Note.

The Evidence divides itself into three heads:

I. Financial machinery of the Government of India;

II. Progress of Expenditure; and

III. Apportionment of Expenditure in which both Great Britain and India are interested.

For various reasons it was not found possible to complete the Evidence in each section before taking up the next; but, with a view to keeping the sections distinct, the Evidence relating to each head, even though not taken on consecutive days, has been brought together.

It will be found that the first seven days and the 30th day, except Qq. 13,641–81 (Qq. 1–3675, and 13,503–640, and 13,682—723) relate to the inquiry into the Financial Machinery; that the 8th to the 11th, 15th, 16th, 18th, and 20th to 25th and part of the 29th days (Qq. 3676–5704, 7184–8217, 8718–9264, 9614–12,268, and 13,409–502) relate to Progress of Expenditure; and that the 12th to the 14th, 17th, 19th, and 26th to 29th days (Qq. 5705–7183, 8218–717, 9265–613, 12,269–13,408) relate to the apportionment of charge between Great Britain and India.

ROYAL COMMISSION TO INQUIRE INTO THE ADMINISTRATION AND MANAGEMENT OF THE EXPENDITURE OF INDIA AND INTO THE APPORTIONMENT OF CHARGE BETWEEN INDIA AND THE UNITED KINGDOM.

VICTORIA, R.I.

Victoria, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith, Empress of India, &c., to—

Our right trusty and well-beloved Reginald Earle, Baron Welby, Knight Grand Cross of Our Most Honourable Order of the Bath; Our right trusty and well-beloved Councillor Leonard Henry Courtney; Our right trusty and well-beloved Councillor William Lawies Jackson; Our trusty and well-beloved George Nathaniel Curzon, Esquire, commonly called the Honourable George Nathaniel Curzon; Our trusty and well-beloved Sir William Wedderburn, Baronet; Our trusty and well-beloved Sir Donald Martin Stewart, Baronet, Knight Grand Cross of Our Most Honourable Order of the Bath, Knight Grand Commander of Our Most Exalted Order of the Star of India, Companion of Our Most Eminent Order of the Indian Empire, Field-Marshal of Our Forces, Member of the Council of India; Our trusty and well-beloved Sir Edward Walter Hamilton, Knight Commander of Our Most Honourable Order of the Bath, Assistant Secretary to the Commissioners of Our Treasury for Great Britain and Ireland; Our trusty and well-beloved Sir James Braithwaite Peile, Knight Commander of Our Most Exalted Order of the Star of India, Member of the Council of India; Our trusty and well-beloved Sir Andrew Richard Scoble, Knight Commander of Our Most Exalted Order of the Star of India, one of Our Council learned in the Law; Our trusty and well-beloved Ralph Henry Knox, Esquire, Companion of Our Most Honourable Order of the Bath, Accountant-General of Our Army; Our trusty and well-beloved George Lisle Ryder, Esquire, Companion of Our Most Honourable Order of the Bath; Our trusty and well-beloved Thomas Ryburn Buchanan, Esquire, Barrister-at-Law; Our trusty and well-beloved William Sproston Caine, Esquire; and Our trusty and well-beloved Dadabhai Naoroji, Esquire; Greeting!

Whereas We have deemed it expedient that a Commission should forthwith issue to inquire into the administration and management of the Military and Civil expenditure incurred under the authority of the Secretary of State for India in Council, or of the Government of India, and the apportionment of charge between the Governments of the United Kingdom and of India for purposes in which both are interested.

Now know ye, that We, reposing great trust and confidence in your knowledge and ability, have authorised and appointed, and do by these Presents authorize and appoint, you, the said Reginald Earle, Baron Welby; Leonard Henry Courtney; William Lawies Jackson; George Nathaniel Curzon, commonly called the Honourable George Nathaniel Curzon; Sir William Wedderburn; Sir Donald Martin Stewart; Sir Edward Walter Hamilton; Sir James Braithwaite Peile; Sir Andrew Richard Scoble; Ralph Henry Knox; George Lisle Ryder; Thomas Ryburn Buchanan; William Sproston Caine; and Dadabhai Naoroji; to be Our Commissioners for the purposes of the said inquiry.

And for the better effecting the purposes of this Our Commission, We do by these Presents give and grant unto you, or any five or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to, and examine, all such books, documents, registers, and records, as may afford you the fullest information on the subject; and to inquire of and concerning the premises by all other lawful ways and means whatsoever.

And We do by these Presents will and ordain that this Our Commission shall continue in full force and virtue; and that you, Our said Commissioners, or any five or more of you, may from time to time proceed in the execution thereof and of every matter and thing therein contained, although the same be not continued from time to time by adjournment.

And We do further ordain that you, or any five or more of you, have liberty to report your proceedings under this Our Commission from time to time, if you shall judge it expedient so to do.

And Our further will and pleasure is, that you do, with as little delay as possible, report to Us, under your hands and seals, or under the hands and seals of any five or more of you, your opinion on the matters herein submitted for your consideration.

And for the purpose of aiding you in your inquiries, We hereby appoint Our trusty and well-beloved Richmond Thackeray Willoughby Ritchie, Esquire, to be Secretary to this Our Commission.

Given at Our Court at Saint James's, the twenty-fourth day of May, one thousand eight hundred and ninety-five, in the fifty-eighth year of Our Reign.

By Her Majesty's Command,
HENRY H. FOWLER.

VICTORIA R.

Victoria, by the Grace of God, of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith, to Our trusty and well-beloved Robert Gray Cornish Mowbray, Esquire, Master of Arts, greeting!

Whereas We did by Warrant under Our Royal Sign Manual bearing date the twenty-fourth day of May, one thousand eight hundred and ninety-five, appoint Our right trusty and well-beloved Reginald Earle, Baron Welby, Knight Grand Cross of Our Most Honourable Order of the Bath, together with the several gentlemen therein mentioned, or any five or more of them, to be Our Commissioners to inquire into the Administration and Management of the Military and Civil Expenditure incurred under the authority of the Secretary of State for India in Council, or of the Government of India, and the apportionment of charge between the Governments of the United Kingdom and of India for purposes in which both are interested.

And whereas one of Our Commissioners so appointed, namely, Our right trusty and well-beloved Councillor George Nathaniel Curzon hath on being appointed one of the Under Secretaries of State to Our Principal Secretary of State for Foreign Affairs, humbly tendered unto Us his resignation of his appointment as one of Our said Commissioners.

Now know ye, that We, reposing great confidence in you, do by these Presents appoint you the said Robert Gray Cornish Mowbray to be one of Our Commissioners for the purposes aforesaid in the room of the said George Nathaniel Curzon, resigned, in addition to and together with the other Commissioners whom We have already appointed.

Given at Our Court at St. James's, the third day of February, one thousand eight hundred and ninety-six, in the fifty-ninth year of Our Reign.

By Her Majesty's Command.

(Signed) M. W. RIDLEY.

Robert Gray Cornish Mowbray, Esquire, M.A.

To be a Commissioner to inquire into the Administration and Management of the Expenditure of India, and into the Apportionment of Charge between India and the United Kingdom.

VICTORIA R.

Victoria, by the Grace of God, of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith, Empress of India, &c. &c. To the Commissioners constituted by Warrant under Our Royal Sign Manual bearing date the twenty-fourth day of May last, to inquire into the Administration and Management of the Military and Civil Expenditure incurred under the authority of the Secretary of State for India in Council, or of the Government of India, and the apportionment of charge between the Government of the United Kingdom and of India for purposes in which both are interested, greeting!

Whereas We did by Our said Warrant appoint Our trusty and well-beloved Richmond Thackeray Willoughby Ritchie, Esquire, to be Secretary to the Commission constituted by the same Warrant:

And whereas the said Richmond Thackeray Willoughby Ritchie has resigned such appointment:

Now know ye, that, in the room of the said Richmond Thackeray Willoughby Ritchie, We have made choice of Our trusty and well-beloved Colin George Campbell, Esquire, to be Secretary to our said Commission.

Given at Our Court at St. James's, the ninth day of August, one thousand eight hundred and ninety-five, in the fifty-ninth year of Our Reign.

By Her Majesty's Command.

(Signed) M. W. RIDLEY.

Colin George Campbell, Esquire.

Secretary to the Royal Commission to inquire into the Administration and Management of the Expenditure of India, and into the Apportionment of Charge between India and the United Kingdom.

I 87800.

FIRST REPORT.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,

WE, the undersigned Commissioners appointed to inquire into the Administration and Management of the Military and Civil Expenditure incurred under the authority of the Secretary of State for India in Council, or of the Government of India, and the apportionment of charge between the Government of the United Kingdom and of India for purposes in which both are interested, desire humbly to submit to Your Majesty the following Report of the steps which we have taken in the prosecution of the inquiry entrusted to us. We commenced to hold sittings for the examination of witnesses on the 5th November last, and have held since that date 30 sittings, in the course of which we have received evidence from officials deputed by the Government of India and by the Secretary of State, as well as from gentlemen who have recently held the position of Financial Member of the Governor-General's Council, and others. We have also heard evidence on behalf of the Admiralty and the War Office in regard to the charges made against the Government of India on account of the British naval and military forces at the disposal of the Government of India.

We are not yet in a position to submit any recommendations upon the questions referred to us, but we think it desirable to lay before Your Majesty, without delay, the evidence which we have hitherto taken.

We, therefore, humbly submit this our preliminary Report for Your Majesty's gracious consideration.

WELBY.

ANALYSIS OF EVIDENCE.

SECTION I—FINANCIAL MACHINERY.

Note.—Qq. 13,641–74 relate to the general question of Apportionment of Charge (Section III.).

SECTION II.—PROGRESS OF EXPENDITURE.

SECTION III.—APPORTIONMENT OF EXPENDITURE.

See also Qq. 13,641–74 in Section I.

ANALYSIS OF EVIDENCE.

SECTION I.—FINANCIAL MACHINERY.

(*Days* 1–7, *and the* 30*th.*)

DAYS 1, 2, AND 6.

WATERFIELD, SIR HENRY, K.C.S.I., C.B., Secretary in the Financial Department of the India Office, and JACOB, MR. STEPHEN, C.S.I., Comptroller and Auditor-General to the Government of India. ANALYSIS OF EVIDENCE OF.

(Past and Present Services of the Witnesses, 1–7.)

SYSTEM OF ACCOUNT IN INDIA. *See* APPENDIX.)

1. THE SEPARATE GOVERNMENTS.
2. ADMINISTRATION.
3. THE BUDGET.
4. THE COLLECTION OF REVENUE.
5. DISTRIBUTION OF FUNDS FOR EXPENDITURE.
6. ACCOUNT AND AUDIT.

1. THE SEPARATE GOVERNMENTS.

Enumerates the eight Provincial Governments, each of which is a separate centre of Financial Administration, 8–9.

The style of the Governments of Bombay and Madras, the larger provinces, is "The Governor in Council," and of the minor provinces, "The Lieutenant-Governor" or "The Chief Commissioner," 10–15.

2. ADMINISTRATION.

A. Civil Financial Officers.

The chief Financial Officers of the Central Government are the Financial Member of Council, the Financial Secretary, and the Comptroller and Auditor-General—of the Presidencies of Bombay and Madras, the Financial Member of Council, assisted by the heads of branches, and by the advice of the Accountants-General; of the larger provinces, the Lieutenant-Governor; and of the minor provinces, the Chief Commissioner, 10–15.

The Financial Member of Council.

The term of office is five years, but this has been occasionally extended, 16–18. The Viceroy, should he agree with the Financial Member in differing from a decision of the majority of the Council on a question in which finance is involved, may suspend action pending a reference to the Secretary of State; otherwise the Finance Member can only record his dissent, which is forwarded to the Secretary of State, 25–35. *Paper handed in* showing instances of dissents of the Financial Member, then come before the Secretary of State by the way of record, 562–81.

His powers and duties are generally similar to those of the Chancellor of the Exchequer in England, 19–29.

The Financial Secretary.

Corresponds generally to the Secretary of the Treasury in England; he is a member of the Indian Civil Service, and holds office till promotion or retirement; it is his duty to see generally that financial regularity is observed, 71–3.

His staff consists of a Deputy Secretary, an Under Secretary, an Assistant Secretary, a Registrar, and subordinates, 74–5.

The Comptroller and Auditor General.

Detailed list of his duties, 76–79.

His executive duties nearly correspond to those of the Assistant Secretary of the English Treasury, the

WATERFIELD, Sir HENRY—*cont.*

Controller of the National Debt Office, and the Deputy Master of the Mint; he is chief auditor of the Accounts; 79–92, 102–3, 113–21. He is also the unofficial adviser of the Finance Member, *Jacob*, 2842.

When the Government is at Simla he is the representative of the Treasury at Calcutta; he is, however, outside the Financial Department proper, 93–6.

In any crisis he would be the first to know the general state of the reserves of the treasuries, and would communicate it instantly to the Government of India, 104–13.

His staff, which is entirely distinct from that of the Financial Department proper, includes three Deputies, one of whom is his assistant in executive functions, and two in audit functions, four assistant Comptrollers-General, and subordinate officers, 97–101*b*.

He is the first officer who focusses all the accounts of the different spending departments throughout India, 76–8.

Descriptions of the several Accounts rendered to the Comptroller and Auditor-General, 406–12, (*Jacob*, 2844*a*–5.)

Provincial Accountants General.

Are officers of the Central Government under the Comptroller-General, they act only as *advisers* of the Provincial Governments, rather on questions as to whether the regulations are complied with, and whether proposals are within the powers of the Provincial Governments, than on questions of financial administration, and are quite apart from the Provincial Finance Department, 122–34, 866–71. Duties of Accountants-General, 868–9.

Treasury Officers.

The Treasury officer is one of the assistants of the chief civil officer or Collector of each district, and is subordinate to the Provincial Government; he is practically district paymaster; besides his Treasury duties he is generally on the district staff, performing revenue and magisterial work; he is assisted by an accountant, a treasurer, and staff, 135–7. The treasurer is responsible for the cash, and gives security, the balance being tested at uncertain intervals by the District Collector, 183–4.

B. Military Financial Officers.

The Military Financial officers are (1) the Military Member of Council, (2) the Military Secretary, (3) the Military Accountant-General (corresponding to the Accountant-General of the Army in England, 401–3), (4) the Military Controllers in each Command, who are the Auditors of Military Expenditure, (352); and (5) the Military Examiners, who are purely audit and account officers on the staff of the Military Controller, 352–4, 462–87.

3. THE BUDGET.

Is usually presented to the Legislative Council in the last week in March, 303.

Process of Framing the Budgets.

The various district and departmental officers prepare their estimates in October; these the respective Departments combine and send to the Provincial Government, for whom the Accountants-General compile them into a budget about the middle of January, 304–7, the Civil budgets are submitted to the Finance Department of the Government

WATERFIELD, Sir HENRY—*cont.*
of India by the 15th January, the Military and Public Works Budgets by the end of February, 308–15.
The Military Budget is primarily prepared by the Controllers of each command, the Public Works Budgets primarily by the Provincial Governments. The Accountants-General in the Military and Public Works Departments combine the estimates furnished by the several Controllers of Military Accounts or by the Provincial Governments and managers of State railways respectively, 316–20.
There is no formal decision arrived at annually on the Budget, as to military policy, the establishment being fixed, 322–32.
Description in detail of the process of examining the Budget by the Financial Department, 321.
The Budget estimate only provides for receipts and expenditure expected actually to be received or paid within the year, 333.
Details of information upon which the revised estimate is framed, 413–8.
The Financial Member of Council is furnished by the Comptroller-General on the 9th of each month, with an account of revenue and expenditure of the previous month, and later on in the month with a more detailed account, 432–46. These are also furnished to the Military Member, 384–95. The only departments with responsible expert officers at headquarters from whom the Financial Member could obtain immediate information regarding noticeable variations in the Revenue are the Opium and Salt Departments; the Financial Member would have to refer to the Provincial Governments for similar information in connexion with other departments, 447–52, 452–60.
Returns as to military expenditure during the previous month are received by the Military Accountant-General from the Controller in each Command on the 20th and in greater detail (including Military Expenditure incurred in other Departments) on the 26th of each month, 360–80; quarterly statements of expenditure, not provided in the Estimates, are laid before the Military Member of Council, 362–83.

THE COLLECTION OF REVENUE.

a. General.
b. Customs.
c. Excise.
d. Stamps.
e. Land Revenue.
f. Opium.
g. Post and telegraph.
h. Railways.

a. General.
There are 266 district treasuries, not including sub-treasuries; (a sub-treasury is an outlying post in an extensive district), 152–62. The revenue collected within a district is paid into the district treasury, 224; in the smaller districts the cash balances are kept in strong rooms, in the larger ordinarily in the branch Presidency Banks, 138–51, 156–8, 190. Losses are very rare, 185–9 (*hands in Statement of places where there are branches of the Presidency Banks*, 561. APPENDIX.)
All the District Treasuries are in telegraphic communication with the Accountants-General of their province, 223.
Any money that is not wanted at a District Treasury is remitted to a central station, where the bulk of the payments are made and from which funds can easily be removed by drafts, 164. The movement of funds is now a source of profit, owing to the premium on bills, *Jacob*, 2832. The whole of the money at the central stations is not invariably banked; in the Presidency towns, for instance, a part is kept as a reserve in the strong box, in order to secure the speedy transfer from a treasury with a large balance to one in need. This is done by means of transfers from the Treasury to the Currency reserve, and *vice versâ*, 166–72, 177–82. The Provincial Accountants-General receive monthly information from the several treasuries, and thus are able to order remittances from surplus to deficit treasuries, 404–5; the question of the balance to be maintained in the reserve Treasuries has been fully considered; it has been decided that balances cannot be safely reduced below eight crores, and that of this a minimum balance should be kept at the Presidency Banks, interest being payable by Government on the deficit, should the balance fall below the minimum, *Jacob*, 2805–30. The reason for maintaining Reserve Treasuries is that the banks may not always be able to call in funds to meet Government demands with sufficient rapidity (instances of this), for in India the Government balance forms a very large proportion of the total funds of the country, 172–5.

b. Customs.
The Financial Department in India is responsible for the general administration of the Customs. In each province the Customs Department is under the Provincial Government, 225–8. There is one Act for the whole of India, subject to which the Provincial Governments have considerable power in regard to details, 231–5. Local considerations render absolute uniformity impracticable, (266); but to secure harmony of administration all customs orders of general application are published in the Gazette of India, 229–30. Appeal against the action of Customs officials is to the Provincial Government, but there is in practice appeal from the Provincial to the Imperial Government, which also occasionally reviews the action of the Provincial Governments on its own initiative, 230–6. As a general rule Customs officers pay the gross revenue collected into the district treasuries, on which they draw for their expenditure; accounts are rendered to the departmental controlling officers, 236–9.

c. Excise.
Similarly the Excise Department is under the several Provincial Governments, subject to the ultimate control of the Government of India in the Financial Department; when a proposal is made (usually at the instance of the Provincial Governments, 249) for an alteration in the excise law, the Provincial Governments, who would take advice from their chief excise authorities (254), are consulted by the Imperial Government, and a Bill is drafted and circulated, not only to the Provincial Governments, but for the information of the general public; upon the consequent recommendations the project of law is finally brought into shape, 240–50, 255–7. There are separate local Excise Acts for Bombay, Madras, and Bengal respectively; for the rest of India there is a general Act, 251–3. The excise revenue is paid into the District Treasuries, subject to the same conditions as the customs, 260.

d. Stamp Revenue.
The Stamp revenue is also under the management of the Provincial Governments, large questions and general regulations being under the control of the Central Government. Stamps are sold at treasuries and sub-treasuries, which receive directly the bulk of the revenue, including fines, 261–3.

e. Land Revenue.
The Imperial control of the collection of Land Revenue is vested in the Revenue and Agricultural Department of the Government of India, great latitude being reserved to the Provincial Governments. The systems in the various provinces, and even districts of the same province, vary greatly. All questions requiring an alteration in the law must be settled by the Central Government, 270–4. The staff of the Central Department consists of a secretary, an under-secretary, a registrar, and subordinate staff, 275. Its functions include the management of general questions of survey and settlement, appeals, and general control, 276–80.
In the case of any alteration of law involving a loss of revenue or increase of charge, the Finance Department must be consulted, 281.

f. Opium.
The Opium Department is directly under the Government of India in the Finance Department. In Bengal the Government manufactures the opium, and derives its revenue from sale by auction. In Bombay it is manufactured in the native States, and a transit duty is levied. The revenue is wholly Imperial, 282–3.

g. Post Office and Telegraph Department.
The Post Office is under the control of its Director-General in direct subordination to the central Finance Department; the Telegraph Department under the Director-General of Telegraphs, in direct subordination to the central Public Works Department, 284–6. The receipts from both are paid into the several district treasuries, 287. The Telegraph Department has for several years produced a net revenue; the Post Office is not looked upon as a revenue-producing department;

WATERFIELD, Sir HENRY—*cont.*
the position of both is annually reported, 288.
the expansion of the Post Office in the near future is probable, subject to general financial considerations, 289–98.

k. State Railways.

For the most part State railways are under the control of the Government of India in the Public Works Department; some are provincial; there are the same regulations for all, 301. The revenue from railways (and irrigation works) would usually be paid into the most convenient Central Treasury, 299–300.

As a rule each Railway Administration settles its rates between a maximum and minimum prescribed by the Public Works Department; but any alteration involving a loss of revenue must be sanctioned by the Finance Department, and, in case of difference of opinion between the Departments, by the Governor-General in Council, 301–2.

5. DISTRIBUTION OF FUNDS FOR EXPENDITURE:

a. In the case of Civil Departments.

The Treasury officers are bound by certain general rules applying to the various classes of expenditure, 194.

b. In the Public Works Department.

Funds are provided to the Department by means of letters of credit issued to Treasury officers by the Accountant-General of the Province, at the instance of the Examiner of Public Works Accounts, in favour of each Executive Engineer, who makes payments by cheques on the Treasury. The expenditure of the Department was Rx. 34,000,000 in 1893–4, 194–7, 340–4.

c. In the Military Department.

Funds are placed at the disposal of Military Disbursing officers by annual assignments in their favour issued to Treasury officers by the Provincial Accountant-General on the application of the Military Controller, 349–50.

Money is drawn by the Disbursing officers by cheques against their assignments, ordinarily representing their exact requirements. Except during military expeditions, balances in their hands are very small, 198–215.

In case of emergency, where the delay involved in procuring formal sanction would cause public inconvenience, a supplementary assignment may be made to a Disbursing officer, on the authority of a station or district order, without limit—such advances must be at once brought to the notice of the military authorities, 355–9.

Each Controller may sanction extraordinary expenditure up to the limit of Rs.1,000 a month, in order to avoid petty references for formal sanction, 381–2.

6. AUDIT AND ACCOUNT.

a. General.

All civil expenditure (whether Imperial or Provincial, 902), is audited by the Provincial Accountants-General or Comptrollers and their subordinates, (906-27); these officers are entirely independent of the Provincial Governments, they have the power to disallow any payments, even made on the authority of the Provincial Government, if irregular, subject to reference to the highest authority, 918–22. They are not executive officers, except in so far as the Accountant-General advises the Provincial Government and is the compiler of the Provincial Budget, 910–14. Though the Revenue officers are primarily responsible for the accounts of the Treasury officers, their accounts are submitted twice a month (194) for audit by the subordinates of the Accountant-General, who enter objections in a book (to which the Accountant-General is directed to pay constant attention, 510); 504–18. To check the action of his subordinates the Comptroller-General sends round his two Deputy Auditors-General to every office in India to test the accounts for two or three months, 514. These test audit reports are submitted *in extenso* to the Government of India with the Comptroller-General's comments; he relies on them for assurance that items are not passed which ought not to be passed, 533–7. There is also an annual report on outstanding objections, *Jacob*, 2846.

WATERFIELD, Sir HENRY—*cont.*
The decision of the Comptroller and Auditor-General is, in audit cases, final, subject to appeal to the Government of India, and, if required, to the Secretary of State; instances of such references, 538–44.

Misappropriation of money must, in any case, be discovered within a month, 545–60.

The Appropriation Audit Report of the Comptroller and Auditor-General is practically a review of the expenditure of the past year, and not a detailed criticism of the yearly charges, etc., like the Appropriation Report of the English Comptroller and Auditor-General, in which all irregularities are noticed. Irregularities in India are promptly disallowed by the subordinate audit officers, and do not ordinarily reach the Comptroller-General, 529, except in rare cases, where they are referred for his decision by the Accountant-General (511); there are practically no irregularities left to be discovered by the Appropriation Report, 1107–26. The audit system adequately ensures that all irregularities are reported to the Government of India, 2867–9.

The Appropriation Report is made to the Government of India, the authority which grants the supplies. Just as the English report is made to Parliament, the granting authority, 999. It is not laid before Parliament, but the Secretary of State is responsible to Parliament for the expenditure of Indian Revenues, (956–65). The Comptroller-General is, from his position, an absolutely independent officer, 969–72; it is not part of his duty to check expenditure authorised by the Secretary of State, *Jacob*, 976–7; nor would he go behind the orders of the Government of India except in matters which require the sanction of the Secretary of State, *Jacob*, 1033–40, 1114–1137, the Comptroller-General's report, as a matter of course, goes to the Secretary of State, and is published in the Gazette of India, *Jacob*, 1041–3, The instructions of 1889 to Audit Officers to bring to notice cases in which the sanction of the Secretary of State, though necessary, has not been obtained, have been successfully carried out, 1121–8.

The suggestion accepted by the Government of India in 1882, that a more detailed system of Audit by an absolutely independent auditor should be carried out, was set aside by the Secretary of State on the score of expense, 1001–1009, 1133. The modified system now in force was considered sufficient, 1010–6.

b. In the Public Works Department.

The details of testing and watching Public Works expenditure, 345–7.

Military works are generally executed by the Military Works Department, 343, 348.

The Accounts of the several engineers are sent monthly to the Examiners, who audit them, and report, if necessary, to the Accountant-General of the Public Works Department; they disallow items of expenditure not duly sanctioned; the audited Accounts are compiled by the Accountant-General and furnished to the Finance Department, 498–500. The Public Works Department prepares a separate Appropriation Report, *Jacob*, 432.

c. In the Military Department.

The Examiners examine the accounts of the Disbursing officers, who must only make payments according to the regulations, and are required to furnish to the Examiners vouchers for every payment, 466–477.

The Examiners are on the staff of the Military Controller, who compiles their accounts into a monthly account for the Military Accountant-General, 478–87.

The Examiners would either disallow payments not properly authorised, or, in doubtful cases, refer to the Controller, whose decision is final unless appealed against; any want of necessary sanction of the Secretary of State would be brought to notice by the Controller, 488–92.

Regulations for inspecting and auditing stores accounts, 493–7.

The Controllers draw up Appropriation Reports, which they send to the Military Accountant-General, who compiles from them his Appropriation Report, and forwards them with his own, to the Comptroller-General and the Financial Department of the Government of India, 396–400, 423–30.

WATERFIELD, Sir HENRY—*cont.*

d. In other Departments.

The Forest Department and Post Office have separate Accounts Departments, under the immediate control of the Comptroller-General; the Marine Department under the Military Accountant-General; the Telegraph Department under the Public Works Accountant-General. The audited accounts of all these departments are sent to the Comptroller-General or Accountant-General, 501–2.

Account Codes.

The Account Codes seem as simple as they can be made, 216–22.

The paper "System of Account" is an epitome of the Civil Account Code, there are also the Military Account, Public Works Account, and Postal Account Codes, the Comptroller-General is responsible for any alterations in the Civil Account Code, subject to higher sanction where necessary; for alterations in the Public Works and Military Codes the Public Works and Military Departments are respectively responsible, 334–9.

PROVINCIAL SYSTEM. (*See* Appendix, "Provincial Finance.")

Definition of Provincial Government, 856.

The Secretaries to the Provincial Governments communicate on financial questions with the Financial Department of the Government of India, 857–62, and with other Departments, except the Military Department, 874–8.

Military Finance does not concern the Provincial Governments; it is wholly Imperial, 872–3.

The System of Decentralisation has done away with a vast amount of correspondence that would otherwise have been necessary, 884–7.

With the exception of the Salt Revenue in Northern India, which for the sake of convenience is collected by officers of the Central Government, 657–67, and certain Departmental Receipts (Post Office, Telegraph, Mint, Army and Military Works, 656 and 781), the whole of the Revenue is collected by officers of the Provincial Governments, 642.

Officers of the Central Government charged with the collection of Imperial heads of revenue are independent of the Provincial Governments, 668–70 (as are also officers of Scientific Departments, *e.g.*, the Survey of India, wherever stationed, 880–83).

The germ of the provincial system was a suggestion made in 1861 by Mr. Laing, Financial Member of Council, that, for the purpose of executing public works of a minor character, funds should be raised by the Provincial Governments by means of a tobacco tax or octroi; these particular taxes, however, were never imposed, except by municipalities for their own purposes, 633–40.

The policy of transferring to the Provincial Governments, with a view to administrative as well as financial improvement, the responsibility for the administration of a large portion of their own revenues was introduced by Lord Mayo in 1871, in the shape of fixed grants. In 1877, in lieu of a portion of the fixed grant, certain heads of revenue were assigned to the Provincial Governments; a further step in this direction was made with respect to Burma and Assam in 1879, and the amended system was generally applied in 1882, 582–7. The Provincial Governments have always been responsible for the collection of revenue, but till 1877 derived no direct benefit from careful collection, 584.

The Provincial Agreements assure to the Provincial Governments a normal income, the Central Government taking the risks of war and fall in exchange (except to some extent of late years in respect of Compensation Allowance), 840–6.

The Central Government reserves to itself the right to call on the Provincial Governments to contribute to the Imperial Expenditure in case of abnormal pressure; such contributions have been levied four times, first during the Afghan War (these contributions were afterwards refunded, and added to the balances of the Provincial Governments,) next in 1886–7; next in 1890–1, and lastly in 1893–4, 847–55.

Every five years an examination is made of the circumstances of the several Provinces, and the agreements are revised with a view, on the one hand, to ensure to the Imperial Government a due share of any improvement in the revenues; and, on the other hand, while giving the Provincial

WATERFIELD, Sir HENRY—*cont.*

Governments a fair proportion of any increase, to lessen the chance of their being called upon to render abnormal assistance to the Imperial Government, 588. Fixed proportions of the various heads of Revenue are assigned to the Provincial Governments, on the principle of establishing general equilibrium, the necessary adjustments being effected by additions to or subtractions from the normal proportion (25 per cent.) of Land Revenue assigned to the Province, 642–4, 770–1. No attempt is made to arrive at equilibrium under each separate head transferred; the equilibrium is arrived at by general adjustments, 823–37. The revision of the Provincial agreements is conducted by the Financial Department in correspondence with the Provincial Governments, 588–97.

Under the Agreement of 1882 the Provincial Governments had an interest, more or less direct, in the collection of 42 crores of Revenue and administered about 16 crores of expenditure, 700–2.

A large increase has taken place in the revenues, which may be ascribed to a great extent to more careful administration, 679–88. As an instance, the Excise Revenue has increased 85 per cent. without any appreciable increase in the scale of taxation, 689–97.

The total increase in the Provincial Revenues has amounted to 22 per cent. without any very considerable addition of taxation, excepting the Income tax (which may be variously estimated to have added from Rx. 350,000 to Rx. 500,000, to the Revenue), and this increase has been due partly to more careful collection, partly to an improvement in the general prosperity of the country, 709–805.

In 1887—the first revision under the new system—and again in 1892 the Revenue and expenditure of the Provincial Governments were re-estimated and the assignments refixed with a view to equilibrium, the Imperial Government taking practically the whole of the net increase, 700–8. In 1886 a special Finance Committee was appointed to consider Provincial Finance, and to advise the Financial Department in carrying on this revision, 588–97, 601–4.

Practically the same provisions, excepting as regards receipts from provincial railways and land revenue, now apply to all Provinces alike, 598–600.

The increase in the Land Revenue is caused by resettlements on expiration of existing contracts; the assessments are in a great part of India a proportion of the rental value of the land, and the increased return must be ascribed to increased agricultural prosperity, 721–29, 748–55; a limit has been placed upon the enhancement of individual assessments by the Secretary of State, 733–47. Recommendations for revised assessments must have the approval of (1) the Provincial Government, (2) the Government of India, and (3) the Secretary of State, 764–70.

In addition to their assigned Revenues, those Provinces which have Legislative Councils may, with the consent of the Government of India, levy a provincial or local rate, which is a further tax on land—in addition to the Land Revenue proper—to meet local expenditure, 605–32.

All charges under the head of general administration—such as Education, Medical, Police, Law and Justice, Civil Roads, and the Administration of Revenue—are Provincial; offices of Account and Audit are mainly Imperial, 649–55, 1108–11.

No attempt is made to arrive at equilibrium under each separate head transferred; the equilibrium is arrived at by general adjustments, 823–37.

In consideration of the fixed assignments under each head, the Provincial Governments undertake to defray fixed proportions of the expenditure under each head.

All payments by the Provincial Governments are made out of the general cash balances in the most convenient manner, an adjustment of accounts between the Central and Provincial Governments being made afterwards, 671–2. No change can be made in existing systems of Revenue management or collection without the approval of the Central Government; which, whilst giving the Provincial Governments great freedom in details, maintains a general supervision and control over their expenditure and Revenue management, 673–8, 789–805; *hands in* and describes the Bengal Budget for 1894–5, 800–5, 807.

WATERFIELD, Sir HENRY—*cont.*

The Provincial Budgets.—The Estimates of each District or Departmental office (305) are revised and corrected by the head of the Department, who sends them to the Accountant-General. He, after seeing whether the expenditure has been sanctioned; passes them on to the Provincial Government, which makes any alteration it thinks fit and returns them to the Accountant-General for compilation. The compiled Budget is then submitted by him to the Provincial Government with his observations thereon, and at the same time forwarded to the Comptroller-General; the Provincial Governments, by 16th January, submit their Budgets to the Government of India in the Financial Department; this leaves about two months for correspondence on disputed points, 887–8.

Excess of expenditure over the Budget grant must be sanctioned by the Central Government. In any case it would have to be met from the Provincial Balances (*quotes an instance*), 808–12.

Two essential rules of Indian Finance are, that, in absence of strict necessity, new expenditure only begins with the new financial year, and that the mere insertion in the Budget of a charge requiring special authority is not a sanction for the incurring of that charge without that authority, 821–2.

The Provincial Governments can enter fresh expenditure on their Budgets, within the limits of their Revenue, without further sanction, provided that the expenditure is within their general powers; they must be assured of the increased revenue before they can propose an increased expenditure (1075), and they must have the sanction of the Government of India for considerable expenditure from balances, 1069–77, 1077.

Balances.

The Provincial Governments are bound to budget for a minimum cash balance at the close of the year, 891–2 (*hands in a list of balances*, 892), unless with the previous sanction of the Government of India, 895. These balances are designed to meet purely local emergencies, they are not ear-marked, but form part of the general balances, for the location and management of which the Comptroller-General is responsible, 890–900.

Should a Provincial Government reduce its balance below the prescribed minimum, the Central Government would probably recreate it by means of a loan, and the Province would not be allowed to use its spare revenues until the amount had been replaced; such cases have occurred, 813–20.

In the case of severe distress from Famine, the Central Government will not aid the Provincial Government until the current income of the latter and two-thirds of its accumulated savings, in excess of the ordinary working balance, have been spent; after the pressure has passed away the margin of normal income over normal expenditure must be applied to complete famine relief works or payment of interest on loans raised in consequence of the famine, 806.

Local and Municipal Authorities.

The system under which Provincial Governments delegate part of their authority to local bodies, the powers, duties, and sources of income of such bodies, 930–5.

5TH DAY.

WATERFIELD, SIR HENRY (recalled), and CAVE-BROWNE, C.S.I., MR. EDWARD RABAN, Accountant-General in the India Office. ANALYSIS OF EVIDENCE.

Experience of Mr. Cave Browne, 2357–8.

1. *Home Accounts.*

India Office procedure, 2394–5, 2465–78; branches of India Office and division of business, 2396–2415.

Heads of payments are given in the explanatory memorandum of the Secretary of State, 2362; the figures are stated in that account in three columns, viz., the sum paid in sterling, the amount which must be added to the sterling figure in order to obtain the number of Rx. which the Government of India has to pay, and the total which is the real rupee charge, 2362–76; this mode of stating the charge for exchange is for the sake of convenience, 2382; though it comes to the same

WATERFIELD, Sir HENRY—*cont.*

thing as entering sterling in Rx. at 2*s.*, it is not based on the conventional idea that the rupee is worth 2*s.*, 2377–9; care is taken not to describe the difference as *loss* by exchange, 2389; the average rate of exchange for the year is obtained by taking the amount of rupee bills sold throughout the year, and dividing that by the sterling amount received for those bills, and on this average the rupee equivalent of the sterling payment is calculated, 2611–20A.

2. *Financial Department.*

The Finance Committee of Council and Financial Secretary, with the assistance of the Accountant-General, are the financial advisers of the Secretary of State, 2443; theoretically all business involving expenditure goes before the Secretary of State personally, 2444–6; and he sees all important papers at a very early stage, 2476; expenditure in India, with certain exceptions, is criticised by the Financial Department, and financial proceedings reviewed, 2447–53; financial procedure, in the India Office, 2454–64; the policy of imposing fresh taxation would be dealt with by the Financial Department, the details by the Revenue Department, 2969–73.

3. *Accountant-General's Department.*

Duties of Accountant-General, 2416; he invests the cash balances subject to the approval of the Secretary of State in Council and general regulations, 2425–9, 2435–42; on rare occasions temporary borrowings are necessary, but usually the balances are maintained by sale of bills, 2430–4

4. *Home Expenditure.*

Services for which payment is made in the India Office, 2360; payments are not made under code, 2477–8; but under the authority of the Secretary of State in Council in some form or other, 2391; explanations of different heads of account, 2479–2584; the establishment of the Secretary of State is regulated by Order in Council, 2482–4; in other respects in regard to expenditure the Secretary of State in Council has complete authority, 2485–9; procedure in regard to increase of expenditure in England, 2490–3; important increases would be referred to the Government of India, instances, 2494–2522.

5. *Stores.*

Method of procuring stores for India, 2523–7; strength of Stores Department, 3529–33; details of various classes of stores and mode of supply, 2534–61, 2621–37; method of payment for stores for guaranteed railways, 2574.

6. *Estimates.*

The estimates are prepared in November on the Indian system, 2585; they are sent to India with a despatch, and revised figures are sent out early in March, 2587; any criticism or remonstrance by the Government of India would probably not take place in reply to this despatch, but on a specific proposal, 2588–94.

(3RD DAY.)

NEWMARCH, MAJOR GENERAL SIR OLIVER, K.C.S.I., Secretary in the Military Department of the India Office. ANALYSIS OF EVIDENCE OF.

(Past and Present Services, 1147–57.)

MILITARY FINANCE.

1. ADMINISTRATION.
2. PREPARATION OF THE MILITARY BUDGET.
3. DISTRIBUTION OF FUNDS FOR EXPENDITURE.
4. ACCOUNT AND AUDIT.

1. ADMINISTRATION.

Officers.

The officers concerned with Military Administration in India, are, i. The Military Member of Council; ii. The Commander-in-Chief; iii. The Military Secretary; iv. The Military Accountant-General; v. The Controllers (of each of the four Commands, 1167–72); vi. The Examiners; and vii. The Disbursing Officers, 1149–72A.

The Military Member and the Commander-in-Chief.

The former deals with the Finance and the Departments of the Army, the latter deals with the executive and *personnel*, 1158–66.

NEWMARCH, Major General Sir OLIVER—*cont.*

The Military Accountant-General is the head of the Account branch of the Military Department; and, with the assistance of a Deputy Accountant-General, an Assistant Accountant-General, and a large staff of clerks, he reviews and consolidates the military estimates for the whole of India, and is responsible for the orderly conduct of Military Finance; he is practically a Deputy Financial Secretary in the Military Department; 1173–9, 1215–27. The various detailed statements of account that he receives every month always keep him thoroughly cognisant of the state of military finance, 1397–9.

The Controllers, (of whom there is one in each of the four commands, 1172A), consolidate the monthly audited accounts of the subordinate accounts and audit officers into a general statement for each command, 1376–8; draw up military appropriation reports 1381–3; and compile the military estimates, 1216; a test audit is conducted by a special officer under their orders, 1401–3; they are responsible for the distribution of assignments to the disbursing officers, 1238–41, 1256–7.

The Examiners. The Controller of each of the four commands has under him three Examiners, viz., the Examiner of Commissariat, Remount and Medical accounts, the Pay Examiner, and the Examiner of Ordnance and Clothing accounts, 1180–8. With the exception of the Pay Examiner (who is to some extent a disbursing officer, 1182), they act purely as auditors, 1324–38; 1413–24.

The Disbursing Officers are military officers, they include District and Regimental Paymasters, Commanding Officers of native regiments and batteries, Commissariat Officers, the Superintendent of Family Pensions, Pension Pay Officers, Remount and Clothing Officers, Ordnance Officers, and, at small stations, the officer in command, 1190–1208, 1250–4.

2. THE PREPARATION OF THE MILITARY BUDGET.

Every disbursing officer by a fixed date sends to the Controller of his command the estimate of his requirements for the ensuing year based on existing facts; the Controllers compile the estimates and send them to the Military Accountant-General, who consolidates them into one estimate for all India (making any alterations he thinks fit) which he submits to the Military Member by the 25th January, 1215–27. (Considerable modifications are often made at headquarters, 1450–5). The Government of India has, therefore, about two months to consider the Military Estimate, 1229–30; and during these two months consultations take place between the Commander-in-Chief, the Military, and the Finance Members of Council, reference being made to the Governor-General in Council in case of disagreement, 1209–28. For any large contemplated increase the Secretary of State's sanction must generally be obtained, 1406–10. The estimates for services at home are received from the Secretary of State, but they are occasionally revised on the representation of the Governor-General, 1461–6. The Budget as a whole is finally accepted by the Governor-General in Council, 1231–7

3. DISTRIBUTION OF FUNDS FOR EXPENDITURE.

The Controller of each command arranges with the Provincial Accountant-General for a yearly assignment—subdivided into monthly assignments—in favour of each disbursing officer with the District Treasury; the disbursing officers can only draw up to the limit provided for in each month, and the Treasury officer is informed by the Provincial Accountant-General of the amount up to which each disbursing officer may draw, 1237–40.

In case of sudden demand, application might be made to the Controller for a supplementary assignment; if the case were urgent an order might be procured from the commanding officer for the amount, and the matter would be immediately reported to the Controller, 1241.

Ordnance officers alone receive no cash assignment; their bills for supplies are paid by the Commissariat officers, on the authority of the Inspector General of Ordnance; and they receive only a petty cash allowance, 1250–77, 1282–4.

NEWMARCH, Major General Sir OLIVER—*cont.*

Paymasters of Native and of British Regiments draw pay for the troops once and four times a month respectively, 1278–89.

Pensioners are now paid through the Civil Treasuries, precautions being taken to identify them, 1290–313, 1467–70.

Disbursing officers draw cheques on the Treasuries as on a bank, and such cheques are honoured without inquiry if within the monthly assignment, 1313–23.

4. AUDIT.

The Examiners, under the Controller in each command, conduct the examination of the whole of the military expenditure, 1324–33, 1413–24, and a test audit is also conducted by officers deputed by the Controller, 1334–8.

The Examiners have no discretion to pass payments not in accordance with the regulations, or not properly vouched, 1370–5; they must disallow such payments, subject to appeal, first to the Controller, then to the Commander-in-Chief, and ultimately to the Governor-General whose decision is final, 1352–69; no statement of objections is rendered by the Examiners to the Controller, except in case of appeal, 1378–80.

As regards the payment of troops, the audit officers are satisfied with the statement of the company paymaster, and do not require to see the receipt of every soldier, 1343–51, 1431–7.

There is no second audit on behalf of the Comptroller and Auditor-General, but he may at any time have a test-audit performed on his behalf, 1399–405, 1400–5.

Commissariat accounts are furnished to the Controllers monthly, 1339–42.

The various military account codes are not so complicated as to give rise to questions, 1242–9A.

(3RD DAY.)

BECHER, MR. A. R. Deputy Accountant-General, Public Works Department of the Government of India, ANALYSIS OF EVIDENCE OF.

Experience, 1471–4.

THE PUBLIC WORKS DEPARTMENT.

The main divisions of the Department are the Railways Branch, which is subdivided into the Construction and Open Lines Divisions, the Irrigation Branch, the Buildings and Roads Branch, and the Accounts Branch; the Telegraph Department is also under the Public Works Department, 1475–86.

The expenditure administered by the Public Works Department is about 33 million Rx., 1487–89.

The Executive branches are Provincial; the Accounts Branch is Imperial, 1497–1500.

Great works, such as the Periyar project in Madras, are carried out by Provincial officers, but railways, for instance, possibly because they generally pass through more than one province, are carried out under the Central Government, 1537–41.

"Special Defence Works" are carried out by the Military Works Department, which is under the Military Department, 1543–4.

The Accounts Branch.

The strength of the headquarter staff is 84 officers, including an Accountant-General, a Deputy Accountant-General; it is the Finance as well as the Audit Branch of the Department, 1490, 1501.

The Accounts Department compiles the Estimates of the Executive Branch for the Budget, 1494–6.

There is an Examiner of Public Works Accounts in each Province,, with subordinate staff, 1501; the Examiners are purely Audit Officers, 1473, though they are also advisers of the Provincial Governments, 1502: it is on their requisition that the Civil Accountants-General give order to the Treasury Officers to issue money to the Executive officers, 1503–8.

The preparation of the Budget.

The amounts which can be found from Provincial and Local Funds and from Imperial Funds for Public Works, are settled by the Provincial and Imperial Governments, respectively, and the latter informs the Provincial Governments what works it proposes to carry out within the Provinces; the Provincial Governments send their Budget estimates in on the 15th January to the central Public Works Department, where they are revised

BECHER, Mr. A. R.—*cont.*
and criticised, and a combined estimate is submitted to the Governor-General in Council by about the 15th February. There is thus at this stage only about a month for consideration, 1509–19.
In the previous October, however, a preliminary forecast of proposed expenditure has been submitted by the Provincial Governments, and the Budget is prepared for the amount then arranged, 1519.
The Provincial Governments practically settle the amounts available for their own wants, 1649–50; their powers of sanction without superior authority are limited in respect of any individual work, 1667–71.
There is a similar restriction upon the Government of India, 1672–3.
Small alterations are frequent, but large alterations are rare, in the final stages of the Budget, 1519–20, 1633–41.
The Financial Department informs the Public Works Department what money can be provided for Imperial Works, and the latter apportions the money in the manner it thinks best, 1521–3, providing for works in progress and for necessary repairs in preference to new works, 1524–7.
Proposals to pay for works out of borrowed money must be sanctioned by the Secretary of State and such works must be of the "productive" class (definition of "productive," 1632); these are usually Railways and Irrigation works, 1528–36. Buildings and Roads would be entirely provided for out of revenue, 1542.
Military works having only been transferred to the Military Works Department of recent years from the Public Works Department, for convenience the accounts continue to be rendered to the Public Works Department, and the estimate, though prepared by the Director-General of Military Works, is included in the Public Works Estimates, 1543–52, 1674–1711.

Distribution of Funds.
The Provincial Governments are informed when their Budgets have been approved, and the Provincial Public Works Secretariats proceed to apportion the grant for the year amongst the Superintendents of Circles, who in turn distribute to their subordinates. Every month the Executive Engineer of each division submits to the examiner a statement of the amount he proposes to spend in the following month. The Examiner compiles from these a statement showing the amounts to be drawn on each Treasury, which he forwards to the Provincial Accountant-General, who instructs the Treasury officers to issue money to the Executive Officers, 1503–4, 1554–7.
A Treasury officer would refuse to honour a cheque in excess of the monthly assignment in the absence of a supplementary letter of credit, 1558–60.

Audit.
The Accounts of the Executive Engineers, with vouchers, are audited monthly by the Public Works Examiner in each Province (there is a special Examiner of Military Works Accounts attached to the Public Works Accounts Branch, 1709.) Examiners have the power of disallowance, 1561–5; subject to reference to higher authority, 1566–9. Disallowances would only come before the Central Government on reference, 1611–2. The Examiner sends either monthly or quarterly a statement of the more important irregularities which have not been satisfactorily settled by the Provincial Government (1591–3) to the Public Works Accountant-General, who is thus kept informed of the action of his subordinates, 1570–8, 1586–93; any gross irregularity would be reported immediately, 1580–82. The bulk of the irregularities are merely questions of rule, &c, 1579; the Public Works Account Code is generally understood and works smoothly, 1596. The Examiner compiles the audited accounts into one general account which he submits to the Accountant-General, 1583–7; the Examiners also carry out a test audit, 1598–1601.
The Central Public Works Accounts Branch compiles a monthly statement from the Provincial Accounts for the Comptroller-General; the Public Works chapter of the Finance and Revenue Accounts is also compiled in the Public Works Accounts Branch, and a review of the accounts of each branch of the Department, showing special irregularities which have still to be remedied, 1602–3.
The Comptroller-General makes no second audit of the Public Works Accounts, except his test audit, which is fitted in with that of the Public Works Accountant-General, 1613–9.

Stores.
Stores for important works are obtained from England through the Secretary of State, 1620–1; the Executive engineers have to render monthly stores accounts which are audited like the cash accounts; the chief check on these accounts is the original estimate, which is usually fairly accurate; a half yearly survey of stores in stock is made and a balance return founded thereon, which is also audited by the Examiner, 1620–9.
The Financial arrangements of the Department are generally entirely satisfactory, 1630–2.
Question of possible saving by the employment of natives, 1632–8.

(3RD DAY.)

BERNARD, SIR CHARLES, K.C.S.I., Secretary in the Revenue Department of the India Office. ANALYSIS OF EVIDENCE.

Experience, 1714–19.

Result of Decentralisation on the Revenues.

Excise.
Some of the increase in Excise Revenue in the last 13 years is attributable to increased prosperity, but there has been a decided increase in rates of taxation, *e.g.*, spirits, beer, opium, hemp drugs, 1720–6; details of increase of receipts under different heads of excise, 1727–36; the duty on liquors has everywhere been raised of late years with a view to raising the maximum of revenue on the minimum of consumption, 1739; the administration of the revenue also has improved, and the Provincial Governments have a freer hand in this respect, 1740–1; there has been no stimulation of consumption, 1742–3; but a decrease in illicit consumption, 1774; undoubtedly increased attention has been paid to excise questions during the last 15 years, but, though contemporaneous with the decentralisation system, it is not clear that it is the result of it, 1755–16.

Land Revenue.
The increase in land revenue is due partly to resettlements, partly to extension of cultivation in Bombay, Madras, Burma, and Assam, but not to better collection, 1747–51; enhancements on revision are due mainly to increased prices owing to the opening up of fresh markets for produce, 1752–9; decentralisation of the finances has not conduced to further enhancement of the land revenue, 1784.

Revenue Administration.
The land revenue could not be administered from a central office, but there is in the Central Financial Department an officer charged with reviewing the operations of the Provincial Revenue Departments, 1760; he, however, does not represent the Chairmen of the English Revenue Boards, but there are in each Province officers corresponding to them, 1761–2; the Finance Minister must rely on the Provincial Governments, and he is able to receive from them sufficient information, 1763–71.
Tobacco tax, objections to, 1803–4.

(4TH DAY.)

BARBOUR, SIR DAVID MILLER, K.C.S.I., formerly Financial Member of the Council of the Governor General of India, ANALYSIS OF EVIDENCE.

Experience, 1817–21.

Position of Financial Member.
Theoretically, the position of the Financial Member in India corresponds to that of the Chancellor of the Exchequer in England; practically it differs, because he has not got behind him the control of any body corresponding to Parliament, 1823–32; the check on the Finance Minister is the Governor-General in Council; behind the Governor-General in Council comes the Secretary of State and (in the remote distance) Parliament, 1845–9;

BARBOUR, Sir DAVID MILLER—*cont.*
the Indian audit system furnishes a sufficient guarantee to all these authorities that irregularities are not committed, 1841, 1850–3; the Finance Department, being practically weak though theoretically strong, relies on the support of the Secretary of State, 1854–5. If possible, the information of the Secretary of State regarding Indian finance should be strengthened, 2173–5, 2190–1; the power of the Viceroy is very great; if he is inclined to economy, the Government is economical; if to liberality, it is liberal, 1856–69; a policy involving expenditure is brought to the notice of the Financial Member early enough to enable him to state financial considerations, 1872–6; he can record his dissent, but there is a want of touch between him and the Home authorities, which it is difficult to remedy without impairing the authority of the Viceroy, 1887–91; the rule giving the Viceroy power to suspend the decision of Council on a question involving Finance, if he and the Finance Member are in a minority, is practically a dead letter, 1892–1900, 1910–21; the Viceroy alone may, in certain circumstances, overrule his Council, 1901–9; it is not the formal machinery of financial control that requires improvement, but greater attention should be paid to financial considerations and to the fact that great apparent financial prosperity is generally followed by the reverse, 1833, 1928–42.

Estimates.
The Financial Member has opportunity of discussing proposed expenditure with the Department concerned, 1954–5; it is not so easy as it is in England for the Finance Minister to get immediate information on Revenue questions or for the purpose of deciding appeals; but this difficulty are inseparable from the circumstances of India, and such matters must be left in the first instance to the Provincial Governments, 1957–74; though he has no special staff for the purpose, the Financial Member may, and does, either depute an officer to inquire into a particular matter or go himself, but he must conduct enquiries through the Provincial Government, 1975–8; each Province has authorities responsible for Revenue Administration, 1979–84; organisation of Revenue Departments not perfect, but satisfactory and improving, 1979–85; it is not possible for the Finance Department to make a close estimate of revenue for any particular year, except under the heads of Excise, Stamps, Opium, and some other heads, therefore it is necessary to estimate cautiously, though the revenue is more than fairly buoyant, 2038–43; the revised estimates in the Budget deal with expenditure as incurred, not with Treasury issues, 2046–7; the latter system would be difficult to introduce in India, 2070–5; the Budget is produced before the close of the financial year (and this arrangement is desirable in order that the estimates may be sanctioned and distributed by the beginning of the next year, 2065–6); but, even if it were deferred, so long as the Financial year closes on the 31st March, there would have to be a partial estimate in the Accounts for the expiring year, and the estimate is always somewhat less favourable than the result of the final Accounts, 2048–82.

District Treasuries.
System satisfactory, 1987; the monthly return from treasuries of receipts and issues is sufficient for the guidance of the Finance Member, and no improvement on the system drawn up by Mr. Westland in consequence of the mistake in regard to the Afghan War Estimates, has been discovered, 2329–30, 2033–7, 2044–5; there is little to be done in the direction of extending the use of banks, 1988–9; the losses from district treasuries are quite insignificant, 1990–3; the cost of the system is not great, and cash is moved, when possible, by means of bills, 1994–2011; the Bank of Bengal holds the Government balance and manages debt. Government cannot rely upon it for temporary advances, but works by its own balance, which should not be reduced below Rx. 8,000,000, as a minimum, 2012–28.

Provincial System.
The provincial system should eventually be still further developed if possible, by putting the Provincial Governments in a position of financial

BARBOUR, Sir DAVID MILLER—*cont.*
independence, 2083–4; the aim should be to assign to the Provinces permanently a reasonable share of their revenues, 2104; and the powers of control reserved to the Imperial Government should be exercised as little as possible, 1947, 2127. In the meantime, provincial estimates are subject to revision by Government of India, 1946–53; the constant revisions and absorption by the Central Government of increased revenue, as well as the special contributions levied on the provincial assignments are, at present, a necessary evil, though it is true that the Central Government takes the risks of finance except in the case of famine, 2085–94, 2104A–6; though the system has a certain tendency towards encouraging profuse local expenditure in years of prosperity, that tendency is checked by the Central Government, and it does not really lead to a higher standard of permanent expenditure, 2095–9. The principle of decentralisation has been given full effect to, though contributions and revisions have been more severe than was originally contemplated, 2129. It would not be possible to levy the contributions rateably without respect to the circumstances of each province, 2131. The increase of revenue under the provincial system is not so much due to more zealous collection as to the greater latitude allowed to the provincial authorities, 2110–4; in the case of Excise, there has been a considerable increase of taxation under powers vested in the Revenue authorities under existing legislation, 2115–20; the whole of the increased revenues is not to be attributed to increased taxation (2121); but generalisations from the figures must be made with caution, 2121–2.

Audit.
The real audit is made by officers who have no executive functions, 2132–4; there is a weakness, in that the Military and Public Works auditors are appointed and promoted by the authorities of their respective departments, and also in so far as the Comptroller-General audits expenditure for which he is personally responsible; but the weakness is not serious, 3135; the Comptroller-General does not come into direct contact with the Financial Member at all, 2141–2; he is quite outside the Financial Department, 2143–4; the local auditors take up every question connected with an expenditure, 2324A; they have power to disallow and to interpret rules; it would be impossible to refer all disallowances to a central officer, 2145–54; there would be no objection to a return being made of serious cases, as is done at present in the Public Works Department, 2155. The Comptroller-General's Appropriation Report is not of much value, but there is nothing much left for him to report, all irregularities being brought to notice from day to day, 2156–61. There is, moreover, a perfectly independent test audit which has an excellent moral effect, 2338–40. A perfectly independent auditor appointed by Parliament would in principle be more satisfactory, but would not be worth the cost, 2158. A critical Appropriation Report would not be the best means of giving Parliament information on Indian finance, but a committee or commission sitting from time to time, to report on particular matters would be useful, 2252.

Checks on Secretary of State.
The Government of India has power to protest, 2192–2209; but no appeal by it to higher authority is possible, 2210–13.

Prosperity of India.
There has of late years been a large addition to taxation and to the land revenue; but the average income of the people is very low, 2276–95.

Possible employment of Natives.
Saving effected by, 2293–317.

(5TH DAY.)

GODSELL, MR. WILLIAM, Auditor of the Accounts of the Secretary of State in Council. ANALYSIS OF EVIDENCE.

India Office Audit.
Conditions of appointment aim at securing independence, 2650–7, duties, 2658–60; staff, 2661–3; report laid before Parliament generally similar in form to that of English Comptroller and Auditor General, 2664–6; powers do not include that of

GODSELL, Mr. WILLIAM—*cont.*
disallowance, but disapproval may be reported to Secretary of State, who may or may not press the charge, 2667–77; no actual reports of approval or disapproval are made, 2725–6; in minor matters the Auditor reports a payment for disallowance, and the Secretary of State either disallows or passes it at his discretion, 2690–3; power to refer report to Committees of both Houses desirable, 2679–80; there has been only one instance of the Auditor questioning a payment definitely sanctioned by Council, 2681; but it was the opinion of a previous Auditor, Sir C. Jackson, that it was his duty to report if in his opinion the Secretary of State exceeded his powers, 2682–9; however important a policy may be, the Auditor would be at liberty to express a judgment on it to be laid before Parliament, unless the matter was already before Parliament, 2750–9, 2780–92, if he considered the appropriation of Indian revenues involved to be outside the Act of 1858, 2793; he would consider whether an expenditure was legal, 2744, and, as a matter of pre-audit, reasonable, 2745–6; but he would not consider himself called upon to say whether it was judicious, 2795A; the Auditor's report is submitted to the Secretary of State with a statement of the action taken upon it, but the statement is not laid before Parliament, 2695–2702; the Auditor's power is confined to the action of the Indian Government in Great Britain: he has no control over the final disposal of supplies by the Government of India, 2703–17, 2727–43, 2747–9; he experiences no difficulty in getting information, 2718–9; he may summon any subordinate of the Secretary of State as a witness, but in practice obtains information by correspondence, 2720–4; all accounts with a few exceptions are examined in detail, some are only tested, 2760–9; direct evidence is required of fulfilment of conditions of inter-departmental agreements, 2770–9.

(6TH DAY.)

COLVIN, SIR AUCKLAND, K.C.S.I., formerly Financial Member of the Council of the Governor-General, ANALYSIS OF EVIDENCE OF.

Experience, 2870–81.

Position of Finance Member theoretically corresponds to that of the Chancellor of the Exchequer, 2881*a*; he has security that every measure requiring his sanction is really brought to his notice, 2882–5; the audit system is a complete guarantee of this, 2891–2; there is, moreover, the practice of recording proceedings which are submitted by each Department to the Department above it, 2893–4; the proceedings of a Department not subordiate to the Financial Department would, however, only come to the notice of the Financial Member if his attention were drawn to them by the Member in charge of that Department, 2895. The Finance Member would refer any question as to legality of expenditure to the Legal Member, 3190–5. The Military Member has come to be regarded as a financial check on the Commander-in-Chief, though in practice he is not always so, 3228–35.

The checks on the Financial Member are the Viceroy personally, the Viceroy in Council, the Secretary of State and anticipation of the action of Parliament, but the last is stronger in relation to those officials who are nearest to the immediate sphere of parliamentary action, 2896–8.

It would be desirable, if possible, to strengthen the powers of the Finance Member in so far as concerns the deliberations which precede sanction to expenditure, 2899–900; so far as when a policy is formed, its results can be foreseen, he has ample opportunities of impressing his views on his colleagues, 2901, before a decision is arrived at, or, presumably, the Viceroy's mind made up, 3161; but he has not the detailed knowledge of the policy possessed by his colleagues in charge of that policy; moreover, the element of the unknown is greater in India than in Europe, 2902–6.

Sufficient attention is not paid by the Government of India to financial considerations, though such considerations are peculiarly important, not only on economic grounds, but because the taxpayer is an alien, unable to make his voice directly heard, 2909–11. The Finance Member generally has the support of the Indian Press, 3188–9.

Since 1885 and the establishment of the Russian power in Central Asia, military considerations have had a preponderating influence in the Government, and this has resulted in the weakening of the Finance Member, 2912–28. To some extent the control of the Finance Member over Public Works Expenditure also has weakened; but the internal administration being carried on by the Provincial Governments, pressure is not put to any great extent, in administrative matters, on the Finance Member, 2929–31. The decentralisation system, however, by turning the attention of the Viceroy from internal affairs to foreign affairs, which are costly, may also have contributed to the weakening of the Finance Member, 2957.

The power of suspending execution of a decision when the Viceroy and the Financial Member are in a minority was the first indication of the recognition of the altered position of the latter, 2951; it would not be desirable to give the Financial Member by himself power of suspending action pending reference to the Secretary of State, 3248–50. but the Viceroy generally supports the Finance Member so far as he can consistently with his own views, 2959–61. The influence of the Secretary of State inclines to economy, except in the matter of railway construction, 2932–6, 3167. The power of the Financial Member to dissent adequately secures consideration of his views by the Secretary of State, but is useless without the support of the Viceroy, 2937–40; direct unofficial communication between the Financial Member and the Secretary of State would not be advisable; he already corresponds with members of the Home Council, 2941–50.

The direction in which to look for the strengthening of the Finance Minister would be the strengthening of the financial interests in the Secretary of State's Council, by a larger diffusion of financial knowledge in it and (theoretically) in the Finance Department of the India Office, which should be amalgamated with the Revenue Department, 3284–97, and also the endeavour to establish control by Parliament without undue interference with the Government of India, 3115–34; the present Budget debate in Parliament is not of much benefit to India, 3170–3; the Secretary of State, and through him Parliament, are only responsible for expenditure on frontier expeditions, etc., in so far as they may be said to be the *causa causans* thereof, 3256–80.

Estimates.

The Finance Member is amply informed of the programme of expenditure, 2962–4; so far as concerns departments directly under him, *e.g.*, the Salt Department, Post Office, &c., he has ample means of gaining information concerning variations in revenue; so far as concerns Land Revenue, &c. he would rely, in the first place, on the Revenue Member, who would have expert knowledge, and, in the second place, he would fall back upon the Provincial Governments, 2965–73; the cost of having at headquarters an expert head of each Revenue Department would not be compensated by the advantage, 2974, 2978–81; such a measure is less necessary because appeals from the action of revenue authorities lie to the Provincial Governments, and only questions of principle reach the Central Government, 2982–8. The same remark would apply to having officers analogous to the French Inspectors-General of Finance, 2975–7. The date of the Budget is fixed, chiefly by climatic considerations, before the close of the financial year, and, even if it were produced later, it would still have to depend as to two months on estimate; there is some inconvenience in the system of revised estimate, but it is probably inseparable from the conditions of the country, 3040–5.

District Treasuries.

The district treasury regulations work very satisfactorily, 2988–91; surplus funds are not allowed to accumulate longer than absolutely necessary, 2992; the monthly treasury returns are useful, not as a check, but as a weather-cock to show which way the wind is blowing, 2993–8; it would be two or three months later than the date of the monthly return before the precise object of the issues would be known, 2998A–3001; but the

COLVIN, Sir AUCKLAND—*cont.*

Finance Minister would be able to judge of the progress of expenditure by comparison with previous years, 3002–14.

Weekly returns of receipts and issues would be neither useful nor practicable in India, 3031–35.

The Government use banks to the full extent that is advisable, 3015–18; the Government do not borrow from the banks, but are rather themselves in possession of accumulated balances; the system of large balances is indispensable, but care has to be taken that they should not be too large; frequent borrowing would disturb the money market, 3025–9; the minimum balance of about 8 crores which the Government maintains is a reserve balance outside of all probable requirements: besides this reserve there is always a large floating balance in the treasuries, 3209–15.

Provincial System.

Provincial Governments should be allowed great discretion, 3047–8. Decentralisation has been carried nearly as far as it can go, and no further results comparable with what have already been achieved can be expected from it, 3135–9; under the revision system the Central Government gets its own share of the increase calculated on the basis of the last five years; then, in making the new contract, the receipts and expenditure are summed up, and so much of the receipts assigned to the Provincial Government as will balance the expenditure; any surplus of receipts goes to the Central Government, 3049–56; therefore the Central Government has a direct interest in keeping down provincial expenditure, though it does not consider it its business to scrutinise very closely the provincial budgets, 3057–64, 3202–8; it would be preferable to make the term of the contract longer, say 10 years, and to give the Provincial Governments a smaller share of receipts, rather than abolish the revision altogether, 3065. The increase in revenue is attributable not only to improved administration, but largely to increased power of consumption owing to favourable seasons, 3066–71.

Audit.

In India the Account Department is habitually looked upon as outside the Executive, and the Comptroller-General is, from that point of view, independent, 3072–94; the audit by subordinate officers works well, and the test audit has been found a sufficient check on them, 3095–9; an Appropriation Report—like the English one—calling attention to grave irregularities would have a political rather than a practical value, but would deserve further consideration, 3100–14.

(7TH DAY.)

COLLEN, MAJOR-GENERAL SIR EDWIN, K.C.I.E., Military Secretary to the Government of India, and Military Member Elect of the Governor-General's Council, ANALYSIS OF EVIDENCE OF, 3301–675.

Experience, 3301-2.

Though the check on the Military Expenditure in India has always been strict, more detailed regulations have been laid down in recent years, resulting in more consultation with the Financial Department, less latitude being given to subordinate officers, and more concentration of power in the hands of the Military Member, 2305–11.

Whereas the most important references from the Military to the Financial Department have always gone to the Military Member, now every question requiring the concurrence of the Financial Department must go before him; the Military Member has more complete financial information than formerly, 3312–28.

THE ADMINISTRATION OF THE MILITARY DEPARTMENT.

The Military Member and the Commander-in-Chief.

There are two members of the Governor-General's Council representing the Army, the Military Member and the Commander-in-Chief; the former is responsible for Military Finance, and is the Military adviser of the Governor-General; the latter commands the Army, and is the executive officer of the Government; their relations would only in a very general way correspond to those of the Secretary of State for War and the Commander-in-Chief in England, 3329–35.

COLLEN, Major-General Sir EDWIN—*cont.*

The Military Member would probably rather correspond with the "Secretary-at-War" in England (now non-existent), 3336–8.

The presence of two Military representatives in the Council does not create an unfair Military predominance; the strongest factor towards economy, or the reverse, is the Viceroy, and the two Military Members could not override the Viceroy and the Financial Member united in the cause of economy; the Military Member is often in alliance with the Finance Member on the side of economy, 3599–605.

The control of the Finance Department over the Military Department is very complete; should the Military Department urge expenditure in itself desirable, but likely to impose a heavy strain on the finances, it would be for the Viceroy to decide between the views of the Military and Financial authorities; and it is quite possible that the Military Member might agree with the Finance Member on the question of urgency; but, on the other hand, considerations of general policy would override financial objections, 3582–92.

The Military Member is invariably, 3560–1, and always should be, a military officer, 3647; it is his special duty to check expenditure, as it is the duty of the Commander-in-Chief to promote efficiency, 3623–32; though he is not usually a trained financier, and his instincts are probably rather military than financial, his opinion is usually a valuable one from the financial point of view, 3615.

The Commander-in-Chief has no power of sanctioning expenditure, but only a power of spending Rs. 2,500 in any one case up to a limit of Rs. 10,000 in any month, on certain conditions, 3581–2. Such expenditure would be specially reported to the Controller (of the command concerned), and by him monthly to the Accountant-General, 3648–51, 3662–4. Lieutenant-Generals have similar powers of sanctioning special expenditure up to a limit of Rs. 1,000 in each case, or Rs. 2,500 in any month, 3665. General officers in command of districts also have similar power within narrower limits, 3672.

The Military Secretary.

The Military Secretary is responsible for laying the business of the Department before the Military Member and the Governor-General, with such financial reports as he thinks necessary; such reports are generally furnished by one of the Controllers of Military Accounts, sometimes by the Accountant-General, 3339–41.

It is his duty to do everything in his power to promote economy, consistently with the maintenance of efficiency in the Army; the Military Department frequently negative proposals for fresh expenditure, though of late years a great deal has been done towards promoting economy even by the executive officers, 3596–9, 3634–5.

The function of the Department is to check expenditure, and to do the best for the Army with the money that can be found, 3554–9. Describes the form in which questions arise, and the procedure in the Military Department, 3557.

The Accountant-General.

The Accountant-General is the chief officer of the Military Accounts Department, 3342–6.

The Accountant-General has dual functions: he is Deputy Secretary of the Military Department in charge of Section F., which deals with questions of pay, pensions, allowances, &c.; and he is the head of the Military Accounts Branch, and the official adviser of the Government of India in this Department. Though he is the head of the Military Accounts Department, his subordinates, the Controllers in the several commands, communicate direct with the Military Department, and their reports do not necessarily pass through his hands, 3349–51.

He is not an Auditor in the ordinary sense of the word; he compiles the audit reports of the Controllers, 3360–3; and only the most important questions requiring the orders of Government would be referred to him, 3364–7.

He is overworked, and his office is under-manned; fewer references should be made to him, and his position as second officer under the Military Member should be established and enhanced, 3368–72. Under him (in the Central Military Financial Office) are a Deputy and an Assistant Accountant-General, who are Military Officers

COLLEN, Major-General Sir EDWIN—*cont.*
seconded, and a staff composed of members of the Subordinate Accounts Service, 3352–9.

The Military Accounts Department.
The Military Accounts Department in each command is divided into:—1. The Central Branch. 2. The Accounts Branch. 3. The Pay Branch. 4. The Commissariat Branch. 5. The Ordnance and Clothing Branch. 6. Special Branches. Besides these, there are a certain number of Military Accountants detailed for inspection and special services, 3373.
It is the duty of the Controllers to suggest economies, and this duty should receive even more attention than it does at present, 3431–3.
There are three grades of officers; the first consists mainly of commissioned Army officers; the second of the Subordinate Accounts Service, recruited either from the non-commissioned ranks of the Army, or from civil life; and the third of the clerical service, consisting chiefly of natives, 3606–11.
The commissioned officers are seconded, in the first instance, from their regiments for five years; they then either return to their regiments, or enter the Department permanently, 3374–80, 3384–9. They have a prospect of promotion to the rank of Controller, or, possibly, Accountant-General, 3612–23. There is no inconvenience in the system of employing military officers, 3381–3.

The System of Account and Audit.
The principles of control and audit in the Department, are, first, the administrative duties of control, viz., strict preliminary scrutiny and review of demands for money and stores prior to supply; then the audit duties of checking the due application of money to the service for which they may be sanctioned; a prompt audit of the accounts, and rendering an Appropriation Audit Explanation, 3390–3405.
A disbursing officer, *e.g.*, a commissariat officer, draws on the assignment made in his favour, by the Controller, at a convenient Treasury; his accounts are first examined by the special officer in the office of the Chief Commissariat Officer in the Command; they are then sent for audit to the Examiner of Commissariat Accounts, who is an officer of the Military Accounts Department, at the headquarters of the Command, 3406–17. The examiners are extremely independent in their judgment, and the above-mentioned principles are carried out satisfactorily, 3419–21. They are guided by the Account Code (which might be more simplified, 3394–7), and, in case of difference of opinion, have the power of appealing against the decision of the Controller to the Government, 3484–91.
The Controllers constantly conduct test audits, either personally or through specially deputed officers, in order to check the efficiency of their subordinates, 3422–30. The Accountant-General also can annually make tours of inspection, 3460–1. In matters of account the Controllers are directly subordinate to the Comptroller-General, 3467–8; and the Accountant-General is aware of what his subordinates report to the Comptroller-General from the accounts he receives from them, 3469. He would also generally receive copies of any criticisms made by the Comptroller-General on their work, 3463–6. The Comptroller-General also conducts test audits, 3500–1.
No actual examination of stores is made, 3478–9; but the check consists in examination of the factory books, 3472–7. Stores accounts cannot be kept with the same accuracy as cash accounts, 3480–3. The Inspectors-General of Ordnance have power to write off losses or wastage of stores up to 500 rupees; beyond this the matter is reported to the Government, 3505–10. Heads of other Departments have similar powers, 3672–5.
The Director-General of Ordnance may transfer savings under one head of the Grant to another similar head, 3494–5. The Military Department may transfer savings under any Grant from one Command to another, 3496–9.
In cases where the Secretary of State's sanction is necessary, the Auditor must satisfy himself that it has been obtained, 3595–4.

Appropriation Reports and Financial Reviews.
Each Controller prepares an Appropriation Report, which is consolidated by the Controller-General in his Appropriation Report on the whole Military Expenditure, 3454–6

COLLEN, Major-General Sir EDWIN—*cont.*
These Appropriation Reports are more of the nature of reviews of the expenditure, &c., than an audit account proper; they do not report irregularities, 3437–40. Sufficiently important irregularities would reach the Government of India through the Departmental financial reviews, but not through the Appropriation Reports; it would be advantageous to include irregularities in the Appropriation Reports, 3441–57, 3562–5. The report on the Accountant-General's inspections might also be incorporated in the Appropriation Report, 3458–9.
The Financial Reviews report on the year's work in each Department from the financial point of view, 3566–9. There are also Administration Reports on each Department's work, 3570–2. The two together amply review the work from every point of view, 3573.
These reviews are closely analysed and reported upon, and, together with specially appointed committees, are a means of giving the Government information with respect to the progress of expenditure, 3574–7. Mode of appointment and constitution of special Committees, 3658–46.

Estimates.
The Controllers receive estimates from the heads of the Departments in their command in September, and forwards them, after revision, to the Head of the Department with the Government of India, by whom they are submitted to the Accountant-General in December, 3571–3; he having revised them, submits them to the Military Department on the 12th February, which passes them on to the Financial Department as early as possible after that date, 3514–8. The estimates in their upward course are much altered, advantage being taken of the latest information, 3530–1, 3546*a*–51, they are occasionally reduced by the Governor-General in Council, 3552–3
A large part of the charges, such as pay, allowances, and establishments, are fixed, but there is great variation in the price of victualling stores, 3519–25; the rates for labour and materials for works also vary locally, 3526–9.
The sums that are reasonably available for the variable services are considered between the Military and Financial Authorities before placing them on the estimates, 3543–6.
The Military Department receives reports on the cash issues from the treasuries, by means of which they test their own reports on the progress of expenditure; these Cash Issue reports do not show liabilities, they could not be relied upon in estimating the cost of a Campaign, 3532–43.
Demands which arise too late for insertion in one year's estimates are carried forward at the head of the list for the next year, 3578–80.
Large immediate demands which arise after the passing of the estimates must be specially sanctioned by the Financial Department, as in the case of urgent expeditions, the treasuries being authorised to grant additional assignments, 3652–61.
Officers commanding stations can issue orders on the treasuries in emergencies, 3470–1.

[30TH DAY.)

CROMER, LORD, G.C.B., ANALYSIS OF EVIDENCE OF.
Qq. 13,641 to 13,674 relate to the general question of Appropriation of Charge.
Indian experience, 13,503–5.

Position of Financial Member of Council.
Theoretically the position of the Finance Member of Council is very similar to that of the Chancellor of the Exchequer, but the Finance Department in India does not occupy the predominant position that the Treasury does in England; probably, amongst other reasons, because the Treasury in England had for years the support of one of the most powerful ministers, Mr. Gladstone; and, though the personal element is more important in India than under a parliamentary system, it will always be a most important factor, whatever system may be adopted, 13,508–10. No doubt, also, the power of Parliament behind the Chancellor of the Exchequer is a source of strength to him, though it is not invariably exerted in the interests of economy, 13,511–7. In India every member of Council was not only a head of a department of State, but also a member of a Government which was collectively responsible for its acts, and

CROMER, Lord—*cont.*

the question of balancing revenue and expenditure was one of the most important considerations to be taken into account. But it is no doubt possible that at other times the circumstances in Council may have been different, and financial considerations may have gone to the wall, 13,518–9. No doubt, also, heads of spending departments are apt to wish to spend freely in times of surplus and not lay by for the lean years, which, more especially in India, usually follow; but the question whether that tendency constitutes a difficulty to the Finance Member, involves personal considerations, 13,520–4. The Viceroy in India is no doubt very powerful, and he fulfils the important function of securing unity of action in the different departments; in this respect his position is more nearly akin to that of the German Chancellor than to that of the English Prime Minister; but anything which would transfer the Government of India from the Viceroy to the Secretary of State, or tend to govern India rather from England than in India should be avoided, as it is impossible for an authority in England to have the necessary knowledge, or to be able to stop in time action which may lead to unforeseen expenditure; the most important safeguard is that the Financial Member should be kept fully informed at an early stage of all that is going on, and that is a matter which depends chiefly on the Viceroy. In England members of the Cabinet are kept more fully informed on foreign affairs than members of Council in India, but even in England steps leading to heavy expenditure are taken, as for instance in the Education Department, without the knowledge of the Treasury. It is, however, undoubtedly the case that the practical control of the Finance Minister depends much on the idiosyncrasy of the Viceroy; still, it would not be desirable to impair in any way the power of the Viceroy, 13,525–42. In the event of the financial, or any other member of Council disagreeing with a policy, there was a disinclination to record a formal dissent, which, being a public document, cannot therefore be written with freedom. A system of private letters from members of Council to the Secretary of State would not be desirable; but opinions might be recorded in Confidential Minutes which might be sent for the information of the Secretary of State, but not for publication without their consent, 13,548–62. With regard to the idea that military men are necessarily blind to financial considerations, that used not to be the case; and, though theoretically the military element may be too strongly represented, no better arrangement can be suggested, and the Military Member acts as a check on the Commander-in-Chief, 13,563–70. As to strengthening the financial element in the Secretary of State's Council, the danger of getting in experts, who might wish to govern from London, should be borne in mind, though it is, of course, desirable to have a certain number of members who attach weight to finance, 13,571–9. Sir D. Barbour's suggestion of a small committee to be associated with the Financial Member would not be advisable for India, 13,580–3. The only remedy for a state of things in which the other members of council are not interested in finance is to improve the selection, 15,584–5.

Composition of the Viceroy's Council.

With regard to the composition of the Council, while there is no difficulty about getting the best men in the Indian service, there is much difficulty in getting men from England of the requisite capacity, and it would be well worth while to make the appointment more attractive to the latter class; it would be inadvisable to have the Council wholly composed of men of Indian experience—the merit of the present composition of the council is that it contains men of both Indian and English

CROMER, Lord—*cont.*

experience; of course there would be a difficulty in making a distinction between the emoluments of the two classes, but a pension might be granted to men appointed from England. The essential thing is to get a capable man, where you can get him; but in any case the English element should not be excluded, 13,543–7.

The provincial system is a most admirable system, both from the financial and the political point of view; but it is necessary to retain the power of withdrawing portions of the provincial allotments in the case of imperial emergency, though the power should be very sparingly used, 13,586–93.

The facilities of the Finance Member for getting information on revenue subjects used to be sufficient; a system like the French one of having Inspectors of Finance would probably create friction. What might be done would be to make more systematic use of the Provincial Accountants General, 13,594–602.

Under the system of check introduced after the Afghan War, such an error as occurred in 1880 could not recur, 13,603–6.

There would be an inconvenience, and no great advantage, in making up the Budget after the close of the financial year. The Indian accounts, owing to the provincial system, are very difficult to understand, and the actual account would not be of great interest to the public, 13,607–20.

Audit.

The Audit system was a good one; but, if the Auditor General is hampered by any want of independence, he should be made independent. There could be no objection to submitting a report by the Comptroller and Auditor General of India, drawn up in the form of the English Appropriation Report, to a Committee of the Council of India in this country with one or two independent members, though it is doubtful whether it would do much good, 13,627–40.

Apportionment.

With regard to the apportionment of charges between England and India, there is in England a general desire that India should be justly and even generously dealt with; but a general impression exists in India that the English view is advocated more successfully than the Indian; it is, therefore, most desirable that there should be some tribunal of arbitration in the shape of a permanent board, containing, at all events, a judicial element; the board should be constituted by Act of Parliament with specific powers; and either party to a dispute about the apportionment of a permanent charge, such as that for the British troops, should have power of referring it to the board; points involving political considerations, such as the respective interests of England and India in a military expedition, are matters rather for the decision of Government or Parliament. If questions in dispute were referred to arbitration, the decision should be over-ruled, if at all, only by a resolution of Parliament, not by the Executive Government of the day; the machinery of the Judicial Committee of the Privy Council would be rather too elaborate for the purpose, 13,641–74.

An examination of the Indian Accounts by a select Committee of the House of Commons would do no harm, but it is very doubtful whether it would do any good, 13,682–90.

Development of popular institutions.

The first step towards seeing whether popular institutions in India should be developed, should be to examine how the natives of India have exercised the authority already given to them; if the result were satisfactory, a further voice in the affairs of the country might be given them, but in a gradual and tentative manner; it is by no means always the case that the taxpayers are most in favour of economy, 13,691–702.

SECTION II.—PROGRESS OF EXPENDITURE.

(8th to 11th, 15th and 16th, 18th, 20th to 25th; and part of 29th days.)

8TH DAY.

WACE, R. COLONEL R.A., INSPECTOR-GENERAL OF ORDNANCE, Bengal. ANALYSIS OF EVIDENCE OF, 3676–4198.

Experience, 3676–82.

THE ORDNANCE DEPARTMENT.

The Ordnance Department in India is charged with the duties of providing, storing, issuing, and accounting for equipments, accoutrements, and munitions of war for the use of the whole Army in India, including the Native Army and Volunteers; also, the supply of firms and ammunition to the military and civil police, and ammunition for the coast and frontier defence armaments for the Indian Marine, and for reserves for ships of the Royal Navy on the East India Station, and for fitting out armed merchant ships in time of war, 3683.

The Department is under the control of the Military Member of Council, 3684.

The direct control is vested in the Director-General, who acts as the adviser of the Commander-in-Chief, but would refer all questions involving expenditure to the Military Department, 3685–98.

Directly responsible to the Director-General are the four Inspectors-General who are in charge of the four circles (corresponding to the four Commands). Each of these is on the staff of the Lieutenant-General-Commanding and acts as his adviser, 3699–701.

They are in communication with the Controller of the Command, whose report on the financial effect of proposals they obtain before submitting them to the Director-General, 3702–4. The Inspectors-General have full power over all the Ordnance establishments in their Circle, and, subject to the Director-General, dispose of all questions regarding pay, promotion, leave, pension, &c. of subordinates. The sanction of Government must be obtained for promotion, through the Director General, of commissioned officers, 3705–8, 3712–14; or for permanent or recurring increases of establishment, &c. 3715.

The Inspectors-General have power to make up their stores by local purchase on emergencies up to a certain limit, 3709–11, 3928–9.

The Executive Ordnance Officers are officers of the Royal Artillery seconded for service in the Department; they are 36 in number, and are divided into 4 grades; of these 9 are Assistant-Superintendents of Factories; the remainder (27) are placed in charge of arsenals or depôts according to their grades, 3886–9.

They are appointed originally for a period of five years, renewable for a similar period; at the end of their second period they may be appointed to the continuous service list in the Department, 3890–2, 3869, 3909.

For the first year an officer has no executive duties, he is engaged in learning his work, 3909–14.

There is no school in India where they might go through a course of training before joining the Department, 3915. Consequently they have to come to England for the purpose after joining the Department, and to reduce the number of available officers, 3906.

The number of executive officers is small compared to the number of troops under supply, 3908; an increase is necessary as the arsenals are under-officered, 3915–6, 3924–7; and thus the service lacks the necessary controlling element, 3917–8; there should be an addition made to the staff to take the place of officers on furlough, 3914–21.

The Director-General and the Inspectors-General draw consolidated allowances; the other commissioned officers (being seconded for service in the Department) receive regimental pay, plus a staff allowance, 3716–8.

WACE, Colonel R.—*cont.*

The Director-General and the Inspector-General of Ordnance can only spend money within their Budget, except with the further sanction of the Government Department, 3719–20, 3726, 3721–25.

The Director-General can, in emergencies, transfer money from one Circle to another under the same head, 3727–9; but not from one head to another, without the sanction of Government, 3730–1.

The Inspectors-General and the Controllers have power to write off losses up to 100 and 500 Rs., respectively, beyond this the matter would be reported to Government; in the case of theft, a board of investigation would be appointed, 4160–6.

Each establishment within a Circle prepares its estimate for *personnel* by the 15th August, these are consolidated by the Inspector-General, who submits them as a whole to the Controller for revision, thence they go to the Director-General, 3732–44.

An estimate of work proposed to be carried out during the year is submitted before the estimates for material are prepared, 3745–55.

The preparation of the estimates of material and labour is based upon an average of past years, modified by the circumstances of the time, 3756–60.

The superintendent of each factory or Ordnance officer in charge of an arsenal is responsible for the correctness of the accounts, both of receipts and issues; they are compiled by his staff, and sent, for audit, to the Central Military Accounts Office of the Circle The pay-sheets are audited by the Pay Examiner; the stores accounts by the Examiners of Ordnance Stores, 3761–71; checked by the Commissariat Examiners, because the Commissariat Department pays on the demand of the Ordnance officer demands of the local contractors for stores supplied to the Ordnance Department, 3772–6, 3781.

The head of such establishment receives a permanent advance of cash, for the pay of the European staff, labourers, &c., and incidental expenses, 3777–80.

The Inspectors-General ascertain exactly how their budget is being spent month by month, by means of the returns they receive from their subordinate officers, and from the examiners of Ordnance Accounts, 3782–5.

The system of stocktaking is very complete, 3786–9, independent yearly tests of stock are made by the Inspectors-General and the Ordnance Examiner, 3790.

Monthly returns of the balance of stores are sent by each establishment to the Inspector-General, these are compiled and sent quarterly to the Director-General; this facilitates the transfer of stores from one arsenal to another, 3791–5. An Inspector-General would be able to inform the Director-General of the amount of stores in hand in his Circle within two or three weeks, 3796–800.

The distinction between an arsenal and a depôt, 3807; of enumeration and distribution of establishments in each Command, 3801–6, 3812–7, 3843–9. Financial considerations and the extended construction of railways have diminished the number of establishments, which might even admit of further reduction, 3808–11, 3818–20.

The reduced number of establishments has caused no inconvenience, and centralisation has made the control more complete, 3831–2.

A few large establishments are preferable to a number of small establishments, 3850 1.

The establishments are sufficiently near the troops to supply them efficiently and quickly, 3821–30.

A supply of stores required for mobilisation and sufficient for immediate wants, is kept, in regimental charge, 3833–6; and regiments are always in possession of their service ammunition; for these stores the Commissariat Officer accounts to the Regimental Examiner, 3837–42; regimental supplies can be supplemented with sufficient rapidity to prevent inconvenience, 3864.

WACE, Colonel R.— *cont.*

There cannot be fewer than two powder factories, as the possibility of explosions must be taken into account, 3867–9. All the necessary powder is made in India, but in emergencies and on the change of equipments, ammunition is imported, 3938–40, 4012–14. Cordite is, as yet, only experimentally manufactured in India, 3869, 4167–75. There must also be two factories for small-arm ammunition. There are also one for artillery projectiles, one harness factory, and three for gun-carriages. The stores imported from England include guns, rifles, and the steel component parts of gun-carriages, 3936–7; since the Department in India manufactures steel of artillery projectiles, with proper plant it would be capable of making gun-mountings and carriages, 3865–6, 3951–4, 3958–78.

The number of European engineers, foremen, &c., are kept as low as possible. Details of distribution of number of European staff in the factories, 3893–900. The cost of superintendence in 1893–4 amounted to 5½ per cent. of the value of the out-turn, 3901. Comparison of wages paid in India and England, and the comparative amount of work performed by individual native and English workmen, 4085–99, 4144–6.

The amount of skilled European supervision must be increased, if the policy of making India independent is to be followed, 4124; but the consequent increase would be more than balanced by the cheapness of labour, 4125–6. Possibility of employing native supervision, 4176–97.

So as to reduce the Homes Charges the Ordnance Department might economically extend its sphere of manufacture, 3947–54.

Illustrates the economy of manufacturing in India over importing from England, 3979–93, 4006–11.

Comparative quality and cost of English and India made saddlery, 4034–40; but the choice between the two methods of supply should be solely governed by financial considerations, 3955–7.

Probably rifles could not be economically made in India, 3758–78, 4130–43.

Comparison of the methods of making up cost accounts and of the ascertaining indirect expenditure in England and India, 3994–9.

The system of accounting in the Ordnance Department were approved of by a specially appointed Committee, 4000–2*a*; but, to relieve the superintendents from clerical work, it is contemplated to assimilate the system of accounting to the Home system, 4040–4.

The means of ascertaining the cost of labour in the manufacture of stores, 4045–71.

The capital value of the buildings, machinery, &c. of the Ordnance Department increased from 59½ to 71½ lakhs between 1884 to 1891, 4077; in the same period the out-turn nearly doubled, 4077–80; the capital account is made up on the English system, 4072–61.

Much attention is given to the possible reduction of expenditure, 4119–21; the demands of regiments and batteries, &c. are strictly checked, 4147–51.

Expenditure has been constantly kept down by the Government, the reserves being kept as low as possible, 4100–5; the greatest economy has been in Bengal, 4107–9.

The reduction consequent upon the report of the Ordnance Committee of 1879 has amounted to over 3 lakhs, 3870–8. The out-turn nearly doubled from 1884 to 1892, 4077–80.

Particulars of the expenditure in England on Ordnance stores from 1875 to 1894, 3941–6.

The cost of Ordnance stores in India will probably increase, but this increase should be more than counterbalanced by the decrease of the home charges consequent on the extension of the manufacture in India, 4116–8, 4127–9; but the total expenditure can never decrease owing to the immense increase in the cost of modern ammunition, 4127–9.

9TH DAY.

JACOB, MR. STEPHEN, C.S.I., ANALYSIS OF EVIDENCE OF—*continued.*

THE EXPENDITURE ON LAW AND JUSTICE:

The impossibility of making a fair comparison of the expenditure of years prior to 1875, owing to different method of keeping the accounts, 4199–208, 4673–80.

The figures for 1893–4 are quoted as being the latest available actuals, 4214–21.

The population for which the Legal Establishments were provided was, in 1875–6, 183,783,537, and the area of British India 862,878 square miles; the population now is 218,275,461, and the area 947,275 square miles; 2,974,213 of the increased population is due to the increased area, 4209–13.

THE ADMINISTRATION OF JUSTICE IN INDIA:

Criminal Courts.

The magisterial work is done by the District Magistrate, assisted by assistant and deputy collectors and magistrates, and by the sub-divisional officers, 4478; the District and Assistant Magistrates are chiefly Europeans, the others natives; they would deal with the same class of cases as the magistrates in England; their powers of punishment vary from one month's imprisonment and 50 Rs. fine to two years and 1,000 Rs. fine and whipping; the District Magistrate exercises appellate jurisdiction in respect of magistrates of the second and third class, all of whose sentences are appealable; the sentences of the first class magistrate *above* one month's imprisonment and 50 Rs. fine are subject to appeal to the Sessions Judge, who is also a civil judge, 4478–96.

The Sessions Judges (one for each district, or sometimes one for two districts), sit at the headquarters of the district; they have the power to sentence to death subject to the confirmation of the High Court; in regard to appeal, their powers of summary sentence are only the same as those of District Magistrates, 4497–514; the number of appeals to the High Court is very large, 4508.

There are also a certain number of honorary magistrates, 4542–4.

The High Courts may revise the order of any of the subordinate courts on their own initiative or otherwise, 4516–8.

Pay of the foregoing magistrates and judges, 4549–51.

Civil Courts.

The lowest grade of judge is the Munsif, who is a native judge; he can try suits up to 5,000 Rs. in value; next above the Munsifs come the Subordinate Judges, who have power to try all original suits of any value, and sometimes exercise appellate powers; the District and Sessions Judges can try all original suits, and exercise appellate jurisdiction over the decisions of subordinate judges, except as regards cases in which the value exceeds Rx. 5,000, when the appeal lies to the High Court, 4519–20.

The District Judges practically control the administration of justice and distribute the suits between the various courts, the subordinate judges are practically their assistants; over them all are the High and Chief Courts. A High Court is established by Royal Warrant, a Chief Court by an Act of the Government of India. In some Provinces there are no Chief Courts, 4521–9; in such cases there are Judicial Commissioners, 4530–6.

Pay of the judges on the civil side, 4545–7.

There is a tendency to increase the number of courts, 4537–41.

Comparison of Expenditure.

On Law and Justice the gross expenditure was Rx. 2,274,000 in 1875–76; the estimated gross expenditure for 1895–96 is Rx. 3,125,000; (this includes Rx. 37,000, under the head of refunds, 4234–8, which are more properly deductions from receipts, 4303–6) increase, Rx. 851,000, but of this increase, Rx. 100,000 is due to the extension of territories, leaving about Rx. 750,000 increase for the former area, 4222–33.

The percentage of increase of the gross expenditure compared with that of the population is as 33 to 17, 4239–43.

To these totals should be added a non-effective charge of about Rx. 400,000 for pensions, and also a proportion of the pay of officers whose duties are both executive and judicial, 4567–4602.

Distribution of the Increase.

Of the increase, Rx. 463,000 arises on civil courts, Rx. 291,000 on criminal courts, and Rx. 100,000 under miscellaneous heads, 4244–50.

JACOB, Mr. STEPHEN—*cont.*

The expenditure in 1875-76 and 1893-94 on Civil and Sessions courts (excluding Upper Burmah) is divided as follows:—

	Rx. 1875-76.	Rx. 1893-94.
Superior courts	253,451	326,331
Subordinate courts	224,493	331,599
Establishments	212,613	304,453
Contingent expenses	34,033	85,747
Witnesses	6,175	14,195
Process service	167,370	250,284
	898,135	1,312,609

4251-64, 4455-51.

Explanations of the increase under the head of superior courts, 4314; subordinate courts, 4315-6; establishments, 4317, 4332-38; process service, 4317-26; contingencies, 4327-31. Under the head of judges, the increase is mainly due to the separation of judicial and executive functions, 4339-58.

The expenditure in 1875-76 and 1893-94 on criminal courts is divided as follows:—

	Rx. 1875-76.	Rx. 1893-94.
Superior courts	354,232	342,955
Subordinate courts	108,988	213,037
Small cause courts	51,602	43,205
Establishments	221,494	224,708
Allowances	35,871	48,531
Witnesses	9,234	35,018
Process service	22,171	31,854
Other charges	70,691	65,578
	874,283	1,004,886
Upper Burmah		74,308
		1,079,194

4265-73, 4462-77.

Explanation of the decreased charge for superior courts, 4371-3; of the increased charge for magisterial courts, 4359-70; due to improvement in the pay, &c., of the lower classes of native Magistrates, 4438-40; establishments, 4443-5; allowances, 4446; witnesses, 4447-50; process service, 4451-2; the decrease under other heads, 4453-5.

The increase on the Supreme Courts has been comparatively small (Rx. 47,240, excluding Upper Burmah, 4274-80, 4306; and of this Rx. 24,000 is due to the salaries of Judges and Judicial Commissioners, 4281-4; the increase under the head of Law Officers has amounted to Rx. 53,000 (Rx. 1,000 due to Upper Burmah, 4307-9), of which Rx. 37,000 is due to the increased number of Government Pleaders necessary to render the service efficient, 4285-96.

The charges for Presidency Magistrates Courts, Coroner's Courts, and Small Causes Courts, have remained almost stationary, 4297-302.

The Separation of Judicial and Executive Functions as a factor of the Increase.

The separation, so far the higher courts are concerned, is practically complete in the Regulation Provinces, and has caused an increase of Rx. 58,000, 4339-41.

In 1875-6, both revenue and judicial functions were performed by the Commissioners and other officers in the Punjab, for instance, but no part of their pay would have been charged to Law and Justice as it is now, 4342-6, except in the case of certain additional Commissioners appointed for judicial work.

JACOB, Mr. STEPHEN—*cont.*

All the magisterial work is performed by executive officers, 4406-11, 4371-7; any separation of magisterial from executive duties must cause very considerably increased expenditure, 4378-93.

The Net Cost of Law and Justice.

An inquiry was made into the expenditure of 1885 with a view to ascertain the net cost: the total receipts were then calculated to amount to Rx. 2,017,600, and the charges Rx. 2,142,700, 4604-15.

In 1875-6, the receipts did not cover the cost, but in 1893-4 the increase in the former had exceeded that in the latter, resulting in a balance that could be set against non-effective charges, 4616-36*a*. Similarly a surplus is estimated in 1895-6, 4637-8.

The expenditure must be expected to increase, but the increase will probably be balanced by the receipts, 4644-5.

Thus it may be said that the Courts of Justice in India are practically self-supporting, 4646-50.

The question of savings effected by the employment of natives, 4551-7; Europeans are employed only in the higher and supervising capacities, 4664-8.

Comparison of the cost of Europeans and natives, 4668-9.

The policy of recent years has been to employ natives more than formerly, 4670-1; practically all original jurisdiction is in their hands, 4672.

Jails.

Expenditure on jails has increased from Rx. 826,304 in 1875-6 to Rx. 924,000 in 1893-4; 4688; In the same period Jail receipts have increased by Rx. 36,000, 4688-94.

The average cost of each prisoner has increased, owing to the enhanced cost of rations and provisions, and better administration; the increase has been chiefly in the central jails, 4695-701.

The death-rate in jails, 4781-2.

10TH DAY.—PART I.

JACOB, MR. STEPHEN, C.S.I., ANALYSIS OF EVIDENCE OF—*continued.*

(N.B.—The figures given in this Digest are approximate only.)

MILITARY EXPENDITURE.

Comparison of the figures given in Sir Henry Waterfield's tables, the Statistical Abstract, and Sir Donald MacFarlane's Return, 4751-69.

Sir H. Waterfield's totals are exclusive of exchange, 4770-81.

Examination of the military expenditure in India (exclusive of expenditure in England) from 1881 to 1896, shows that a fixed grant of 30 per cent. of the revenue would cover the charges for military purposes, 4782-802.

Variations in the amount of the revenues in consequence of changes in the rates of taxation since 1881, 4803-26. The increase as between 1875 and 1895 may be reckoned at Rx. 3,000,000, 4825.

In 1893-4 the expenditure on new military charges, special operations, Upper Burmah, Military Works, etc., amounted to Rx. 2,455,000, of which Rx. 458,000 was for Upper Burmah (which, however, contributed a revenue of Rx. 838,000), 4829-35.

In order that a fair comparison of the ordinary military expenditure of 1893-4 with that of previous years may be made, the amount (Rx. 2,455,000) for new charges, should be deducted from the net Military Expenditure (Rx. 15,338,000), leaving a balance, Rx. 12,883,000, to represent the charges in existence in 1881, 4836-45.

In 1875-6, the military force (approximately) amounted to 60,000 British and 120,000 Native troops, and in 1893-4, 70,000 and 141,200 respectively, 4846-55.

The military charges in 1875-6 amounted to Rx. 12,108,000 on a revenue of Rx. 440,005,000 in 1893-4 the similar military charges amounted to Rx. 12,733,000, on a revenue calculated on the same basis as that of 1875-6 of Rx. 48,738,000, 4856-61.

First period 1875–6 to 1883–4. Second period 1884–5 to 1893–4.

10TH DAY.—PART. II.

COLLEN, SIR EDWIN, K.C.I.E., ANALYSIS OF EVIDENCE OF—*continued.*

THE INCREASE OR DECREASE OF EXPENDITURE ON EACH VOTE.

The Indian Army Estimates are divided into 20 grants, of which the two largest are Commissariat and Regimental Pay, etc., 4871–6.

(Under every head, the increase or decrease given hereafter is net, after allowance has been made for corresponding reduction and increase.)

Grant I.—Army and Garrison Staff.

In the first period, 1875–6 to 1883–4, the net increase was Rx. 12,600, due to the increased charges for the tours of inspection of the Commander in Chief, the creation of an Intelligence Department, and an increase in the number of musketry inspectors, 4877–84. In the second period, 1884–5 to 1893–4, the increase was Rx. 42,000, due to the additional requirements of Upper Burmah, and to improved sanitation, 4999–500.

Grant II.—Administrative Staff.

In the first period the net increase of Rx. 3,000 was due to the increase in the Military Accounts Department, 4885; in the second period the net increase of Rx. 14,000 was due to the creation of a fourth circle of accounts, and an establishment for Burmah, 5008–11.

Grant III.—Regimental Pay and Allowances.

During the first period there was a net decrease of Rx. 358,000, partly due to re-organisation, 4964–72; partly only apparent, owing to the transfer of the pay of medical officers to Grant IX., and partly due to a reduction in the number of batteries of artillery, 4973–83, and of officers, 4984–7. In the second period there was a net increase of Rx. 1,748,000, due to increases of the army, fall in exchange, causing an increased rupee charge for sterling payments, increase of rates of pay, and the establishment of native army reserves, 5091–9, 5108–11; which now number between 13,000 and 14,000, 5156–8. The pay of the native soldier was increased in order to attract a better class of recruit, 5172–84.

Grant IV.—Commissariat Establishments.

The net increase of Rx. 280,000 in the first period was due to the gradual substitution of locally brewed malt liquor for imported liquor, provisions for native soldiers at Quetta, compensation to native soldiers for dearness of food, and increase in pay and charges of the Commissariat and Transport Departments, 4988–94; the increase of Rx. 1,200,000 in the second period was due to the increase of the army, to augmented transport establishments, to free rations granted to native troops at certain stations, to increase in prices, and to compensation to native troops for dearness of food, 5112, 5149–55, 5161–4; also to the supply of forage by Government for mounted troops and transport animals, 5159.

The method of calculating the compensation to be awarded for the dearness of provisions, 5116–43. The compensation represents the excess of the cost to the native soldier of his ordinary ration over Rs. 3 a. 8 per mensem, and it is only granted at stations where such excess price actually exists, 5144–5; 5336–44.

Though the expenditure under this grant increased with the increase of the army, it has remained fairly constant since, owing to economical administration, 5187*a*–92.

Grant V.—Remount and Veterinary Establishments.

There was a net decrease in the first period of Rx. 33,000, partly due to the transfer of the charge for horse breeding to the Civil Accounts, and for the Hissar Cattle Farm to Grant IV., and partly to the abolition of the stud department, and the reduction of appointments, 4886–90; but during the second period the pay of veterinary officers was transferred to this grant, the number of reserve mounts was increased, and the price of forage rose, resulting in a net increase of Rx. 138,000, 5012–6.

COLLEN, Sir EDWIN—*cont.*

First period 1875–6 to 1883–4. Second period 1884–5 to 1893–4.

Grant VI.—Clothing Establishments.

The first period showed a net increase of Rx. 8,000, due to the increased purchase of local supplies, 4891–7; the second an increase of Rx. 103,000, due to augmentation of the army, the change in the clothing system, and increase of establishments, 5017–26.

Grant VII.—Barrack Establishments.

The net decrease of Rx. 31,000 in the first period was due to the transfer of establishments and furniture to the Public Works Department in Bombay, and the reduction of punkah pulling and similar establishments, 4898–900; the net increase of Rx. 40,000 in the second period was due to the increase in the army, the occupation of Upper Burmah, and increased number of barrack establishments, 5027–30.

Grant VIII.—Administration of Martial Law.

An abolition of appointments during the first period caused a net decrease of Rx. 3,600, 4900. The net increase of Rx. 12,000 in the second period was due to the raising of salaries, 5031–9.

Grant IX.—Medical Establishments.

There was a net increase (after allowing for certain transfers to other grants) in the first period of Rx. 93,000, due to the promotion of officers of the Army Medical Department to be Surgeon-Majors after 12 years' service, and to the transfer to this grant of the Native Hospital Corps, 4901–11; the net increase of Rx. 122,000 in the second period was due to re-organisations, the creation of the Indian Nursing Service, etc., 5040–6.

Grant X.—Ordnance Establishments.

Reduction and rigid economy in the first period brought a decrease of Rx. 51,000, 4912–26, 5069–70; but during the second period there was an increase of Rx. 333,000 due to the development of establishments, changes in material, increase of the army, increase of reserves, of stores, and of camp equipage, and enhanced prices, 2047–61; a part of the increase is due to the extended use of local supplies, 5066–8.

The expenditure under this grant has a natural tendency to increase, even were the numbers of the army to remain unchanged, since the cost of material is constantly increasing, 5047–64.

Grant XI.—Ecclesiastical.

The increased pay of Roman Catholic priests caused an increase of Rx. 6,000 during the first period, 4927; during the second there was no important variation, 5074.

Grant XII.—Education.

First period net decrease Rx. 3,500, due to economy in the management of Military Asylums, 4928; second period net increase Rx. 7,000, due to transfer of certain charges from Grant I., 5074.

Grant XIII.—Sea Transport.

First period net decrease Rx. 6,000, 4929–31; second period net increase Rx. 4,000, due to increased passage rates, 5075.

Grant XIV.—Miscellaneous Services.

Enumeration of the charges included in this grant, 4933–8; they vary every year, thus rendering comparison difficult, 5932.

There was an increase of Rx. 6,000 during the first period, 4932; but a decrease of Rx. 76,000 during the second, 5076–7.

Grant XV.—Volunteer Corps.

With the growth of the movement the expenditure increased Rx. 45,000 during the first period, 4939–40; and Rx. 109,000 during the second; the possibility of the extension of the volunteer system is limited by the number of the European and Eurasian population only, 5078–80.

NON-EFFECTIVE SERVICES.

Grant XVI.—Rewards for Military Services,

The grant includes Victoria Cross annuities, annuities for meritorious services, etc. The net decrease of

First period 1875-6 to 1883-4. Second period 1884-5 to 1893-4.

COLLEN, Sir EDWIN—*cont.*

Rx. 1,400 in the first period was due to a transfer of rewards to pensioned native soldiers to Grant XVIII., 4941-3; during the second period the net increase was Rx. 4,000, 5081-2.

Grant XVII.—Military Pensions to Europeans.

The increase in the first period amounted to Rx. 6,000, due to the increased number of retired officers living in India, and to the capitalisation of pensions, 4944-6; and the increase in the second period, Rx. 31,000, due to the same causes, 5083-5.

Grant XVIII.—Military Pensions to Natives.

These pensions include invalid and wound pensions of warrant and non-commissioned officers and men; after 15 years a man, if invalided, is pensioned, but ordinarily he is pensioned after 21 years; if men are passed into the reserve they receive a retaining fee only; the increase in the first period was Rx. 135,000, 4947-60; in the second Rx. 61,000 due to field service and retirements on re-organisation, 5086-8.

Grant XIX.—Widows' Pensions, Compassionate Allowances.

First period, increase Rx. 2,000, 4961; second period, increase Rx. 5,000, 5089.

Grant XX.—Departmental Pensions.

The increase of Rx. 17,000 in the first period, and of Rx. 16,000 in the second period, were due to the enlargement and re-constitution of the Army offices, 4962-3, 5090-2.

11TH DAY.

COLLEN, MAJOR-GENERAL SIR EDWIN, K.C.I.E., and MR. STEPHEN JACOB, C.S.I. ANALYSIS OF EVIDENCE—*continued.*

SYSTEM OF RECRUITING THE NATIVE ARMY.

The recruits are enlisted by officers stationed at centres of areas from which the best men are expected, they usually undergo a certain amount of training at the regimental centre, before they are passed into the ranks of the linked battalions, 5373-96.

The district from which a regiment draws its recruits depends upon the individual composition of the regiment, 5397-401.

Cavalry regiments usually make their own recruiting arrangements; recruits make a payment of Rs. 200 or more before joining, in order to pay for their equipment, but are recouped by their pay; they also receive forage allowance on a regular scale, 5402-6.

It is a common practice for candidates to come to the head-quarters of cavalry regiments and wait for vacancies, 5407-13.

Since the pay of the cavalry has been raised, there has been no difficulty in filling the ranks, 5414-7.

The cavalry pay is now Rs. 31 per mensem; the infantry Rs. 9, 5427-9.

The infantry need a year's training before they are fit to join the ranks, the cavalry somewhat longer, 5418-20.

Volunteers.

The volunteers in India are a useful force, valuable to the extent of the charge incurred; they now number from 28,000 to 30,000, the limit of the force is probably the number that can be obtained, but the cost is not likely to increase in the same ratio as heretofore, 5606-19.

MILITARY EXPENDITURE IN ENGLAND.

The whole expenditure of the Government of India in England, civil and military, has increased by 3,000,000*l.* since 1875. *Jacob*, 5431-42.

Army effective charges.

An increase of 430,000*l.* is on account of payments to the War Office, due partly to the augmentation of the army, but also to the increased capitation rate paid to the War Office. *Jacob*, 5442-3.

The capitation rate paid for each man furnished to India of all arms was formerly 4*l.* 12*s.* 6*d.*, and on this rate the payment in 1875 was based (5448);

COLLEN, Sir EDWIN, and JACOB, Mr. STEPHEN—*cont.*

on the report of Mr. Bouverie's Committee in 1875 it was raised to 5*l.* 16*s.* 7*d.*, *Jacob*, 5444-50; but later on Lord Northbrook's Commission, after settling the amounts to be paid for the years from 1886 to 1889, fixed a capitation rate of 7*l.* 10*s.* for 1890. *Jacob*, 5451-6.

The difference between 7*l.* 10*s.* and 4*l.* 12*s.* 6*d.* would probably account for about 200,000*l.* of the total increase, to this should be added 190,000*l.* for deferred pay (which was not given in 1875-6), and these sums account for 390,000*l.* of the increase, leaving only about 50,000*l.* to represent other causes, including the increase of the army. *Jacob*, 5457-65.

Probably the Government of India would consider that the increase in the capitation rate is greater than their needs require, *Collen*, 5593-8; and that the old system under which India did its own recruiting was more economical, *Collen*, 5598-605.

Transport.

Though the amounts for 1875-6 and 1895-6 are very close, there were considerable variations in the intermediate years owing to changes of system. The charge is not one likely to increase. *Collen and Jacob*, 5465-74.

Other charges.

There is no special remark to be made about charges under this head. *Jacob*, 5475-9.

Enumerates the charges for particular years under this head, amongst which are included advances of pay to troops on passage to India, which is outside the present capitation rate payable to the War Office. *Jacob*, 5480-6.

Furlough pay.

The increase is about 9,000*l.*; under rules introduced in 1886, the rates of furlough pay were reduced (though the leave granted was more liberal), thus balancing the increase which has resulted from the increase of the army. *Jacob*, 5487-90.

Non-Effective Charges.

This head is divided into the sub-heads British and Indian, the first being the share of pensions which belong to service of Imperial troops in India, and the second the pensions of Officers of the Indian Army. *Jacob*, 5491-5.

There was a complete change made in 1885-6 in the method of making the British payments. Up to 1885 India made a capital payment in respect of her share of each pension; but after 1885 India paid her share of the actual pension charge, calculated actuarially, falling due within the year. *Jacob*, 5496-512, 5672-82.

After the cessation of the former system the charge was very much reduced. *Jacob*, 5641.

It is not possible to compare the annual payments under this head, under the present system, with those under the former system. *Jacob*, 5639-84.

Under the Indian sub-head the increase of about Rx. 746,000 has been due to the increased number of successions to Colonels' allowances, and generally to increase numbers of pensioners, owing to enforced retirements, &c. *Collen*, 5512-9.

The amount for Colonels' allowances was calculated to decrease after 1895. *Collen*, 5526.

The maximum charge for pensions generally is calculated to be reached in 1901.

Stores.

This is divided into several sub-heads.

The policy of the Government has been to purchase locally more than formerly, *Jacob*, 5530-1; and this has prevented the charge for stores in England being so much increased as might have been expected from other causes. *Collen*, 5533, 5537, 5542.

The charge for clothing has risen from 225,470*l.* to 236,400*l.*, but the charges in intermediate years have been much heavier. *Jacob*, 5532-5.

The charge for Ordnance and Miscellaneous Stores has fallen from 470,000*l.* to 426,000*l.*; the increased price of material imported has prevented local manufacture causing a larger decrease. *Jacob*, 5536-7.

The charges in intermediate years have been heavier owing to changes in equipment. *Collen*, 5537-8.

COLLEN, Sir EDWIN, and JACOB, Mr. STEPHEN—*cont.*

The charge for "other" stores has also fallen from 381,000*l.* to 42,000*l.*, the result of local purchase. *Collen and Jacob*, 5539–41.

Special Operations and Defence Works; description of the method of ascertaining the charge for stores to be made against special operations. *Collen and Jacob*, 5542–51.

The account for special operations was opened in 1878–9 and closed in 1883–4, whilst that for Defence Works commenced in 1886–7. *Jacob*, 5552–6.

Exchange.

The British soldier's pay is reckoned in sterling, and he is now paid the equivalent in rupees, *Jacob*, 5557–61; from 1873 to 1884 he was paid at 1*s.* 10½*d.* a rupee. *Collen*, 5685–90.

The amount of exchange compensation to military officers was Rx. 269,620 in 1893–4, and was estimated in 1895–6 at Rx. 610,000, 5584.

The facilities given to military officers to send remittances home at the official rate have ceased since the grant of the compensation allowance. *Collen and Jacob*, 5693–702.

In Sir Henry Waterfield's tables 10 rupees are treated as the equivalent of each 1*l.* due to British soldiers, and the extra number of rupees paid to the soldier in order to convert his sterling pay at the current rate of exchange are shown in a separate column. *Jacob*, 5562–71.

The amount for exchange compensation is also shown separately. *Jacob*, 5580–4.

(15TH DAY.)

JACOB, MR. STEPHEN, C.S.I. ANALYSIS OF EVIDENCE OF—*continued.*

DEBT SERVICES.

In India there is no sinking fund as regards the rupee debt, but in England there is a small sinking fund for the general Indian debt merely to replace the discount (*i.e.*, the difference between par and the price of issue of the stock), 7186–91. There are also sinking funds in connexion with the purchases of some guaranteed railways, 7192.

Savings bank receipts are available for all purposes for which money is raised by loan, 7192–7.

The debt of India is divided (as a matter of account, 7237–8) into two divisions, ordinary and Public Works; the latter is defined as the total capital expenditure, incurred from revenue or loan, on railways and irrigation that is charged as capital on which interest is chargeable, 7202–7. (A work that is likely to produce 4 per cent. within a given time is classed as a productive work, 7496–500). This division has been carried back so as to include the whole of the capital expenditure on Public Works, 7490–5.

In 1895–6 the interest charged to the Public Works Department exceeded the total interest on rupee debt in India; this arises from the fact that the Public Works are charged with interest at 4 per cent. on their capital expenditure, and that that capital expenditure exceeds the total amount borrowed for other purposes, 7192–7. The debt of India does not necessarily increase in the same ratio as the debt of the Public Works Department, because the latter is partly due to investment by the Government of India of their balances, which avoids the necessity of borrowing, 7208–13.

Savings Bank receipts are available for all purposes for which money is raised by loan, and come in aid of the Government balances, 7198–200.

Until last year the Indian Government allowed interest at 3¾ per cent. on savings bank deposits, now it is 3½ per cent., and as they charge the Public Works Department 4 per cent. all round on their capital expenditure, there is an apparent profit from these deposits, but not a real one, as the cost to the Government is fully 4 per cent., 7214–7, 7221–7. The limit of deposits is Rx. 200 a year, and Rx. 2,000 in all; the total at the end of 1895 was Rx. 10,701,000, 7218–21. The lowest rate at which a loan has been raised in India (in rupees), is 3½ per cent. at 96 in 1893, and in England 3 per cent. above par, 7228–36. The 2½ per cent. loan about to be issued in London is being quoted at

JACOB, Mr. STEPHEN—*cont.*

105¾, 7239–43. Quotations and prices of the new 2½ per cent. loan, 7239–43, 7372–80; the reason for the loan, 7434–5.

In 1875 the total debt was in India Rx. 69,850,000, and in England 48,600,000*l.*, total 118,450,000*l.*; and in 1895 it was Rx. 104,373,000 and 116,005,000*l.* respectively, total 220,378,000*l.*; increase Rx. 102,000,000. (taking the rupee at 2*s.*), 7244–8. The interest on debt in 1875 in India was Rx. 3,017,000, in England 2,161,000*l.*, total 5,178,000*l.*, and in 1895 Rx. 3,633,000 and 3,857,000*l.* respectively, total 7,490,000*l.*; increase 2,312,000*l.* (taking the rupee at the same rate), 7249–50. Since the average rate of interest was, in 1895, between 4¼ and 4½ per cent., and in 1895 between 3¼ and 3½ per cent., there has been an average annual saving of 1 per cent. or 2,200,000*l.*; and (so far as it concerns the taxpayer) this saving rather more than counterbalances the increased payment due to the fall in exchange; but in consequence of the fall in exchange India cannot enjoy the benefit of this saving, 7254–76.

In 1875 the ordinary debt was about 96,000,000*l.*, and the cost of it in interest about 4,000,000*l.*, 7277–85. In 1895 it was 70,000,000*l.*, the cost being about 2,275,000*l.*; the reduction, both in debt and cost, is considerable and very satisfactory, 7277–98. The exchange, however, on the interest must also be added as a charge which amounted, in 1893–4, to Rx. 1,621,000, 7420–31.

The productive (or public works debt) now stands at 150,000,000*l.*, and a charge of 4 per cent. is made against the Public Works Department on that portion of the debt which is not raised for any special work, such as the purchase of a railway, but in the case of debt raised for a special work the actual cost of the debt is charged to the Department; the former would account for about 120,000,000*l.*, and the latter for about 30,000,000*l.*, 7299–7306. Though the 120,000,000*l.* is raised at 3¼ per cent., and brings in 4 per cent., there is no profit to the Government, since the receipts are in rupees and the interest has to be paid in sterling, 7307–27; on the whole the productive debt does not pay its charges, 7828–35; and the difference, which falls on the taxpayer, is about 2½ millions, 7336–54.

Conversions.

In India in 1878–79 10 crores were converted from 5½ to 4½ per cent.; and in 1890–2–3 the whole of the 4½ per cent. to 4 per cent.; and in 1894–5 the whole of the 4 per cent. general debt was converted to 3½ per cent. (95 crores), 7355–9; most of which is guaranteed for 10 years, 7360–1.

In England, 17,000,000*l.* at 5 per cent., and 60,000,000*l.* at 4 per cent., have been converted into 3½ per cent., to run until about 1940, and new debt has been raised at 3 per cent, 7360–73.

Besides the debt there are certain obligations on which interest is paid; they amount to Rx. 13,000,000, and the charge is about Rx. 550,000, 7381–3. On the other hand, there are receipts with which the debt should be credited, the largest being the investment of the paper currency reserve, bringing in about 300,000*l.* a year, 7388–90; there are also receipts from loans to corporations and municipalities; the loans are made through the agency of the Provincial Governments for purposes of public convenience and utility; the Central Government charges the Provincial Governments 4 per cent., and the rate of interest charged is only limited by the minimum of 4 per cent.; 7391–401; a small amount is also lent to native States, 7402.

The discharge of debt by the Government has generally been in the shape of the conversion of the character of the debt, but in 1876–77 the Government purchased a certain amount of debt in view of the high rate of interest, 7403–7. In some years portions of the famine insurance allotments were appropriated to the purchase and cancelment of debt, and whenever their obligations have come into the hands of the Government in some casual way, they have been cancelled, 7408–15.

The debt discharged in England represents the balances of large debt transactions; sometimes it is the discharge of temporary debt, 7416–19.

The policy of the Government of India is to borrow as far as possible in India; they never borrow in

JACOB, Mr. STEPHEN—*cont.*

England for general public works expenditure; the only amount borrowed in England, other than for the purchase of specific railways, was in 1893-94, owing to the failure of the Secretary of States' bills; some have been borrowed in England for the purchase of railways, the redemption of railway securities, and for advances to railways, &c, the Indian Government reaping the benefit of the low rate of interest without the exchange complications, 7432–42. Other loans advanced in England, 7443–4.

A loan of 6,000,000*l.* was raised in England on the occasion of famine in Madras and Bombay, 1876–8, 7459.

The debt in England has, on the whole, increased since 1875–6 by 65,000,000*l.*, 7447.

Borrowing in India is really an expensive method of bringing money from England, as much of the rupee debt is taken up in London; the native can procure a higher rate of interest for his loan than Government pay him; the fluctuation of the rupee prevents money being borrowed in India at so good a rate as it might otherwise be borrowed; the Government estimate that not more than five crores of rupees could be borrowed in India with any degree of certainty, 7465, 7484. The people of British India hold very little of the debt, 7507–16.

If it were not for the difference in currency, money could be raised in England much more cheaply, 7485–9.

For many years the credit of the Indian Government has gradually been approximating to that of the Imperial Government, 7502–6.

Details cannot be given of how much is lent by the natives of British India, 7507–32; probably there is an accumulation of capital growing up in India, 7526–38.

In 1893–4 railways show a deficit of about Rx. 1,500,000, which arises partly from the fact that some of the works are still under construction, but mainly from the large charge for exchange, which was 2,250,000*l.* in excess of the whole loss, so, that, but for it, there would have been a profit, 7540–63.

16TH DAY. PART I.

JACOB, MR. STEPHEN, C.S.I. ANALYSIS OF EVIDENCE—*continued.*

POLICE.

The increase of expenditure on police from 1875–6 to 1893–4 has been Rx. 1,446,000, and of receipts Rx. 182,795, 4692–4.

Nearly 50 per cent. of the increase in the charge for police since 1875 is due to the acquisition of Upper Burma, viz., Rx. 631,675 out of Rx. 1,262,558, 7601–2. There have also been reorganisations in Bengal, Bombay, and Lower Burma, in which last the increased charge has been Rx. 136,000, partly owing to the organisation of a military police force, 4702–7, 7603–4, 7650–1. The military police are employed mostly in the frontier provinces, and the scale of pay is higher. There was practically no military police force in 1875–6, 7667–73. The military police are under the Provincial Governments, 7681–2.

The annexation of Baluchistan also caused a considerable part of the increase, 7674–6.

A diminution of the police expenditure in Burma may be expected as the provinces become better organised, 7605–7.

The Bengal charge has increased by Rx. 103,000; of this Rx. 41,000 has been due to the Calcutta Police (to which there is an indirect municipal contribution in aid), and Rx. 38,000 to special charges in South Lushai, 7608–10.

Under present arrangements the Municipality of Calcutta would not pay for the increased police charges, due to extension of the city; eventually, probably in will pay its due share, 7614–5. The municipality is exempted from a direct contribution on condition that it spends annually three lakhs on necessary sanitation; this arrangement is not a permanent one, and is subject to alteration, 7616.

In Bombay the increase has been Rx. 103,000; viz., in Kathiawar, Rx. 60,000; village police, Rx. 43,000; the Kathiawar police are paid for by Native States, but managed by Bombay, 7610–13.

JACOB, Mr. STEPHEN—*cont.*

Municipalities have not in the past contributed the whole cost of their police, but it is intended that in future (with some small exceptions) that they shall so do, or that, if the Government pays for the police, the municipalities shall contribute more liberally to other charges, 7617–23.

In Baluchistan there has been an increase of Rx. 41,000, 7626–8. In the North-Western Provinces and Oudh there has been an increase of Rx. 66,000; in the Punjab of Rx. 31,000, for special police, partly due to the extension of the frontier, besides some increase on reorganisation; in Madras, too, the force has been strengthened, 7628–9.

The increase has been more largely due to increased force than to increased pay; in 1876–7 the district police force numbered 110,000 men, in 1895–6 117,000, increase 6,747, besides an increase of 6,542 men in Upper Burma, 7630–3. This does not include village or municipal police, 7634–5.

The increase in cost is almost in due proportion to the increase in force, 7636–42. In making a comparison between the early and late periods, Upper Burma must be excluded. The police charge for all India in 1875–6 was Rx. 2,238,000; in 1895–6, Rx. 3,500,000, or deducting Rx. 600,000 for Upper Burma, Rx. 2,900,000—increase Rx. 700,000; this increase is made up of Rx. 233,000, for district police force; Rx. 279,000 for special police (chiefly military, 6677); Rx. 74,000, for village police; and Rx. 69,000 for cattle pounds (the last two items being covered by a corresponding increase in receipts), 7642–9.

The increase in strength has been in the lower grades; the increase in pay (confined almost entirely to the lower grades) and charges other than increase of force, has been about five per cent., 7650–8.

The charge for and the administration of the police is provincial, except in Upper Burma, and the smaller provinces, 7654–61.

The foregoing figures, being net, allow for the receipts; but there are receipts coming under other heads, *e.g.*, provincial rates, which defray the charge for village police in the North-West Provinces; and in Bombay there are receipts under Land Revenue, devoted to the same purpose, 7662–3.

The receipts in 1875–76 were Rx. 234,736, and in the 1896–7 budget Rx. 412,000, 7664–6.

The cost of police must gradually increase, and some increase will probably be necessary to secure efficiency, 7683–9, 7693–4. There is a feeling in favour of a better class of men, 7684–6. Pay of individual constables as compared with current wages, 4708–15.

Each Provincial Government has power to charge a district with the cost of special police. There is no special rate for meeting the cost of military police, 7690–2.

The rates of pay are controlled by the Central Government, 7695–6, 7698–9. They are not the same in all provinces, 7697.

There are other charges brought on the Police Account since 1875–6, which would swell the increase, such as clothing, cattle-pounds, railway police service, 4716–21. The advisability of opening up the higher grades to natives, 4727–30. The higher grades are open to natives and Europeans alike by means of competitive examination, 4731–40.

16TH DAY. PART II.

JACOB, MR. STEPHEN, C.S.I. ANALYSIS OF EVIDENCE OF—*continued.*

COMMERCIAL SERVICES.

The reproductive public works undertaken by the State in India are mainly railways and irrigation works, but they include some collieries, and also some petroleum operations in Beluchistan. These last two items are, however, comparatively small, 7700–7.

RAILWAYS.

The Government of India began (1) by assisting private companies, by guaranteeing interest on their capital, to construct railways; the first com-

JACOB, Mr. STEPHEN—*cont.*

pany on this basis was formed in 1849–50, 7709. (2) In 1868–9, the Government of India began to construct railways for itself on a large scale, 7710. (3) Since 1880–1 many lines have been constructed by companies, but they are the property of the Government, and are practically leased to the companies for a term, on the expiration of which the Government is generally bound to repay to to them their capital at par, interest being in the meantime guaranteed on their capital in some form, 7709–35, 7712–21. There is also (4) a class of railways, called "subsidised," the subsidy being paid by Government to either capital or revenue, or both, or taking the form of free grant of land, &c., 7789–99.

Guaranteed Lines.

Enplanation of the guarantee system, 7962–74. Of the old guaranteed railways, only the Madras Railway now earns insufficient to pay the guaranteed interest, but in the case of neither the Great Indian Peninsula nor the Bombay-Baroda has the Government share of the recent earnings been sufficient to wipe out the excess interest paid in the past. Even where a surplus is shown in the accounts, the whole of the Government interest may not have been provided, because the interest is under the contracts converted at the fixed rate of 1*s.* 10*d.* the rupee, 7736–75.

In 1875 the capital of the guaranteed railways amounted to 92,000,000*l.*; in 1895 it was 45,000,000*l.*, 7800. The guarantee usually ran for 99 years, but the State had the option of purchase at certain periods, by the exercise of which the number of guaranteed lines has been reduced from eight to three. 46,000,000*l.* now represents the total capital liability of the Government of India in respect of these guaranteed lines, 7808–10.

Details of the sums paid for the purchase of the guaranteed lines, 8082–101. Out of the total price of 71,000,000*l.* there was paid in the form of an annuity about 37,000,000*l.*, the remaining 33,000,000*l.* being met by loan, 8097–8.

The remaining three guaranteed railways may be purchased in 1899, 1905, and 1907 respectively, and the question of purchase will have to be considered, 8108–17.

The annual burthen has been slightly increased by the purchase of the old guaranteed lines, but that includes a sinking fund for the redemption of the purchase money, 8032–42.

State Lines.

In 1875 the total expenditure on lines constructed by the State was a little over Rx. 12,000,000; in 1893–4 it amounted to nearly Rx. 115,000,000. These sums include direct expenditure by the State, either on construction of new lines (Rx. 80,000,000), or on the purchase and redemption of the liabilities of companies whose lines have been taken over by the State (Rx. 34,000,000), 7821–4; but not the liability of Government on account of annuities created for the purchase of any of the guaranteed lines, 7825–7. Of the direct outlay by the State, the whole may be said to have been met by borrowing, 7848–51; though a sum amounting in 1893–4 to Rx. 22,000,000 on account of railways and irrigation works, is charged against revenue, 7902–15.

State lines include lines built both for military purposes and for protection against famine, which were never expected to be commercially remunerative. No distinction is made in the accounts between productive and unproductive lines. Up to the end of 1893–4, the expenditure on military lines was a little over Rx. 14,000,000, the result of the working being a net loss of Rx. 76,424, though possibly, in course of time they may be worked at a profit. In the meantime, however, the deficit is large, 7854–97. The military lines are treated in India as commercial lines, and constructed out of borrowed money, because they are mainly maintained by the revenue they bring in, and might possibly even be worked at a profit, 7916–26.

Leased Lines.

The total capital liability of the Government with respect to the leased lines at the end of 1893–4 was 25,143,000*l.*, 7833.

JACOB, Mr. STEPHEN—*cont.*

Liability of Government.

On this total liability of Government, amounting to 139,000,000*l.*, *plus* the capital value of the annuities, payable under the terms of purchase of the old guaranteed lines, which may be taken at about 41,000,000*l.*, 7933, the Government pay interest to the amount of 7,000,000*l.* a year, 7839–44.

Total Railway Expenditure.

The total expenditure of all kinds, however, on Indian railways is about 246,000,000*l.*, 7845–7, but this sum is exclusive of the difference between the actual expenditure on certain lines and the cost to Government of purchasing them, viz., 8,000,000*l.*, 7934–43.

Subsidised Lines.

The capital of the subsidised companies amounts to about 6¼ millions, 7947.

Explanation of the method of paying subsidies to companies, 7975–8.

Comparison between 1875–6 *and* 1895–6.

The total charge against Government on account of the guaranteed railways in 1875–6 was Rx. 5,456,672, and the receipts were Rx. 4,281,672, leaving a deficit of Rx. 1,175,000.

The total charge on the same account in the Budget of 1895–6 was Rx. 4,403,800, the receipts Rx. 3,233,000, leaving a deficit of Rx. 1,170,000.

If, however, exchange had been maintained at the rate current in 1875–6, the deficit in 1895–6 would have been a substantial surplus, 7979–97.

In 1875–6 nothing was paid on account of subsidised railways; in 1895–6 the charge was estimated at Rx. 25,500, the receipts at Rx. 29,200, giving a net receipt of Rx. 3,700, 7998–8000.

Explanation of certain miscellaneous charges connected with railways, 8001–6.

The charges on account of State railways (including leased lines) in 1875–6 were Rx. 433,534, and the net receipts Rx. 96,601, leaving a net charge of Rx. 337,000.

In 1895–6 the charges were estimated at Rx. 10,225,000, and the receipts at Rx. 9,304,900, showing a deficit of Rx. 970,000, which, had exchange remained as in 1875–6, would have been a surplus of Rx. 1,700,000, 8007–28.

Speaking generally, the capital for the construction of railways is raised in India; that for the purchase of railways in England, 8029–31.

Policy of the Indian Government in regard to the construction of railways, 8043–68. In 1881 the amount to be borrowed for railway construction in any one year was limited to 2,500,000*l.*, independent of any sums provided out of revenue or by companies, 8048–9; but no considerable sum has been expended out of revenue, 8050–9. The result of the 1884 committee was to raise the limit to about 2,950,000*l.*, and in some subsequent years the frontier railway policy caused this limit to be exceeded; in particular years also there were some exceptional charges, 8069–72.

In the six years following 1887–8 the amount of charge shown in the accounts is less than the allotment, but in the first two of these years the deficiency was due to adjustment of account; in the latter years it was a genuine reduction, 8073–9.

In 1876 the open mileage of railways in India was 6862; the capital outlay Rx. 112,000,000; the gross earnings Rx. 8,794,000; the working expenses Rx. 4,229,000; the net earnings Rx. 4,565,000.

In 1894 the open mileage was 18,841; the capital outlay Rx. 246,880,000; the gross earnings Rx. 25,510,000; the working expenses Rx. 13,530,000; and the net earnings Rx. 11,980,000. Thus, in 1894 the return on the capital outlay in India is about 4·85 per cent., and the working expenses are about 53 per cent. of the gross earnings. On the other hand, the cost of remittance of the sterling interest modifies the result, 8123–35. Military and other unproductive railways make the total result lower than it would otherwise have been, but, though administratively desirable, a division of the railways into productive and non-productive would be attended with disadvantages so far as the general accounts are concerned, 8136–41. Notwithstanding the excellent general result of the railway system, the railways have financially been a loss to the Government of India, and this

JACOB, Mr. STEPHEN—*cont.*
loss occurs not on lines constructed by the Government itself, but on lines under the old and new guarantee systems, 8142–9.
At present the railway revenue is burdened by 11,000,000*l.* of capital expenditure on lines in course of construction and as yet paying little or no revenue, 8150–1. The Government of India are proceeding with the construction of railways in the belief that they are likely to be productive, 8153–6, and, apart from a further fall in exchange, there is little cause for apprehension as to the future, even looking only to the direct financial results, and leaving indirect benefits out of the question, 8157.
That least productive class of railways, viz., those for protection against famine, are now practically completed, and future lines may be expected to be of a more productive character, 8208–17.
Employment of Europeans and Natives on railways, 8161–202.
Contribution of native capital, 8179–89, 8203–7.

See also 20th day.

18TH DAY. PART I.

JACOB, Mr. STEPHEN, C.S.I. ANALYSIS OF EVIDENCE OF—*continued.*
There are certain railways charged to the Famine Relief Fund, which are taken directly against the revenue; the total charge up to the end of 1894–95 was 5,934,000*l.*, 8718–23.

IRRIGATION WORKS.

Construction.
Irrigation works are, for financial purposes, divided into two heads, major and minor; the first includes works undertaken from loan funds and likely to be sufficiently productive to cover the interest charge, and famine protective works (constructed from the famine insurance grant); the second includes all works whose cost is defrayed from the ordinary revenues, for the greater part of which no distinct capital and revenue accounts are kept, 8724, 9055–6.
These works are administered by officers of the Public Works Department, under the general control of the Provincial Governments, 8725–7.
Generally speaking, productive works are only undertaken if they arelikely to produce 4 per cent. in 10 years; protective works are undertaken where they are necessary for protection against famine, 8728–9; the initiative rests with the Chief of the Provincial Irrigation Department, and he advises his Government, 8730–7, 9053–4.
The sum set apart for major works (out of the Public Works Vote) is not absolutely fixed, but is now about Rx. 700,000, besides what can be spared from the Famine Insurance Grant; the whole would amount to about Rx. 800,000, 8738–41, 9,026–7. Of this about Rx. 50,000 is appropriated out of revenue, 9058–61. The cost of constructing major works is now charged either to loan funds, or to "Famine Relief and Insurance"; four per cent. on the total capital expenditure is added to the charge side of the Revenue Account, 8751–6.
The total capital expenditure, which was in 1875–6 Rx. 12,897,901, had risen to Rx. 30,343,404 in 1894–5, and up to the end of 1896–7 (including estimates) Rx. 31,921,000, 8757–60. The first sum includes all expenditure incurred by Government anterior to 1875–6, 8761–5. About 22 millions of the sum total for 1894–5 have been incurred from loan funds, the amount advanced of late years out of revenue having been only about three millions, 8766–71.
No sinking fund is created for the repayment of borrowed money, 8772–3.
Repairs are charged to revenue unless they exceed the cost of the original work, 8774–8. No charge for depreciation is made to the Famine Fund, 8779–82. Minor works are carried out by the Provincial Governments, out of their revenues; there is a limit to the size of the works they may undertake without the sanction of the central Government, 8742–4.
As a rule there are no local contributions; the local contributions in aid of irrigation works do not make up one-tenth of the total amount spent, 8745–50.
Out of the total outlay on construction, which was 29,000,000*l.* in 1892–3, 3,045,000*l.* was outlay in England, for the purchase of the works of the East India and Madras Irrigation and Canal Companies, and a certain sum was spent on stores, 8783–90. This liability having been raised in England and afterwards converted into rupees a charge for exchange has arisen, 8791–809.

Revenue—Major Works.
Taking major and minor works together the result works out to a net charge; but, taken separately, the former produce a small net revenue, 8810. The receipts fluctuate according to the rainfall; in 1895–6 the heavy fall reduced the need of irrigation, and *vice versâ* in 1896–7, 8810–4. (In 1896–7 the purchase of water increased by about 60 per cent., 8821–2.) (The land revenue is also affected by the rainfall, 8812–3.)
The irrigation revenue is mainly made up by the voluntary purchase of water, but in some parts an irrigation cess is levied, which is included in the land revenue demand, 8815–7.
In one or two cases water is supplied to municipalities, but the amount of revenue from this source is only Rx. 10,655, 9119–21.
Another class of irrigation receipts is land revenue due to irrigation; where the value of the land has been enhanced by the irrigation, the portion due to irrigation is credited to it, 8818–20, 8823–5.
Landowners cannot be assessed at a higher rate on the ground of enhanced value due to irrigation until their land comes under resettlement, 8825–7, 8830. Permanently settled land in the North-West Provinces may be assessed for irrigation as though it were temporarily settled, 9138–42.
On the resettlement, the land is reassessed on the actual rentals, and the portion to be attributed to irrigation is arbitrarily fixed by the revenue authorities, 8835–8.
In some cases the direct purchase of water is credited to land revenue due to irrigation, 8833–4.
Amount of land revenue credited to irrigation from 1892–3 to 1896–7, 8840–1.
There may be a fall in the land revenue proper, owing to a dry season, but a coincident rise in land revenue due to irrigation; the former would, however, in a bad season largely exceed the latter, 8842–7.
The working expenses (including maintenance, 9074) represent about one-third of the direct receipts, but they do not increase in quite the same ratio, 8848–55.
The interest charge has risen from about Rx. 600,000 in 1875–6 to Rx. 1,254,000 in 1896–7, 8856–62.
The net receipts in 1884–5 were Rx. 37,000, and in 1895–6, Rx. 244,000, and the estimated receipts for 1896–7 are Rx. 600,000, 8863–70.
Taking the receipts from 1884–5, whilst they fluctuate from year to year, yet there is a considerable gradual improvement; the normal surplus would be between Rx. 200,000 and Rx. 300,000, after payment of the 4 per cent. interest and all other charges, 8871–6; *i.e.*, after paying the 4 per cent. interest, &c., there is a surplus of clear profit of about 1 per cent., 8877–8, 8888–90.
It may be considered that the return is really 6 per cent. on the 22 millions of borrowed capital, so far as the present revenues of India are concerned, 8910–5.
The net revenue increases with the gross receipts as the working expenses are stationary, 8879–82.
The use of irrigation works is becoming more popular; the opening up of the railways has had a decided effect in that direction, 8885–7.
The protective works and those taken over from the companies will never be productive; some do not even pay their working expenses, 8891–5.
The value of irrigation varies with the kind of soil and of the crops which can be produced from it, 8898–8903.
The technical term "protective works" means works protective against famine, but there are also some minor works to protect against inundation, 8906. A rate is chargeable upon the latter class of works, 8907–9.
In Bengal there are major works, but the Revenue only comes in from direct receipts, the permanent settlement prevailing in that Province, 8916–20. It would be within the power of the Government to make permanently settled land liable to an irrigation cess, but that has not been done in Bengal, 8921–3. There is no "owners' rate" in Bengal, as there is in the Punjab in North-West

JACOB, Mr. STEPHEN—*cont.*

Provinces, 9125–6, 8933–4. The two large works in that Province were started by companies, and taken over by the Government, 8929–30, 8995–9016. There is not much demand for irrigation in many parts of Bengal, 8931–2. In 1893–4 the direct receipts in Bengal were Rx. 167,000, working expenses (including maintenance, 9074,) Rx. 145,000, interest on capital outlay Rx. 246,000, 8935–41. The loss may be accounted for by the absence of the owners' rate, and the lowness of the direct receipts; the works have never been fully developed, 8942–5, 8954.

The capital outlay in Bengal on major works is Rx. 6,180,586, and in the North-West Provinces, Rx. 7,485,000, but the direct receipts were Rx. 167,000 and Rx. 585,000, *plus* Rx. 118,000 land revenue due to irrigation, respectively, 8946–50. The working expenses (including maintenance, 9074,) in the North-West Provinces were Rx. 255,000, and the interest Rx. 298,000.

In Madras the capital charge is Rx. 6,091,000, the direct receipts are Rx. 30,000; the Land Revenue due to irrigation Rx. 531,400, the working expenses (including maintenance, 9074,) Rx. 117,000, and the interest Rx. 239,000. The net revenue, therefore, is Rx. 205,000, 8958–9.

Some of the irrigation works were old works, and the capital accounted for is only that which has been expended by the Government of India on them; but most have been reconstructed at a cost which brings a fair charge against the capital, 8960–9; there were some irrigation works before the advent of the British Government, 8970–6; of these the most important is the Western Jumna Canal, 8972–3.

The details of the direct receipts are (for 1894–95) occupiers' rate, Rx. 1,147,514, owners' rate in the Punjab and North-West Provinces, Rx. 73,550, and navigation receipts, Rx. 59,985, together with various petty items, 8977–8.

The occupiers' rates are assessed under rules framed by the Provincial Governments; the revenue officers may assess land to the full extent of what they consider to be the benefit conferred upon that land, 8982–6, 9128. The total receipt from owners' rate is small, because, when the land comes under assessment, the rate becomes amalgamated with the land revenue credited to irrigation, 8987–8.

The occupiers' rate in the Punjab amounts to Rx. 489,000 and in the North-West Provinces to Rx. 506,000, as against Rx. 1,147,000 for the whole of India, 8984–94.

Considering the importance of irrigation to India, the financial result of the works is very satisfactory, 9017.

In, at all events, one part of the country irrigation has had a harmful effect, and the land has become sterile; but that is being remedied by drainage. 9018–22. Though the older works are the more productive, some of the new works are doing remarkably well, 9023–5.

Minor Works.

Minor works are those which are undertaken for the general improvement of the country, and are paid for out of ordinary revenues, 9122–3. They include embankments, tanks, and some canals, 9057); they are charged against revenue, (9085-6); but in future separate capital and revenue accounts are to be kept for any work (major or minor) as a condition of their being undertaken. There is no financial distinction between major and minor works, but the former are generally the more costly, 9038–47.

The revenue and expenditure on minor works of recent years, as shown in the Finance Accounts, have been as follows:—

——	Revenue.	Expenditure.	Net charge.
	Rx.	Rx.	Rx.
1892–93 - -	186,000	1,008,000	822,000
1893–94 - -	200,000	908,000	708,000
1894–95 - -	192,000	959,000	767,000
1895–96 (revised estimate).	204,000	1,000,000	796,000
1896–97 (Budget)	210,000	1,129,000	919,000

JACOB, Mr. STEPHEN—*cont.*

The capital and revenue accounts kept for some of these minor works in the Public Works Administrators accounts show a net revenue; the deficit shown in the Finance Accounts is due to the fact that all capital expenditure is charged against revenue, and that the works are not credited with land revenue due to irrigation, 9076–84. Instance of a work (the Tuleli Canal) shown in the Finance Accounts to work at a loss, but which, with the addition of the land revenue due to irrigation, would show a net revenue of over Rx. 17,000, 9090–97.

It is possible to get at the financial result of those minor works for which capital and revenue accounts are kept, but not of those for which they are not kept, 9098–114.

It would be desirable to separate entirely from the ordinary irrigation accounts those works for which a capital and revenue account is not kept, in order that the financial results of irrigation may be seen in a clearer light, 9124–5.

18TH DAY.—PART II.

JACOB, Mr. STEPHEN, C.S.I. ANALYSIS OF EVIDENCE OF.—*continued.*

GENERAL ADMINISTRATION.

This head includes the salaries of the Governor-General, the Governors and Lieutenant-Governors, and Chief Commissioners, their staff and household charges, charges for Executive and Legislative Councils, all the secretariat charges, charges for the Boards of Revenue, Financial Commissioners, Commissioners of Divisions (9153 and 9179); Inspectors-General of Stamps, Registration and Excise, the Accounts Department; allowance to Presidency banks, and the general establishments of Local Funds, 9146–53.

The total cost was in 1875–6 Rx. 1,464,000, and 1895–6 Rx. 2,032,000, 9154.

The charges for the Governor-General, Governors, Chief Commissioners, their staff, &c. were in 1875–6 about Rx. 193,000; in 1895–6 Rx. 209,000, 9154–60.

Executive and Legislative Councils, 1875–6, Rx. 93,000; 1895–6, Rx. 97,000, 9161–7. The former have decreased owing to a decrease in the rate of pay, 9210–1. Secretariats (and tour charges), 1875–6, Rx. 392,000; 1895–6, Rx. 482,000, 9168–71. The Civil Secretariat comprises the Foreign, Finance, Revenue, Agriculture and Home branches of the Government of India, and those of the Provincial Governments, 9169. The increase is due to increase of staff, a large portion of which is due to the annexation of Burma and extension of the frontiers accounts for a large portion, 9172–7, 9253.

Description of the Boards of Revenue and Financial Commissioners, who cost Rx. 79,000 in 1875–6, and Rx. 107,000 in 1895–6, and the Inspectors-General of Stamps, Registration and Excise were not brought under this head in 1875–6; in 1895–6 they cost Rx. 25,000; and Commissioners in 1875–6 Rx. 209,000, in 1895–6 Rx. 245,000, 9178–84.

The Civil Account and Audit Department, 1875–6, Rx. 163,000; 1895–6, Rx. 217,000; the Public Works Account and Audit, Rx. 15,000; 1895–6, Rx. 27,000; the Paper Currency Department, 1875–6, Rx. 23,000, 1895–6, Rx. 28,000; Reserve Treasury, 1875–6, nil, 1895–6, Rx. 1,000; Presidency Banks, 1875–6, Rx. 33,000, 1895–6, Rx. 30,000, 9184.

Local Funds, General Establishments, were not accounted for under this head in 1875–6, in 1895–6 the cost was Rx. 101,000, 9185, 9201–2.

Miscellaneous charges, 1875–6, Rx. 5,000, 1895–6 Rx. 2,000, 9186.

The totals were, 1875–6, Rx. 1,210,000, and 1895–6, Rx. 1,571,000, 9187–9.

The charges in England include the expenses of the India Office, the Auditor, &c., the management of debt, law charges, passage and outfit allowance, and the cost of currency forms; the totals in 1875–6 were Rx. 233,000, and in 1895–6 Rx. 252,000 (exchange included) 9191–3.

The payments to Presidency Banks are for the Treasury work done for the Government at Calcutta, Madras, and Bombay, and for the managment of Public Debt and branches of the Savings Bank;

JACOB, MR. STEPHEN—*cont.*

though their charge has increased, the rates of remuneration have been lowered, 9196–8. The Reserve Treasuries are to provide funds, independently of the banks, in emergencies, 9199–9200.

Increase or Decrease as between 1875–6 and 1893–4:—

Civil Secretariats, increase Rx. 109,000, 9206–7; Local Funds, General Establishments, increase Rx. 95,000; Civil Account and Audit, increase Rx. 45,000; Commissioners, &c., increase Rx. 28,000; Inspectors-General of Stamps, Registration and Excise, increase Rx. 23,000, 9227–9. Revenue Boards and Financial Commissioners, increase Rx. 24,000. On the other hand, there has been a small net reduction of about Rx. 11,000, 9205. Details of local increase under heads of Secretariat: the increase is mainly due to increased force, and partly to exchange, 9215–9222.

The expenses of the Legislative Council consist of the charges of the Legislative Secretariats, and allowances to additional members, official and non-official, for personal expenses, 9212–3.

There are now five Legislative Councils, 9214.

The increase under Boards of Revenue and Financial Commissioners is largely due to the creation of a Financial Commissioner for Burma, 9223–6.

Of the increase under Commissioners of Revenue Rx. 29,000 is due to Burma, 9228–9.

The increase under Accounts Department is partly due to Burma, and partly to the creation of the Auditor-General's Department, and to the increase of work in that Department, 9230–8.

Explanation of increase under Commissioners, 9254–5.

The reduction under Tour charges is rather due to reclassification than to decreased expenditure, 9256–7.

The transference of certain charges from Imperial to Provincial has caused a reduction under the Imperial head, but a corresponding increase under Provincial, 9258–64.

Taken as a whole, the increase under General Administration is one of the largest under any head in the Indian accounts; it is chiefly due to increase of work, for salaries have rather been reduced than increased, 9239–43.

The whole cost of general administration in Burma in 1875–6 was Rx. 37,000; now it is over Rx. 120,000, the increase being entirely due to Upper Burma, 9244–9252.

JACOB, MR. STEPHEN—*cont.*

The arrangements were that the Company should sell the water to the Government, who would retail it to the customers, 9710–11.

In the case of the Madras Irrigation Company, there was a guarantee of five per cent.; the Company made over its property on the following terms: for each 100*l.* stock the Government of India should pay 106 *plus* five per cent. interest for a given period; for each 100*l.* mortgage debenture (amounting to 430,000*l.*, 9741–4), 75*l.* plus four per cent. of interest for a given period, and 12,000*l.* as compensation to offices, &c.; the total amounting to Rx. 1,404,000. The balance of advances made by the Government to the Company, amounting to 358,428*l.*, was written off, 9714–39, 9747–50. It was considered by the Government that it was more profitable to take the work over when they did than to wait until 1888, when they could have purchased under the contract, 9740–6, 9756–83.

Though there is practically no return from this canal, it is valuable as a relief work, 9751–4.

There has only been one case of deterioration of land due to the action of the irrigation works, 9785–6.

No protective irrigation rate is levied in any part of India; in Madras all the irrigation revenue is collected as land revenue, 9787–8.

In 1893–4 the works, of which capital accounts are not kept, brought in Rx. 847,000 net, including land revenue due to irrigation, 9789–92. There is no accurate information as to the cost of these works, 9793–5.

Railways:

The results of the gross earnings and working expenses of the military sections of the North-Western Railway for the six years from 1889–94, (*see* App.), 9614–21.

The interest on capital expended in building the lines would have to be added to get the true financial circumstances, 9623–4.

It was decided, on the recommendation of a Parliamentary Committee of 1879, not to separate the results of productive and unproductive lines in the Financial and Revenue Accounts, 9625.

The military traffic furnishes a very small proportion of the gross earnings, more than 90 per cent. of the gross revenue accrues from public traffic, 9631.

(*Tables put in giving* the net charge for railways on the revenue account), 9631*a*. The total net loss on revenue account has been, for 38 years, Rx. 49,834,393, including the interest on capital expenditure, and loss by exchange, 9631*a*–9.

20TH DAY.—PART I.

JACOB, MR. STEPHEN, C.S.I., ANALYSIS OF EVIDENCE OF—*continued.*

IRRIGATION—*continued.*

Enumerates several old irrigation works constructed by native governments; the revenue brought to account is only that due to the improvements on the old works; the revenue due to the old works themselves comes in as land revenue, 9645–50.

The East India Irrigation Company was not guaranteed by the Government, but Government provided the Company with land (which was to be paid for on certain conditions) and other assistance, 9651, 9654–61.

After negotiation between the Company, the Secretary of State, and the Government of India, the works were taken over (under the authority of an Act of Parliament, 9714) on the payment of the paid-up capital (plus five per cent.) and an extra bonus of 50,000*l.*; the amount fixed for the Orissa works was 1,040,050*l.* 8*s.* 7*d.*, and for the Behar project 14,000*l.*, and about 50,000*l.* for the Sone project, 9689–99, 9652–3. The Company were paying no dividend at the time of these negotiations, but it was essential that the Government should take over the works, because of the complications caused by adjustments of the land revenue due to irrigation, 9662–3, 9700–9; the Government is making nothing out of these works, but they are in course of development, 9664–6.

The Government has incurred a considerable amount of capital expenditure on these works, 9670, amounting to Rx. 2,533,000 on the Orissa project, and Rx. 2,596,000 on the Sone project (including the cost of taking them over), 9671–83.

20TH DAY.—PART II.

JACOB, MR. STEPHEN, C.S.I. ANALYSIS OF EVIDENCE OF—*cont.*

MARINE.

(*Statement put in showing Receipts and Expenditure,* 9797–811).

There are certain provincial Marine charges, chiefly for vessels kept for local purposes (for the conveyance of the district officers over their districts, 9829–30), establishments, lighthouses and ships, subsidies to steamers, and pilotage dues, 9804–12. The net charge for 1893–94 was Rx. 76,293, 9814. Salaries, pay, &c., Rx. 26,000; victualling, Rx. 2,000; stores, repairs, &c., Rx. 28,000; purchase and hire of ships, Rx. 25,000, incurred mainly in inland waterways in Burma, Bengal, and Assam, 9814–5.

The gross provincial charge is Rx. 203,360, including the Upper Burma charge, which, though Imperial, is included in the provincial accounts, 9822–3.

Charges in England, including stores, Rx. 245,443, making a gross total of Rx. 754,000, 9823–7.

The charge for the purchase and hire of provincial steamers, &c. was unusually high in 1893–94, Rx. 25,000; the charge for establishments and shipping offices would be about Rx. 5,000 net, 9828, 9831–3.

The subsidies to steamers amounted to Rx. 15,816, 9834–6.

The light dues more than cover the lighthouse and lightship charges; it is only in Burma and at ports that lights are required, 9837–41.

The pilotage receipts more than cover the charges, 9842–4.

JACOB, Mr. STEPHEN—*cont.*

The accounts of the Indian Marine are audited by a Deputy Auditor-General and forwarded to the Auditor-General, who passes them on with his criticism to the Military Accountant-General; detailed reports of action taken on the Auditor-General's criticism is furnished him; a difference of opinion between the Auditor-General and Military Accountant-General would be decided by the Government of India, subject to a reference to the Secretary of State, if the accounting officer's decision is reversed, 9845–68.

THE EDUCATION DEPARTMENT.

The Home Department of the Government of India generally controls the educational system in India, 9869–81.

There is a Director of Public Instruction in each province, 9874; and each Province has its own code or system, basee on fixed general principles, 9884.

Education is not compulsory in India, 9969.

The administration is entirely provincial, subject to the general control of the Home Department, 9882–4.

The following is the charge for education from Provincial revenues and local rates:—

	1875–6.	1893–4.	1894–5.
Gross Charge for Education -	Rx. 1,021,000	Rx. 1,472,000	Rx. 1,511,000
Receipts - -	147,000	216,000	214,000
Net charge - -	874,000	1,256,000	1,297,000

9885.

The contribution from local rates was, in 1875–6, Rx. 227,000; 1893–4, Rx. 646,000; and in 1894–5, Rx. 665,000, 9887–8.

The expenditure, except what is purely local, is a provincial charge, the only Imperial charge being for small States directly administered by the Government of India, amounting to Rx. 28,000, 9889–95, 9928–31.

Of the net charge to Government of 1894–5 of about Rx. 1,300,000, about Rx. 600,000 was provided from local rates, 9896–9.

Details of the expenditure, amounting to Rx. 1,020,000 in 1875–6, and to Rx. 1,469,000, in 1893–4, 9900. The main charge is payments to Government schools, Rx. 540,000 in 1893–4, or more than one-third, 9901–2. The next largest item is grants in aid, Rx. 374,000, 9903–4.

Besides the Government expenditure there is expenditure from municipal funds amounting to Rx. 235,000 in 1893–4, 9907–8. Local rates differ from municipal, in that they are levied by Government, 9911–3.

The cost of municipal schools should be added to the provincial and local charge, in order to ascertain the total charge to the taxpayers for education, 9920–5.

Roughly speaking, Rx. 800,000 is the gross charge on the general revenues, 9936–9.

The receipts from fees of all kinds being 216,000, and the local rates 550,000, making in all Rx. 778,000; if this sum be deducted from the Rx 1,469,000, Rx. 691,000 is the net charge left to come out of the general revenues, 9940–1.

The main charge for Universities is at present for the Punjab University, which is a new institution not yet self-supporting; the Calcutta and Madras Universities receive nothing, and the Bombay University only Rx. 500 from Government; the charge is gradually disappearing, 9945–9.

The charge to the Imperial and provincial taxpayer, apart from that levied by local rates, is not expected to increase very much, 9950–2, though the total expenditure must increase, 9995.

The policy of the Government is to encourage private enterprise (especially technical schools) by grants in aid, and the educational system is being gradually developed slightly faster than population is increasing, 9953–61.

The grants in aid amounted in 1875–76 to Rx. 174,000 and in 1893–94 to Rx. 374,000, 9956, 9962. The provincial Governments receive more applications for grants in aid than they can afford to comply with, 9970–4. In some provinces the grants amount to half of the expenditure, 9986–9. Grants are made to any school, under European or native management, complying with certain conditions as to secular education, and they are awarded according to the report made by the inspector, 9976–82.

In exceptional cases grants are made to establishments outside British territory, 9992–4.

The whole expenditure is very small compared with the population, 9983–5.

Question of a special subvention supposed to have been paid to the Church Missionary Society for educational purposes, 10,110–26.

ECCLESIASTICAL CHARGES:

The increase since 1875–76 has only been Rx. 14,000, 9997; the budget is not a growing one, 9998. The charges amounted to Rx. 177,000 in 1893–94, and 185,000 in 1894–95, the difference being due to exchange compensation allowance, 9999. Details of the charge for 1893–94, 10,001–3.

The chaplains are distributed with reference to the requirements of the European population at the different centres, 10,004, 1003–5. Their numbers have not been increased in late years, 10,055.

The number of Government chaplains is about 150, 10,007, 10,011–2.

The junior class receive about Rx. 600 per annum and the seniors about Rx. 960, 10,005–10.

The chaplains would be re-distributed in the case of a re-distribution of population, 10,016–8.

Church of Scotland chaplains are only supplied for the troops, presidency towns, and the head-quarters of provincial governments, 10,019–20, 10,029. There are no Roman Catholic chaplains charged to this budget, but an allowance is made to certain archbishops and bishops, 10,023–4.

The pay of Roman Catholic and Scotch chaplains attached to regiments is treated as military expenditure, 10,023–4.

Variations in the charge for pay are caused by absence on leave, and by exchange compensation, 10,025–7. Allowances are also made to Wesleyan ministers, 10,028.

In certain cases, regiments carry their Scotch or Roman Catholic chaplains with them, 10,030–2; All the Church of England chaplains are under the control of the bishops, 10,036. They are appointed to stations to minister both to the civil and military population, 10,039–41.

Church of England chaplains are not divided into military and civil, 10,050–1.

The proportion of chaplains to the European population seems large, but it is necessitated by the scattered condition of the population, 10,042.

The civil population is too nomadic to support its own clergy, 10,043–9. In such places as Calcutta this might be possible; there there are seven or eight chaplains, one doing entirely military duties, 10,052–4.

The State provides for three bishops, but there are others who, over and above their pay as chaplains, receive an additional stipend from voluntary contributions, 10,056–7.

Allowances made for Hindoo and Mahommedan religious purposes, 10,058–61.

MEDICAL CHARGES:

The Government must keep up a certain number of medical officers to attend on its civil servants, 10,062–3.

In 1893–4 the gross charge was Rx. 979,000, receipts Rx. 75,000, net charge Rx. 904,000, 10,064. Heads of the charge, 10,075. The charge for establishments has increased by Rx. 90,000 since 1875–76; the head includes salaries, &c., of medical officers in charge of the principal stations, supervision, and a reserve staff of subordinate medical officers, 10,065–7, 10,079–80, 10,084.

The department is controlled by the Home Department, the chief officer being the surgeon-general with the Government of India, the actual administration is under the Provincial Governments, 10,068–71.

The charge for medical schools, &c., is for the education of medical subordinates, 10,076–8.

No part of the charge for medical instruction comes under the educational vote, 10,102–5.

JACOB, Mr. STEPHEN—*cont.*
The pay of commissioned medical officers in charge of districts varies from Rs. 550 to 1,250 a month, according to their standing; the minimum pay of the subordinates is Rs. 85 a month, 10,083.
The members of the Commissioned Medical Service belong to the Indian Medical Department, but they have no military functions, though they are looked upon as a reserve for the army, 10,085–90.
In military stations the army doctors sometimes receive an allowance for attending civilians, 10,091–6.
Under hospitals and dispensaries the increase has been general, the greater part, however, has been met from local funds, 10,072–4, 10,097; this head forms a large part of the whole increase, 10,098.
The increase in the charge for sanitation and vaccination is due to the increased activity of the department, 10,099–101.
Charges in England; the responsibility of the Secretary of State for the maintenance of certain classes of lunatics, 10,106–9.

THE POLITICAL DEPARTMENT:
The Political Department comprises the Political Residents, &c. at the Native Courts: it is under the Foreign Department of the Government of India, 10,127–30.
The charges have increased from Rx. 432,000 in 1875–6 to 966,000 in 1893–4, 10,131. Details of the increase, 10,132–3.
The increase of the political agents' charges is greatly due to the creation of the Baluchistan agency; there was also a new appointment in the Central Provinces, 10,134–7; the total charge in Upper Burma was Rx. 25,000; in Assam there was an increase of Rx. 14,000, 10,137.
The Punjab charges include the Kashmir and Gilgit agency charges, and the charges for certain newly appointed agencies, 10,138–9.
The political subsidies amounted to nearly Rx. 230,000 in 1893–4, and to Rx. 110,800 in 1894–5; the former sum included some arrears; the normal amount would be about Rx. 130,000, 10,141–5.
The charge for refugees and State prisoners, 10,146.
The charges under special political expenditure vary from year to year; they chiefly consist of charges to special missions, 10,147–8.
The charge for Imperial Service troops is for a staff of officers engaged upon organisation and superintendence, 10,149–50.
The charge for the administration of certain lands in the Somali country near Aden ceded to the Government of India are covered by the receipts, 10,151–3, 10,156–61.
Details, of miscellaneous political charges, 10,154–5.
Details of political charges in England, 10,162–3.

SCIENTIFIC AND MINOR DEPARTMENTS:
This head is made of charges appertaining to several independent departments (enumeration of the departments), 10,168–70.
The principal is the Survey of India, which is under the Revenue Department; the decrease is due to reorganization, 10,171–7.
The next largest is the Meteorological Department; the charge has increased owing to reorganization, 10,178.
The Geological Survey Department shows a decrease, due to the reduction in the number of officers, 10,179–80.

21ST DAY.

JACOB, MR. STEPHEN, C.S.I.—ANALYSIS OF EVIDENCE OF—*continued.*

TERRITORIAL AND POLITICAL PENSIONS:
These consist mainly of pensions and allowances to native chiefs and their followers consequent upon treaty obligations, pensions granted by the Governments to which we have succeeded, and political charitable allowances; for the most part they are merely personal and not hereditary, 10,191–2. Almost all of them are gradually expiring, 10,193–4, 10,196. The decrease since 1875–6 has amounted to Rx. 303,880, 10,195. Amongst others a few large pensions, *e.g.*, Oudh and Nizam, &c., have fallen through, amounting to Rx. 252,000, 10,197. Allowances that are granted on account of land revenue are charged to "Assignments and Compensations," but not to this head, 10,198–204.
The pensions involved by the conquest of Upper Burma were Rx. 13,000 in 1893–4. They will be reduced on the death of the present holders, 10,205–7.
The pensions (in 1893–4) payable in England amounted to 21,950*l.*, but since the death of His Highness the Maharaja Dhuleep Sing there has been a large decrease, 10,208–13.

FURLOUGH ALLOWANCES:
As a general rule half-pay is given to officers on furlough out of India, subject to certain maxima and minima, converted formerly at the current rate, but now at the rate of 1*s.* 6*d.* the rupee; if any officer takes leave in India the maximum and minimum are reduced, 10,214–7, 10,225–6. The Government is not legally bound to grant any compensation for loss by exchange, 10,276–80.
The civil furlough charges amounted to Rx. 254,921 in 1875–6, and 327,431 in 1893–4, 10,218–9. Apart from exchange the charge has been almost stationary, 10,267. Under the present Civil Leave Code it is possible for an officer to take leave, including sick leave, amounting to almost one-fourth of his service, 10,230. Comparison between the leave granted in the Indian Civil Service, the Diplomatic, Consular, and Colonial services, 10,220–53. It is considered advantageous to the Service that a man should take leave to England, but it is not compulsory, 10,254–5. Native officers of the same class, as a rule, take less leave than English officers, 10,268–74. Fewer officers can now afford to take leave on half-pay on 1*s.* 6*d.* the rupee, 10,256–9. Speaking generally, the leave rules are satisfactory, 10,260–2.
The furlough pay of an officer taking leave in India is charged to the same head as his pay, 10,265–6. The furlough rules for Native Uncovenanted Civil Servants are more restricted, 10,275.

SUPERANNUATIONS:
The whole grant for Non-effective Civil Services amounts to 3,853,000*l.*, of which 900,000*l.* is paid in India, 10,390–1.
A deduction of 4 per cent. is made from the salary of an Indian civil servant for the whole time he is in India, and a pension of 1,000*l.* a year is granted him after 25 years' service. 10,281–4, 10,372. The deductions from the pay of the Indian Civil Service are not brought to account, 10,378–9. Natives who pass by examination into the Indian Civil Service are treated in every respect as Europeans, 10,488–9.
Military and Uncovenanted Officers do not contribute to their pensions, 10,490–5.
The actual cost of an officer's non-effective service is calculated to be 25 per cent. of the cost of his active service, and the share of pension borne by the Government is that part of the 25 per cent. which is not covered by the officer's own contributions, 10,285–94.
Contributions for pensions and gratuities of officers in foreign service have amounted to 113,000*l.*, 10,378–9, 10,386.
Few men retire on a salary of less than Rs. 2,250 a month, 10,295–7.
As compared with the English Civil Service, the period of service for pension is short, but the pension is not proportionately so large, and the charge is not so great on the tax-payer, 10,298–324.
If a civil servant stays in the Service beyond the 25 years his pension is not increased; many holding good appointments do stay on, 10,325–32. The fixed pension of 1,000*l.* a year is an inducement to early retirement, 10,482–4; but the greater amount of pension owing to its being payable in sterling in proportion to pay has not in recent years had a tendency that way, 10,496–7.
Judges of the High Court and certain judicial officers, military men in civil employ, and chaplains receive pensions in sterling, 10,346. Judges' pensions have been increased while their pay has decreased, 10,347–9. In 1881–2 the relation of their pensions to their salaries was 23 per cent., in 1887–8 37 per cent.; in the former year the pension list had not reached its maximum in 1881–2, 10,352–3.

JACOB, Mr. STEPHEN—*cont.*

The pensions of certain other judicial officers vary from 300*l.* per annum after 6¾ years' service, to a maximum of 750*l.*, 10,354–60.

Uncovenanted Officers cannot get more than half-pay after 30 years. They may retire at 55, or after 30 years' service, and they may serve until they are inefficient from age, 10,361–71. The employment of natives might reduce the pension charge, 10,485–8.

Chaplains get a pension of 365*l.* after 23 years' service, 10,375.

Engineers earn pensions after 10 years of 20/60ths of pay up to 29/60ths for 19 years, but their maxima are limited, 10,376.

Allowances amount to 851,000*l.*, the greater part of which is for natives, 10,392–4.

The *net* charge for pensions was in 1875–6 Rx. 1,357,000, in 1893–4 it was Rx. 3,476.000, 10,395–6. The increase on account of pensions payable in India is large; it is due to the increase in staff; the service is still increasing in numbers, 10,397–401.

The increase is not unreasonable, considering the increase of the Civil Service, 10,410–7.

The English net charge has risen from 1,096,000*l.* in 1875–6 to 1,686,000*l.* in 1893–4, 10,418. The chief increase is due to the Uncovenanted Service Pensions; there is also an increase in the fund payments, 10,419–20.

Explanation of the increase of the net charge, 10,421. The gross charges have not increased to anything like the extent of the increase in the net charge; a large part is due to payments on account of funds which were taken over since 1875–6 by the Government, the receipts on account of which are not credited to the account, 10,422–30, 10,441–7.

In 1875–6 nearly half the pension of an officer was not charged to Government, but to the Annuity Funds; similarly pensions from the various family funds are now charged to Government, 10,441–6.

The increase in pensions other than family pensions since 1878–9 has been only 66,000*l.*, 10,440–64.

The policy of the Government in taking over the service funds, 10,440–80.

Paper put in, giving details of Military Pension charges, 10,481.

STATIONERY AND PRINTING:

There are three central stationery offices at Calcutta, Madras, and Bombay; that at Calcutta is under the Superintendent of Stationery and Stamps, 10,498–9. The cost of the Calcutta Office was Rx. 16,600 in 1893–4, 10,450–2.

The Superintendent at Calcutta is under the general control of the Financial Department, but immediately under the Government of Bengal, and similarly the offices at Bombay and Madras are under those Governments, 10,503–4.

The total charge for 1893–4 is Rx. 683,181; this comprises the whole cost of printing by Government presses, and the principal stationery charges, 10,505–6.

In some cases small departments can order their own stationery to a limited extent; the Government does practically all its own printing, except form printing which is done by contract, 10,506–7.

The powers of the Superintendent in making contracts are limited, 10,508–11.

The heads of the three offices are quite independent of each other, 10,512–3.

Area of supply, 10,514. Purchase of stationery is an imperial charge, and the Government of India gets credit for stationery supplied to Provincial Governments, 10,515–6.

The Stationery Offices are large stores upon which the Provincial Governments draw, 10,520–1, 10,524.

The total amount spent on purchase of stationery in India was Rx. 294,000, or, adding the amount spent in England, the total amount Rx. 345,000, 10,522–3, 10,543–4.

The value of stationery supplied from central stores was Rx. 209,000, 10,525–40. The stationery supplied to the Provincial Governments amounted to Rx. 193,238, and the balance would represent that supplied to the Imperial Government Departments, 10,540–56, but in the accounts the amount is not distributed over the departments, 10,554–8. Full details are, however, given in the estimate, 10,561–63.

JACOB, Mr. STEPHEN—*cont.*

The difference between the amount purchased and the total issues represents the value of the stock in hand, 10,549–50.

The total increase since 1875–6 have been Rx. 172,347, 10,564–5. The policy has been to substitute, as much as possible, stores purchased in India for those purchased in England, 10,566–8. The increase for stationery, &c., has been Rx. 107,000, for printing, Rx. 64,000 (including an increase for printing in the India Office, Rx. 1,000 (due entirely to exchange), 10,569. The increased charge is due to the increased supply and not to the enhanced prices of articles; it will still increase, 10,570–2.

The permanent printing staff is kept as small as is possible, but the bulk of the printing can only be done by the Government itself, 10,573–6. Postage amounted to Rx. 400; departments in India purchase special stamps for official purposes from the Treasury, 10,577–80.

MISCELLANEOUS:

Heads of charge, 10,581–4. It is impossible to compare 1875–6 with 1893–4 owing to a recast in the accounts. Principal charges and receipts for 1893–4 and 1884–5, 10,585–8. The net profit in 1884–5 was Rx. 80,000, and in 1893–4, Rx. 190,000, but the charges and receipts do not necessarily relate to each other, 10,589–90.

MINTS:

There are two mints, one at Calcutta and one at Bombay, with a mint master at each; he is immediately subordinate to the Comptroller General and to the Financial Department, 10,592–8. Copper now is the only metal bought, it is issued at Calcutta; gold and silver were coined, but not bought, formerly, 10,599–603.

In 1875–6 the net receipt was Rx. 83, and, in 1893–4, Rx. 136,275; the increase in the latter year was chiefly due to seignorage on the coinage of silver, 10,610; the only receipts now are from the coinage of copper, 10,604–7. Coins are sent to England to be assayed, 10,608–9. The closing of the Mints for coining silver has caused a reduction of establishments to the smallest limits, the gross total charge for the Mints in 1896–7 being estimated at Rx. 53,000, as compared with Rx. 91,000 in 1893–4, 10,611–3, 10,618–22. The actual charge for establishments in 1893–4 (the year of the closing), was Rx. 54,000, 10,614–7. The reduction will probably bring the two ends of the accounts together, 10,623–7. The coinage of the Native States is not legal tender outside the States, 10,628–35.

FAMINE RELIEF AND INSURANCE GRANT:

The amount to be set aside was at first Rx. 1,500,000; in the last budget statement this amount has been reduced to 1,000,000, 10,636–9. The full amount has not always been available because of the varying financial pressure, and in some years there has been no surplus available, 10,640. Table giving the actual charges against Famine Relief, &c., 1881–97, 10,641–4. This grant is really a surplus of revenue applied to a particular purpose, 10,645–50. Any surplus that there might be from the grant after providing for famine relief or protective works was applied to the redemption of debt, 10,651–9.

Considering the number of protective works constructed in past years, one million will be quite sufficient for the future, 10,660–9. From 1881–2 to 1893–4, the total expenditure on Famine Relief Works was Rx. 7,196,000. The net loss on the Indian Midland and Bengal Nagpur Railways (protective lines) is charged against the Famine Insurance Grant, 10,670–83.

CIVIL BUILDINGS AND ROADS:

Generally the administration of this Department is made over to the Provincial Governments, though some of the charges are Imperial, 10,684–5. The net expenditure in 1875–6 was Rx. 2,753,511, and Rx. 3,898,531 in 1893–4, there were also net charges in England of 76,884*l.* in 1875–6, and 62,583*l.* in 1893–4. A great part of the increase is due to expenditure on Imperial account in Upper Burmah, the balance is made up of expenditure by the Provincial Governments out of their surpluses

JACOB, Mr. STEPHEN—*cont.*

10,687, 10,704–6. The bulk of the expenditure is on communications in 1893–4 which would amount to about Rx. 2,000,000, 10,688–96. This is only for the main channels of communication; local roads are supported locally, 10,698–703. There is also a small heading for miscellaneous public improvements, 10,696*a*. A great proportion of the charges are local, 10,696*b*. The charges in England have remained nearly stationary, 10,697. The works are carried out by the Public Works Department, 10,707–11.

COLONELS' ALLOWANCES, RETIRED PAY, &c. (*See* Appendix, "Details of the Charge for Military Pensions"):

Under the head of Colonels' Allowances, the increase is due to the increased number of officers entitled to the allowance; the present regulations do not apply to officers now joining, so the charge will decrease. It is expected to reach its maximum in about five years, 10,712–5. The increased rate of staff corps pensions has brought the military pension charge from 403,000*l.* to 611,000*l.*, the increased pension rate for Artillery and Engineer officers has also contributed to the incaease, 10,716. The scale of medical pensions has also increased, 10,717.

The employment of natives in the Education Department has been and is being much extended, and, as in other departments, the employment of natives is a saving of expenditure, 10,718–33.

22ND DAY.

JACOB, MR. STEPHEN.—ANALYSIS OF EVIDENCE of.—*cont.*

LAND REVENUE.

Charges for collection.—The land revenue forms about 28 per cent. of the whole revenue of India, and about 40 per cent. of the principal heads of revenue, 10,734–9. The land revenue charges are important, not only because of the importance of the land revenue itself, but also because they comprise charges for settlement and for general district administration, 10,740–1. Sub-heads of land revenue charges, 10,742–3. The charges have increased from Rx. 2,907,000 in 1875–6 to Rx. 4,022,000 in 1893–4, or by over 38 per cent. In the same years the net land revenue amounted to Rx. 18,634,000 and Rx. 22,315,000 respectively, the percentage of increase being 22¼ on the gross, and 19¾ on the net revenue, 10,744–51.

The charges continue to increase, 10,752.

In Madras the charges have risen by 50 per cent., of which all but 10 per cent. is new expenditure, covered by local receipts (coming under provincial rates); explanation of reasons for showing the charge under Land Revenue and the receipts under provincial rates, 10,755–7. The services which have caused about one-half of the total increase in the charge have been taken over by the Government since 1875–6, it would not be in accordance with the Indian system to bring the local rates from which the charge for these services is met to credit under Land Revenue; but, in order to make a fair comparison between the two years, the amount of the expenditure on the new services might be deducted from the later year; and this would reduce the increase in the charge to Rx. 600,000, which would be a percentage not bigger than the percentage of increase in receipts, 10,758–835. Increases of charge in 1893–4 in the Central Provinces, Lower Burma and Bengal were mainly for settlement operations, and were of a temporary character; there were similar heavy charges in some provinces in 1875–6; but a large part of the survey charges have only been brought to account under Land Revenue since 1878–9; formerly they were charged under "Survey," 10,836–44. Explanation of the new charge "Land Records and Agriculture," amounting to Rx. 945,000, 10,845–61. The increase of Rx. 300,000 under General Administration is accounted for by improvement in the pay and numbers of the subordinate executive service; the salaries paid to Indian civil servants have decreased by Rx. 19,000, notwithstanding the compensation allowance for loss by exchange; while those of the native subordinate services have increased by Rx. 148,000, 10,862–6. Burma and other annexations account for a considerable increase in this charge. Explanations of increases in various provinces, 10,867–72. In Bombay the land revenue charges have remained very stationary, but the charge is not a very moderate one, as collection under the Ryotwari system is expensive, 10,873–9. The percentage of charge to revenue was, in 1875–6, for the whole of India, about 13½, and, for Bombay, about 18, 10,880–9. The practice of paying in some cases the hereditary collectors of revenue by commission is a continuance of an ancient practice, but is being gradually superseded in Assam, 10,890–1. Government estates are estates which have come into the hands of Government, chiefly under the Zemindari system, owing to the failure of the proprietor to pay his land revenue promptly, in which case he is dispossessed and merely given an allowance called "*Malikana*," 10,892–900.

Deductions from Land Revenue.—Explanation of terms "assignments" and "compensations," 10,901–3. They have risen by 27 per cent. since 1875–6, which increase is more than accounted for by the increase under rent-free grants in Bombay, which is in fact merely a book adjustment, 10,904–8. "Refunds" are merely repayments of sums exacted in error, 10,909–11. There is no system of buying up perpetual grants, except when they are very small in amount, 10,912–14. Explanation of various items appearing under the head of Land Revenue, 10,917–24. The percentage of cost of collection is, in Madras 17½, in the North-West Provinces and Oudh 13, in Bombay 15, in Bengal 12, in the Punjab 15, in Upper Burma 30, in Lower Burma 13¾, in the Central Provinces 24½, in Assam 18, and in the small provinces, under "India General," 30, 10,925–37. Explanation of these percentages, 10,938–44. The whole charge for India works out to about 15 per cent., but it must be remembered that this includes the charge for the general administration, 10,945–8. The system is more or less expensive in the different provinces according to the revenue system in force in each province; the general principles of the system are much the same, 10,949–51. Description of the system, 10,952–65.

Employment of natives, 10,966–11,003.

FOREST DEPARTMENT.—The forests are worked by the Indian Government with a view to the improvement of the country, but they do as a fact produce revenue, 11,004–5. The net revenue was in 1875–6 Rx. 277,000; and in 1893–4 Rx. 817,000. The The charges were in 1875–6 Rx. 420,000; and in 1893–4 Rx. 906,000. The net revenue of 1893–4 includes Rx. 52,000, on account of Upper Burma, 11,008–14. Even excluding Burma the revenue has increased rather faster than the charges, 11,015–19. The establishment charges have increased nearly 200 per cent. in the period, with the advance of forest conservancy; the increase is almost entirely due to increased numbers, though there has been an improvement in the position of the lower grades, 11,020–3. The improvement has been general in all provinces except the Central Provinces, 11,038. The revenue is lower than it might be owing to benefits allowed to the people, such as fuel, &c., 11,040–1.

OPIUM DEPARTMENT.—The gross revenue was in 1875–6, Rx. 8,471,425, and the charge Rx. 2,219,000; and in 1893–4, Rx. 6,628,000 and 1,877,000, respectively 11,043. The revenue and expenditure in any given year are not very closely connected, the charges depending on the extent or the nature of the crop, and the price paid to the cultivator; the revenue on the number of chests sold and prices ruling in the Chinese market. In Bengal, Government sells opium itself; in Bombay it levies a transit duty on opium grown in Native States, 11,044–50. The price paid to the cultivator is settled at the beginning of the year, and is not affected by the quality of the crop. The system is to make to the cultivator an advance at the beginning of the season, and to pay the balance when the crop is brought in, 11,051–7. Explanations of certain items of expenditure, 11,058–61. It is not likely that improved administration would be obtained by transferring the management of the

JACOB, Mr. STEPHEN—*cont.*

Opium Department from Bengal to the Central Government, 11,062–7.

SALT DEPARTMENT.—The revenue is a rising one; the charge in 1875–6 was Rx. 509,000; and in 1893–4, Rx. 474,000; but the charges in the former year included certain treaty payments which have since come under another head of account; deducting these, the charges show a small increase of Rx. 36,000, due to the abolition of the Customs line, which relieved Northern India, having caused the employment of additional preventive establishments in Bombay, 11,068–72. The charge is mainly imperial, 11,073–4. The assignments have increased from Rx. 45,000 in 1875–6 to Rx. 367,000 in 1893–4, owing to the arrangements with the Native States, in connection with the abolition of the customs line between 1870 and 1878, under which fixed payments are made to those States, 11,075–8. Organisation of the Salt Department, 11,079–81. In Bengal the revenue is mainly from customs duty on salt imported from England, which is about 20 per cent. of the whole consumption, 11,082–4. The revenue is derived chiefly from excise and customs duties, and only to a small extent from sales, 11,085–94. Rates of duty 11,095–11,101.

STAMP DEPARTMENT.—The revenue has increased steadily with practically no increase of duty; in 1875–6 it was Rx. 2,799,000, in 1893–4, Rx. 4,457,000; the charges were Rx. 110,000 and Rx. 156,000 respectively, 11,102–6. The chief cause of the increase in charge is discount on sale of stamps, 11,107. The percentage of cost of collection is only 3½, including the supply of stamps from England 11,108. Explanation of a *minus* entry in the charge for collection 11,109–11. Three-fourths of both revenue and charges are provincial, the remainder imperial, 11,112. Details of the revenue 11,114–28. Probate duties and stamps 11,130–9.

EXCISE DEPARTMENT.—Excise revenue has increased from Rx. 2,494,000 in 1875–6. to Rx. 5,388,000 in 1893–4; the charges from Rx. 87,000 to Rx. 193,000, 11,141–2. The percentage of cost of collection is about 3½, showing a very slight increase over 1875–6, 11,143–6. Explanations of increased charge, 11,147–8. Assignments and refunds have increased considerably, chiefly in Bombay, owing to arrangements with Native States, 11,149. The revenue and charge are both three-fourths provincial, and one-fourth imperial, 11,150. The revenue is confined to duties on intoxicating articles of consumption, and they have been increased, 11,151–60.

PROVINCIAL RATES.—Provincial rates are levied on the land for special local purposes, such as schools, hospitals, roads, district post, &c., 11,161–5. The cost of collection is generally charged to Land Revenue, except in Bengal, where there is a special establishment, 11,166, 11,175–7. The revenue in 1875–6 was Rx. 1,942,000; in 1893–4, Rx. 3,315,000, 11,173. Nature of the charges in each province, 11,178. The charges are provincial and local, 11,179.

CUSTOMS.—Variations in the customs duties of recent years, 11,180–2. Between 1883–4 and 1893–4, the principal import duties were on liquors; there is also an export duty on rice, 11,183–4. Land customs on goods passing between the foreign European settlements and India are a small item, 11,185. The total customs revenues in 1875–6 was Rx. 2,724,000; in 1893–4 it was Rx. 1,682,000, but it has risen since that time to about Rx. 4,482,000 (estimated) of which about Rx. 1,000,000 is due to cotton duties. The charges in 1875–6 were Rx. 188,000, in 1893–4, Rx. 144,000, in 1895–6 (revised estimate) 201,000, which last figure gives a percentage of a little over four on the revenue (Rx. 4,900,000) of that year, 11,186–95. The charges include practically the whole cost of collection, none of it being included in Land Revenue, 11,196–201. There are some refunds and assignments, chiefly due to arrangements with Travancore and Cochin, 11,202. The charges are provincial except in Bombay; the revenue is imperial everywhere, 11,203–4.

ASSESSED TAXES.—The income tax, and an analogous tax in the Central Provinces are the only taxes

JACOB, Mr. STEPHEN—*cont.*

under this head. The latter was the only assessed tax in 1875–6, 11,205–10. Description of the income tax, 11,211. The revenue from assessed taxes amounted to Rx. 15,000 in 1875–6; and to Rx. 1,739,000 (gross) in 1893–4. The cost of collection was Rx. 10 in 1875–6; Rx. 31,000 in 1893–4, the lowness of the charge being accounted for by the fact that it is collected by the Land Revenue Establishment, 11,212–6. The tax is general in India, except Burma, where it only applies to officers' salaries, and private incomes in some of the large towns of Lower Burma. The portions collected in Bengal and Bombay are the highest, 11,217–8. The receipts are half credited to provincial, half to imperial; but that portion of the tax charged on railway profits is wholly imperial, 11,220–2. Exemptions: the income tax does not apply to land, 11,224–31.

REGISTRATION DEPARTMENT.—Receipts (consisting of fees for registration, either obligatory or voluntary, of documents amounted in 1875–6 to Rx. 187,000, and the net revenue to Rx. 51,000; in 1893–4 to Rx. 416,000 and 192,000 respectively, 11,237–41. Though not primarily intended to be a revenue producing department, it more than pays its way, 11,242–5.

TRIBUTES, &c. FROM NATIVE STATES.—The political officers are primarily responsible for the levy of these sums, which are treaty payments almost entirely, and amount to Rx. 775,000, 11,246–54.

23RD DAY.

JACOB, Mr. STEPHEN, C.S.I., ANALYSIS OF EVIDENCE OF—*continued.*

POST OFFICE.

The Imperial Post Office is under the central control of the Director-General, who has Postmasters-General or Deputy Postmasters General in each province subordinate to him, 11,256–8.

In 1875–6 the net deficit on the working of the Imperial Post Office was Rx. 66,000; on the District post the net deficit was Rx. 79,000,—making a total net deficit of Rx. 145,000. In 1893–4 there was a net revenue from the Imperial Post Office of Rx. 118,000, and a net deficit on the District post of Rx. 114,000, making a total net revenue of Rx. 4,000. In 1895–6 the net revenue will probably exceed Rx. 72,000, 11,259–62. Details of the charges, 11,263. The net revenue would be considerably higher in the later years but for exchange, 11,264.

Constitution of the staff, 11,272–3. There has been some increase of superintending staff owing to increase of business, and Money Order and Savings Bank business has been taken over since 1875–6. This business has increased enormously since it was taken over by the Post Office, 11,265–9; and is conducted mainly at headquarters, 11,275–8, but an attempt is being made to decentralize which will relieve the central account office of some of the examination work, 11,277–88. The extension of the business is not due, either in the case of Money Orders or Savings Banks, to reduction of rates; it is due to increased facilities and to general confidence in the Post Office, 11,289–93, 11,445. The Money Order business certainly pays, 11,454–8. The interest on Savings Banks' deposits has been reduced from 3¾ to 3½ per cent.; except on the express wish of the depositor and in his name, no part of the deposits is invested, but they are used by the Government for any general purpose to which loan money would be applicable, 11,294–6. The Post Office has no capital account, but it is charged with the rent of buildings; and if this rent is added to the charges, the total charges would not work out to a net surplus, though the Imperial post would still show a surplus; on the other hand, if the Post Office account were credited with the local rates applicable to the District post, the total net revenue would be considerably larger than it is, 11,297–313. Question of propriety of including the rates in the account, 11,314–28. It might be well to draw attention in the accounts to the fact that the deficit in the District post is met by local rates, 11,329–34. Analysis of charges for Presidency and District offices, 11,335–6. The increase under

JACOB, Mr. STEPHEN—*cont.*

"Salaries" arises from increase in the numbers of the lowest class of appointments. The amount paid for "Establishments" in the Post Office is extremely low, both in regard to the salaries paid, and to the manner in which the Post Office utilises the services of minor officials in other departments, 11,337–43.

The number of postal articles dealt with has risen from 119½ millions in 1875–6 to 370¼ millions in 1893–4, 11,344–5. The parcel post is supposed to pay, and it has steadily extended, 11,346–50. Method of ascertaining and checking the number of letters, 11,351–3. The Post Office is used for the payment of land revenue and other Government dues, but not to a very great extent; and pensions are paid through it, 11,354–60. The employment of minor officials to conduct Money Order business has not resulted in increased fraud, as the checks are very complete; and there is an insurance fund against losses by fraud, subscribed to by Post Office officials, 11,361–4.

Sale of quinine through the Post Office, 11,365–7. Analysis of charges for conveyance of mails, 11,368. Explanations of these charges, 11,369–90. Discount is allowed to postmasters on the stamps they sell, 11,391–2. It is only of recent years that the Post Office has had to pay for its stationery and printing, on the ground that it, like the Public Works Department, is a commercial department, 11,393–400. Analysis of charges in England, 11,401–2. Eastern Mail Service contract; description of successive apportionments of the charge, 11,404–14. The increase in stores supplied from England is due chiefly to the expansion of postal business in India; arrangements for the supply, 11,415–28.

DISTRICT POST OFFICE.

Description, 11,429, 11,446–53. Mode of treating in the accounts, 11,430–6.

Rates of postage in India, 11,437–44.

The Post Office pension charge was Rx. 43,721 in 1894–5.

Government Departments are charged a lower rate than the general public, but not by weight *en masse*, 11,513–8.

TELEGRAPH SERVICE.

The Telegraph Department is divided into two branches, the Indian Telegraphs and the Indo-European Telegraph, 11,465–6.

In 1875–6 the Indian Telegraph Department accounts showed a net deficit of Rx. 177,000; in 1893–4 a net surplus of Rx. 45,000.

In 1875–6 the Indo-European Telegraph Department produced a net revenue of Rx. 11,000; in 1893–4, of Rx. 46,000.

These figures include both revenue and capital charges, 11,463–70.

Comparison of charges in the two years, 11,474.

In 1875–6 the result of the whole system was a net deficit of Rx. 192,000; in 1893–4 a net revenue of Rx. 57,000, 11,475–6. Buildings are charged to capital account, stationery to revenue account, and everything is included in the above figures, except pensions, 11,477–8. The whole of the capital expenditure is included in the annual expenditure, but separate accounts are kept of capital and revenue, 11,479–80.

Indian Telegraph Department.

The capital charges are chiefly incurred for line construction, buildings, &c.

In 1875–6 479 miles were constructed during the year, bringing up the total to 16,633 miles; in 1893–4 1,677 miles were constructed, the total at the end of the year being 42,707.

In 1875–6 the net capital charge was Rx. 115,000; in 1893–4 Rx. 225,000; the whole capital charge, amounting in the gross in 1875–6 to Rx. 2,132,000, and in 1893–4 to Rx. 5,665,000, has been met entirely from revenue, and not from loan money, 11,481–3. If interest on the capital be charged to the department, then, after deducting the capital expenditure from the annual expenditure, in 1875–6 there was a net deficit of three per cent., and in 1893–4 a net profit of three-fourths per cent., 11,484–507.

All telegrams sent by Government departments, except those sent on Telegraph or Post Office business, are charged; but, even excluding State messages, the revenue in 1893–4 gave a percentage of 2⅓ on capital, though, if the interest on capital also were charged the result would in that case be a deficit, 11,508–13.

JACOB, Mr. STEPHEN—*cont.*

Analysis of expenditure on revenue account, amounting in 1875–6 to Rx. 269,000, and in 1893–4 to Rx. 524,000, *i.e.*, about double, while the mileage has increased 2½ times, 11,520–6. The Government has been in working the direction of reducing the numbers of the superior (European) establishment, 11,527–8. Details of expenditure on line establishment and signalling staff, 11,529–32. The total number of messages has increased from 866,000 to 4,189,000, and service messages from 89,000 to 605,000. Service messages are checked, but undoubtedly the use of the telegraph by officials has increased, 11,533–9. Explanations of other charges on revenue, 11,540–50.

Indo-European Telegraph Department.

Description of the service and financial arrangements under which it is worked, 11,551–2.

The total net capital outlay to the end of 1875–6 was Rx. 1,154,000; and to the end of 1893–4 Rx. 1,145,000; on which sums the net revenue shows a percentage in 1875–6 of about one-half per cent., and in 1893–4 of nearly four per cent., 11,553–5. Analysis of charges against revenue, 11,556–7.

Description of Ceylon telegraphs, 11,558. Zanzibar and Mauritius cable, 11,559.

24TH DAY.

WATERFIELD, SIR HENRY, K.C.S.I., C.B.

ANALYSIS OF EVIDENCE.

HOME ADMINISTRATION:

Details of payments in England in 1875–6 and 1893–4, resulting in a total increase of administrative charges paid in England from 233,045*l.* to 265,812*l.*, or 32,767*l.*, 11,563–4. The latest accounts show very slight alterations, tending rather towards decrease, except in regard to management of the debt, which is increased by 16,000*l.*, 11,565–9. In salaries there is a reduction in the latest figures of 3,051*l.*, accompanied by an increase in numbers of 12 persons, 11,570–3.

COUNCIL:

Within the last 17 years the number of Members of Council (salary, 1,200*l.*) has been reduced from 15 to 11, or 10 if an existing vacancy is not filled up, power having been taken by Act of Parliament to reduce the number to the latter extent, 11,574–5. Members of Council do not now earn pensions, with certain specified exceptions, 11,576–89. The Secretary of State has power to appoint three members with professional qualifications, who would serve for pension, but this power has only been exercised on four occasions since the Act of 1876, 11,590–3. No practical inconvenience has resulted from the reduction in the number, 11,595–605. Standing Committees, 11,606–7.

CORRESPONDENCE DEPARTMENT:

There is a reduction in numbers from 63 to 51, and the normal establishment will be 48. This reduction has been gradually effected on the occurrence of vacancies. The 60 and 65 years' retirement rules have been adopted, but the former is infrequently enforced; in two cases officers have been kept on till 70 years of age, 11,608–20. Value of services after 60 years of age, 11,632–5. The fall in the charge for salaries has been between 4,000*l.* and 5,000*l.*, or about 11½ per cent., 11,621–4. The proportions of higher and lower division clerks in this branch are 31 and 17; but the small proportion of the latter class is due to most of the lower class of work being done by the Registry Department, 11,625–6. If the Registry Department were taken with the Correspondence Department, there were 108 men, costing 46,626*l.*, employed in 1875–6, and 110 men, costing 43,793*l.*, in 1893–4. Arrangement of rooms, 11,627–31, 11,649–52. There are six divisions of the Correspondence Department, varying considerably in strength.

FUNDS DEPARTMENT:

This Department is more analogous to the Accounts Department than to the Correspondence Depart-

WATERFIELD, Sir HENRY—*cont.*

ment. It deals with the Indian family pension funds. Since 1895–6 it has had the Civil Funds added to its responsibilities. Since that time the staff has been reduced from 14 persons to 7, chiefly owing to the abolition of the Consulting Committee. The normal staff will be five clerks besides the Director, 11,653–62. There are 11 funds administered by this Department. The receipts from these funds in England amount to between 80,000*l.* and 90,000*l.* a year; but a large part of the total receipts is actually received in India, and the accounts have to be dealt with in England, 11,663–9. Questions relating to the Funds are referred to the Finance Committee of the Council, 11,670–1. Explanation of the system of the Indian family pension funds and of the circumstances in which they were taken over by the Government, 11,950–76. The capital taken over was added to the surplus of receipts over liabilities for the year, and was not treated as capital, the interest on which would go to defraying the pension charge, 11,977–93.

ACCOUNTS DEPARTMENT:

In 1875–6 this Department was conducted by an accountant subordinate to the Financial Secretary. In that year the strength was 46; In 1893–4 it consisted of an Accountant-General (independent of the Financial Secretary) and 45 clerks, &c. The normal establishment is 44, 11,672–3. Important questions are referred to the Financial Secretary and to the Finance Committee, 11,674–82.

STORES DEPARTMENT:

The Director-General with his staff is established in the India Office; and the Superintendent and his staff for examining and shipping the stores is located at the depôt in Lambeth, 11,683.

In 1875–6, the Director-General's clerical staff consisted of 31 persons; in 1893–4 of 24 persons. The normal establishment is 22 persons, 11,684–90.

In 1875–6 the Superintendent's staff consisted of 51 persons; in 1893–4 of 61 persons, which has since been reduced by one, and is, at present, normal, 11,691–2. The policy is to obtain stores, as far as possible, of local manufacture in India, but not to purchase European stores except through the Stores Department, 11,695–6. The total amount of general stores purchased through the Stores Department in the decade ending 1887–8 was nearly stationary at about a million sterling, and the items which have increased have done so for special reasons and are those which are only obtainable from England, 11,697–706. Railway stores brought up the total from 1,704,000*l.* to 2,077,000*l.*, which figure represents the total value of stores provided through the Department, 11,707–8. The rate per cent. of the cost of the Stores Department on the total value and freight of stores shipped to India, including special rates paid on inspection of stores supplied by other Government Departments and interest on capital, &c., were in 1875–6 and 1887–8 3·56 and 3·15 respectively, 11,709–26. The fall in prices has to some extent neutralised the effect of the fall of the rupee, 11,727–44. The charges for inspection at the India Office can hardly be compared with those in other departments, and it is most difficult to be certain that any calculation of cost of inspection is exhaustive, 11,745–52. The India Office does not propose to raise the question of the charge made by other departments for inspection, 11,753–5. The arrangements with the Inland Revenue for the supply of stamps is satisfactory. Explanation thereof, 11,757–73. On the recommendations of the Home Charges Committee, malt liquor is now locally supplied in India, 11,774. Generally, the amount of stores bought in England for India has not decreased, and the value of the stores examined by the Stores Department remains much as it was, though there have been fluctuations in the supply of military stores; the Secretary of State is fully alive to the importance of keeping down the cost of the Stores Department to the minimum, 11,774–83. Wages, rent of buildings, &c., rose from 25,177*l.* in 1875–6 to 26,855*l.* in 1893–4, but a large part of the increase is merely nominal, and the charge is practically stationary, 11,811–4.

WATERFIELD, Sir HENRY—*cont.*

REGISTRY DEPARTMENT:

In 1875–6 the Registry Department consisted of a Registrar and a staff of 44, of whom 35 were second-class clerks; in 1893–4 the staff consisted of 58 persons, of whom 43 were second-class clerks, and there are now 37 second-class clerks, and seven boy-copyists, besides the Registrar and his three assistants, the keeper of records, the keeper of geographical records, women typists, &c. The normal establishment of second-class clerks will be 33, 11,794–7.

MISCELLANEOUS OFFICES:

The number rose from 15 in 1875–6 to 29 in 1893–4, owing to various changes in the organisation of the office, including the addition of the Indo-European Telegraph staff, 11,798–9. The number of messengers, &c. has been reduced, and the use of boy messengers has been introduced, 11,800–2.

AUDIT DEPARTMENT:

The Audit Department has been reorganised since 1875–6. The normal strength is now, besides the Auditor and his Assistant, 2 senior, 3 junior, and 13 second-class clerks. The cost has increased from 4,410*l.* in 1875–6 to 6,742*l.* in 1893–4. Its normal cost will be about 6,208*l.* The cost is now better distributed than formerly, and saving will accrue as vacancies occur, 11,803–4. Question raised by the Auditor, 11,805–9.

MISCELLANEOUS.—Explanations of other minor heads of expenditure, viz., Telegrams to India, Postage, Contingencies, &c., 11,815–20. The Library Grant is a subvention to literature: it amounts to 3,000*l.* a year, 11,821–33. Rent and Taxes on India Office and other buildings, 18,834–46.

Allowances to Civil Service probationers have now been reduced to 100*l.* for one year, 12,019–21. Outfit allowances to high officials on appointment have been considerably reduced, 12,022.

MANAGEMENT OF DEBT:

The sums paid to the Banks of England and Ireland for the management of debt were, in 1875–6, 18,385*l.*, and, in 1893–4, 44,938*l.*, and in 1894–5, 61,096*l.*, 11,747–8. Details of these sums, with explanations, 11,880–902. In 1860 the rate was fixed at 340*l.* per 1,000,000*l.*; in 1885, on stock with quarterly dividends at 400*l.*; after the conversion of 1887–8, when quarterly dividends became more general, at 300*l.* on half yearly, and 360*l.* on quarterly dividend stocks; recently it has been arranged to pay 360*l.* per 1,000,000*l.* on the first hundred millions of India stock, and 100*l.* on further stock, the payment for debt with half-yearly dividends remaining at 300*l.* per million, 11,847–50. The total amount of stock held by the Bank of England was, in 1875–6, 52,700,000*l.*; and in 1893–4, 124,000,000*l.* At the Bank of Ireland, in 1875–6, 1,196,000*l.*, and, in 1893–4, 3,700,000*l.*, 11,851–2. Explanation of payment to the banks, 11,853–9. Explanation of other charges connected with the debt, 11,860–79. The nominal amount of stock is not increased by a conversion, 11,908–10. Where there is a difference between the amount of money received for a loan and the amount of stock inscribed, that difference is made good by a sinking fund, if the amount is large; otherwise it is made good from the revenue of the year. The sinking fund is applied in purchase of stock to cancel the discount in 50 or 60 years, 11,911–5. Apart from this the Indian Government do not apply a sinking fund to their loans, 11,916–7. Policy of a sinking fund, 11,918–38.

ROYAL INDIAN ENGINEERING COLLEGE:

It has not been possible to hand over the Cooper's Hill College to a private body, but it has now been put on as economical a footing as possible, consistently with the training in this country of engineers, and telegraph and forest officers for India. The college is now nearly self-supporting, 11,940–7. No probability of past losses being reimbursed, 13,035–8.

SUPERANNUATION:

The proportion which an Indian officer's pension bears to his salary is probably much less than in England, and a large part of it is met by his own payments. It might be well to explain this latter fact in the accounts, 11,994–12,018.

Employment of natives of India, 12,023–34.

25TH DAY.

WATERFIELD, SIR HENRY, K.C.S.I., C.B. ANALYSIS OF EVIDENCE OF—*continued.*

According to the principle which he has adopted, the figures in Sir W. Wedderburn's memorandum may be accepted as correct (*passim.*)

The tables of increase of expenditure were prepared in the old form, not with any view to minimise their amount, but because at the time they were drawn up the new form had not been decided upon, 12,055. The statement of the distinction between Imperial and provincial expenditure in Sir W. Wedderburn's paper is correct, 12,058. It would be impossible to debit provincial governments with exchange, *e.g.*, that resulting from an increased superannuation charge owing to an increase of their establishment; all their direct expenditure is in India, 12,059–62. It is true that the provincial system in a certain sense invites provincial governments to increase expenditure, that is, to administer their province in the most efficient manner, 12,063–8. When the words "improvement" and "deterioration" are used in the tables, they refer strictly to the financial position, and not to a possible exhaustion of sources of revenue, 12,069–70. Additional taxation imposed since 1884–5, 12,071–3; the proceeds thereof amount to about one-half of the increase of revenue in the period, 12,074–7. Increase of land revenue does not imply increased strain upon the people, as it implies also an increased portion left in the hands of the owner 12,078–81. No distinction could fairly be drawn between loss by exchange "automatically" and that "voluntarily" incurred by government at any particular time, though there may be a distinction drawn between charges over which the Secretary of State has or has not control, 12,083–9, 12,227–31. Sir W. Wedderburn's apportionment of "automatic" and "voluntary" increases due to loss by exchange cannot be accepted. The former class should be Rs. 11,000,000 instead of 5,500,000, as he puts it, 12,232–7. The reason the totals of expenditure have been divided in the tables into the four groups, Expenditure by the Government of India, by Provincial Governments, by the Secretary of State, and Exchange, is to enable the Commission to take the expenditure to pieces and see how it arises (but you cannot form any idea of the total growth without putting the figures together, 12,145–51). Of course, if to the Imperial expenditure in India is added the expenditure by the Secretary of State, exchange, and exchange compensation allowance, the result is an addition of nearly four million Rx. to the Imperial expenditure, 12,094–7. It is only in the sense of a reduction in expenditure that the absorption of the Famine Insurance Grant is an "improvement"—the Famine Insurance Grant is practically an appropriation of surplus revenue to provision against, or relief of, famine, and a large part of it is really a sinking fund; if there is no surplus revenue, it becomes a question whether additional taxation should be imposed to provide the Famine Grant, and it has usually been decided not to do so; but the spending departments are never allowed to encroach upon the grant, which is jealously guarded by the Financial Department. If the Famine Insurance is treated as surplus revenue, an average of a little over a million a year has been applied from it since 1884–5 to reduction of debt or discharge of debt. The total actual expenditure on famine relief in that period was only Rx. 306,000, and, since 1881–2, on protective irrigation works, Rx. 1,800,000, on protective railways, Rx. 5,469,000 in direct construction, and Rx. 3,587,000 paid to companies as interest on capital expended by them, 12,098–139. Explanations with regard to military expenditure, including the Chitral Expedition and special military operations. A chief cause of the large increase in the last 10 years of nearly five millions is the cost of the special defences on the North-West frontier of India, which are now nearly completed, 12,153–85. The charge for the guaranteed interest of the Bengal-Nagpur, and Indian-Midland Railways was sanctioned as a very special case; and subsequently the net loss, including that interest, was charged against the Famine Grant, 12,188. In order to judge of the financial success of the Indian State railways, the charges both in England and India must be added together, and that is done in the Government accounts, 12,187–8. The object of offering special terms to private companies to construct feeder lines is to induce individuals to invest their money in the undertakings, so as to accelerate railway construction, as Government can only raise limited sums on its own account without raising the rate of interest on its loans. To avoid unnecessary reduplication of machinery, the construction of new feeder lines is, as far as possible, entrusted to existing companies, 12,189–95. It is impossible to state what loss may have fallen upon the Government through waiving its right to purchase some of the old guaranteed companies, 12,202. History of the Bengal Central Railway Company, 12,203–4. The advantages given to the shareholders of the guaranteed companies are obligatory under the contracts under which the lines were originally constructed, 12,205–15. Cost of the Gilgit Agency and of Burma, 12,216. In the tables, "effective charges" are exclusive of furlough and military stores (which are ordinarily included). The sub-tables are prepared in a different manner to the Indian accounts in order to give greater detail, but the totals are arrived at in the Indian method, 12,221–2. The reduction in the charge for military pensions is due to a change in system, 12,223–6. Mode of treating the debt so as to show the effect of exchange, 12,238, 12,244–58. The object of the transfer of debt to productive works is to treat those works as having been entirely constructed either from borrowed money or from revenue applied to cancel debt, 12,239–40. No doubt the provincial balances are smaller, but they may have been spent on useful works, and, therefore, the reduction cannot be called a deterioration, 12,241–3. There is no depreciation written off each year against a work, because the works are maintained out of revenue, 12,259–62.

WATERFIELD, SIR HENRY—*cont.*

29TH DAY.—PART II.

BAHADURJI, DR. K. W.

The amalgamation of the medical services would, in the opinion of many high authorities, conduce to efficiency as well as to economy. The saving has been variously estimated at 17½ and 20 lakhs. The latter being Lord Wolseley's estimate of the results likely to follow the establishment of station medical officers instead of regimental, and the combination of the charge of British and native troops, 13,409–24. Since Lord Wolseley wrote, an amalgamation of the administrative branch has been carried out, but not of the executive branch, and it is from the latter that a saving of at least 17½ lahks may be expected, 13,425–33. There is, of course, much difference of opinion about the station hospital system (the saving from which was estimated at 4½ lakhs, 13,429); but Lord Wolseley thought that it would be more successful with native troops even than with British troops, because the hospitals might be given over to the charge of native hospital assistants, in consultation only with the European medical officer, very much as happens at present; under the existing system there is not enough for the medical officers to do, 13,434–54. Natives are particularly prone to go to a medical man in whom they have faith, but they would, of course, be just as likely to do so under the one system as under the other, 13,455–61. The saving would arise from the abolition of superfluous establishments. It has also been proposed to abolish the Netley course of instruction, and substitute training in India, where experience in tropical diseases would be gained. It is true that this proposal has been deliberately rejected, 13,462–3. The station hospital system has also been rejected, but on the ground that the natives require to have an intimate knowledge of their medical officer, which ground is not in consonance with experience of native troops, 13,464–6. With regard to the Civil Medical Department, it at present consists of officers, of the Military Medical Department, the theory being that they form a war reserve, 13,474; but the conditions required from a civil medical officer are wholly different from those of a military officer; and, moreover, the mixed character of the Indian Medical Department stands in the way of an amalgamation

BAHADURJI, Dr. K. W.—*cont.*

with the British Medical Department, because civil employment interferes with military training; further, in practice officers who have been long in civil stations do not like reverting to military duty, nor can the Civil Department spare them at short notice. The theory of the present constitution has, in fact, broken down, 13,475–82. Instead of it, the Civil Department should be a separate service, recruited from the open profession in England or in India; the Indian universities will furnish ample material for ordinary medical charges, but for educational and scientific appointments recourse will for a long time have to be had

BAHADURJI, Dr. K. W.—*cont.*

to the English universities. The present system of confining these appointments to the Indian Medical Department is not satisfactory, 13,482–97. These reforms would lead to large economies, as there would be no difficulty in procuring qualified men from outside on lower salaries than are paid to officers of the Indian Medical Department. It is irrational to foster medical instruction simply for the purpose of providing a military reserve, but the Government of India has been misled by their medical advisers, who belong to the Indian Medical Department themselves, 13,498–502.

SECTION III.—APPORTIONMENT.

(12th–14th, 17th, 18th, and 26th to 29th days.)

12TH DAY.

COLLEN, MAJOR GENERAL SIR EDWIN. ANALYSIS OF EVIDENCE OF—*continued.*

The APPORTIONMENT of CHARGES between the Home Government and the Government of India, in which the two Governments have an interest.

The Government of India consider the 7*l.* 10*s.* capitation rate excessive. They accept the principle that India should pay the whole cost of the Military Establishment, but they consider that for defence against an European enemy, the Home Government should contribute, 5710–9.

The capitation rate of 7*l.* 10*s.* includes :—

1. Capitation of troops embarked for India.
2. Charges for depôts.
3. Agency charges.
4. Charges for men deserted, died, or discharged, with less than one year's service.
5. Maintenance of young officers on first appointment to regiments serving in India, previous to embarkation.
6. Cost of young officers of Royal Engineers while under instruction.
7. Difference of pay of Royal Engineers, colonels and lieut.-colonels, &c.
8. Cost of veterinary surgeons for India.
9. Cost of examination of candidates for the India Medical Service.
10. Educational establishments.
11. Advance of pay to men embarked for India, expenses of men awaiting discharge, travelling expenses of invalids.
12. Share of cost, of pay and allowances of staff of hospitals and discharge depôts, and expenses of invalids, except pay and travelling.
13. Rebate on men returning from India, and deferred pay, 5720–2.

Charges paid by India.

The East India Company bore actual charges. After the assumption by the Crown, the capitation rate was fixed at 10*l.* In 1869 the capitation rate was terminated, and actual payments were made in following years, amounting to about 9*l.* 11*s.* per man. From 1879–80 to 1889–90 the average payments amounted to from 7*l.* to 8*l.* per man; in one particular year, owing to a writing off of 400,000*l.*, it came down to about 6*l.* 10*s.* Lord Northbrook's Commission finally settled the rate on the arithmetical basis at 7*l.* 10s., but Lord Northbrook in a speech said that he considered 5*l.* a sufficient rate for India to pay, 5731–5.

Various Committees considered the question from Sir A. Tulloch's Committee in 1860 to Lord Northbrook's, 1879–80, 5748–5766.

The Government of India objects not only to the calculations on which the results are founded, but to the bases of those calculations. They would wish the advantages to England of its possession of India to be taken into consideration, 5767–80.

The Government of India objects to the present arrangements because :—1. The system of recruiting is unduly expensive. 2. Though they do not desire to receive a purely local army, an alternative would be to have a special organization of regiments localised in India; in this way India might get a supply of more mature men for longer service, thereby also saving transport charges, 5781–99.

The Government of India consider that they are put to great expense by changes of organization made by the Horse Guards, and the remedy they claim is liberal treatment, and that they should not be called upon to pay for many of these changes, from which they do not consider that they derive any benefit, for instance, the abolition of purchase; in which case though India bore none of the initial expense, she has incurred a heavy liability for pensions, 5808–37. There was a system of purchase

COLLEN, Major General Sir EDWIN—*cont.*

in the old Indian Army, but it was neither universal nor officially recognised, 5841–4.

CAPITATION CHARGE.

From 1834 to 1857 the average force was 24,000 men and the average payment 195,000*l.*, or about 8*l.* per man. This apparently compares with the present rate of 7*l.* 10*s.* which is paid for a more highly equipped force; and must have been an overcharge, unless it may be accounted for by greater expense owing to greater mortality. The objection, however, of the Government of India to the capitation charge is that no allowance is made for the services of the men in England before they embark, 5846–81.

Depôt Charge.

The Government of India contend that the present English depôt system is less economical than one which would be sufficient for purely Indian wants. The Warley depôt supplied men at an average charge of 3*l.* 3*s.* 9¾*d.* per man on the Indian Establishment. Though these men were untrained, it would be a great saving to Indian revenues, if their training took place in India; longer service would then be necessary; the system could not now be changed, but India should not be asked to pay so much for it. For instance, in two consecutive years India had to pay 89*l.* and 140*l.* respectively, for every trained horse artilleryman sent out. So far as particular charges, calculated on an arithmetical basis, are concerned, a properly constituted Committee might decide the question; but what the Government of India contend for is a charge based on general principles of reciprocity; they do not question the arithmetical correctness of the figures. The only way in which the actual expenses could be reduced would be to have one or two large centres, instead of a number of scattered depôts, with consequently reduced numbers and rank of officers. It is such a point as this that an expert Committee might decide, 5882–922.

Agency charges have been abolished, 5923–4.

Charges for men who desert or die before embarking.

The Government of India object to this charge altogether, because they have no means of knowing whether the loss was preventable; they think that they should only be charged for the men who actually embark; at all events this charge should be covered by the capitation rate, 5925–35.

Maintenance of young officers previous to embarkation.

The Government of India think that they should be relieved of a portion of this charge, as these young officers are available for service in England till they embark, 5936–53.

Young officers of Royal Engineers under instruction for India.

The same remarks apply, 5954–64.

Veterinary Surgeons in training for India.

The same remarks apply, 5968–70.

Examination for the Indian Medical Service.

The charge is merely an estimate, which the Indian Governments considers too high and would cut down by one half, 5971–2.

Educational Establishments.

The Government of India objected to the basis of this charge against India, namely, a moiety of the net cost of the establishments, plus interest on the value of buildings and land. When Sandhurst was built, India was maintaining its own military college, and a great number of Indian officers never passed through Sandhurst at all. Moreover, India

COLLEN, Major General Sir EDWIN—*cont.*

does not charge England for the military instruction given in India. The Government of India also objected to pay one-fourth of the expense of the Staff college, which quota was based on the fact that that was the proportion of Staff College officers holding appointments in India. They consider that many of these officers do not remain in India for the rest of their service, and that for officers of the Indian service they paid separately for officers, 5973–94.

The Government of India were not satisfied as to the charge made against them on account of the Netley Medical School; and, with regard to the School of Gunnery, they object to pay for the experimental as well as the instructional side; they think they should only pay on the number of officers sent home for instruction, 5995–6002; the same general objections apply to the charges for the School of Military Engineering and the Artillery College. The Government of India have never considered what precise form of inquiry into the points would satisfy them, 6003–14.

Expenses of Men awaiting Discharge, &c.

The Government of India thought the charge excessive, as being based on a longer period of detention than is necessary, 6016–22.

Similarly, they could not follow the calculations on which the charge for hospital staff, &c., is based, 6023.

With regard to all these details, the mere fact of the India Office representative on Lord Northbrook's Commission having accepted the calculation as being arithmetically correct, would not be sufficient, unless sufficient reasons were adduced, 6024–40.

Rebate on Men returning from India.

The Government of India protest against the inadequacy of the rates allowed by the War Office, which are even less favourable than those fixed by Mr. Bouverie's Committee. It assumes that a man gives six out of his 12 years' service in India, whereas the actual average is five years four months, 6041–4; 6093–6116.

To sum up, the Government of India consider that a capitation rate of 5*l.* would represent what they might be fairly called upon to pay, 6045–6.

DEFERRED PAY AND THE SHORT SERVICE SYSTEM.

Deferred pay was introduced in 1876 at 2*d.* a day. It is now 3*l.* a year for service up to 12 years, with the colours or in the reserve; or in the case of non-commissioned officers up to 21 years. It has been variously calculated that the maximum would be reached in 1890 or in 1895, and that the maximum burden on India would be 165,000 or 220,000*l.* As a matter of fact, the charge in 1895 was 230,000*l.* There must also be a considerable increase on the transport charges owing to the short service system. On the other hand, assuming that the old system of long service (which is not that which the Government of India would favour, they would prefer a service of 10 years) had been retained, there might have been a large payment for pensions, 6049–74.

The Government of India object to the system of deferred pay having been adopted without consulting them, and it is doubtful how far it is of any advantage to them, as it may tend to prevent men re-engaging, which they might have done even without prospect of pension; and, on the other hand, the reserve is of no use to India, unless in time of need she is only charged for the cost of their transport to India, 6075–92.

Cost of Expeditions:

The principle should be that India should be repaid the whole cost of troops lent to England, though she would not claim for the training of those troops, as England did in the case of the Mutiny. This principle was followed in the case of the expedition to Malta. In the case of Egypt, India only received a grant in aid of 500,000*l.* towards a total expenditure, of nearly Rx. 2,000,000.

In the case of Abyssinia, England found all the extraordinary expenditure. India ought not to have had to pay anything in the case of Egypt, her interest being only indirect. India should, of course, pay her share in the case of a European

COLLEN, Major General Sir EDWIN—*cont.*

nation threatening her territory, or in the case of war in the Asiatic continent. The principle of joint interest in the latter case was admitted with regard to the Afghan war, 6117–50.

In the case of the Mutiny, India had not only to pay the whole cost of the troops, but also the cost of training them. In the case of the third China war and Malta expedition, England paid the whole cost of the troops, but nothing for their training. The words of the Act of 1858 seem to show that it was not contemplated that India should pay for expeditions beyond her frontier without the express leave of Parliament. The Government of India certainly were of opinion that they should not have to pay for the Perak expedition, and the Abyssinian and Egyptian wars. For the Afghan wars, it was just that the Home Government should contribute, 6151–94.

13TH DAY.

COLLEN, MAJOR-GENERAL SIR EDWIN, ANALYSIS OF EVIDENCE OF—*continued.*

SHORT AND LONG SERVICE.

The view of the Government of India in 1890 on the short service system, 6229–32.

Expressions of opinion given in evidence before Lord Curry's and Lord Wantage's committees, against the short-service system. The Government of India are not prepared with any practical proposal, but desire that the disadvantage of the system may be considered in giving the charges, 6233–4.

The average service in India is five years and four months, probably the Indian Government would be satisfied with a service of seven years, 6235–7. The youth of the men coming out under the present system is also an objection, 6238.

In later years invaliding has been very greatly reduced, but this is the result of greater attention being paid to sanitation, 6240–7. (Possibly the temperance movement has contributed towards this result, 6673–6); the mortality has also considerably decreased, 6288–92.

Two-thirds of the soldiers in India are under 25, but more than half of the invalids come from the remaining one-third who have reached 25, 6248–61. Notwithstanding this, the bulk of Indian opinion is that the best service is given over 25 years, 6224–82. These older men are chiefly men who have re-engaged, 6705–8.

It cannot be precisely stated that the short-service system has increased the invaliding, 6262–5.

(Statistics of the ages of the British soldiers at the present time, 6266–73.)

It is between the ages of 18 and 20 that most recruits enlist, 6350–8.

Before the mutiny the British forces in India consisted of local Indian forces, 12,000 men, recruited by the Company and collected at Warley depôt, and the British force, 24,000, recruited by the Home Government and collected at Chatham, 6293–8.

Whilst the Warley recruits were not trained for any length of time, those from Chatham were more or less trained men when they proceeded to India, 6299–305, 6313–4.

The expenses of Warley were low, (the average cost per man was about 20*l.* or 30*l.*, 6310–2), because the men sent out thence received the greater part of their training in India, 6306–9; whereas of late years the Government of India have constantly insisted upon the men receiving a minimum of six months' training before proceeding to India, 6315–6.

After the mutiny the army was considerably increased, the numbers of European troops being doubled, (72,000 as against 36,000), 6317–27. At the present time the total numbers of European troops in British India would be 74 or 75,000, or about 67,000 exclusive of commissioned officers, 6700–4; the strength of the forces in India is regulated by the Indian Government, subject to the approval of the Home Government, 6677–85.

During the mutiny 26 battalions were added by the Home Government to the army at home, especially for Indian service, 6328–35.

The difficulty of getting together and maintaining this, additional force, amongst other reasons, necessitated the appointment of two Royal

COLLEN, Major General Sir EDWIN—*cont.*
Commissions on recruiting, the second of which recommended an increase of pay by 2*d.* a day and a further 1*d.* a day more on re-engagement, 6336-49. Even so it was found impracticable to get a sufficient number of recruits on the old system, and the short service system was introduced in 1870, 6359.
Whilst the change gave rise to increased expenditure on raising, training, and drilling the men, it may have lessened the pension charge, 6360-6. India has benefitted financially by the change, if the decrease on pensions counterbalances the increased depôt and transport charges plus the charge for deferred pay, 6367-82.
Changes were subsequently made in the organisation of the army and in the system of relief, which tended to reduce the transport charge, 6383-8, and the extra penny on re-engagement was abolished, 6492.
It may be the case that the linked battalion system is a great advantage, in that men invalided home or unfit for Indian service, are drafted into the home battalions and are not kept merely as a dead weight in the depôt, 6416-22, 6457-72; and that by this means it is possible to charge India only for the men actually supplied to her, 6433-5.
It is true that India has insisted on the men supplied to her being 20 years old, and, since the majority of the recruits were between 18 and 19 on joining, they must have had one or two years' training previous to embarkation, 6389-94; the charge made against India is only for six months' training, 6396-403.
If it be admitted that the cost of a depot under the old system was 1,922*l.* and that now, including certain new charges, it is 1,929*l.*, the charge has not largely increased the charge on India, 6404-15, but the figures are hardly compatible with the increased cost per man, 6416-26.
There is no connection between the Canterbury cavalry depôt and any regiment at home, it is kept exclusively for the needs of regiments abroad; the normal annual draft to India is from 800 to 900 men, and to supply these between 1,300 and 1,400 are kept constantly at Canterbury, 6429-35. The question arises whether the depôt is not too extensively organised, India being charged for an establishment of 23 officers and 180 horses, 6435-45.
The normal cost of each cavalryman supplied to India would be about 80*l.*, though in exceptional years it has reached the sum of 227*l.*, 6688-92. The special depôt for training the Horse Artillery for India has been found insufficient, but a cheaper organisation than the present cadre of two batteries should be possible, 6451-5.

Specific Complaints of the Government of India.
The two Medical Services in India should be amalgamated with a view to economy, 6473-84.
The Government of India objected to the increase of pay to the soldier being granted without reference to them, also to other similar charges on the same grounds, irrespective of the merits of the cases, 6485-95, and they would like their military opinion and financial interests to be consulted, as far as possible, on new departures, 6563-8.
The charge, however, for good-conduct pay, for instance, to which they object, is probably less now than heretofore, 6492-5.
The Indian Government were not aware that the charge for adding a second lieut.-colonel and two majors to each regiment of British infantry and cavalry was incurred with a view to decrease the non-effective charge, 6496-7. In the opinion of the Indian Government, a reduction should be made by the Home Government, in the charge for recruits, partly on general grounds and partly on the grounds that the depôts in England form a reserve for England, 6504-12.
Although on the theory of an identical army, the apportionment of charge between the Home and Indian Governments should be reckoned arithmetically, yet there are general grounds on which India looks for a reduction, 6569-76A.
No large reduction can be expected in the Indian military expenditure; reduction in the number of troops, stores, or pay is impossible; 6550-3, possibly the native army might be reduced as the native reserve grows, 6554. The British forces must be kept up in a certain proportion with the number of native troops, 6555-6, 6627-30, 6686-7. It would

COLLEN, Major General Sir EDWIN—*cont.*
be bad policy to replace British by native troops, 6631-50.
India must also follow England in charges of equipment, &c., 6557-62.
The relative merits of British and Native cavalry, 6641-7.
It would not be expedient to reduce the proportion of the latter.
Part of the increase of the forces has been absorbed by Burma, 6651-4.
Though a great many Eurasians become effective volunteers, 6655-8, it is not thought desirable to extend the right of volunteering to natives, 6668-72.
The possibility of establishing regiments of Eurasians, 6663-7.
Question of the share in the Government taken by natives of India, 6577-6617, 6714. The question of the apportionment of charge between India or England for military and other purposes, 6618-23.

Aden.
(First occupied in 1839). The whole expenditure, Military and Civil, is defrayed out of the Indian Revenues, England only paid a moiety of the cost of defence work and armaments; India provided the ammunition and stores for armaments, 6523-9, 6530-5, 6543-5, 6695-700.
The importance of Aden from an Imperial point of view is greater than its importance to India, 6536-40, *see also* 6693-4; for this reason India should not be charged with the total cost, 6541-2; though for many reasons it should pay part of the cost, 6692.
Gibraltar is in no way a set-off to it, 6546-9.

Troop Service.
Though the drafts sent out have been more numerous, the cost of transport has decreased, 6714-7. The Government of India have always been anxious to employ their own transports on the home trooping service; at present transports are hired, 6719-23, 6727-8.

The Indian Marine.
The Admiralty took over the duties of the old Indian Navy in 1862; in 1869 a subsidy of 76,000*l.* was paid by India, reduced in 1888 to 41,600*l.* Since then, under recent arrangements, India pays in all 160,000*l.*, including the sum for the manning of her harbour defence ships. India has provided ports, repairs, docking, &c. for Royal Navy ships at a very moderate charge, 6743. She also provides a Marine survey, 6744. The Government of India consider that it pays too much for, and has insufficient control over, the East Indian Squadron, 6744. The Indian Marine is capable of doing the police duty and transport of troops, and saving the Royal Navy Squadron to protect the highways of trade, 6744-53. It has been estimated that India saved about 400,000*l.* a year by the transfer of her Navy; but she had still to bear considerable expenditure on account of the Bombay Marine, 6754-6.
The Government of India consider that they do enough in protecting their own ports and discharging other duties by their Royal Indian Marine vessels, and that the Home Government should bear the charge for the defence of the high seas.

14TH DAY.

HEXT, CAPTAIN JOHN, R.N., DIRECTOR OF THE ROYAL INDIAN MARINE, Analysis of Evidence of.

Has been for 13 years Director of the Royal Indian Marine; was originally nominated by the Secretary of State for five years; is subordinate to the Military Member of Council, 6759-67.
Former heads of the Department, 6768-74, 6777-8.
The conduct of the Royal Indian Marine is regulated by the Act of 1884, 6775-6, which was necessitated by the fact that the Royal Indian Marine had no defined status or discipline, 6999-7004; the Act enumerates the duties of the Royal Indian Marine, 7006-10.
The old Indian Navy, before its abolition, was probably subordinate rather to the Government of Bombay than the Government of India, 6772-4. The duties of the old Indian Navy were the police duties of the whole of the Indian seas, 6922, 6951-4, 6959-64.

HEXT, Captain JOHN—*cont.*

6968; it assisted in the New Zealand and China wars, 6923–6; it also performed duties to a very small extent in connexion with the slave trade, 6965–7. The two small services, the Bengal and Bombay Marines, which came into existence after the abolition of the Indian Navy, being found expensive and inefficient, were amalgamated, and formed the present Royal Indian Marine, 6775–6.

The duties of the Royal Indian Marine, 6776, 6789, 7,106. The head-quarters are at Bombay, 6780–1.

Distribution of the 10 seagoing ships and five river steamers forming the Indian Marine, 6782–8.

The Cost of the Royal Indian Marine:

In later years there have been apparent reductions of actual expenditure as compared with the estimate, but these are mainly nominal, being due to recoveries on account of work done for and stores supplied to other Departments, 6816–26.

Under the head of Dockyards, though the gross expenditure exceeded the estimate, the increase was more than counterbalanced by recoveries from other Departments, 6,827–31; there was a small decrease under salaries, 6832, and a decrease under stores, owing to less purchase of coal in India, as well as a greater amount of recoveries than was estimated, 6833–5, 6847–9. Besides the foregoing decreases, the re-organisation of the Survey Department and other minor variations account for a decrease of one lakh; there was also an increase in the trooping receipts of Rs. 66,000, 6836–7.

The Indian Marine Budget deals solely with receipts and expenditure in India, and leaves out of account stores received from England. Hence the apparent discrepancy between receipts from other Departments and expenditure, 6850–7.

The estimate appears under nine sub-heads; the gross expenditure of 1892–3 was nearly Rs. 20,00,000; of this salaries and victualling accounted for Rs. 8,00,000. Dockyards, 5½ lakhs; purchase and hire of vessels, 4 lakhs; and there was a net receipt of Rs. 1,71,000 on account of stores, 6858–74. On the other hand, the expenditure on stores from England amounted to 132,000*l.* in 1893–4, 6873.

Royal Navy Ships in the Indian Seas:

The Admiralty keeps four of the eight ships of the East Indian Squadron in Indian waters, in respect of which India pays a subsidy at present of 100,000*l.* a year; in addition to them India has provided and handed over to the Admiralty a defence squadron of two turret ships and nine torpedo gunboats and torpedo boats on account of the crews of which she pays the Admiralty about 60,000*l.* a year, 6878–86. One turret-ship and one torpedo gunboat are actually in commission, under the orders of the Admiralty, the remainder are in reserve, 6887–90. The total cost to India of her marine and naval subsidies may be taken roughly at about Rx. 490,000. exclusive of non-effective charges (and exchange), 6908. There are no figures to show the cost of the old Indian Navy, but an approximate statement might possibly be made out, 6910–8.

In the days of the East India Company the merchant ships were equipped for defending themselves, and, though there was an India and China squadron of Royal Navy vessels, they did not practically do much towards protecting commerce east of the Cape of Good Hope, 6936–50, 6955–64. The Indian Navy was constituted in 1830, and its duties were solely those of the maritime police of the Indian waters; it had nothing to do with the protection of trade routes, 6951–8. It appears to have had some connexion with the suppression of the slave trade on the Eastern Coast of Africa, but it can only have been very limited; and it is also the police of the Persian Gulf, 6968, 6965–7.

When the old Indian Navy was abolished in 1862, the Admiralty undertook its duties, except in the Persian Gulf, without charge to India, 6976–80. When, however, in 1869 the Bombay Government complained of the manner in which those duties were discharged, the result was that India agreed to pay a subsidy for the service of six ships to to perform all duties, excluding the Persian Gulf, 6976–95. In 1888, in consequence of the Indian Marine steamer "Lawrence" being built for service in the Persian Gulf, the squadron for service in Indian waters was reduced to four, and the subsidy to 48,700*l.*, 6996–7013; two or three years subsequently a discussion arose between the Admiralty and the Indian Government which led to what is called the Foreign Office Conference, 7014–5, which resulted in a failure, owing to the inability of the Admiralty and the Indian Government to find a common basis, 7015–26, 7045–8. Attempts were then made at arbitration, which culminated in the Rosebery award of 1894, under which India pays a sum of 100,000*l.* for the service of four Royal Navy ships, 7025–30, 6891, 7037, the term "Indian purposes," used in the Foreign Office Conference award, being determined to have a wider signification than that which, in the opinion of the Government of India, ought to be assigned to it, 7031. The Government of India contend that they are more hardly dealt with under this award than the Australian Colonies, which for their defence squadron pay at the rate of 11*l.* 4*s.* per ton, for which they get an addition to the squadron on the station of 14,345 tons; India, on the other hand, pays 15*l.* per ton without the addition of a single ship to the local squadron, 7032–37. In addition to the subsidy to the Royal Navy, India has paid over 150,000*l.* for dockyard improvements, chiefly for the use of vessels of the Royal Navy, whether belonging to the Indian squadron or not, where repairs are executed at a very low cost; over 500,000*l.* for harbour defence ships, and an annual sum of about 60,000*l.* for manning them; besides large sums on making the four principal Indian harbours as strongly fortified as any in the United Kingdom; and India also provides its own Marine Survey Department, and renders other services to the Royal Navy, which ought to be taken into consideration in determining the amount of the subsidy, 7048–84. The Government of India contend that for their own purposes three Royal Navy gunboats of the "Pigeon" class are all that is necessary, 7122–9. The Admiralty decline to accept this view, and wish to substitute larger vessels on the ground that "Indian purposes" include duties on the high seas, 7158–82.

With regard to the Persian Gulf, the Government have not objected to pay for the work done by the Royal Navy, 7142–3; but the "Lawrence," if armed, would be quite capable of doing the work of one vessel, and so relieving Indian revenues to that extent. At the instance, however, of the Admiralty, orders were given by the Secretary of State forbidding the arming of the "Lawrence," 6796–813. Though the Government of India have never expressed any such opinion, the Royal Indian Marine would be quite capable of performing all the purely Indian duties in Indian waters which were contemplated in the Marine Service Act if they were allowed to be armed, 7088–109.

The duties in the Persian Gulf should be undertaken by the Admiralty without charge to India, or at least with only the assistance of the "Lawrence," 7142–3, 7150–7.

The employment of Natives and Eurasians in the Royal Indian Marine and the Royal Navy, 7130–41, 7144–92.

17TH DAY.

KENNEDY, VICE-ADMIRAL W. R., R.N., and CUMING, MR. WILLIAMS (OF THE ADMIRALTY), ANALYSIS OF EVIDENCE OF.

Experience, *Kennedy*, 8218–19; *Cuming*, 8225.

The boundaries of the East India station, 8220–24.

The duties, performed by the armed vessels of Her Majesty's Navy before the abolition of the Indian Navy were small, now they include general defence, suppression of piracy and slave trade, and police duties, 8230–46. Letter of Sir Charles Wood defining the duties of the old Indian Navy, 8236.

For an annual payment of 100,000*l.* the Admiralty keeps four vessels in Indian waters out of a squadron of eight, and a further payment of 59,600*l.* is made for the manning of vessels of the Indian Defence Squadron, 8247–53.

The cost of these four ships is estimated at 117,000*l.* a year, plus 4,000*l.* a year supposed to be spent by India on repairs of the "Sphinx," 8254–5; the Admiralty maintains that this does not cover the whole cost of the ships, no allowance being made for the pilotage contingent expenses, and indirect expenses, 8255–9. Method of computing the charge,

KENNEDY, Vice-Adml. W. R., and CUMING, Mr. W.—*cont.*

8260. The distinct charge for the repairs of the "Sphinx" is made because she was specially built for the Persian Gulf service, 8261–6.

India nowadays needs a larger fleet than she did between 1832 and 1867, 8267.

The duties of the Indian Marine were taken over by the Imperial Government because the Royal Navy could more advantageously perform the duties, and the presence of Royal Navy ships was for reasons of policy desirable; no charge was at first made, because of the unsettled state of affairs caused by the mutiny, 8285–6; financially the Government of India has benefitted, 8286–74.

The abolition of the Indian Navy has benefitted both the Indian Government and the Indian taxpayer, because in the present day a separate Indian Navy would cost much more than the subsidy, 8430.

The defence of India by the Royal Navy is on exactly the same footing as that of England, 8275–9; some of the ports are defended by batteries and the defensive flotilla, which is officered and manned by the Royal Navy, in consideration of a contribution of 59,000*l.* from India, 8280–3.

The Indian Defence Flotilla consists of two turret ships (one in reserve), two torpedo catchers (one in reserve), seven torpedo boats (four in reserve), they are all kept in Bombay Harbour, because the dockyards are there; the small vessels are being constantly exercised up and down the coast. In time of war they would be distributed along the coast. They were transferred by the Indian Government to the Admiralty, which maintains them for an annual payment of 59,600*l.*; this arrangement is satisfactory to both sides, 8589*a*–95.

The Government of India first made a payment to England in respect of the Royal Navy ships in 1869 (six years after the abolition of the Indian Navy) of 70*l.* per man on 1,000 men, representing the cost of the crews of six ships; this 70*l.* rate did not cover the actual cost, it was merely the average cost of wages and victuals; but the Imperial Government benefited by the fact that the full establishment of 1,000 men was not insisted upon, though paid for, 8284–305. (At the present time there are 623 men in the four subsidised ships, 8306–7.)

The Secretary of State for India applied, in 1887, for modern ships with more powerful armaments, 8314–5; and the four ships now in Indian waters are far superior to those which they replaced, 8361–2.

The 1869 arrangement lasted until 1888, when the force to be kept in Indian waters was reduced to four ships, for which India was charged 38,500*l.* and 5 per cent. on the cost of the "Sphinx," making 41,600*l.*; this subsidy was also based on the 70*l.* rate, 8308–13. No four particular ships were ear marked for Indian Service, but the Commander-in-Chief deputed any four out of his squadron at his discretion, 8358–9.

This arrangement was allowed by the Treasury under protest, 8313–8; neither the Admiralty or Treasury considered the subsidy sufficient, 8319–20.

The Foreign Office conference considered the question, and it was decided that India was to pay the whole cost, effective and non-effective, of the ships employed; the number and class of ships required for Indian purposes were to be settled by both Governments jointly, 8321–3.

The ships were not to be employed beyond the limits of Indian waters without the consent of the Indian Government; this rule still holds good, 8334–40.

At the present time one ship is stationed in the Persian Gulf, one at Aden, one at Bombay to relieve the Gulf ship, and the fourth in the Bay of Bengal, 8341–2.

The Persian Gulf must be considered as Indian waters, 8343–52.

No mutual agreement, however, could be arrived at as to the definition of "Indian purposes," 8324–7. Whilst the Admiralty proposed that four ships, of a total tonnage of 6,605 tons, was necessary, the Indian Government considered that the "Sphinx" and two gunboats, total tonnage 2,640 tons, were sufficient, 8328–33, 8353–8. The objection of the Indian Government to the Admiralty proposal was due to their restricted view of "Indian purposes." The Admiralty considers that, being charged with the defence of the Empire, it must be the deciding authority as to the manner of carrying out that defence; the opinion of the Admiralty on this point should have more weight than that of the Government of India, 8363–75. Lord Rosebery, in his award, concurred with the Admiralty of taking the broader view and considering Imperial purposes, 8375. 100,000*l.* a year seems a small sum for India to pay for the protection of her trade, 8662. The whole matter turns on the definition of "India purposes," 8717.

KENNEDY, Vice-Adml. W. R., and CUMING, Mr. W.—*cont.*

Australia pays less for her ships than India does, though the circumstances of the two cases are not analogous, 8377–90. On the Australian principle India would pay 106,000*l.* for her ships, she does, in fact, now pay 100,000*l.*

Australia pays no subsidy that can be likened to the 60,000*l.* that India pays for the ships in reserve; she manages her coast defences for herself. 8396–403.

Australia contributes towards the cost of the Marine Survey, whilst India carries out the whole of the surveys in Indian waters at her own expense, 8404–9.

There is a difference in the two cases, in that India has always had a navy of her own, whereas the Colonies only began in 1888 or 1889, to contribute to the Navy in the same way as they took over the cost of their troops in 1870, 8410–2.

The three vessels required by the Indian Government would be incapable of carrying out the duties of the old Indian Navy, 8413. The Government of India do not contemplate paying for the general protection of trade which devolved on the old Indian Navy, 8414–7.

The cost of the old Indian Navy is supposed to have been about 300,000*l.*, 8418–21. This cost would probably have doubled, or trebled, if the Indian Navy still existed, as it would have had to be equipped according to the most modern ideas, 8421–5.

During the great war the East India Company's ships sailed armed, and thus the Company defended its own trade and coasts, 8426–9.

With regard to Captain Hext's opinion that the Indian Government could with its existing Indian Marine perform all the duties enumerated in the Indian Marine Act, if the ships were allowed to be armed efficiently without additional cost to India; if India bought the three ships, and added them to its navy fully equipped and armed, it would probably perform those duties at a cheaper rate than 100,000*l.* a year, 8431–55.

The "Lawrence," "Warren Hastings," and three other ships all have their armaments in Bombay, which could be placed on board in time of war, 8473, 8481–3, 8494–6.

But the ships would have no status if armed, unless they were under the orders of the Admiral, 8510–5.

If the Royal Indian Marine ships are to be armed, they must be placed under the command of the Commander-in-Chief of the Royal Navy Squadron, 8457–60, 8472. The Royal Indian Marine ship, "Lawrence," serving in the Gulf, is really a yacht to move the Political Resident about; Her Majesty's ship "Sphinx" also does this service, and is, in fact, fitted up for it, 8480, 8514–5. The "Lawrence" is not sufficiently armed to suppress piracy (except by moral force), but she is armed enough for her own defence (as all ships serving there should be), 8460–71. The Admiralty does not admit the question of arming the Royal Indian Marine ships as capable of argument, 8478–9.

The "Lawrence" was actually built as a despatch boat for the Resident at Bushire, the subsidised Royal Navy vessels being reduced from six to four, 8531–3.

The "Sphinx" is entirely at the service of the Resident at Bushire, and carries out his orders, 8570–9.

It cannot be considered a waste of material to keep the Indian Marine vessels unarmed, as they are constantly employed on their own principal business of trooping, 8484–93. Besides trooping, they are employed on lighthouse duties, surveying, and, according to the Act, the guarding of convict settlements and suppression of piracy, but, from a naval point of view, the recital in the Act cannot be regarded, 8497–8509A.

The Admiralty would probably not fall in with the suggestion that it should take over the whole Indian Marine, as a means of utilising the ships as armed vessels, 8516–23.

KENNEDY, Vice-Admi. W. R., and CUMING, Mr. W.—*cont.*

It is quite true that the "Marathon" is not at all suited to the Persian Gulf, but she would be useful at Muscat, for instance, 8524–6.

No allowance should be made on account of the presence of the "Lawrence" in the Persian Gulf, in computing the subsidy, as she serves no fighting purposes, 8527–9. The "Lawrence," armed and under Admiralty orders, together with the "Sphinx," would serve the purpose of the Gulf excellently, 8530–1. At the same time there would still have to be a gunboat at Bombay as a relief, 8534–9. These ships are necessary, 8456.

With regard to the opinion of the Government of India that the subsidy should be reduced, because the ships are not to the same extent at the disposal of the Indian Government as the Army, the Admiralty would not consent to their Admiral being under the orders of any other authority; there must be one, and only one, authority in naval matters; at the same time, the Viceroy's wishes are invariably carried out, 8541–54. The commanding officers on all stations have orders to, and actually do, assist and carry out the wishes of the civil and political authorities, but they do not take orders from them, 8555–60.

Another ground put forward for reducing the subsidy is that the ships are employed on services other than Indian; but it is expressly laid down that they may not be employed beyond limits mutually agreed upon; four ships of the squadron are always in Indian waters, 8561–9.

The third reason for reducing the subsidy, is that the number and class of vessels employed is not that which the Government of India thinks necessary; in the first place the Admiralty, being an expert department, would be the best judge of the requirements, and they hold that Lord Rosebery's definition of "Indian purposes" justified their selection, 8576–85. Lord Rosebery decided that "Indian purposes" included more duties than those put forward in the India Office case, 8589–90.

A reciprocal arrangement was made between the Imperial and Indian Governments as to docking ships; but this is one-sided, inasmuch as no ships of the Indian Government are now sent to England practically, the use of the Indian troopers having been discontinued, 8596–607, 8620.

The charge was fixed at 10 per cent. in addition to actual cost of labour and material; a heavier charge would be made to the owners of private or alien vessels, 8618–26.

The dock accommodation provided by India is very little used by ships of the Royal Navy other than those engaged in the defence of India; this, therefore, reduces their value to England, as estimated by Captain Hext, 8607–8617.

The difference in the cost of docking at Portsmouth and Bombay is due to the low rate of exchange, 8630–1. The ships of the Royal Navy are not kept in dock in India longer than is necessary, 8634–8. Payment is made to the Peninsular and Oriental Company for three vessels and armed cruisers, but they hold ten others at the disposal of the Admiralty without further subsidy, 8632–3.

The transport of troops was formerly carried out by the Indian Government, but now the trooping is done in hired ships; this last method is more expensive, 8639–43. The only use made of the Indian Marine ships is that of coast trooping, 8644–54.

The protection afforded to trade by the Royal Navy squadron, the comparative importance of the essentially Indian and English shipping trade, 8683–710.

In Captain Hext's opinion, when the Imperial Government took over the Government of India, the duties of the Indian Navy became an Imperial charge; the Admiralty consider that to take over the responsibiliy did not preclude them from being assisted as to the cost, 8711–6.

19TH DAY.

HEXT, CAPT., R.N. ANALYSIS OF EVIDENCE OF—*continued.*

CRITICISM OF THE EVIDENCE GIVEN BY THE ADMIRALTY REPRESENTATIVES.

With reference to *Q.* 8230–6.) The duties of the Indian Navy on the high seas were comparatively,

HEXT, Capt.—*cont.*

if not entirely, nil, 9267–78. It is contended by the Admiralty, that India should bear part of the cost of duties on the high seas, though the Indian Government contend that they are of Imperial concern (*see Qs.* 8322-7), 9346. The British Government in 1863 took over the duties of general protection of trade without payment, but a payment for six ships, for the specific purpose of supporting British authority on the seaboard, began in 1869, though the Indian Government did not like the arrangement, 9599–605. The "Marathon" for Indian purposes is comparatively useless; she is devoted to Imperial purposes on the high seas, 9347–54. The protection of the coasting trade would be considered as one of the Indian purposes, 9274–83. As regards the suppression of piracy (*Q.* 8243), the Indian Marine, not being armed, is unable to act, 9284–5.

Witness agrees with Admiral Kennedy's description of the force in Indian waters (*see Q.* 8253), 9286–9. One of the ships is stationed at Aden, which is a station of Imperial interest, and the subsidy should be proportionately decreased. Though Aden is manned by Indian troops, and a Royal Indian Marine ship is stationed there, 9290–6, 9572–9; yet it is a place of Imperial interest, 9297–9307.

In estimating the subsidy (*Q.* 8250–60) the charge for repairs is too high, 9308–21.

More ships are not required at the station than formerly, but rather fewer (*Q.* 8267), 9328–32.

Lord Cross' object in pressing the Admiralty for more modern and speedy ships (*Q.* 8314) was to call attention to the worn-out condition of the ships on the station, 9339–44.

The Indian Marine surveying ship is not permitted to enter the Persian Gulf, though Admiral Kennedy holds that the gulf is included in Indian waters (*Q.* 8343). The expenses of the gulf should be shared by the Imperial Exchequer, 9354–9.

Comparative experience of the Admiralty and the Director of the Royal Indian Marine in dealing with Indian requirements (*see Q.* 8368–70), 9374–6.

As regards the Australian and Indian agreements (*Q.* 8556, 8379, 8386), the Admiralty gives the latter worse terms than the former; all dependencies should be treated upon the same footing, 9377–97. India provides a floating defence for her ports to a much greater extent than Australia (*Q.* 8400–3), (9398–401).

Surveying—a service of Imperial importance—is undertaken by India but not by Australia (*see Q.* 8404–5), 9401–6.

The comparative size of the ships of the Indian and Australian squadrons, 9561–3.

By taking over the duties of the Indian Navy gratuitously (at first) the Imperial Government morally debarred itself from making a charge afterwards, 9322–7.

Although the principle of India's permanent exemption from subsidy may not have been accepted in England (*see Q.* 8417), the Admiralty accepted the arrangement voluntarily at the time, 9409–10.

Witness does not agree with Admiral Kennedy (*Q.* 8425) that an enormous outlay would be required to keep the ships thoroughly up to date 9411–17.

The old East India Company's ships defended themselves; but the monopoly of the Company has disappeared, the trade having become an Imperial trade, its protection should now be an Imperial duty, 9418–24, 9533–43.

(*Q.* 8433.) The armaments should be placed in the Indian Marine ships, 9426. (*Q.* 8421.) The Royal Indian Marine should do the coast duties of India, 9427.

(*Q.* 8444–7.) The naval duties of India could be done more cheaply by India, 9428–32.

(*Q.* 8466.) The statement of the danger run by the "Lawrence" through being unarmed, is not exaggerated; the Australian ships are permitted to be armed, though there is dual authority there, 9434–6

(*Q.* 8492–3.) Only three of the Royal Indian Marine ships are really troopships, 9438. The value of the Royal Indian Marine ships as auxiliaries in time of war, 9439–40. (*Q.* 8495) Comparison of the Royal Indian Marine ships and subsidised liners, 9441. (*Q.* 8497.) Only three of the Royal Indian Marine ships should be armed, 9443–4. (*Q.* 8515.) The ships, if armed, should be under the command of the

HEXT, Capt.—*cont.*
senior naval officer of the squadron, in all offensive operations, 9446–57.
The arming of these ships would obviate the necessity of one or two Royal Navy ships, 9452–4. Were the "Lawrence" armed, one of the gunboats on the station could be dispensed with (*Q.* 8537), 9465–8. The Royal Indian Marine ship at Aden would similarly take the place of a Royal Navy ship, 9569–71.
With reference to *Q.* 8608–14, the alterations to the docks were made with a view of meeting Admiralty requirements, 9474–9.
(*Q.* 8613.) The present docks would have sufficed for the old Indian navy, 9481–2.
(*Q.* 8620.) There is now no reciprocity between the two governments as regards docking, 9484–5.
The comparative cost of docking at Bombay and Plymouth (*see Q.* 8630), 9487–93.
India Office letter referring to payments for repairs of "Sphinx," 9496–7.
The repairs of the "Sphinx" should be on the same footing as those of other ships, 9498–503.
(*Q.* 8531.) The "Lawrence" was originally intended for a non-combatant ship, but the Government of India construed the Royal Indian Marine Act as warranting her being armed, 9515.
In cases where both England and India have an interest, both should contribute to the cost, 9518–9606.
The Rosebery award is not strictly fair to India, 9519.
The definition of "Indian purposes" is the stumbling-block of the whole question, 9527.
The services India renders to the Royal Navy have not been taken into account, 9544–51.
The Admiralty claim that the Indian subsidy does not cover the whole cost, 9588.
The proposed charge is 100,000*l.* a year, as against the calculated actual expenditure of 117,000*l.*, 9552–9.
The calculations of the Admiralty in arriving at the subsidy were onesided, 9563–8.
In 1869 India began to pay for the pay and victuals at 70*l.* per man, before that time she paid nothing, 9580–3.
Australia does not pay the whole cost; her payment is for a definite force, 9584–7.
The subsidy will be reconsidered in 1901, 9592–8.
The question of the employment of natives, 9606–12.

26TH DAY.

WATERFIELD, SIR HENRY, K.C.S.I., C.B., ANALYSIS OF EVIDENCE OF—*continued.*

Eastern Mail Contract.

The present contract for the Eastern Mail service is with the Peninsular and Oriental Company, but new tenders are now being invited, 12,269. With regard to the apportionment of the charge, there was some controversy between the Post Office and the India Office, which was settled in 1876 by Lord Halifax's award. The main point of the controversy was the apportionment of the charge for the Mediterranean section, and the division of cost for this section is still made under that award. The India Office now contend that the proportions of correspondence carried to India may have altered, owing to increased correspondence between England, Egypt, and Africa, 12,270–1. Lord Halifax's award was in the shape of percentages on the various sections; and the result is that, at present, India pays about 25 per cent. of the gross amount *minus* the sea postage, or a net charge of 21½ per cent., 12,272–4. Under recent arrangements India retains its sea postage, and pays a larger proportion to the Post Office in consequence, 12,275–7. The recent reduction in postage was estimated to cost India about Rx. 38,000 a year, 12,286–96. The contention of the India Office is that there should be a revision of the statistics from time to time; and also that the Indian section, which is the most lucrative to the Company, is burdened with a greater share of the subsidy under the *pro ratâ* principle than if each section were dealt with separately; but this point has, it is believed, been provided for in the new contract, 12,297–8.

WATERFIELD, Sir HENRY—*cont.*

Zanzibar and Mauritius Telegraph.

The Government of India complain that their share of the cost of this cable came to more than they expected, 12,302. The cable is a strategical one, and was taken up at the instance of the Government of India. The Indian Government agreed to bear half of the balance of the cost, after deducting the share borne by the Mauritius and Seychelles Islands, and this came to 10,000*l.*, or 2,000*l.* more than India anticipated, 12,306–13. The object of it is to keep in touch with Her Majesty's forces in other parts of the world, 12,319–26.

Red Sea and India Telegraph Company.

The Home and Indian Governments at the time of the Mutiny guaranteed the capital of this Company to the extent of 4½ per cent. for 50 years, in order to provide prompt communication at that time with India. The line broke down and did, practically, no work, 12,314–8.

Diplomatic charges in Persia.

The apportionment of the expenses of the mission has been a subject of controversy between the British and Indian Governments for many years, but in 1891 the share of India was assessed by the Foreign Office Conference at 7,000*l.*, subject to revision at the end of five years, 12,398. According to an account prepared in the Foreign Office, England has borne in the last three years a net charge of 31,642*l.* [or if buildings, &c., be added in (*see* Appendix) of 44,475*l.*] In the same period Indian revenues have borne a charge of 91,568*l.*, so that India has contributed 74·32 (or 58·3, *see* Appendix) per cent. of the total cost, which is more than the $\frac{12}{17}$ths which she is supposed to be paying; that is to say, if buildings, &c. are excluded, 12,400–14.

China Consulates.

In 1834 it was agreed that India should bear one-third of the cost of the China establishments, amounting at that time to a payment of 4,676*l.* a year, which, however, rose to 23,000*l.* in 1876. From 1859 onwards the Secretary of State constantly protested. In 1876 the Government of India proposed a fixed payment of 10,000*l.*, but, the Treasury having demurred, at last 15,000*l.* was agreed to, with effect from 1876. This arrangement, in spite of protests from India, lasted till 1890; and, finally, simply (12,449) as a compromise, it was agreed at the Foreign Office Conference to fix the Indian share at 12,500*l.* 12,415. The object of the fixed payment has been considerably interfered with by the fact that the payment is a sterling payment, and therefore liable to vary with variations in the value of the rupee, 12,416. The 12,500*l.* a year, which she now pays is as heavy a burden upon India as the 15,000*l.* which she previously paid, 12,450. The Home Government will not agree to have payments assessed in rupees, unless they are payable in silver-using countries, *e.g.*, the Chiengmai Consulate; but this point has never been pressed with reference to this particular payment, 12,459–78. The protests of the Government of India are based on the ground that, when they entered into the agreement, it was never contemplated that the charge would be so heavy; and that they should not be obliged to pay more than 10,000*l.* to an expenditure which is not within their control; also because, apart from the opium trade, India has now little interest in China, 12,417–30. It is not fair to regard Indian trade as a trade in which Great Britain is not interested; most of it belongs to British merchants, 12,431. The Government of India has never accepted the principle of measuring the relative interests of the two countries in establishments by the relative amount of the trade, 12,438–9, 12,455–6.

Euphrates-Tigris, and Karun River Subsidies.

The Euphrates-Tigris subsidy now amounts to Rs. 24,000 a year for 10 years, payable entirely by India; it is paid to encourage trade and communications on those two rivers. The Karun River subsidy of 2,000*l.* (originally 3,000*l.*) a year has a similar object, and is shared between the British and Indian Governments. The Indian Government, however, contend that Indian interests on the Karun River are not sufficient to warrant them in continuing

WATERFIELD, Sir HENRY—*cont.*

their contribution unless the British Government will contribute towards the Euphrates-Tigris subsidy. Otherwise they will continue to subsidise the Euphrates-Tigris route, but leave the Karun River to the British Government, 12,479–83. The Karun subsidy was paid partly for commercial, partly for political, reasons; it was thought desirable to open the Karun to British trade, but it was recognised that the company would probably not pay at first, 12,484–8. Indian interests on the Karun are not so great as those on the Euphrates and Tigris, 12,489–92.

Aden.

The whole charge for Aden is borne by India, except a portion of that for the special defences; but it is held by India that the interests of the United Kingdom in Aden, both in respect of its foreign trade and of its great dependencies, is so great that some contribution should be paid to India on this account, 12,502. With regard to the fortifications, India constructed the works, England agreeing to pay a moiety of the estimated cost, and a converse arrangement was made with regard to the armament. The actual cost of the works is fairly close to the estimate, but India will have to bear any excess; the original estimate for the armament was set aside, but the revised estimate, which was prepared by the War Office, will probably not be greatly exceeded, 12,503–12. One ground on which India bases her contention is the state of the trade, the percentage being as follows:—33 per cent. belonging to the United Kingdom, 27 per cent. to India, and 40 per cent. to foreign countries. Further, Aden is most valuable to England as a naval station and as a base for the suppression of the slave trade, 12,513. It would not be fair to regard Gibraltar as a set-off against Aden, because that would throw on India the whole burden of the protection of the Eastern seas; Aden is really an Imperial fortress, protecting the route to England's Eastern possessions. The recent partition of Africa has added to the importance of Aden, and the Red Sea route is now of as much importance to Australasia, China, and other countries as to India alone, 12,514–9.

Miscellaneous.

There are certain other payments made by India to Her Majesty's Government to which no exception is taken, 12,495–500

26TH DAY.

FORMAN, MR. H. BUXTON, and CARDIN, MR. J., OF THE GENERAL POST OFFICE, ANALYSIS OF EVIDENCE OF.

EASTERN MAIL CONTRACT.

The process of coming to an agreement with the India Office upon the compiled accounts is gone through on the occasion of each new contract, *e.g.*, in 1887. At present a payment is made by India, reckoned upon the mails of 1886–7, and a similar course will naturally be followed in regard to the new contract, No difficulty should arise in coming to an agreement, 12,327–33. Revisions of the arrangement would be a matter for discussion; and, in fact, alterations have taken place during the currency of the existing contract, consequent on the reduction, for instance, of the postage rate to 2½*d*., 12,334–6. Since the Halifax award, the only disputed point has been a payment for increased speed on the Suez-Bombay section, but that point was not settled, except by a lump sum payment by India, without prejudice to the principle; and it is now probably under consideration by an inter-departmental committee with reference to the new contract, which will no doubt duly consider the interests of India. This committee, should it decide that the principles of Lord Halifax's award still hold good, will merely apply them to the existing circumstances, 12,337–46. Lord Halifax examined all the conditions under which the division was being made, *e.g.*, the mileage, and the subsidy was divided by the total annual mileage to see the cost per mile; then the United Kingdom was charged 50 per cent. of the cost of each section, and the other moiety was

FORMAN, Mr. H. BUXTON, and CARDIN, Mr. J.—*cont.*

divided rateably among the countries using the section 12,347. The principle of the Halifax Award was not affected by the separation of the Australian mail contract, which merely involved a readjustment of the figures, 12,348–9. India gets certain advantages from its association with the colonies in the extreme Eastern sections, *e.g.*, increase of speed to Bombay and lower transit rate across Europe, 12,350–3. Sir H. Waterfield's objection to the *pro ratâ* apportionment strikes at the principle of the Halifax award, and probably the Post Office would refuse to discuss it, 12,354. The principle of the award is that the cost of conveying a certain weight of correspondence a certain distance is the same from end to end of the service, 12,354–67. The loss on the reduction of postage to 2½*d*. has probably not been less than was anticipated, and the more the correspondence the greater the loss, 12,376–80. It is not expected that the East African and Egyptian correspondence will have altered the proportions materially. The latest figures will be taken, from which to assess the proportions, 12,381–93.

27TH AND 28TH DAYS.

KNOX, SIR RALPH, K.C.B., ACCOUNTANT-GENERAL OF THE ARMY. ANALYSIS OF EVIDENCE OF.

EFFECTIVE SERVICES.

The actual cost to the British Exchequer of maintaining a force in India consists of every expense incurred in England which would not be incurred but for the necessity of sending reliefs and drafts to India. The force to be maintained in England to fulfil the requirements of the army in India cannot be taken at less than 200 men for every battalion in India, and 500 for the cavalry, and a similar number for the artillery—in all probability about 16,000 officers and men. In addition to the charge for these men there are a number of other expenses which might be charged against the army in India, such as administrative departments, &c., which may be roughly calculated at 190,000*l*. a year, and for which no claim is made against India. The total charge to the British Exchequer of the Indian Army has been calculated at 1,100,000*l*. a year, 12,736–41. The calculation of the total cost to England of the Army in India at 1,100,000*l*. a year was arrived at on similar lines to the schemes which have been worked out from time to time, with the addition of administrative charges. That sum represents the saving if establishments maintained solely for Indian purposes were dispensed with. The 7*l*. 10*s*. capitation works out to a total charge of about 600,000*l*.; therefore, assuming this calculation to be correct, that is what the English Exchequer gets back out of 1,100,000*l*., 12,742–6.

Different Systems of Payment.

Before the Mutiny the total European force was about 37,000 men; from 1861 to 1870 about 63,000, and now there are about 73,030 men in India, 12,604–8.

The force of Queen's troops in India was 28,000 in 1844, and 24,000 at the time of the Mutiny, 12,533.

In the period before the Mutiny, each regiment in India had its depôt at home, which supplied all its wants, and the actual cost of these depôts was charged to India; also charges were made on account of recruiting staff, barrack accommodation, forage for the cavalry depôt, pay of officers in England on leave or at the depôt, contingent expenses, pay of men on passage, 12,546–53; the payments made by India for British troops represented an average rate of 8*l*. per man, which sum included furlough and honorary colonel's pay, 12,533–8. The Company's European troops were recruited at Warley, which was merely a receiving depôt; the cost of each recruit at Warley was on an average of three normal years, 30*l*., which figure fairly compares with the cost of an infantry recruit as calculated by the Northbrook Committee at 25*l*. (12,825), 12,554–70. The capitation charge now paid by India works out to a charge of 32*l*. or 33*l*. per recruit, which includes all the improved services, and the extra pay of the soldier, 12,571–81.

KNOX, Sir RALPH—*cont.*

Before the Mutiny soldiers were enlisted either under the old system for life, or under the 1847 system for 10 years; but the latter system did not begin to tell on the recruiting practically till about 1857; then in 1867, for a few years, the service was extended to 12 years, and finally the present system of short service was introduced in 1872 (12,609-15). The local European force was enlisted for life, 12,584.

Colonel Tulloch's capitation rate of 10*l.* covered important charges not included in the present rate, viz., furlough pay of officers and and pay of honorary colonels of regiments. The former item was calculated at about 70,000*l.* a year, but increased during the currency of the arrangement to 150,000*l.*; the latter amounted to about 67,000*l.*, 12,529-32. The Tulloch capitation rate of 10*l.* remained in force till 1870. Then the Bouverie Commission was appointed, which recommended that a price should be charged per man on the Indian Establishment, to include the cost of educating and fully training the recruit, and this is the system which is now adopted; that committee recommended that India should bear one-fifth of the cost of each depôt (this one-fifth charge amounts to about 2,000*l.* per depôt, whereas the cost of a depôt under the old system has been calculated at 1,922*l.*, but the former figure includes several charges not included in the latter), 12,642-5. In the meantime the Indian Government had paid sums as advances, and when the committee reported, the Indian Government having declined to accept their recommendations, after some correspondence with the Treasury the sums paid in advance up to 1878 were accepted as full payment, and the Northbrook Committee was appointed, which settled the present rate of 7*l.* 10*s.*, 12,609-65. The present capitation charge of 7*l.* 10*s.* includes the charge for training the soldier, and for waste by desertion and death in the first year's service; for young officers under training, for selecting and training medical and veterinary officers for India; for educational establishments; for advances of pay of drafts proceeding to India; for expenses on account of men returning from India, 12,520-8. It is based on calculations of the normal establishment, and could not be accepted by the War Office if it were to be affected by fluctuation in the numbers in India in the course of the year. It is extremely difficult to hit off the exact numbers of the drafts required, but it might be fair to make a deduction if, at the end of the relief season, the establishment is short of its strength, 12,747-53. The capitation rate was arrived at by Lord Northbrook's Committee by dividing the actual charges of certain years by the number of men on the establishment for those years, and calculating, as far as possible, the future probabilities; the arrangement is no doubt a rough and ready method of calculating the charge, and one side or the other may have an advantage in particular years of a series, and it would be well to come to a settlement as to its duration, 12,691-709, and it might be renewed from time to time (13,051). Whereas the 8*l.* payment before the Mutiny and the 10*l.* capitation rate included furlough and honorary colonel's pay, the 7*l.* 10*s.* rate does not include these but it includes a more costly administration and educational charges, amounting to 37,000*l.* a year. Therefore the three rates can only be compared with considerable reservation, 12,539-45.

Cost of Training.

The existing short-service system demands a greater number of recruits, but the charge *per caput* compares very favourably with all systems previously in force, 12,754-5. The lowness of the charge at Warley, calculated as a capitation rate on the force in India which it supplied, was due to the small number of recruits sent out owing to the service being for life; it has been calculated at 2*l.* 8*s.* 11*d.*, as compared with the charge for Queen's troops of 8*l.* before the Mutiny, and subsequently 10*l.*, and at present 7*l.* 10*s.* (But putting the four charges on a similar footing, and comparing like with like as far as possible, they should be 4*l.*, 6*l.* 7*s.* 6*d.*, 7*l.* 3*s.*, and 6*l.* 14*s.* respectively, the last three rates including both infantry and the mounted arms, 12,821-51.) The real cost of Warley must be judged by the cost of each recruit, which was, comparing like with like, higher than that now charged to India for an infantry soldier, 12,584-96.

The average period of training of a soldier before he is sent to India is now about 18 months, 12,597-8. With reference to the argument that the 10,000 men in training in England for India are available for home defence, the answer is, that they are not wanted for England, and exist only for India, 12,598-603. They are under military age, not fully trained, 13,054-5. During the Mutiny, the army in India was increased permanently by 40 battalions; to replace them a number of regiments were specially raised; subsequently 10,000 additional men were added, consequently the number of recruits has risen from about 1,100 or 1,200 to 10,000, 12,584-9. The charge for 12,000 recruits embarked for India, deducting charges on account of officers, amounts under the capitation rate to 629,000*l.*, or 52*l.* per man embarked; deducting further the rebate, which amounts to 13*l.* per man, the charge is 39*l.* per man. On the other hand, the cost of the Warley recruits, whether it be taken at 30*l.* or 26*l.*, with the addition of the charges for barrack accommodation, clothes, arms, &c. included in the present rate, comes probably to more; but that is not quite comparing like with like, as the present charge includes the mounted arms, which are more expensive, whereas there was practically no mounted establishment at Warley, nor any cavalry recruits, except in the last years of the Mutiny, and then they were sent out untrained, 12,675-90. At present the infantry recruit is taken to cost not more than 33*l.*, inclusive of everything, the cavalry recruit 71*l.* 11*s.*, the field artilleryman, 81*l.* 3*s.*, and the horse artilleryman 84*l.* 12*s.*, working out to a cost for each recruit of all arms (in consequence of the smaller numbers of the more expensive services) of 44*l.*, 12,821-6. The War Office hold that they have taken a just and liberal view in settling the depôt charges against India, 12,793-4. The recruit is now made a soldier before he goes out to India, though active operations there may no doubt make him a veteran, 12,788-90. Indian service is not distasteful to the men, though its attractions may be exaggerated, 12,791-2.

Short Service.

The short-service system of necessity causes an increased charge on account of recruiting and transport, but the saving comes in the pension charge, which, though at present it amounts to about 8*l.* 10*s.* a man, will probably fall to about 3*l.* or 4*l.*, 12,670-3. The number of men annually sent out to India under the short-service system is increased by about 50 per cent. as compared with the 10 years' system, but the expense has not increased proportionately owing to the fall in price of freight; the reserve, which is a part of the present system, is maintained as a reserve, not only for England, but for India, because in time of war Indian battalions would have to be filled up from it, and regiments going to India would also be supplied from it; but the short service system was really adopted as a cheaper as well as more efficient method of keeping up the army, 12,756-64.

Deferred Pay.

Deferred pay was introduced shortly after the short service system; the object was to increase the attractions of the service in order to be able to procure the necessary number of recruits by enabling the men to return home at the end of their service with money in their pockets. It is a moot point whether it should be regarded as an effective or non-effective charge, but it undoubtedly throws a new burden of about 200,000*l.* a year on India, 12,726-9. In such cases the practice is to take the consent of the India Office as being that of the Indian Government; and the interests of India are most carefully studied, and concessions are only granted to the Army when they are inevitable, 12,730-5.

With regard to the complaint of the Indian Government, that it is not consulted about changes, it is the practice of the War Office to consult the India Office, though omissions may have occurred through oversight; but it is difficult to see how the Indian Government could withhold its assent. As a

KNOX, Sir RALPH—*cont.*

matter of fact, some of these changes have been part of new systems which have resulted in decreased charges to India; others have been the result of prolonged discussion, in the course of which the India Office, at least, was consulted, 13,004–29.

Rebate.

The Northbrook Committee adopted the basis, *mutatis mutandis*, recommended by Mr. Bouverie's Committee, but they allowed a rebate to India of one-third of the cost charged against her for the six months' training of the recruit, on the ground that he gives one-third of his service in the reserve; but, in fact, though India only pays for six months' training, her requirements necessitate something like 18 months' training, and a rebate of one-third is too much, 12,666–9. A rebate would no doubt be quite fair if India paid the full charge of the period of training, 13,052. As it is, no rebate, or very little, should be made on account of reserve service, though the principle is fair, 13,056–60.

Central Depôts.

Both for the cavalry and artillery a system of big central depôts used to exist, but that has now been abolished for the artillery, and the recruits are trained with batteries, which is a more efficient but not a cheaper system, 12,710–2.

Abolition of Purchase.

Special care was taken that no part of the cost of the abolition of purchase should be charged to India; before the abolition a system of pensions existed in the artillery and engineers, and in a modified form (retired full pay) and extent in the cavalry and infantry, and to these pensions India contributed her share since 1824, which was fixed after the Mutiny at a capitation rate of 3*l.* 10*s.*, having previously been a lump sum of 60,000*l.* a year; but the abolition has no doubt imposed a new charge for pensions, both on the Home and Indian Governments, 12,713–25.

Charges owing to the Mutiny.

With regard to the troops sent to India during the Mutiny, so far as those troops had to be replaced, the arrangement under which India paid for them is similar to that under which India is now to be repaid for troops when raised to replace troops lent to England; but India did pay the whole charge for part of the force, which was only required for a temporary purpose, though they were to some extent replaced by embodying militia, 12,765–87.

Training of Royal Engineer Officers.

The training of Engineer officers is an expensive matter, and the establishment has been increased solely to meet Indian requirements; the officers, even though they might be utilised in emergency, are redundant to the British establishment, 12,857–77.

NON-EFFECTIVE SERVICES.

Before the year 1824, India paid nothing for the non-effective services of the British troops; it was then decided that she should pay 60,000*l.*, which was practically at the rate of 3*l.* a head on the maximum force then in India; then, in 1861–62, a capitation rate of 3*l.* 10*s.* was fixed by Sir A. Tulloch's committee, which was provisionally accepted, though the War Office calculated that it should be 5*l.*; that arrangement lasted till 1871–72, when the capitalisation system was introduced, under which India paid the present value of her share of each pension as it was granted, calculated upon a special life-table, based upon actual experience of pensioners' lives, and assuming the value of money as 4 per cent. (which was, however, considered to be an unduly high rate in the interest of the British taxpayer). This arrangement went on for 20 years, and was then superseded by the present arrangement, under which the claim against India is an annuity for a certain number of years, based upon a calculation of the probability of the life of each person who is put upon the pension list, the probabilities of life being calculated by specially prepared tables, 12,883–924.

KNOX, Sir RALPH—*cont.*

Pensions of Non-commissioned Officers and Men.

Under the capitalisation system the annual payments by India rose from 211,000*l.* in 1870–71 to 733,000*l.* in 1878–79. The abolition of this system at first almost annihilated the Indian pension charge, and the normal charge would be much greater even than the present charge. In 1884–85 the annuity was only 15,000*l.* (for men only), in 1894–95 it had risen to 214,000*l.* But, excluding the effect of the capitalisation system, the new charge falling annually upon India for permanent pensions, which was, in 1878–79, 59,700*l.*, has, with slight fluctuations, steadily fallen to 14,681*l.* in 1894–95; and, whereas the normal annual charge on India may now be taken at about 43,760*l.*, the normal charge under the short-service system has been calculated at 13,000*l.*, and the experience of 1894–95 bears out that calculation, 12,925. The maximum annual payment by India under the new system is calculated to be about 302,000*l.*, as against a maximum of 971,000*l.* under the long-service system. To put it in another way, whereas, in the years 1876–81, the number of men, for a share of whose pensions India is liable, was 5,200, 3,800, 5,700, 4,600, and 3,800 respectively, in the last two years the numbers have been 957 and 846, 12,925–53. Even allowing for a *per contra* of about 200,000*l.* for deferred pay, there has been an enormous saving from this decrease of pension arising from the short-service system, 12,954–8. The saving to India in pensions being 670,000*l.*, if from that sum 210,000*l.*, on account of deferred pay, and 73,000*l.*, on account of the charge for the transport to India of the increased number of recruits, be deducted, there will still remain a very large saving to India from the short-service system on the forces she now maintains, amounting to about 400,000*l.* a year, 12,959–70.

Pensions of Officers.

The abolition of purchase necessitates a system of pensions, which only partly existed before; but it was inevitable owing to the abuses to which it led, and the War Office had come to the conclusion that the army could no longer go on on that system; the only charge thrown on India was the pension charge, 12,971–88.

The charges fluctuated owing to adjustments affecting different years, but the capitalised Indian share amounted, in the years 1871–72 to 1883–84, to 77,000*l.*, 85,000*l.*, 49,000*l.*, 98,000*l.*, 76,000*l.*, 113,000*l.*, 223,000*l.*, 122,000*l.*, 274,000*l.*, 395,000*l.*, 405,000*l.*, 262,000*l.*, and 253,000*l.* In 1884–85, under the annuity system, the charge was 21,000*l.*, and it has increased steadily to 205,000*l.* in 1894–95. The annuities are calculated in the same way as the men's, on a special life table, 12,989–13,003.

Chelsea and Kilmainham Hospitals.

When the 3*l.* 10*s.* capitation rate was in force it included the Chelsea and Kilmainham charges; but, on the rearrangement, these charges were left out of account, the War Office considering that the balance of prize-money in their hands, resulting from Indian wars, was a fair offset against them. Subsequently an offer was made to surrender the prize money, if India would pay her share of the pensions to which it is admittedly liable, but this offer was refused; and now the Treasury desire to recover a sum amounting to about 5,000*l.* a year. No doubt the in-pension system is expensive, but the number of pensioners, on whose account there is a charge against India, has dwindled from 5,000 to 800, and the question seems likely to disappear, 13,030–48.

Questions as to the mutual interests of England and India, 12,795–804.

India is treated, in the matter of supply of stores, on the same footing as the Colonial Governments, it pays trade prices, but there is no charge for interest on capital sunk in buildings, &c., 12,805–9. Position with regard to warlike stores is different as regards the Admiralty to that as regards other departments, but India is treated similarly to any other Imperial Department, 12,877–82.

Questions as to "constantly sick" in Indian military hospitals, 12,810–20.

29TH DAY.

WOLSELEY, FIELD MARSHAL VISCOUNT., &c. ANALYSIS OF EVIDENCE OF.

Recruiting.

The strength of the Indian establishment is fixed at the request of the Government of India and to keep up its strength adds considerably to the difficulty of recruiting, 13,063–5. The authorities at home must be the best judges of the recruiting establishment requirements, 13,066–70. The present system of recruiting compares very favourably with the old system at Warley, under which men were recruited in great haste during certain months and sent out with little or no training to India, where there was great mortality among them, 13,071–5. The present system is also incomparably better than the old system of recruiting Queen's regiments, which indeed would not have furnished the necessary number of recruits, 13,076–83. The object of the present system is to send out seasoned soldiers ready to take the field, 13,084. It is probable that the present cost to India of the better class of soldier is not higher than that of the recruit under the old system, 13,085–9. A majority of the soldiers now sent out to India have had 18 months' training; a majority of the men recruits are 18 years of age, or of physical development equivalent to that age; India could not procure for herself men of 20 years of age and with even six month's training at a cheaper rate than under the existing system, 13,086–94. With regard to the argument that the recruits are useful for home defence, they would be positively a detriment in case of invasion, and in case of internal riots they would be useless, 13,095; after they have had a year's training they might be used for holding fortifications; but the reserve men are the force that would be used for fighting, and India can certainly not claim a rebate of charge on account of the value of the recruits to England, 13,096–109. Though the Army in India increases the ultimate reserve, if it were not for the large numbers required for India, it would be possible to get a better class of recruit at a less cost, 13,120–4. It is only in the event of invasion of England, that the army in India would be of any real practical use to England, 13,125–7.

India as a training ground.

With regard to the argument that India is the best training ground for the Army and that the most valuable part of the reserve consists of men trained in India, it is true that the small wars are an invaluable training, but the peace training in India is inferior to that at Aldershot, 13,133–5.

Short service system.

There can be no question but that short service has increased the efficiency of the Army, though it was inaugurated principally because of the difficulty of procuring recruits for long service, and would have been postponed but for the increased demands of India since the Mutiny. The mortality among the younger men now sent out is less than under the old system and also the number invalided, 13,136–50. The short service system is also especially economical to India, owing to the enormous diminution of pensions, 13,151–5. Though the cost of the recruit under the old system, reckoned as a capitation rate on the force in India, may have been lower because the recruits were enlisted for life and there were fewer of them, they formed a less effective army; the younger men now enlisted are better men and do more effective service for India, 13,156–66. In the interests of India, a prolongation of Indian service to 10 years is not desirable, and would be expensive, as it would entail the grant of pensions, 13,167–70. Seven years' service in India is quite sufficient, or even six years; but to get seven years' Indian service, you would have to extend the period of enlistment with the colours, and that would entail a pension; at present the Indian Army is admirably constituted in respect of age, 13,171–6. The old Indian European Artillery was an admirable force, and so were some of the infantry regiments, though

WOLSELEY, Field Marshal Viscount—*cont.*

slightly, perhaps, inferior to the Queen's regiments in discipline; but others were distinctly inferior, 13,177–82.

Payments to be made by India.

With regard to the charge made on India for troops sent out during the Mutiny, militia were embodied to take their place, and 26 new battalions were raised; the charge was, therefore, similar to that under the existing arrangement with England, under which India is repaid the cost of any men raised to replace troops lent to England, 13,183–5. India should in principle (13,407–8) pay for every charge connected with the Army and defence; and also for Aden, to the extent she pays at present, considering what a small contribution she makes to the Navy, and that the whole of the British Army is a reserve to be drawn upon by her in time of need; the Indian Native Army is not a reserve for England in the same sense, as native troops could not be pitted against European troops, 13,186–246. The real military charge to England on account of India is that which would not exist, if India did not exist; and we fulfil our Imperial obligation to India by keeping up a larger force in this country than we otherwise should keep; it is true that we ought not in any case to reduce the force at home, owing to a different set of considerations, but the fact remains that that force is maintained and available as a reserve for India; and possibly the force would, in fact, be considerably reduced, but for India; moreover, if India had not this reserve at her command, she would have to provide her own reserve at her own cost, whereas now she pays nothing for it; as for the payment made by India, all the Colonies contribute towards their defence when they are rich enough, 13,247–94.

Abolition of purchase.

With regard to compensation for the abolition of purchase, India paid nothing on that account. That step was necessary for making the Army efficient, and a system of pensions is necessary for a normal Army; India must allow the home administration to lay down rules for the Army, as a whole, 13,295–308.

India has a very good bargain with this country in regard to her payment for her British troops, 131,309–11.

It would be impossible to get the required number of recruits with a system of large central depôts, and the present system is that which the War Office have adopted as being most efficient for the Army, as a whole, 13,313–5; so far as the experience of the cavalry depôt is concerned, it is not favourable to the system of a large central training depot, 13,399–406.

The system sketched by Sir E. Collen of having localised regiments in India would be practically a reversion to the local Army system, and would be a very bad one, 13,316–7.

The larger demand caused by India on the recruiting market necessitated increased pay, 13,318–20; the War Office are always anxious to reduce charges as much as possible consistently with fairness to the British taxpayer, 13,321–2.

Consultation of Government of India.

With regard to the list of cases put in by the Indian Government in which charges have been imposed upon them without their consent, it is undoubtedly the rule of the War Office to consult the India Office, though cases may have occurred, in which this was not done; but the War Office cannot admit that the Indian Government have discretion to adopt, or not, charges which have been adopted for the Army as a whole by the home authorities, 13,323–45.

It is impossible to found any calculation of the financial interest of India in the British Army on the assumption that, but for the British connection, the work might be done by native troops; there is no possibility of replacing the British troops by any number of native troops, 13,346–73. It would not be safe to discontinue sending British Cavalry to India, 13,374–81. Eurasian troops are not useful, 13,382–3.

MINUTES OF EVIDENCE

TAKEN BEFORE THE

ROYAL COMMISSION

APPOINTED TO

INQUIRE INTO THE ADMINISTRATION AND MANAGEMENT OF THE MILITARY AND CIVIL EXPENDITURE INCURRED UNDER THE AUTHORITY OF THE SECRETARY OF STATE FOR INDIA IN COUNCIL, OR OF THE GOVERNMENT OF INDIA, AND THE APPORTIONMENT OF CHARGE BETWEEN THE GOVERNMENTS OF THE UNITED KINGDOM AND OF INDIA FOR PURPOSES IN WHICH BOTH ARE INTERESTED.

SECTION I.

FINANCIAL MACHINERY OF THE GOVERNMENT OF INDIA.

1st to 7th DAYS, and the 30th DAY.
Q. 1 to 3675, and 13,503 to 13,723.

Note.—Questions 13,641-81, Lord Cromer's Evidence on the 30th Day, relate to the general question of Apportionment.

At the India Office.

FIRST DAY.

Tuesday, 5th November 1895.

LIBRARY OF THE BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN PRESIDING).

THE RIGHT HON. LEONARD COURTNEY, M.P.
SIR WILLIAM WEDDERBURN, Bart., M.P.
FIELD MARSHAL SIR DONALD STEWART, Bart., G.C.B., G.C.S.I.
SIR E. W. HAMILTON, K.C.B.
SIR RALPH KNOX, K.C.B.
SIR JAMES PEILE, K.C.S.I.
SIR ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
MR. G. L. RYDER, C.B.
MR. T. R. BUCHANAN, M.P.
MR. W. S. CAINE.
MR. DADABHAI NAOROJI.

MR. COLIN G. CAMPBELL, *Secretary*.

SIR HENRY WATERFIELD, K.C.S.I., C.B., and MR. STEPHEN JACOB, C.S.I., called in and examined.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

5 Nov. 1895.

1. *(Chairman.)* Sir Henry Waterfield, would you state to the Commission the post you hold at the India Office?—I am the Secretary in the Financial Department.

2. I think you have held that post for a considerable time?—Yes, since February 1879.

3. Mr. Jacob, would you tell the Commission the post you occupy in the Indian Government?—*(Mr. Jacob.)* I am Comptroller and Auditor-General.

4. How long have you held that post?—I have served continuously since April 1890 as Comptroller and Auditor-General, except when acting as Financial Secretary.

5. And before that time, what post did you occupy?—I was Accountant-General.

6. That would be Accountant-General in one of the Provinces?—Yes.

7. In what province?—I have served in Bombay, and in the North-West Provinces, and in Bengal.

8. Sir Henry, you put in a paper on the system of accounts in India. We should like to hear from you a general description of the manner in which the financial administration is organised, but in the first place, would you give us the number and names of the Provincial Governments into which India is divided?—*(Sir Henry Waterfield.)* There are eight Provincial Governments. The Governors of Madras and Bombay in Council; the Lieutenant-Governors of Bengal, the North-West Provinces and Oudh, and the Punjaub; and the Chief Commissioners of Burma, the Central Provinces, and Assam.

9. Is each of those Provincial Governments a separate centre of financial administration?—Yes.

10. Who are the chief officers entrusted with the financial administration of the Empire, first of all in the Central Government, and secondly in the Provincial Governments?—Taking the Central Government, the Financial Member of the Council of the Governor-General, assisted by the Secretary to the Government of India in the Financial Department, and by the Comptroller-General. As regards the Provincial Governments, the head of the local Government, or, in the case of Bombay and Madras, the Member of Council in charge of the Financial Department, with the assistance of the heads of the various branches, and with advice from the Accountants-General and Comptrollers.

11. I think there is a difference in the different Provincial Governments, is there not? When we speak of the Provincial Governments, for instance the Governments of Madras and Bombay, the style is "the Governor in Council," is it not?—That is so.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

5 Nov. 1895.

12. Then in other provinces the Lieutenant-Governor is the chief officer, is he not?—The Lieutenant-Governor in the larger provinces, and the Chief Commissioner in the minor provinces.

13. Then, on this point I should like to ask you whether that implies any difference of authority possessed by the Provincial Government where, we will say, it is only a Chief Commissioner at the head, and a government like that of Bombay, where there is a Governor and Council?—The Chief Commissioner is, in the province which he administers, the chief authority, in the same sense. In the cases of Madras and Bombay the Governor acts with an Executive Council.

14. But the Chief Commissioner is as complete and supreme an authority within his province as the Governor and Council are within theirs?—Yes, only he is more under the control of the Government of India. In certain matters the Governor and Council of Madras and Bombay would have somewhat more independence, perhaps, in those provinces.

15. My question leads up to this, that the Government of India, the Central Government, would be anxious to give rather a larger financial discretion to, we will say, the Governments of Madras and Bombay, than they would to the governments where there is simply a Chief Commissioner in authority?—I am not sure that they would do so. I think that they would exercise their control equally in both cases.

16. Is the Financial Member of Council, practically, the finance minister for India, and head of the Central Treasury?—Yes.

17. For how many years does he hold office?—Usually for five years.

18. Is his term renewed?—It has never been renewed for a period of five years, but it has been extended for one year.

19. Naturally, some questions which I shall put to you will have a reference to the financial administration to which many of us on this Commission have been accustomed and are versed in, namely, the English Administration; but in putting the questions from that point of view, I wish it particularly to be understood that I am not by any means implying any superiority or instituting any comparison between our system here and the system in India. It is simply for our convenience and the better understanding of the difference between the two systems. In order to understand these powers of the Financial Member of Council, I should like to institute some comparison between him and the Chancellor of the Exchequer in England. You are aware that the Lord High Treasurer is nominally the officer responsible for the administration of financial affairs in England, and it is his duty in the first instance to collect and criticise the estimates for the public service of the year, to satisfy himself that the sums demanded are sufficient and not more than sufficient for the public needs, to submit the approved estimate to Parliament, and to propose also to Parliament such a scheme of taxation as will produce a revenue sufficient to meet the charge. In the second place it is his business to see that money is at all times ready to meet the demands of the Imperial Service at home and abroad. Lastly he has control over the public expenditure, and every executive measure increasing or tending to increase the public expenditure must have his previous approval?—Yes.

20. The office of the Lord High Treasurer has for the best part of two centuries been in commission, and the duties above described have devolved on the Commissioners for executing his office?—Yes.

21. The Chancellor of the Exchequer was in former times the next officer to the Lord High Treasurer on the receipt side of the Exchequer, and when the office of Lord High Treasurer was put into commission he was the second officer named in the commission when the First Lord was a peer. In that case the Treasury was represented by him in the House of Commons, and thus he came to be recognised as the Minister of Finance, and he is responsible for the special duties of the Treasury which I have named above?—Quite so.

22. Is the Financial Member of Council a finance minister with powers similar to those which I have described as exercised by the Chancellor of the Exchequer?—Yes, I think so.

23. The Chancellor of the Exchequer exercises these powers, subject of course to the overruling power of the Cabinet as a whole, and subject also in matters of minor difference between himself and his colleagues to appeal to the First Lord, who is usually the Prime Minister?—Yes.

24. As the Cabinet is the supreme authority here, I suppose the Governor-General in Council is the supreme authority in India?—That is so.

25. What would be the course in the event of a difference of opinion between the Financial Member of Council and one of his colleagues. Would an appeal lie to the Governor-General personally, or in matters of grave importance to the Governor-General in Council?—In the event of a difference of opinion the matter is discussed in Council, and is generally decided by a majority. If, however, the Financial Member and the Viceroy differ from the majority of the Council they can insist on a reference being made to the Secretary of State before the decision of the majority is carried into effect.

26. The Financial Member of Council, I gather from that, has not the power of making or causing an appeal to be made to the Secretary of State unless the Viceroy is in accordance with him?—No.

27. Has the Financial Member of Council any means by which he can make his voice known at home?—Yes; he can record a dissent, and unless it were a matter within the powers of the Governor-General in Council, the Government of India would then report to the Secretary of State the action that it was proposed to take, and send a copy of the Financial Member's dissent.

28. That is to say, the Financial Member of Council must make a formal remonstrance against the decision of the Viceroy in Council in order to get his views brought before the Secretary of State?—Yes, they must be recorded in writing.

29. I suppose that, apart from such serious differences as that, a high officer in the position of Financial Member of Council is probably in confidential correspondence with officers at home?—No doubt he is constantly in private and confidential correspondence, but that would not come upon the records in any way.

30. Quite so, and of course would in no sense be recognised?—No.

31. You would hardly count that a means by which the Financial Member of Council could make his views known at home?—No: certainly not.

32. Has the Financial Member within your knowledge ever recorded his solitary dissent from the rest of the Council?—He has certainly recorded his dissent. Without examination I could not say whether it has been a solitary dissent, whether no other Member of Council has agreed with him on the occasion.

33. (*Mr. Courtney.*) On financial questions?—I am afraid I cannot answer without reference. I can recollect dissents, but those might not perhaps have been recorded on a matter that was purely financial.

34. (*Sir Andrew Scoble.*) May I ask whether, as far as you remember, those dissents have been on a question of general policy involving, of course, financial considerations?—I should think so; I should think that as a rule they have been on questions of general policy. If you would allow me, I would make a note to see whether to qualify that answer.

35. (*Chairman.*) You tell us, Sir Henry, that dissents have been made, and that you will give us some instances of those dissents where they have been made by the Financial Member of Council either with or without the assent of some of his colleagues. Have they been on questions turning practically on financial considerations?—I think so.

36. Of course the exercise of this power of the Financial Member of the Council of controlling the increase of expenditure, raises questions or may raise questions between himself and the principal departments of Government. That we may understand the machinery of Government, would you tell us what the principal departments are that would correspond to the Foreign Office and the Home Office and so on, here?—The Finance and Commerce Department, the Military Department, the Home Department, the Revenue

Department, the Public Works Department, and the Legislative Department.

37. And the Foreign?—And the Foreign — "The Political" it is called in the India Office—which answers to our Foreign Office.

38. Under what head would education come? Under the Home?—Under the Home Department.

39. And I suppose the Revenue and Financial Departments are practically branches of the office over which the Financial Member of Council presides?—The Revenue Department especially takes the land revenue, which is not within the province of the Finance Department. Questions of what are called Separate Revenue, such as Stamps, Excise, and Customs, are under the direct control of the Finance Department, but the Land Revenue and Forests are under the Revenue Department.

40. And to a certain extent independent of the Finance Minister?—Independent, except in the same sense that all departments involving expenditure have to obtain the sanction of the Finance Department for their expenditure as a matter of course.

41. (*Sir James Peile.*) You might convey the idea better by saying that it is the Revenue and Agricultural Department?—The Revenue and Agricultural Department is more correct.

42. That gives a more clear idea of it, does it not?—Yes.

43. (*Chairman.*) Then I may take it from your answer that you think the powers of the Financial Member of Council very closely correspond with the powers exercised here by the Chancellor of the Exchequer—that his consent is necessary to every measure increasing or tending to increase the public expenditure in India?—Yes, as regards Imperial expenditure, subject to appeal to the Governor-General in Council in the manner which I have described. The Provincial Governments have the power, without reference to the Government of India, of increasing provincial expenditure, provided that it be met from provincial revenues.

44. And subject, I think, as we shall learn hereafter when we are dealing with provincial revenues, to certain limits and to certain conditions which require the consent of the Central Government?—Yes, the Provincial Governments are subject, in regard to provincial expenditure, to the same restrictions as the Imperial Government.

45. And on the subject of salary? — Yes, in all cases the Provincial Governments have no more power of increasing salaries than the Imperial Government has. An increase of salary beyond a certain amount requires the consent of the Secretary of State.

46. As head of the Central Treasury, has the Financial Member of Council any power of control over the expenditure of other departments, corresponding to that of the Chancellor of the Exchequer? That is really only a development of the previous question.— Yes, no new imperial charge can be entered in the Budget, and no expenditure in excess of the amount entered in the Budget can be incurred, without the consent of the Financial Department, except in minor cases where the Provincial Governments and other departments of the Government of India at once meet such expenditure by reduction elsewhere, in which case such temporary increases are afterwards reported to the Financial Department. Perhaps I may here ask the Commission to accept the answers which I give to your questions as from myself and Mr. Jacob jointly.

47. You say those cases are confined to temporary increases?—Yes, to temporary increases.

48. Do you mean by temporary increases that they are only temporarily granted until the sanction of the Financial Minister is obtained?—(*Mr. Jacob.*) No, it means that they are absolutely temporary in their nature.

49. And the method of obtaining that consent is, I suppose, the same as we know here, viz., that the head of a department would report to the Finance Department and say that such and such an addition to his establishment is wanted, or such and such an extraordinary expenditure is desirable, and would ask the Finance Department to agree?—(*Sir Henry Waterfield*) Speaking of the Imperial departments, that would be the case. In Provincial departments the application would come through the Provincial Government. I am not sure whether I made the word "department" understood. The Military Department must communicate to the Finance Department, but the Commissariat, which is one of the Army Departments, would not write direct to the Finance Department, but can only apply to the Government of India through the Military Department.

50. There would only be communication between the Financial Department and the Military Sub-departments through the Central Military Office?—Yes.

51. What we should call the War Office?—Yes.

52. And, therefore, I gather from what you have been good enough to tell us, that, for instance, the Postmaster General could not increase the salaries of his officers or add to his establishments without first obtaining the concurrence of the Financial Member of Council?—No, the Post Office is directly under the Financial Department; and the Director-General of the Post Office cannot increase the salaries of the establishment without its authority, except in so far as there is always a sum granted in the budget for petty increases within the Director-General's power of sanction.

53. In England additional clerks cannot be added to the establishment of a Secretary of State without the sanction of the Chancellor of the Exchequer. That is an instance of a measure directly increasing expenditure. The sanction of the Chancellor of the Exchequer is also necessary to a change in the Education Code which may lead indirectly to a large demand on the Education Vote. Would the consent of the Financial Member of Council be necessary in analogous cases in India, or have the heads of branches of administration, such as the Commander-in-Chief, more independent power of incurring expenditure than similar officers here?—Any department that desires to include any new Imperial charge in the Budget, or to incur expenditure beyond what is authorised in the Budget, must have the authority of the Financial Department of the Government of India. The authority of the Secretary of State is also required, if it involves an increase of above 25,000 rupees a year in the case of an establishment or the creation of a new appointment on a salary of upwards of 3,000 rupees, or the raising of the pay of an existing appointment above 5,000 rupees a year. Even the Commander-in-Chief, to whom special powers are granted, can only make transfers, and cannot, without the concurrence of the Financial Department, exceed the provision in the Budget.

54. That refers to what I call direct increases of expenditure; but I was rather drawing your attention to what I may call indirect increases, that is to say, the passing of a measure which may not have any immediate effect upon the Budget, but which, when it is fully carried out, may have a very important financial effect—say a change in regulations under which an education grant may be obtained—it is uncertain at the moment how far that change will take effect; but if it does it will create an eventual increase of expenditure. In such a case as that in India would the consent of the Finance Department be required? — It certainly ought to be obtained; if it was not obtained, it would be simply through an oversight in not observing that the measure proposed would cause an increase of expenditure.

55. I do not want to touch at this present moment on the question of audit, but for fear I may forget it when I come there I will ask this question, in case such an indirect charge were sanctioned, and became law, or came into practice without the assent of the Finance Minister being obtained, would the Comptroller and Auditor-General notice and report on that?—As soon as the expense was incurred, the auditing officer would report, and require proof that the sanction needed for it had been given.

56. He would report that there was an increase of expenditure, which had not been communicated to the Finance Minister, in consequence of such and such an order having been passed by the Home Office in dealing with education cases?—I am afraid my answer will have to go a little into the question of the manner in which the audit is enforced.

57. We had better then keep that till we reach the question of audit?—Yes.

58. (*Sir James Peile.*) Would not any such expenditure come into the estimates and the Budget first of all?—If I understand the Chairman's question, it is the case

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

5 Nov. 1895.

of an order which does not necessarily say that any expenditure will be increased, but the indirect effect of which is to increase the expenditure. As soon as any such expense actually occurred, the audit officer would require that sanction be obtained for it, and the increase of expenditure, if it exceeded the powers of the Provincial Government, would thus come to notice.

59. They could not spend the money until it had been provided in the Budget?—They could not spend the money beyond what had been provided in the Budget.

60–1. (*Chairman.*) The point which I was anxious to get from you, Sir Henry, is this— in instances of indirect expenditure, it is, of course, very often difficult beforehand to say that a measure involves expenditure, and there may be omissions in good faith in getting the necessary assent; but the principle is there, that if a department knows that the adoption of a certain measure will lead to increase of expenditure, the rule of the service requires it to go to the Finance Department; and if it does not go, and if the Comptroller and Auditor-General afterwards observes that it has not gone, and that increase of expenditure has followed, he will call attention to the fact?—Certainly, that is so.

62. Here the highest officer in the State, if he incurs expenditure without the assent of the Treasury, is at once brought to book by the Comptroller and Auditor-General, an officer whose independence of the Executive Government is guaranteed by safeguards similar to those which guarantee the independence of a Judge. This officer has access to the books of the Departments, and he reports direct to the House of Commons every instance of expenditure for which the assent of the Treasury has not been obtained. Every such instance is carefully examined and judged by the Standing Committee of the House of Commons, to which the Public Accounts, and the Reports of the Auditor-General upon them, are annually referred. What is the analogous method in India, by which omissions to obtain the sanction of the Financial Minister are detected and brought to judgment?—The audit officer would disallow such cases of expenditure, and order the money to be repaid, or the requisite sanction to be produced. If this could not be done, the matter would be reported to the Government, and if necessary to the Secretary of State. Thus, any expenditure not authorised by the Budget must within a short time be brought to the notice of the Government of India in the Financial Department, while all excess over the Budget is duly noted in the Appropriation Reports of the several Accountants General and of the Comptroller and Auditor-General.

63. First of all, has the Comptroller and Auditor-General actual power of disallowance? — The audit officer, who is a much inferior officer to the Comptroller and Auditor-General would disallow it. Take the case of a salary that had been overpaid; he would at once draw the Treasury officer's attention to the fact, also that of the officer to whom this excess of salary had been paid, and in ordinary cases it would be refunded immediately, within the month.

64. Then, in fact, the Audit Department has the power of disallowance?—Certainly.

65. And the disallowance has to be removed by superior authority?—Yes.

66. I think you mentioned in certain cases that such disallowance might come before the Secretary of State; what is the authority in India that decides whether it shall or shall not come before the Secretary of State?—The Secretary of State has given special instructions, which are now carried out, under which the audit officer may require, if he is not satisfied that the due sanction has been obtained, that the matter shall be reported to the Secretary of State.

67. In such cases, do you mean by the auditing officer the Comptroller and Auditor-General?—The auditing officer is a clerk under the local Accountant-General, and in the first instance he would report to the Accountant-General, and that officer may require that the sanction of the Secretary of State shall be obtained to the apparent breach of audit rules.

68. Even an officer occupying so comparatively subordinate a position as the Accountant-General may require a reference to the Secretary of State?—Yes.

69. That power is not even confined to the Comptroller and Auditor-General?—No, it is not.

70. The next officer in what I may call the hierarchy, has also that power?—Yes, the highest audit officer in the particular province or department.

71. What are the duties of the Financial Secretary, and for how long a time is he appointed? — The Financial Secretary to the Government of India is the chief officer of the Financial Department, under the Financial Member of Council. It is his duty to submit the correspondence in complete form to the Member of Council, and generally to see that financial regularity is preserved. He is a member of the Indian Civil (formerly covenanted) Service; he holds office during good behaviour, that is, till promotion or retirement.

72. Would he, in your opinion, correspond to the Secretary to the Treasury at home?—I think so, in a general way.

73. He would correspond to the chief permanent officer of the Treasury at home?—I think so.

74. What sort of an establishment is the Central Treasury, of what number of officers is it composed? —The Financial Secretary to the Government of India receives a salary of 4,000 rupees a month. He is assisted by a deputy-secretary on 2,250 rupees, who usually takes the Opium, Excise, and Stamps, and certain branches of expenditure; by an under-secretary on 1,300 rupees a month, who takes the Accounts, Leave, Pay, and Pensions questions; and an assistant-secretary on 1,750 to 2,000 rupees a month, who takes the Customs, Commerce, and Statistics, Mint and Paper currency, and part of the public expenditure. I give the divisions of the work as I believe it is now carried out (it is, of course, a matter of regulation from time to time). There is a registrar on Rs. 700, six superintendents at salaries of Rs. 300 to Rs. 600, and 82 clerks at salaries of Rs. 20 to Rs. 300 a month.

75. And this is quite independent of the establishment which is under the Comptroller and Auditor-General?—Entirely.

76. What are the duties of the Comptroller-General, and for how long is he appointed?—For his duties as chief accountant and auditing officer I will read an extract of the note which I have put in.

"Besides being the authority on all questions affecting classification and adjustment in the public accounts, the Comptroller-General compiles for the Government of India a complete monthly account of the receipts and expenditure of the whole Empire of India, from the accounts submitted to him by the civil accountants-general and comptrollers, the accountants-general in the Military and Public Works Departments, and the Comptroller of the Post Office.. But, before the complete accounts are ready, he reports (by telegraph if necessary) to the Finance Department the approximate receipts and issues from treasuries, in detail of departments, on the 9th of the following month, and fuller details of the chief heads of civil revenue, and expenditure on the 16th of the following month. He also publishes on the 9th the approximate cash balances at the treasuries, of which a revised edition is published on the 16th on the receipt of more accurate information. On the 25th of every month he submits to the Government an estimate of the probable receipts and payments, and the cash balances of that month and the two following months. He makes, for comparison with the budget prepared in the Financial Department of the Government of India, an independent compilation of the estimates of the various accountants-general (civil, military, and public works), and submits it to that Department with his own estimate of the debt heads, interest, exchange, and ways and means; reviewing the other estimates with special reference to the state of the cash balances. At the end of the year he prepares the finance and revenue accounts for submission to Parliament, and draws up an Appropriation Report for the whole of India, including the Military and Public Works Departments, in which the variations of the actual revenue and expenditure from the estimates and from the actuals of the preceding year are explained. He also reviews the balances of the public accounts annually, and satisfies himself how far those represent the admitted assets and liabilities of the Government.

"As Auditor-General, he, through his deputies, inspects and conducts a test audit of all offices of account, so as to satisfy the Government that the detailed audit conducted by the local and departmental account

offices is efficient, that the regulations and orders of the Government are duly enforced, and that the procedure in those offices is in accordance with the codes and suitable for the efficient performance of their duties."

The Comptroller-General is also responsible for the management of the Public Debt Office, and he is the Head Commissioner of Paper Currency. He must ordinarily be a member of the Indian Civil Service, and he holds office till promotion or retirement.

77. What did you say was his function with regard to the National Debt?—I said he is responsible for the management of the Public Debt Office.

78. Would that cover duties which are discharged here by the Bank of England, or would it simply be the executive duties connected with debt which must lie with the Government?—The Bank of Bengal is the agent for the discharge of the work, but it refers all questions involving any responsibility to the Comptroller-General at once, I believe.

(*Mr. Jacob.*) Yes, any questions involving the exercise of any discretion are referred to the Comptroller-General.

(*Sir Henry Waterfield.*) Perhaps I may also refer to the papers on Financial Control and Appropriation Audit which have been laid before the Commission.

79. That is the correspondence which followed the Committee of 1880?—Yes. In the letter dated 8th September 1882, there is a summary given by the Government of India of the principal departments of work which remain to the Comptroller-General after the arrangements which they proposed should be carried into effect. They there divided them into 19 heads:—

1. Appropriation audit.
2. Control of personnel of Civil Account Department.
3. Inspection of all offices of account.
4. Management of the Currency Department.
5. Compilation of the central accounts, both monthly and yearly.
6. Compilation of estimates and comparison of current facts therewith.
7. Resource—that is, the providing of money both by increasing the balances as a whole, and by transferring them to the points where they are required.
8. Management of the Public Debt.
9. Accounts of district savings banks. (These are now merged in the Post Office Savings Banks.)
10. Adjustment of accounts of guaranteed railways.
11. Account with London, and probably also those with the colonies.
12. Management of the reserve treasuries and bank balances.
13. Central accounts, and custody of securities held in trust by Government officers.
14. General direction of coinage and mint operations.
15. Verification of deposit advance and other debt balances.
16. Collection of mutual accounts of accounting officers.
17. Audit of such accounts as Administrator-General's and other law officers; emigration agencies of colonies, &c.
18. The accounts of the Forest Department.
19. Examination of accounts of service funds. (This duty is now performed by the Comptroller of Indian Treasuries.)

80. This brings out a very important point to which the attention of the Commission should be called. The Comptroller General is, from the description of his duties which you have put before us, an important executive officer, and at the same time he is the chief auditor of all the expenditure of India?—That is so.

81. We may note here, I think, that the question was considered both by the Secretary of State and the Government of India, after the discussions which took place in 1880, whether it was desirable that that mixture of functions (which *primâ facie* do not appear quite compatible, namely, the independent functions of an auditor and the naturally more or less dependent functions of an executive officer) should continue; but on the whole the Government of India were satisfied with the arrangement as it stands, and though they were not opposed to the principle that the auditor ought to be a thoroughly independent officer, they demurred to a change of system on account of the expense that would be entailed?—That was the reason of their objection to the appointment of an Auditor-General to carry out annually in detail an administration audit of the whole of the accounts.

82–83. At the present moment it is only necessary to note that this took place. Now, putting aside for the moment the duties of the Comptroller and Auditor-General as an auditor, to what officer, as far as you know, in the English service, would you compare him?—In answering this question my difficulty is that I do not know the English system sufficiently. I think that he has duties which are discharged by one of the secretaries in the Treasury to a very great extent, as presiding over the accounts of the Empire. He occupies to a great extent the position of the Bank of England in the management of the debt.

84. And, I suppose, of the Controller of the National Debt Office?—Of the Controller of the National Debt Office. In the management of the balances I doubt if there is any officer in England to whom he can be compared. He has the responsibility of seeing that all over India there is a sufficient balance at the 200 or 300 treasuries where money is required.

85. The post here which most nearly corresponds to that office is apparently the post held by Sir Edward Hamilton. Of course, I am speaking of a permanent officer under the Chancellor of the Exchequer. The officer who holds Sir Edward Hamilton's place is distinctly responsible to the Chancellor of the Exchequer in respect to the movement of funds?—Yes; but I meant rather as to the number of treasuries. I should suppose that in England—in the United Kingdom—they were very much fewer.

86. But as far as it goes, the comparison is correct?—Yes, as far as it goes.

87. He is responsible for the movement of funds, because a chief officer of the Treasury naturally has to see that the moneys in the Treasury are sufficient for the demands upon it?—Yes.

88. And, therefore, you may put it generally that that is the control of the movement of funds?—Certainly that is so.

89. And I think we must add, must we not, that he also has duties somewhat analogous to those of the Deputy Master of the Mint?—Yes, in controlling the operations of the Mint and presiding over the currency. Well, the currency in England is rather controlled by the Treasury, is it not? Would not the currency come more directly under the Chancellor of the Exchequer?

90. Quite so. The Chancellor of the Exchequer is Master of the Mint; that is part of his office, and all currency questions which involve considerations of policy are, of course, solely in the province of the Chancellor of the Exchequer?—Yes, the policy to be adopted for the Mint and currency would be in the province of the member of Government in the Financial Department, but the Comptroller-General is responsible for the administration of the department.

91. (*Mr. Courtney.*) You are thinking of paper money only?—I was thinking of both; he has both Mint and paper currency, and I believe in England it would be rather a double duty. The Comptroller-General corresponds to the two officers of the English Administration.

92. (*Chairman.*) Would you describe the Comptroller-General as the second officer in the Central Treasury under the Financial Member? In the absence of the Financial Secretary does he take his place and represent him?—No, that is not quite the case. In the case of the Financial Secretary being absent for a short interval—a few days—the deputy secretary would take his place. If the Financial Secretary took leave of absence, the Government would appoint an Acting Secretary. When Mr. Finlay, the Financial Secretary, came to England in 1894, Mr. Jacob, who was then the Comptroller-General, was appointed Acting Financial Secretary, but that was not because he was the Comptroller-General, but because the Government of India considered him the best man to select.

93. Is his office in the same building with the Central Treasury, and—from what you have said before I take it that it does not—form part of the Central Treasury establishment?—No, it is under the same roof, but it is quite separate from that of the Financial Secretary. The Comptroller-General always remains at Calcutta; when the Government is at Simla, the Financial Secretary goes up with a certain part of his office to Simla,

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

5 Nov. 1895.

but at the same time the Comptroller-General is always in constant unofficial and confidential communication with the Secretary.

94. Practically, therefore, the Comptroller-General, when the Government is at Simla, is, the representative of the Treasury in Calcutta?—Yes, in so far as the duties have to be discharged immediately on the spot.

95. Then in a rough sense perhaps you might say he is the second officer in the Treasury, might you not?—The Comptroller-General is usually a more important officer than the Deputy Financial Secretary; but my point is that the Comptroller-General does not succeed to the Financial Secretary in his absence, but the Deputy Secretary would, if the absence was for a short time.

96. But if the absence is for any long period, such as for coming home, it looks as if the Comptroller-General are preferred to the Deputy Financial Secretary as acting chief?—I think it is a question then of the personality of the man—whoever has the greatest experience would be selected.

97. Has the Comptroller-General a deputy?—He has three deputies; one of whom, called Deputy Comptroller General, works in the office and is the Comptroller-General's chief assistant for his work generally. He signs many of the accounts and the Budget with the Comptroller-General. The other two are Deputy Auditors-General, and are employed on the inspection and test audit of the other account offices. If the Comptroller-General were away only for a day or two, his duties would be performed by the Deputy Comptroller-General; but if the Comptroller-General took leave of absence, one of the Accountants-General would probably be appointed to act for him.

98. Then do I understand that under the Comptroller-General his department is entrusted to deputies, two of whom are purely auditors?—Yes. Perhaps you had better let Mr. Jacob answer that question, as it has reference to his office.

(*Mr. Jacob.*) The duties of two of the deputies are confined entirely to the audit, and one is the general assistant of the Comptroller-General.

99. Then one is the assistant to the Comptroller-General in his executive functions, and two in his audit functions?—Yes.

100. What is the strength of the establishment of the Comptroller-General?—(*Sir Henry Waterfield.*) The Comptroller-General's department is thus composed: Comptroller and Auditor-General, salary 3,500 rupees a month; Deputy Comptroller-General, Rs. 1,750 to 2,000.

101. May I just stop you for a moment. Does not that mark rather a difference between the Comptroller General and the Deputy Financial Secretary? When you were mentioning the salaries of the Treasury staff, you stated, if I remember rightly, that the Deputy Financial Secretary had rather a smaller salary?—The Deputy Secretary has Rs. 2,250. Undoubtedly the Comptroller General's post is a more important one than that of the Deputy Financial Secretary. After the Deputy Comptroller-General come a Deputy Auditor-General at Rs. 1,750 to Rs. 2,000, and another Deputy Auditor-General at Rs. 1,250 to Rs. 1,500. There are four Assistant Comptrollers-General at Rs. 600 to Rs. 1,250, one Chief Superintendent at Rs. 450, nine Superintendents at Rs. 200 to Rs. 390, and 100 clerks at Rs. 30 to Rs. 175. Then besides that, as Head Commissioner of Paper Currency the Comptroller-General has the following establishment:—One Assistant Comptroller-General at Rs. 1,000 to Rs. 1,250, one Chief Superintendent at Rs. 500, one Treasurer at Rs. 500, one Deputy Treasurer at Rs. 200, three Superintendents at Rs. 200 to Rs. 290, 101 clerks at Rs. 20 to Rs. 125.

101*a*. That makes a very large total establishment?—Yes, upwards of 200 clerks in the total establishment.

101*b*. I suppose that a very small number of these are European-born, are they?—(*Mr. Jacob.*) Yes, a very small number.

102. It seems to me rather important, Sir Henry, to understand the nature of the executive duties performed by the Comptroller-General, especially with reference to that of which we have already spoken, viz., that he is at the same time entrusted with the functions of an independent auditor. Does he advise the Financial Minister on financial questions, and does he take part in the ordinary business of the Treasury, framing the estimates? Or is he simply chief accountant responsible for the preparation of the account sent to the Treasury, and directing in addition the movement of funds throughout the country?—(*Sir Henry Waterfield.*) The Financial Member constantly takes the advice of the Comptroller-General; but the current business of the Financial Department does not come before him. He is not, however, simply a chief accountant; in addition to the duties described in the previous answer, he compiles the estimates for the whole of India in all departments, independently of the Financial Secretary, and the Budget is signed by both officers.*

103. I think perhaps it would bring it home to the members of the Commission who are more familiar with the English system than with the Indian, if we could take it that the nearest analogy to the duties of the Indian Comptroller-General would be if in our Treasury here Sir Edward Hamilton, in addition to his other duties, was Comptroller and Auditor-General?—I suppose it would be so; but I am not quite sure that you would then have exhausted the duties of the Comptroller-General.

104. Now, take the case of the Afghan war. The Comptroller-General is the first officer at head-quarters who would have knowledge of the state of the cash balances in the different treasuries, and he would be the first officer to learn that the cash advances were in excess of the rate foreseen in the estimates, would he not?—The Accountant-General of the particular province would be the first officer to observe a drain on the balances; but the Comptroller-General's attention would be immediately drawn thereto by the telegraphic report, and he would at once examine the cause.

105. Therefore he would be the first officer at head-quarters?—Yes, at Calcutta probably he would.

106. Then on the occurrence of an emergency he would be as it were the watchdog or signalman of the Treasury, and the Finance Minister would rely upon him for the first intimation of financial danger?—No doubt the Comptroller-General would give the necessary warning; but, as the Financial Secretary would also have the telegraphic reports, he would probably have also observed the excessive drain.

107. But the Financial Secretary receives that information practically through and from the Comptroller-General, does he not?—At the time the present arrangements were initiated a note was written by Mr. Hope, who was then the Financial Secretary, on the arrangement which it was intended to introduce, and, in giving a description of the returns and statements which were to be brought into force he said, "three principles have governed the re-organisation; "first, that it is the business of the Comptroller-General "or other officers, as the case may be, to supply, and to "be responsible for, all facts and figures which the "Financial Department may require; (2) that the latter "must digest and compile from day to day the in-"formation thus supplied in such form as it may deem "suitable for maintaining 'touch' of the whole; and "(3) that nothing shall be supplied to it which it does "not intend regularly to scrutinise, check, and apply "to some practical use." Thus you will see the Comptroller-General, although he undoubtedly would give warning, is not charged with the duty of giving warning. That rests with the Financial Department.

108. With the Financial Secretary?—With the Financial Secretary.

109. But still the Comptroller-General would be the first officer at head-quarters who would receive the information showing that there was danger ahead?—I do not know that he would be the first officer, because it would be simultaneously given to the Financial Department; but he would learn it as soon as anyone.

110. The point I want to come to is this—would it come through him to the Finance Department?—No, a duplicate of these reports goes direct to the Finance Department. (*Mr. Jacob.*) The Comptroller-Generals communicates it to the Finance Department; the Comptroller General compiles the Accountant-General's reports, and he would be the first to know the general state.

* *See Qs.* 2141-4 *and Q.* 2842 *et seq.*

111. And he communicates it to the Financial Department?—And he communicates it by telegraph, or by memorandum if the Government is in Calcutta.

112. That is a very important executive function, is it not?—(*Sir Henry Waterfield.*) Certainly it is.

113. Accounts and returns for the whole of India are furnished to the Comptroller-General by the Accountants-General and Comptrollers of the several Provinces, and, as I gather from paragraph 4 of the despatch of the Government of India dated 1st October 1881, also by other officers, namely, the Accountant-General of the Public Works Department, the Controllers of Military Accounts, the Postal and Marine Controllers, and the Examiner of Telegraph Accounts?—Yes.

114. That is the case?—That is the case.

115. And, therefore, he focusses all the accounts from the different independent spending departments?—Yes.

116. The Provincial Accountants General do not forward to the Comptroller-General the accounts of the Military, Public Works, Postal, Telegraph, and Marine departments, do they?—No. They forward the Civil Accounts but not the accounts of the other Departments.

117. Are duplicates of those returns furnished to the Accountants-General?—No. The Provincial Accountants-General have nothing to do with the accounts of those other departments, which are sent direct to the Comptroller-General; for the purpose, however, of adjusting the balances of the Provincial Governments, they receive certain total figures from the Public Works Examiners.

118. Therefore, the Accountants-General of the Provincial Governments, who are the chief financial officers of the Provincial Governments, are not really aware of the financial condition of the provinces?—The Military Department is entirely under the Government of India, and not under the Provincial Government, and, therefore, the military expenditure does not affect their accounts.

119. But if these accounts from Postal, Telegraph, and Public Works Accountants, besides those of the Military Accountants, are not forwarded to the Accountants-General in the provinces, those officers cannot be fully aware of what is going on generally in the way of expenditure throughout the provinces?—They know the amount that has been paid to each department from the treasuries in their provinces.

120. But that is all?—They have not full information. They could not compile a complete account of the manner in which the money has been spent.

121. And, therefore, the Comptroller-General is the first officer who focusses and collects together the total of the whole expenditure of India?—That is so. (*Mr. Jacob.*) Yes.

122. The same despatch that I have just mentioned describes the Accountants-General as officers of the Finance Department. Are they paid by the Central Government or by the Government of the Provinces to which they belong, and are they solely dependent on the Comptroller-General, or do they owe allegiance to the Government of the Province in which they are employed?—(*Sir Henry Waterfield.*) The salaries of the Provincial Accountants-General and their staffs are charged against the Imperial Revenues. They are under the Central Government, not under the Provincial Governments.

123. And, therefore, they owe no allegiance to the Provincial Governments?—No, excepting that they are directed to furnish all assistance to them; but they are not their officers.

124. But I rather gathered from a previous answer of yours that they were in the position of financial advisers to the Provincial Government?—Yes, they are advisers, but they must not interfere with the Provincial Governments. They only give them advice and warning, as being Imperial advisers at the headquarters of these Provincial Governments.

125. At the same time they most nearly correspond to the Financial Minister to the province, do they not?—There is a Finance Secretariat in each province.

126. Does that Finance Secretariat manage the finance of the province?—That manages the financial administration of the province.

127. Therefore, the Accountant-General is purely the Accountant-General of the Central Government, standing aloof and apart from the provincial Finance Department, which deals with the financial questions arising within the Province and within the powers of the Provincial Government?—Yes, within the powers of the Provincial Government. It is only by way of advice that he can exercise any influence.

128. We should therefore not carry away a correct conclusion if we were to assume that the Accountant-General in Bombay was, to all intents and purposes, the Finance Minister for Bombay?—Oh no, he is not.

129. (*Sir W. Wedderburn.*) But I think it is customary to refer matters partly to him for his advice from the secretaries?—It certainly is customary to do so. I believe the Provincial Governments are very careful to obtain the advice of the Accountant-General in all matters of finance.

130. (*Chairman.*) Probably the Provincial Government on financial matters gets the advice of the Accountant-General, because that would, in most cases, imply that it would get thereby the assent of the Central Government. I mean that the Accountant-General would know how far the Central Government would be likely to approve?—He would certainly give them warning if they were likely to be exceeding their powers. (*Mr. Jacob.*) Perhaps I might say that it is rather as to whether their proposals are in accordance with the regulations that the Accountant-General is consulted, not so much on matters of financial administration.

131. The Accountant-General would not be consulted, for instance, if the Provincial Government was within its limits, amending a method of levying, say, the excise revenue?—Very seldom, I think, would he be consulted on a matter of that kind.

132. And I suppose also he would not be consulted on questions of increasing the establishment or measures of that kind, involving increased expenditure?—Every proposal involving an increase of expenditure has to be referred to him for a certificate that the present expenditure is properly stated.

133. And that it will not cause an increase?—And that the increase in the proposal is properly shown.

134. And that it will not involve an excess over the revenue assigned to the Provincial Government?—Yes, he would see that the proposal was within the powers of the Provincial Government.

135. The next officers mentioned are the Treasury Officers; who are they?—(*Sir Henry Waterfield.*) In the office of the Collector or chief civil officer of each district, one of the deputies or assistants is appointed Treasury officer; he is subordinate to the Local Government.

136. Although he is in the office of the Accountant-General?—No, he is not in the office of the Accountant-General; he is in the office of the Collector of the district—that is, he is a deputy of the Collector of the district.

137. Have the Treasury officers any other duties to perform except that of bankers for the Government at the place where their treasuries are situated, that is, receiving the revenue, and paying the orders issued by duly authorised officers?—The Treasury officers for their Treasury work are assisted by an accountant and a treasurer supervising their respective branches. The Treasury officers almost invariably have other duties to perform. They are on the general district staff, and perform revenue and magisterial duties. In some Provinces the Treasury officer is always in charge of the Excise branch of the Collector's office. In small districts the Treasury work would not take up the whole time of an officer.

138. Where do the Treasury officers keep the moneys in their charge?—In strong rooms in the collectors' district offices which are under double locks of the Treasury officer and Treasurer, and cannot be opened save in the presence of both these officials.

139. In great centres are the moneys placed in banks?—(*Mr. Jacob.*) Yes, in the Presidency banks or their branches.

140. Wherever there is a branch of the Presidency banks?—Almost invariably. I think there are one or two cases in which there is a branch, and the Treasury is not at the branch, but generally, if there is a branch of the Presidency bank at a station, it conducts the Treasury business.

141. There are other banks in India besides the Presidency banks?—Yes.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

5 Nov. 1895.

142. Does the Government ever make use of them?—No, I think in no instance. There have been such proposals sometimes, but they have never been carried into effect.

143-4. I suppose, probably, these other banks have not branches in the small towns where many of the district treasuries must be situated?—No; they are only in large centres, like Agra and Delhi, and at some hill stations where there are many Europeans.

145. And there there would be branches of the Presidency banks, I suppose?—Yes, generally.

146. Therefore, it would practically come to this—that in the smaller centres where there are district treasuries there is no choice except to keep the money in the strong box?—No.

147. Do not these other banks have branches in many places where the Presidency bank has no branches?—I only recollect one instance. At Aden there is a branch of one of the banks, and a proposal was made by it to take over the treasury work; but for some reason or other the negotiations fell through.

148. Could you give us a statement of the places where there are branches of the Presidency bank, do you think?—Yes, I could get a statement made out; I do not think I have got it here. Do you mean where the treasuries ———

149. No, where there are branches of the Presidency bank; how many branches they have, and where they are situated?—Yes, I could give that to you. (*Sir Henry Waterfield.*) We shall be able to put that in.

150. I suppose it would not be very difficult to find out where there are branches of the other banks?—I think the directories which we have upstairs will give them at once.

151. Perhaps you could give them, without too much trouble?—I will see what we can do in that way.

152. How many treasuries are there?—There are 266 treasuries under the Provincial Governments. There are 19 in the Central Provinces, 36 in Burmah, 12 in Assam, 50 in Bengal, 52 in the North-West Provinces and Oudh, 35 in the Punjab, 36 in Madras, and 26 in Bombay.

153. Does that comprise the total number of treasuries, whether they are district treasuries or sub-treasuries, or is it simply the district treasuries alone?—Those are district treasuries alone; that does not include sub-treasuries.

154. Could you describe to us the difference between the treasury and the sub-treasury?—The sub-treasury is an outlying post for a district. The accounts pass through the district treasury and are treated as if they all belonged to the district treasury, but in some places it is convenient to have a sub-treasury; if a place is a considerable distance from the district treasury, it would be inconvenient to have all the revenue paid into the district treasury.

155. At the head of the sub-treasury there is, I suppose, a subordinate officer from the Collector's department?—Yes.

156. You told us just now that the treasury officer had under him I think two officers, an accountant and another officer?—(*Mr. Jacob.*) The treasury officer has a treasurer and an accountant under him.

157. Has he any other officers?—Yes, the treasurer and the accountant are assisted by various clerks and deputies.

158. Then I suppose at a large district treasury the staff must be considerable?—Yes.

159. I suppose you have no return to give us an idea of what the cost of the district treasury system is?—No, I have not any statement made out.

160. Is it easily obtainable?—(*Sir Henry Waterfield*). I am afraid it would be rather a long business to compile it from the Estimates. (*Mr. Jacob.*) The treasury officers of course are mixed up with the regular district staff.

161. And it would be somewhat difficult for you to separate them so as to give us some idea of what the charge of the banking department, if I may so call it, of the Indian Government is?—I think I could give you an idea of what is the cost of a large treasury and of a small treasury.

162. Perhaps you could give us that, would you?—Yes, I will try.*

* *See* Appendix 4.

163. (*Sir Donald Stewart.*) Is it not the case that in some districts the Treasury officer is entirely employed in treasury work?—He may be. As a matter of practice he is simply one of the officers of the general district staff, and the collector can give him any work he chooses.

164. (*Chairman.*) I suppose that there are a few great central treasuries where the bulk of the revenue is received and the bulk of the payments are made, but that the larger number of those of which you have given us a description in the different provinces are comparatively insignificant?—(*Sir Henry Waterfield.*) The bulk of the revenue is received at the collector's office in each district; and any surplus not required for immediate expenditure is removed to central treasuries which are conveniently accessible by railway or otherwise, or from which the funds can be easily removed by drafts owing to mercantile demands, &c. The greater part of the funds is deposited at these central treasuries, and most of the expenditure is by drafts thereon. The payments at the greater number of the treasuries are relatively small.

165. Then do I understand the principle of the movement of funds to be this—that the money is collected and paid into the district treasury, and any money that is not wanted at that district treasury is remitted either in cash or by bills to more central treasuries; that probably at those central treasuries there are branches of the Presidency banks, and that those balances would be deposited in the Presidency banks?—(*Mr. Jacob.*) Yes.*

166. So that the tendency of the administration is to transfer the money that is not immediately wanted on the spot to those treasuries where there are branches of the banks?—Yes, but the excess funds are not always left in the charge of the banks. At the Presidency towns, for instance, we have reserve treasuries in which we deposit any funds in excess of a certain amount.

167. Therefore, even where there are branches of the Presidency banks, the whole of the treasury account is not kept there?—No.

168. Is there any reason for that?—Generally in the districts the whole of the treasury balances are kept with the branch banks, but we have a system by which we can transfer a portion of the treasury balance to the currency department and hold it as a currency balance.

169. And in that case?—It is removed from the Presidency bank.

170. Into the strong box?—Yes; that is a very useful system, because it often obviates the necessity of actually remitting the money. We may have a surplus at one part of the year and a deficiency at another, and by placing the money in the currency department we can transfer it to another treasury where the money is required immediately: and then again when the money is required at the original treasury we can just make a corresponding transfer back again.

171. But on the whole would it not be more secure if the whole of the funds were deposited in the branch of the Presidency bank where there is one?—I think not.

172. You are satisfied with the regulation under which a portion is kept in the strong box?—Yes, I think it is a much more satisfactory arrangement. There have been occasions on which the banks have found some difficulty in making funds available at once. (*Sir Henry Waterfield.*) Many years ago there was a difficulty at Calcutta; and another occasion arose at Bombay, when the bank was not able to supply the Government with the money that was wanted, owing to their having lent out so large a portion of the money deposited with them.

173. Imprudent banking?—In their own banking business; and it was then ordered that the balance kept by the Government at the Presidency bank should only be a liberal amount for what was required, and that any surplus should be put in the reserve treasury.

174. That really appears to mean that there is a certain distrust of the Indian system of banking, and, in consequence of that, a preference for keeping money in the strong box?—There are no reserves in India beyond those of the banks, and they may be unable to call in their money with sufficient rapidity, as happened

* *See* Q. 2805 *et seq.*

in the case of the great crisis which took place a great many years ago in Bombay. I believe that on one occasion a difficulty also arose at Calcutta, through some mismanagement by the secretary of the bank.

175. In fact, it is an arrangement somewhat corresponding to the German Emperor's war chest?—It is somewhat of that nature, no doubt. (*Mr. Jacob.*) Perhaps I might be allowed to say that it is partly, I think, owing to the difference in the proportion which the Government funds bear to the whole of the funds in India. In London I suppose the Government balance is a very small portion of the total available funds in England at any given time; but in India the Government balances form a very large proportion of the total funds, and it does not seem advisable that the Government drafts upon the banks should suddenly cause a great strain upon the general funds available for commerce.

176. Of course it strikes one as singular that where there are banks, and especially banks of the standing of the Presidency banks, the Government money should not be altogether deposited there. But that opens rather a wide question that perhaps we may have to ask more about hereafter. At the present moment we may rest upon your statement that the matter has been fully considered, and that this is a matured policy?—Yes.*

177. Therefore, I will only ask you if I rightly understood you to say that this reserve, which in the central treasuries is kept out of the banks, is so kept as part of the reserve in the hands of the commissioners of currency. I do not know whether I am right in calling them commissioners of currency, but the Currency Department?—No, the treasury surplus is always kept in the treasury, not in the Currency Department.

178. Then perhaps you will explain a little more fully what you said with regard to a certain portion of the balance being kept out of the bank for currency purposes?—Yes, what I mean is, supposing at Treasury A. there is a surplus of treasury money available, and Treasury B. wants treasury money, there being currency depôts at each of these treasuries. I should telegraph, as Comptroller-General, to Treasury A. and say, "Transfer 10 lacs of your treasury money to currency at Treasury A." To Currency Depôt B. I should telegraph as head Commissioner of the Currency Department and say, "Pay 10 lacs to Treasury B."

179. That is to say, you diminish the currency balance?—The currency balance at one depôt is diminished and at another it is increased; and the converse occurs with the treasury money.

180. I suppose you are obliged to keep a certain amount of cash in reserve against the currency?—Yes.

181. Still to a certain extent that might be done even though at Treasury A. the currency money was in the bank, might it not?—The balance is in the bank; but it is a condition of the Currency Act that we must have the money available as cash, so that, even when it is in the bank, it must be deposited in a strong-box which is under the key of the bank, and under the key of a currency officer.

182. And therefore it is an ear-marked deposit in the bank?—Yes.

183. Do the Treasury officers give security, or does the Government take any other kind of security against maladministration?—(*Sir Henry Waterfield.*) The treasury officers do not give security. There is for each treasury a treasurer who is in immediate charge of the cash, and who gives security. The treasurer and his subordinates (for all of whom he is responsible) have the handling of the cash, and his department is quite separate from the accountant's department. The accounts of the treasurers and accountants are examined daily by the treasury officer, and form a check on each other.

184. Then are there no periodical surveys to see that the sum with which the treasurer charges himself is actually there?—(*Mr. Jacob.*) Yes. The collector of the district is bound to report, on the last day in each month, that he has actually counted the treasure, and he is also instructed to do so at uncertain intervals.

185. Are losses frequent under the present system?—(*Sir Henry Waterfield*). No; and, when they do occur, it is invariably through neglect of some of the prescribed precautions. The rule is, "Whenever any "defalcation or loss of public money, stamps, or opium, "is discovered in a Government treasury, or other "office or department, which is under the audit of "the Accountant-General, the fact should be immediately reported to the Accountant-General; and, "when the matter has been fully inquired into, a "further and complete report should be submitted of "the nature and extent of the loss, showing the errors, "or neglect of rules, by which such loss was rendered "possible, and the prospects of effecting a recovery. "The submission of such report does not debar the "local authorities from taking any further action "which may be deemed necessary."

186. Is there any return to the central treasury of the amount of losses in the year, or over a series of years?—(*Mr. Jacob.*) I do not think any return is made out; every individual loss is brought to the notice of the Provincial Government or the Imperial Government.

187. You could not give us any idea of what the sums lost in two or three years were?—No, I could not do that.

188. (*Sir Donald Stewart.*) Losses are very rare?—(*Sir Henry Waterfield.*) They are now very rare.

189. (*Chairman.*) They are so rare that it has not occurred to you to collect the statistics of them?—(*Mr. Jacob.*) No.

190. Then the Treasury officers are in fact district paymasters, and they exist for that purpose, practically, do they not?—Yes.

191. The moneys are kept in these district treasuries instead of being remitted, because it is convenient to have them there to meet the Government payments in the district?—Yes.

192. Are the district treasuries the sole Government banks, if I may so call them, at which Government officers can draw for funds; or do the Military, Public Works, Post Office, and other Departments keep chests of their own?—(*Sir Henry Waterfield.*) Those departments draw on the civil treasuries. But in a few cases military treasure chests are maintained, as, for instance, in the territory of Native States where there is no civil treasury; and, in all cases of expeditions, there is at least one military treasure chest at the base and perhaps elsewhere.

193. But there is no separate chest in cases where there is a district treasury near at hand?—Not in the ordinary course.

194. Can you describe in a general manner, or give an abstract of, the regulations under which the treasury officers make their payments?—In the case of non-civil departments, such as the Military and Public Works Departments, which do not account directly to the Civil Accountant-General, money is drawn from the treasury by cheques against fixed assignments, the amount of which is communicated to the treasury officer by the Accountant-General. In the case of Civil Departments, the treasury officer is bound by certain general rules applying to the various classes of expenditure. Thus salaries can be drawn only at the rate communicated by the Accountant-General; establishment and contingent charges are drawn only on the signature or counter-signature of responsible officers, and such bills are paid by the Treasury officer without the application of any limit. Government has declared that the responsibility for an over-payment rests primarily with the drawer, and that the treasury officer is responsible only for checking palpable errors. All civil bills are submitted twice a month to the account office for audit (on the 11th of the month and the 1st of the following month), so that audit follows very rapidly on payment.

195. Are the amounts which the different departments may draw strictly limited?—Yes, by the assignments in the Military Department, and the letters of credit in the Public Works Department. For the civil departments there is no limit, the treasury officer meeting any payments, if authorised by the regulations; otherwise he would decline to pay.

196. Therefore I might perhaps describe the issues of the treasury in the large spending departments, such as the Military and Public Works Departments as being in the nature of imprests to those departments?—Yes, that is so.

* *See* Q. 2805 *et seq.*

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

5 Nov. 1895.

197. Whereas in the civil departments the district treasury officers are ultimate paymasters?—Yes, the payments to civil departments are treated as final payments.

198. But if the issues to the Military and Public Works Department officers are in the nature of imprests, that implies a certain cash balance being kept in the hands of those officers, does it not?—Yes. The Accountant-General is responsible for keeping the proper balance at each treasury to meet such charges.

199. But I mean, when this imprest is passed into the hands of the military officer, he has a balance in his hands?—Oh, yes, he draws on that imprest.

200. And where does he keep that balance? Because the object of my question was to learn whether other officers besides the district treasurer had cash balances?—(*Mr. Jacob.*) They have; the balances of such officers are, as a rule, I think, of about 100 rupees or so at a time.

201. They are kept from hand to mouth?—Yes.

202. And as far as possible they only just draw what they want?—They are almost always near a treasury or sub-treasury, and can always draw what they want; they have no money in their hands except what is required for immediate payments.

203. (*Sir Donald Stewart.*) On field service large sums of money are sometimes placed at the disposal of the general in command?—Yes.

204. And there you have a treasurer and paymaster-in-charge, but in the ordinary time they have no balance?—(*Sir Henry Waterfield.*) Nothing of any moment. (*Mr. Jacob.*) Merely the money which is passing through their hands in course of payment.

205. The commanding officer sends in bills and cheques for money, that is all. He has no balance?—If a commanding officer drew 5,000 rupees from the treasury for payment to his regiment, he might not pay the whole amount on the same day as he drew it, he might complete the payment in a day or two.

206. That is an extraordinary case. When he gets advances, the ordinary practice is to draw on his treasury balance?—Yes, and such drafts are passed and cashed.

207. (*Chairman.*) And in that case the treasury officer pays the actual cheque which the military officer draws, and so becomes the ultimate paymaster.

208. (*Sir Donald Stewart.*) The pay bills are submitted to the Pay Department?—No military pay bills are submitted to the civil treasury.

209. The commanding officer never has any balance practically?—I fancy the system has been changed since you were in India, Sir Donald. Now the Military Department draws entirely by cheques on the treasury.

210. Well, I do not know about the exact demand—it may be by cheque or bill—but the sum which they draw is fixed?—Yes, they get a cheque either from he paymaster or some other disbursing officer.

211. (*Sir Ralph Knox.*) Does that payment represent the exact amount which the commanding officer or military officer has to disburse, or is it a round sum out of which he makes the disbursements due to his men?—Ordinarily it would represent the exact amount he has to disburse.

212. (*Chairman.*) Supposing there is a certain commodity bought from a bazaar, costing 315 rupees, would that bill be sent in to the district treasury to pay, or would the military officer draw, we will say, 350 rupees, and pay it out of that?—It would be entirely according to his own idea as to what was most convenient. Very often the military or public works officer, if he has to pay a contractor, will draw a cheque for the exact amount payable, and make over the cheque to him. The contractor presents the cheque and draws the amount from the treasury himself; but, as far as the treasury is concerned, the payment is treated as an issue to the Military or Public Works Department, and the military or public works disburser has to account for it.

213. So far as accounting goes, it is an imprest?—Yes.

214. But in other cases, such, I suppose, as that which arose out of Sir Donald Stewart's question, I presume that some officer must draw the pay to be given to the men in bulk and pay it in detail?—Yes, but he would draw the exact amount payable.

215. But as you say that might remain a day or two in his hands?—A portion of it might.

216. Would you say that the Civil, Military, and Public Works Codes, so far as they contain financial directions under which the treasury officers act, are simple and easily understood?—(*Sir Henry Waterfield.*) The Civil Account Code seems as simple as it can be made, being divided, to a great extent, into chapters applicable to particular departments; most of the treasuries are concerned with only a small portion of its provisions, described under the head of treasury procedure, but it is necessary to provide for all contingencies that may arise at any treasury. The treasury officers have very little to do with the Public Works and Military Account Codes, which are mainly for the guidance of the officers of those departments; but abstracts of such portions as the Treasury officers may have to act on are given in brief chapters in the Civil Account Code.

217. You do not think then that there is, or ought to be, any difficulty in interpreting the codes?—I spoke to Mr. Jacob on the subject, and he assures me that each officer knows what he has to administer, which is within a comparatively small compass. No doubt these two volumes do look very formidable, but the treasury officers are not concerned with the second.

218. Your memorandum says that: "A treasury "officer may not make any payment unauthorised by "the code, unless under an express order *to himself* "from the Government, and he must at once enforce "any order from the Accountant-General disallowing "a payment. If the Local Government overrules the "Accountant-General, even temporarily, reference "must at once be made to the Government of India" as to whether it falls within the code?—Yes, he must only pay what the regulations authorise.

219. Does the exercise of this discretion cause any friction between the treasury officers and other departments?—I believe not.

220. You have never heard of such being the case?—No; I think one does hear occasionally of friction, but it is not from the action of the treasury officers, though, no doubt, the executive officers do not like being tied by regulations too closely, and complain; but that is probably essential.

221. That is what was in my mind in asking the question, because where the interpretation of a code rests within the discretion of a certain officer, and perhaps a subordinate officer, I thought it very possible that the officer who made the order to which objection is taken, might, at all events, remonstrate against such a discretion being in the hands of a subordinate officer?—Yes, but I think it is not against the interpretation by the officer, but it is against the rule itself.

222. Exactly. Do you know whether payments are often refused on the ground of insufficient authority?—Payments are undoubtedly refused on such ground, but the requirements of the treasury officers are well known to each department, and they are generally easily complied with.

223. Are all the district treasuries in telegraphic communication with the Accountant-General of the Province to which they belong?—There are, I believe, one or two in Burma which are not, but otherwise they all are.

224. Are the various branches of the revenue collected within a district paid into the district treasury?—Yes.

225. Would you describe to us the method and process of collecting revenue. Take, for instance, Customs; who is the chief authority responsible for enforcing the Customs' laws throughout India, corresponding to the Board of Customs here?—The administration of the Customs is one of the duties of the Financial Department of the Government of India.

226-7. And, therefore, as far as there is an analogy, the Financial Member of Council, the Financial Secretary, and that branch of the Financial Department which has that duty assigned to it, would represent the Board of Customs here?—Yes.

228. Are the Customs officers, say in the Bombay Presidency, subordinate to the Provincial Government of Bombay, or to a central authority in Calcutta?—The Customs Department in each province is under the Provincial Government.

229. But, if so, how is uniformity in the administration of the Customs' laws throughout India maintained?

In the interpretation of one law, may not the Provincial Government of Bombay take a different view from the Provincial Government of Madras?—There is a recent order of the Government of India providing for the publication, in the Gazette of India, for general information, of all Customs' orders of general application. They are re-published in the local gazettes, and sent to Chambers of Commerce, and such bodies as are interested in them; and consequently there is a fair amount of uniformity in the administration.

230. (*Sir Andrew Scoble.*) Is there not an appeal from the Provincial Governments to the Government of India upon questions that arise upon the administration of the Customs' laws?—The practice is to admit an appeal, but by law the appeal is to the Provincial Government; the Government of India, however, always entertains an appeal if necessary.

231. And gives a definitive interpretation?—Yes.

232. (*Chairman.*) Then, under this order which you have described, there is only one Customs code of regulations in force throughout India?—Yes, there is one Act for the whole of India, under which regulations may, with the approval of the Provincial Government, be made for each Province, provided that they are consistent with the Act. That leaves a certain amount of discretion in the details.

233. Then the Provincial Government has the power of modifying or amending, provided always their amendments are in accordance with the Act?—Yes, in matters of pure detail they can do so.

234. And if any Provisional Government interpret that discretion too widely, knowledge of the modification would only reach the Central Government in case somebody remonstrated or appealed?—I suppose so. (*Mr. Jacob.*) The proceedings of the Provincial Government are all submitted to the Government of India, and the Government of India does sometimes take notice of matters which come before it only through the proceedings of the Provincial Government.

235. That involves a very great work of review does it not?—Yes, but the proceedings are actually reviewed by the Government of India. (*Sir Henry Waterfield.*) That is to say, they are read by the Government of India, and noticed by it, if necessary.

236. And I gather from what you have just stated to one of the members of the Commission, that practically the ultimate appeal against the action of Customs officers comes to the Central Government?—Yes. By the law the ultimate appeal in questions relating to Customs is to the Provincial Government, but the Provincial Government is in all executive matters subject to the control of the Governor-General in Council, and appeals are admitted against the orders of Provincial Goverments in Customs matters.

237. Under what regulations do the Customs officers, say of a small port, pay the revenue which they receive into the district treasury?—As far as the treasury transactions are concerned, there are no special regulations for the Customs Department. The revenue is paid by the Customs Department into the district treasury, and is accounted for to the departmental controlling officers, who receive from the Accountant-General, for comparison with and check of the departmental returns, accounts of the amounts credited in the treasury.

238. Do they pay into the district treasury only the net surplus of the revenue collected after defraying all charges of collection? or do they pay the gross receipts into the district treasury, drawing again on the district treasury for such sums as they require?—As a rule they pay in the gross revenue, and draw by bills any amounts required for expenditure; and even in the few instances in which departmental officers are allowed to spend out of revenue, the gross revenue is brought to account on the treasury books, the amounts spent being treated as remittances from the treasury, and charged off. This would seldom be permitted unless the officers were at a considerable distance from the treasury.

239. The principle being that gross revenue is brought to account, and gross expenditure charged?—Yes. The first rule of the Civil Account Code is:—"All transactions to which any officer of Government in his "official capacity is a party, must without any reser- "vation be brought to account, and all the money "received be lodged in full in the Government "treasury, to be credited to the appropriate account, "and make part of the general treasury balance." Then it goes on:—"This rule is relaxed in the civil "department:—(*a*) in the case of the Postal Depart- "ment, to afford facilities for the money order busi- "ness; (*b*) in regard to monies received on account of "the service of summonses, diet money of witnesses, "&c. in civil and criminal cases; (*c*) in the case of "Government servants appointed Notaries Public "under Act 26 of 1881."

240. Take the Excise, is there a central Excise authority, and are Excise officers subordinate to that central authority or to the Provincial Government?—The Excise Department is under the several Provincial Governments, who, on questions requiring authority beyond their own powers, would correspond with the Government of India in the Financial Department

241. Perhaps you would explain what you mean by the Government of India in the Financial Department? It is a phrase, is it not?—It is the financial office of the Government of India. All orders that are issued by the Governor-General in Council which deal with financial matters are issued by him in the Financial Department.

242. And in the same way I suppose any order in the Home Department is issued by the Governor-General in the Home Department?—Quite so. The Governor-General in the Financial Department answers to what we here call the Treasury.

243. But is there no Central Excise authority?—The Financial Department of the Government of India controls it, as it does the Customs; and in matters of Excise as well as Customs, there is an appeal to it similarly from the action of the Provincial Governments, if necessary.

244. Quite so; but you can hardly compare that limited branch of the Treasury with the Board of Inland Revenue here?—You must not look at the control as exercised by the particular Deputy Secretary who is dealing with it; it is the Government of India.

245. Quite so; the Government of India. But the functions that the Financial Department exercises must be very much more limited than those which are exercised by the Inland Revenue Department here. Let me explain what I mean. I understand that, the Excise officers being under the Provincial Governments, that part of the work which is done here by the Board of Inland Revenue would not be done in the central Finance Department in India, because it is work delegated to the provincial authority. Here all the important disputed questions which arise as to the enforcement of the Excise laws, and which concern an enormous number of traders throughout the country, are brought to the notice of and settled by the Board of Inland Revenue, and no doubt they must form a very considerable part of their business. Would that part of their business be carried out by the branch of the Treasury of which we have been speaking?—In the first instance, it would be done by the Provincial Government acting under the law; and it would only be in case the Provincial Government was in doubt, or a representation was made that its action was not just, that a reference or an appeal would be made to the Government of India

246. In reality then the functions of the Board of Inland Revenue are to a great extent exercised in India by officers in the different Provincial Governments, and the function of the Central Finance Department at Calcutta corresponds very nearly to that of the Treasury here—that, namely, of a Court of Appeal?—I think so. I think that that is a fair representation of the case.

247. But then there seems to me to be a lack of power, or might be a lack of power at one point, viz., the want of advisers of the Finance Minister in carrying out modifications of the law. In advising modifications of the law, the Board of Inland Revenue here are a skilled body administering the law throughout the United Kingdom, knowing where the shoe pinches, able to judge better than anybody else, by reason of their large experience, the value of remonstrances, and who are therefore the most competent people to advise the Chancellor of the Exchequer upon changes in the law. I do not quite see, under the administration which you describe, where the corresponding, or equally competent authority exists to advise the Financial Member of Council?—It must be remembered that in India you are dealing with very different provinces, and different sets of people, and strict uniformity is impracticable and undesirable. The

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

5 Nov. 1895.

Government of India, in such a case as you mention, would consult the Government of the Province which was concerned, and obtain the advice of the chief authorities there; and they also have in their own Council, probably, officers who are acquainted more or less with the particular districts. There are three or four civil members of the Council who have served in different parts of India, and who would very likely have personal knowledge on the subject. The Government of India would also have advice from the heads of the different departments; and, although perhaps not with the same convenience of personal intercourse, the Government could by correspondence at any rate, consult all the authorities who know best, and they would be able to say how far it was desirable to modify the orders of the Provincial Government.

248. (*Sir Andrew Scoble.*) Is not the practice this—that, when a proposal is made for alteration in the law relating to excise, for instance, the Provincial Governments are first consulted by the Central Government as to whether the necessity for change in the law is established. Upon these communications a Bill is drafted which is again circulated to the local authorities, and when the Bill is introduced into the Legislative Council of the Governor General it is again circulated, not merely for the information of the Provincial Governments, but of the Chambers of Commerce and other public bodies, and also of private individuals conversant with the subject, whose opinions are invited; and it is upon the body of information thus obtained that the project of law is finally brought into shape, and becomes an Act of the Government of India?—That is so; but I had understood the Chairman's question rather to refer to questions arising, after the law was established, as to whether it was fairly administered.

249. (*Chairman*) I am trying to find out where the motive power would be for modification and amendment of existing law. The original suggestion would come from the Provincial Government which was concerned in the case on which the question had arisen?—Certainly it would.

250. And then the process which has been described would be gone through before the alteration of the law was finally made?—Yes.

251. (*Sir James Peile.*) There is not one Excise law for the whole of India?—No.

252. There are different laws for different provinces, suited to their conditions?—Yes. There is one law for Bombay, one for Madras, and one for Bengal, and then there is a general law for the whole of the rest of India.

253. All of which are passed by the Legislative Council of India and not of the Province?—No; the Bombay, Madras, and Bengal Acts were passed by the Provincial Legislative Councils, and an Act of the Legislative Council of the Governor General was passed for the rest of India.

254. (*Chairman.*) Then in further explanation I would ask this: the Chairman of the Board of Customs and the Chairman of the Board of Inland Revenue are the chief officers who would be consulted here; who are the officers in India corresponding to the Chairman of the Board of Customs and the Chairman of the Board of Inland Revenue, with whom the Financial Member of Council could consult?—The Financial Member of Council would consult the Provincial Governments, who would, as a rule, furnish their advice after consulting the chief Customs or Excise authority. Of course there is often personal and verbal consultation with the actual authorities when any matter of importance is under discussion; and, as Sir Andrew Scoble mentioned, it is very fully discussed in public through the advertisement of the proposed Bill.

255. As I understand, drafts of Bills affecting the public, like Tax Bills, are practically submitted, before they become law, for the criticism of the public?—They are published three times, and again at later stages, if materially altered.

256. Before they become law?—Before they become law.

257. (*Sir Andrew Scoble.*) In the local gazettes both in English and in the vernacular languages, is it not?—Quite so.

258. (*Chairman.*) Take a special case. On the question of imposing a countervailing excise duty on cotton manufactures, who in ordinary course would be the technical advisers of the Financial Member?—That question more especially affected the Bombay Presidency, and Sir James Westland went to Bombay to discuss the subject with the Provincial Government, and to make inquiries on the spot.

259. (*Sir Andrew Scoble.*) I believe he also consulted the different bodies connected with commerce at Bombay, did he not?—He was in communication—confidential communication—with certain members of them; the chairman, I suppose, of the board, but I do not think he formally consulted the Chamber of Commerce there.

260. (*Chairman.*) Then I suppose the Excise Revenue is paid into the district treasuries in exactly the same way as the Customs, and subject to the same rules?—Quite so. It is paid in gross; when it has been collected at or near head-quarters or at a sub-treasury, it is paid in from day to day. From places at a distance the revenue is remitted at longer intervals, but generally every two or three days.

261. Take the Stamp revenue: Is there a central Stamp Authority, and are the collecting officers subject to that authority, or are they in subordination to the Provincial Government of the province in which they are employed?—Like the Excise, the Stamp revenue is under the Provincial Governments, large questions being dealt with by the Government of India in the Financial Department. The officers are under the Provincial Governments, but the regulations are made by or under the control of the Government of India.

262. The Central Financial Department practically being the department to which appeal is made?—Yes.

263. And I suppose the Stamp revenue is collected and paid exactly in the same way into the district treasuries?—Stamps are sold at the treasuries and sub-treasuries. The bulk of the revenue thus comes direct into the Treasury. Fines and other miscellaneous revenue are paid into the Treasury as soon after collection as is convenient.

264. With respect to these three branches of revenue, where in doubtful cases does the ultimate discretion rest as to the interpretation to be put upon a revenue law, or as to non-enforcement of the law in its strictness? Does it lie with the revenue authority itself, or with the Central Finance Department?—In law the decision rests with the Provincial Governments; but appeals would be entertained by the Government of India in the Financial Department under its general powers of control. In the Stamp Act special provision is made for a reference to the High Court, if the local authorities are in doubt upon a point. But that, I think, is not a case of an appeal to the High Court, but a provision that the local authorities may state a case in order to have a decision.

265. Like reserved cases in the Court of Exchequer here?—Yes.

266. If that is the case with the laws, how is uniformity of action and interpretation secured?—The Provincial Governments have freedom in details; their general action is controlled by the Government of India. But that Government would not require the same regulations to be followed, in Burma, for instance, as in the Punjab. Local considerations render uniformity impracticable.

267. Here, although the Customs and Inland Revenue Boards are responsible for the execution of the laws, they consult the Chancellor of the Exchequer beforehand, and thus secure harmonious action. Is any similar result obtained in Indian Revenue administration?—I think I can only say that there is always an ultimate appeal allowed to the Government of India by any member of the public.

268. And I suppose also, that, if the Finance Department became aware of a difference of practice which might result in inequality before the law in different presidencies of India, they would take steps to remedy it?—(*Mr. Jacob.*) I think so.

269. Here the Chancellor of the Exchequer is always open to appeal from members of the public on revenue questions; is the Finance Member of Council equally open to appeal in India?—(*Sir Henry Waterfield.*) Yes.

270. I think you have told us the land revenue is a branch of the revenue which stands apart—that it is not under the management of the Provincial Government. Would you describe the methods in which it is collected?—I think you did not quite catch my reply. It is that

it is not under the Financial Department. There is a special department of the Government of India, the Revenue and Agricultural Department, which controls the land revenue.

271. Yes?—The actual method of collection differs in each province, but as a general rule the revenue payer is bound to pay in his revenue to the district treasury or sub-treasury himself by a certain date. He brings it first to the Land Revenue Department (in the same building), an official of which checks the amount and initials the memorandum made out by the payer. It is then taken to the Treasury, and the amount is paid in. Separate returns are made to the chief Revenue Authority in the province from the Land Revenue Department and the Treasury. The Provincial Government does not actually *retain* a portion, because the revenue is included in the balances. I mention that because I said in my paper that it retained a portion; it is not actually retained. The revenue is included in the balances which are managed by the Comptroller-General, but the Provincial Government is credited for provincial purposes with one-fourth of the receipts.

272. Then the chief authority for the collection of Land Revenue is a central department in Calcutta?—The Revenue and Agricultural Department of the Government of India. But there again there is great latitude left to the Provincial Governments. The land revenue is paid under very different systems in different provinces of India, and in different districts of the same province.

273. But are the collecting officers subordinate to this central department, or are they officers of the Provincial Governments?—They are officers of the Provincial Governments. The Collector is the chief officer in each district of the province.

274. Then what is the function of the Central Department in that case?—General questions—all questions that require an alteration of the law, for instance—must be submitted to the Government of India. The Provincial Government cannot alter the laws relating to Land Revenue on its own authority.

275. Can you give us any idea of the strength of the Central Revenue Department?—The secretary has Rs. 4,166 a month. He has an under secretary on Rs. 1,300 to Rs. 1,500; there is one registrar on 600 to 700; and 37 clerks from Rs. 40 to Rs. 600.

276. Then, I suppose, the Central Department is a special department of appeal?—More than that; because it is not only the Revenue but it is also the Agricultural Department, and there are many questions—general questions throughout India, which must come before the Government of India—general questions of settlement—and the Survey and Settlement Law are under the Government of India.

277. I understand that they would decide questions of principle?—Yes.

278. Questions of principle must be settled at headquarters by this Department?—Yes, the local bodies recommend, but they must receive the sanction of the Government of India.

279. Still that brings the functions of the Central Department rather near to those of a Department of Appeal?—Appeal and general control.

280. More corresponding to the functions of the Treasury here than to those of the actual Executive Departments?—Yes, I think so.

281. Would there be any cases in dealing with the Land Revenue in which appeal would lie to the Finance Member?—No, not an appeal from the public to the Finance Member; any such appeal could only come through the Provincial Government to the Government of India in the Revenue Department; but, if the Government of India and the Revenue Department wished to make an alteration of law or system which would involve a loss of revenue or increase of charge, the Finance Department must be consulted.

282. Then again there is another duty which is reserved to the central authority—the Opium Duty—In that case, what is the regulating authority under the law?—The Opium Department is under the Government of India in the Finance Department. The revenue is, as your Lordship is probably aware, collected under two very different systems. In Bengal the poppy is cultivated by means of advances made by the Government, which itself manufactures the opium; and the revenue consists almost entirely of the proceeds of the sale of opium by auction at Calcutta. In Bombay the opium is manufactured in the Native States, and a pass duty is levied on the transit of the opium to the seaboard. The opium revenue in all provinces is Imperial, the detailed rules are framed under the sanction of the Government of India, and any doubtful points in the law or rules would be referred to it.

283. But in this case the central authority is a branch of the Government of India in the Finance Department?—It is.

284-5. The Post Office and Telegraph services throughout India are under the control, are they not, of a single officer?—A single officer, in each case; the Director-General of the Post Office and the Director-General of Telegraphs are officers immediately under the Government of India—the two departments are quite distinct in India.

286. And are they under the Government of India in the Finance Department?—The Director-General of Telegraphs is under the Public Works Department; the Director-General of the Post Office is under the Finance Department.

287. Are the surplus postal and telegraph revenues paid into the District Treasuries or remitted direct to Calcutta or other centres?—The receipts from both departments are paid into the several district treasuries and form part of the general balances.

288. Is there not a net surplus on these two undertakings?—The Telegraph Department has for several years produced a net revenue. The Post Office began to produce a net revenue on the accounts some years ago; it was then decided to charge the Post Office with its stationery, and printing charges, and this, for a year or two, absorbed the surplus; but now its receipts are in excess of its expenditure. There are, however, some charges which are incurred on behalf of these departments, but not debited to them. An account exhibiting the position of the Postal Department is always made out at the end of the Annual Post Office Report; and in the Telegraph Report similar calculations are made, to show the true financial result.

289. The Financial Member of Council is, of course, interested in the amount of such net surplus as part of the Ways and Means of his Budget?—The Postal Department is not usually looked upon as a revenue-producing department in India. There was an illustration of that, I think, in the debate in the Legislative Council on the last Budget, which shows that the revenue is not treated as one of his reserves by the Finance Member. There is much room for expansion of the Post Office in India, and for some years to come, probably, the necessity for such expansion will be kept in view. At the same time the Financial Member is undoubtedly interested in the financial result, but not more because there is a surplus than if there was a net charge for which he had to find ways and means.

290. Of course these are different aspects of the same question?—Yes.

291. Still, it is the accepted view that the service is to be expanded?—Yes.

292. There would be in that case a certain antagonism between the head of the Post Office, who has no interest in the equilibrium of the revenue, but is much interested in making his department as efficient as possible, and the Financial Member of Council, might there not?—The Postal Department is administered directly by the Financial Department of the Government of India.

293. Therefore, it is completely subject to the Financial Member?—It is completely subject to the Financial Member.

294. Then as to the Telegraph Department?—In the case of the Telegraph Department, which is administered by the Public Works Department, such antagonism may be felt to a slight degree; but the Financial Department of the Government of India fixes the total amount of the Telegraph expenditure before the estimate of revenue is framed.

295. The point I want to come to is this: We have been hearing of the very great difficulty in which the Government of India is placed in respect of finding ways and means, but if it is laid down by the Government that the Post Office revenue is to be entirely spent on expansion of the service, a sound and prudent Finance Minister might in times of great difficulty offer reasonable objection; might he not?—Yes.

Sir H. Waterfield, K.C.S.I., C.B., and M. S. Jacob, C.S.I.

5 Nov 1895.

296. And say: "This is not the time for great "expansion of the service; this is not the time for "reducing a telegram from a shilling to sixpence; we "must get into smoother water before we do it." That is the special function of the Finance Member. But, unless he has considerable powers in this direction, might not the Government find itself practically forced to accept a thorough going policy of expansion, irrespective of financial circumstances?—Yes. I do not think that any prudent Finance Minister would agree in the view, which perhaps the Director-General of the Post Office might wish to enforce, that the whole of his revenue was to be spent in developing the department. In a time of surplus the Director-General would have a better chance of carrying out reforms if he could show that there was a surplus revenue in his own department, but the Finance Minister in a time of pressure would certainly not allow development to occur in the Post Office any more than in another department.

297. What I gathered from you was that the policy of the Government of India, in spite of these bad times and the necessity for looking around for new taxation, is still in favour of this policy of expansion of the Post Office instead of economy?—No doubt, as in a great many other departments in India, we must look to progress being obtained by expansion of expenditure. But in all cases of pressure it is not one department only, but (as was shown only recently), all the departments that have very strong pressure put upon them to curtail their expenses.

298. Therefore, you would hardly say that the policy of expansion of the Post Office is adopted without reference to financial considerations?—No, not at all. I would not go so far as that.

299. Would you explain to us the method in which the surplus revenues from State railways and irrigation or other revenue-producing works are brought in aid of the general expenditure?—All revenue from railways and irrigation works is paid into the treasury of the district in which it is received, or the central treasury which for convenience may be prescribed (as, for example, where the railway terminus is situated). As a rule, the revenue for any railway is paid only into one treasury.

300. And that would be a central treasury?—Probably a central treasury, either at the terminus or in a town through which the railway passes.

301. Is there any central authority, which regulates the State railways?—State railways are for the most part under the direct control of the Government of India in the Public Works Department. Some are provincial, but they must be administered under the general regulations.

302. Could the Public Works Department reduce the traffic rates without previously obtaining the assent of the Financial Member of the Council?—The alteration of traffic rates is a matter for decision by the Government of India in the Public Works Department; but, like any other measure involving a loss of revenue, it cannot be brought into operation without the previous sanction of the Financial Department; or, in case of a difference of opinion, of the Governor-General in Council. In practice, certain maximum and minimum rates are prescribed, within which the railway administrations are left free to make such alterations as they think fit, their proceedings being always reported to the Government of India in the Public Works Department.

303. Passing now to the manner in which the general Budget of India is framed. At what time of the year must the Budget be ready for the Legislative Council?—It is usually presented to the Legislative Council in the last week of March.

304. At what time of the year do the departments prepare their several Budgets for the ensuing financial year?—The various officers prepare their estimates in October, the departments then combine these, and send them to the Provincial Governments, for whom the Accountants-General compile them into a Budget about the middle of January.

305. Would you describe who are the officers who "prepare the Budgets and submit them to the departmental authority"?—The head of each office; for instance, the Collector in each district.

306. I want to get the distinction between "office" and "department"?—In every province there are from about 20 to 50 districts, and the Collector in each of those districts will compile his estimate for his office. The Public Works officer, the engineer, will compile the estimates for his office or his work. But they all have to be amalgamated; for instance, all the civil engineers' various estimates have to be amalgamated into the estimate of the Chief Engineer in the province. And the same way in other departments.

307. It is a distinction which arises out of the immense administrative area over which the collection of statistics and accounts extends?—Yes.

308. Is there any fixed date by which the Budgets must be submitted to the Central Finance Department?—The Civil Budgets must be despatched by the 15th of January.

309. To the Central Finance Department?—Yes.

310. And is there a different time fixed for the Military and Public Works Departments?—Yes. The Military Estimates must reach the Military Secretariat of the Government of India about the middle of December; the Public Works Estimates must be sent to the Government of India in the Public Works Department by the middle of January. It is a matter of convenience in the department, what time is prescribed.

311. Then by what time is the Military Budget in the hands of the chief military authority?—By the middle of December.

312. And the Public Works have a longer period given to them?—Yes.

313. The ordinary civil budgets being, as you said, I think, presented in January?—By the middle of January, about the 15th of January.

313*a*. By the middle of January, then, all the estimates of all the departments must be in the hands of the Government?—In the hands of the particular department of the Government of India which administers them.

314. Not in the Finance Department?—The estimates of the Military Department and the Public Works Department must reach the Financial Department towards the end of February.

315. So that practically the Finance Minister has a month to consider these Budgets?—Hardly a month, perhaps three weeks.

316. Can you explain to us the process of framing the Departmental Budgets in the Military and Public Works Departments, or would you prefer that that question should be reserved for officers of those departments?—I think I can give you a general answer; perhaps for any further details it might be better to ask them.

317. It might properly form part of this branch of information?—The Accountant-General in the Military or Public Works Department combines the estimates furnished to him by the several Controllers of Military Accounts or by the Provincial Governments (who have prepared their estimates on the reports of the local officers) and the managers of State railways.

318. Through the hands of what officers in a province do the Military and Public Works Budgets pass before they are sent up to the Military or Public Works Department in Calcutta?—The Military Budget is prepared for each of the four commands by the Controller concerned, and goes either to the head of the department, or direct to the Accountant-General. I may explain that in the Military Department there are several sub-departments, the Commissariat, and the Ordnance, and so on.

319. Where do all those budgets centre?—All the estimates centre eventually in the Accountant-General.

320. But I suppose they centre in the first instance in the Controller of each of the commands?—Yes. Then the Public Works Budgets are prepared by each Provincial Government for the provincial expenditure and the imperial expenditure administered by it. These are submitted to the Public Works Department of the Government of India, which also receives an estimate from each Manager of a railway.

321. What is the process of the examination of the Budget by the Treasury?—The Financial Department early in September sends to each Civil Accountant-General a form showing under each minor head of revenue and expenditure the actual entries for the last five years and the Budget of the current year, and also under each major head the amount for the first eight,

nine, and ten months, and the last four, three, and two of each of those years, thus drawing attention to any important variation that is usual towards the end of the year. It is one of those forms, showing under each minor head of revenue and expenditure the actual entries for the last five years. I think you would understand it better if you saw an instance (*exhibiting forms*). For each of these years you will notice at the top of the page a form which is left blank in the first instance, except as to past years. The blank columns for the revised estimate for the current year, and the Budget for the new year, are then filled up by the Accountant-General, who adds the actual figures as they become available for the completed months of the current year. He returns these, with explanatory notes, by the 20th of January to the Financial Department, by which they are carefully criticised and returned to the Accountant-General, with any necessary comments or inquiries. You will see at the foot of these tables that initials are put to the notes or questions by the Financial Secretary and the replies by the Accountant-General. About the middle of February they are returned to the Financial Secretary with replies, and any further information available, and he then directs what figures shall be entered under each major head in the preliminary compilation of the revised estimate and of the Budget. These are returned to the Accountant-General, who, after considering the actual results of February, sends an intimation by about the 10th of March of any important alteration which he deems necessary, after which the Financial Department settles the final figures. The Military Estimates are sent to the Financial Department about the 20th of February, with notes akin to those furnished by the Civil Accountants-General, together with a summary giving details of any material increase or decrease. In the Public Works Estimates particulars are given, for the past five years as regards irrigation works, and three years as to railways, of the receipts and working expenses of each important undertaking. In respect of roads and buildings, the particulars are given according to the province. The Comptroller-General examines these estimates carefully, with reference to their probable effect on the balances; but the check of the Financial Department is not applied in the same minute manner that it is to the civil estimates, the necessary control being maintained generally by seeing that there is no excess over the limit previously fixed by the Financial Department as available under each major head. The budgets of other departments, such as post office and marine, are treated in much the same manner.

322. Is there any discussion by the Governor-General in Council of the forces to be maintained or of the works to be undertaken? and is the policy of the varying expenditure of the year decided, before the Military and Works Budgets are finally drafted?—Such a discussion must, as a rule, have taken place beforehand, and orders have been passed, which furnish the authority for including charges in the Budget. For example, the outlay to be sanctioned in the coming year on the construction of State railways will have been determined generally in the previous autumn, but final orders are passed towards the end of February, or early in March, approving or altering the previous decision.

323. My question rather referred to the Military Budget?—As a rule the forces would not be altered at all; it is a fixed establishment, and, except within units, perhaps, it does not vary from year to year.

324. Without entering on the question of the increase of military expenditure, I think there is ground for saying, as a fact, that military expenditure has increased, and that I suppose has been the result of policy. I presume the Governor-General in Council decides what is to be the military policy of the year, and that practically decides the amount of the estimate?—The establishment or force to be maintained was increased in 1884, and has not been altered since; and I do not think any discussion would, as a rule, arise as to the establishment; it would be assumed that it is to be maintained. The Budget provision for perhaps a particular local expedition, or as in the recent case for a more serious war, may have to be considered, but I do not think that would affect the question of the force to be maintained.

325. There is a fixed establishment?—The establishment is fixed.

326 Which cannot be diminished in case of financial emergency, though it may be increased to meet political emergency?—It can be diminished. The amount of the British force maintained in India has occasionally been reduced, provided that the War Office were able to take the corps off the hands of the Government of India; but that would only be on some emergency which would not arise in ordinary course.

327. There is no formal decision come to as to what the forces shall be?—No; the establishment was fixed many years ago, and has not been altered since.

328. (*Sir Donald Stewart.*) It cannot be altered without the sanction of the Secretary of State?—No.

(*Chairman.*) I think Sir Ralph Knox will tell us that here the Cabinet always decides the number and force to be maintained?

(*Sir Ralph Knox.*) The number of the force for the year is determined by the Cabinet; but I think it does not form any subject for serious discussion in the Cabinet, unless some material change is proposed.

(*Chairman.*) What I mean is that the number of the force is really the basis which determines the larger part of the estimate.

(*Sir Ralph Knox.*) Yes; it is so. If any large addition was proposed it would certainly be a Cabinet question, but not such small variations as have occurred in recent years.

(*Chairman.*) Not perhaps of late, but you have known reductions made, have you not?

(*Sir Ralph Knox.*) Certainly. (*Sir H. Waterfield.*) That has been done by the Indian Government in past years, but only after consultation with the Home Government.

329–30. (*Chairman.*) But it would be rather an awkward position for the country if under no circumstances of financial necessity could the force be reduced?—What I mean is, when the Budget is being framed, it is then too late to carry on such a correspondence; that would have to be done months before.

331. Yes, exactly; the point of my question was whether the number of the force, or the warlike policy of the Government is determined beforehand?—Such a policy must be taken into consideration beforehand; it would be too late when the Budget is taken up.

332. What I have in view is that such a consultation would enable the Finance Minister to make fully known to the Governor-General and his colleagues what India can afford to spend, before they settle what she is to spend?—A consultation must be held by the Governor-General in Council, just as it is by the English Cabinet, to ascertain what expenditure must be incurred. But I think on any such great question as the reduction of the military establishment, the discussion must have taken place months before, as it would be necessary to consult the Secretary of State, and he would have to consult the War Office to see whether any reduction of the British forces could be effected; and for a reduction of the native forces it would be necessary to have the approval of the Secretary of State. A preliminary estimate is framed in February to show the general financial position in view of the decisions which may have been passed beforehand on all such questions.

333. Does the Budget estimate provide for those expenses only which will come actually into course of payment within the financial year? Let me explain what I mean by a reference to our financial system at home. Our Budget is confined to receipts actually paid into the Exchequer and to issues actually made out of the Exchequer within the financial year, that is before the close of business on the 31st March, the last day of the financial year. Does the Indian Budget in like manner only relate to receipts into and issues from the treasuries within the year?—Yes, the rule is this: "It "should be for what is expected to be actually received "or paid (under proper sanction) during the year, in- "cluding the arrears of past years,—not for the "demand or the liabilities falling due within the "year."

334. I suppose you have no abstracts of those codes of which we have been speaking which might be of use to the Commission?—No, the codes are rather bulky volumes—the Civil Account Code in two volumes, the Military Account Code in one volume, and the Public Works Account in four volumes; and there is a Postal Account Code I believe also, of which I have not a copy. But there is a summary here in chapter 70 of the Civil Account Code, which is called a summary of the whole system of Government accounts. It runs

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

5 Nov. 1895.

over five or six pages, and if you would like to have a reprint of that, it would, I daresay, give the main points.

335. Well, I think it would be rather useful. Of course it is useless to think of going into those enormous volumes, but if that is really a summary of what they are, it would be useful?—It is entitled "A summary of the whole system of Government accounts." It is very technical as to the mode of compiling transfers, and it gives full particulars as regards the Civil accounts. That paper, which I laid before the Commission, on the system of account, is an epitome of the Civil Account Code, and was made from it.

336. It embraces all the main points?—All the main points of the Civil Account Code. I did not go into the same detail in regard to the Public Works Code, because that is very elaborate, and the general principles the same.

337. Then what would be the difference between your summary and these five or six pages that you speak of?—This chapter is divided into small sections dealing with "Civil Accounts," "Other Departments," "Monthly Accounts," "Account between India and England," "Local Books," "Annual Finance and Revenue Accounts," "Appropriation Report," "Central Books," "Report on Balances," and "Writes-off"; and they contrive to give the general rules of account in five pages.

338. The point in my mind was not so much the number of accounts, but whether you could give us anything which would enable us to judge how far the provisions of these codes are simple and easily intelligible, because two or three volumes of regulations of that kind look as if they went into very great detail, and therefore as if they did not leave a very large field for that discretion on the part of the paying officer of which we have been speaking?—(*Mr. Jacob.*) The second volume of the Civil Account Code has nothing to do with the treasury officers. That deals with the work in the account offices; but the first volume is what the treasury officers are concerned with. (*Sir Henry Waterfield.*) The first volume begins with instructions to officers generally in dealing with treasuries. Part II. is divided into "General," "Claims on the Treasury," "Remittances," "Budget," &c. Then the second part is "Treasury Procedure," divided into "General Procedure of Treasuries," "Special Subjects," "Transactions with other Departments," "Service Funds," "Cash Department of Treasury," and "Miscellaneous." But I am afraid there is no authorised abstract. This paper is a compilation of mine, which Mr. Jacob was good enough to check, and which gives generally an abstract of the Civil Account Code, but it is not authorised by the Government.

339. No, quite so. By what authority are those codes amended or modified?—The Comptroller-General is responsible for any amendment or modification of the Civil Account Code, but he cannot insert any alteration of a rule requiring higher sanction, unless it has received that sanction. The Public Works Code embraces orders on personnel, organisation, and other subjects besides accounts, and must have the sanction of the Government of India in the Public Works Department for its modification; similarly, the Military Account Code is under the Government of India in the Military Department; but in both cases the Finance Department would always have to concur in any important alteration dealing with finance or accounts.

340. We have spoken of the method in which the Military Department obtains money: could you tell us briefly the rules under which the Public Works Department obtains money from the Treasury, the limitations or conditions under which it draws?—Funds are supplied to the Public Works Department by means of letters of credit, against which the disbursing officer, usually an executive engineer, draws cheques. The amount of the letter of credit up to which each disbursing officer may draw, is communicated to the treasury officer by the Accountant-General. The letters of credit are issued monthly on the application of the Examiners of Public Works Accounts; and it is provided that,—"The ordinary monthly requisition will be accompanied by a statement showing the grants, expenditure, and balance of the departments as known on the 20th of the month in which the application is made, the object of which is to make the Accountant-General watch the expenditure of the Public Works Department as against its grants. But the supply of funds should not be stopped from an impression that the expenditure of the department will exceed the grant. If, on checking these statements, the Accountant-General sees reason to form such an expectation, he will report the matter at once to the Local Government for instructions, but will not put the Public Works Department to inconvenience by a sudden stoppage of funds, except on the clearest grounds. If the Examiner asks for funds which he admits to be in excess of the grant, the Accountant-General will exercise his discretion as to whether there are sufficient reasons for granting the credit in anticipation of the sanction of Government Any such credit should, of course, be at once reported to Government."

341. The Public Works Department, it seems to me, is a most important one. It may, I suppose, be divided into two heads, viz., the building and maintenance of public institutions, and the execution of great public works and their maintenance. The regulations under which money is issued for the first head, or ordinary expenditure of the Department, are probably simple. But for the second, which involves large capital expenpenditure, what are the regulations and limitations under which money is supplied?—Whether funds are required for the construction or the maintenance of works, and whether those works are ordinary buildings and roads, or great public works such as railways and canals, the money is issued under the system that I have just described. There is no difference in the system.

342. Can you say in round figures what is the amount of the Public Works Budget?—The Public Works Department spends on the maintenance—would you include interest on debt also in it?

343. Yes, I think so; the whole expenditure?—On railway revenue account—I am reading the figures for 1893-94—Rx. 21,832,476; on irrigation, Rx. 2,862,567; on civil buildings and roads, Rx. 4,630,244—I omit the military works, because they are under the Military Department;—and also there is the construction of railways and protective and other irrigation works which in that year came to Rx. 1,191,208. Those together would make a total of about Rx. 30,500,000. Then there is also the capital expenditure on railways and irrigation works not charged against revenue, which was Rx. 3,621,252; so the total would be something like Rx. 34,000,000.

344. The total expenditure?—The total expenditure that the Public Works Department would control.

345. In what manner, from a financial point of view, is the progress of Public Works expenditure tested and watched?—The disbursing officer on each work keeps a cash-book, a measurement book, a muster roll, a contractor's bill, and a daily report, abstracts of which he forwards, immediately on the close of each month, to the executive engineer. That officer compiles them with store accounts, and compares the outlay to date with each sub-head of the sanctioned estimate, and sends to the Superintending Engineer a work slip, immediately on its becoming apparent that the estimate is likely to be exceeded from any cause. He is required to send to the Examiner, by the 20th of the succeeding month, a cash account current, a stock account current, a schedule of receipts and expenditure, list of petty works and repairs, an extract from the contractor's ledger, a schedule of establishment charges, and a list of the vouchers for each item of expenditure. This enables the Examiner to watch the progress of each work; and he submits a monthly return of grants, expenditure, and unspent balances, to the Accountant-General of the Public Works Department.

345*a*. The Examiner is an officer of the Public Works Department?—Yes.

346. Is he, so to speak, the auditing officer in the Public Works Department?—Yes; his duties are those of audit as well as account.

347. Like those under the Accountant-General?—As regards audit, the Examiner holds a similar position to that of the Civil Accountant-General.

348. Does the Public Works Department execute any works for the Military Department, or has the Military Department its own Works Department quite independent?—Military works are under the Military Works Department, except, perhaps, at very small stations, where it is not worth while to keep a separate staff.

349. Under what limitations, and under what conditions does the Military Department draw for its payments?—Funds are placed at the disposal of military officers by annual assignment estimates in their favour, issued to treasury officers by the local Accountants-General, on the application of the Controllers of Military Accounts. The probable cash requirements for each month are specified in the assignments. The treasury officer pays any amount drawn against the assignment, provided that the payments up to date do not exceed the provision made in the estimate for that period. The Controller is responsible that there is sanction for the assignments for which he applies; and the aggregate of the assignments for the current year is reported on the 1st of May to the Military Accountant-General and to the Comptroller-General, who are also periodically informed of any additional assignments.

350. Then there is no occasion for the treasury officer to object to make a payment so long as the demands are not beyond the sum assigned in the Budget?—Quite so. He will treat it as an imprest or advance to the Military Department within the assignment.

351. And so far there would be no such friction between the civil and military officers which we have here described?—No, there would be no friction between the civil and military officers in that case.

352. Would you describe the military authorities in their order?—The Military Member of Council, the Military Secretary, the Military Accountant-General, the Military Controllers in the four commands, the Military Examiners, and the Military Disbursers.

353. Would you explain the functions of the Examiners and Disbursers. Are the former of the character of audit officers, the latter of that of executive officers?—Yes, that is so.

354. The examining officers have no executive functions?—No. They are officers of audit and account.

355. You say in your memorandum that an additional credit may be given on the authority of a district or station order. What officer can give such an order and under what limitations?—The officer commanding a station or district is allowed to give such an order in cases of emergency, when delay in applying for a supplementary assignment would be productive of inconvenience to the public service, and he may obtain an additional credit on a civil treasury on the authority of a station or district order.

356. Without limit?—Without limit; but such a credit must not be applied for except in cases of actual necessity, and the circumstances must, in every case, be reported to the Controller of Military Accounts.

357. Would the civil treasury officer report to his Accountant-General also that such a demand had been made upon him in excess of the assignments?—Yes. (*Mr. Jacob.*) It would come to the Accountant-General's notice in the accounts.

358. His attention would not be specially called to it?—I do not think so. (*Sir Henry Waterfield.*) In every case when an advance is made, it can only be made through the paymaster or commanding officer of the regiment, who will draw the amounts by cheque, supported by the authority of a station order; and the treasury officer has on the same day to send a letter of advice to the officer who has authorised the advance; so that it is at once brought to the notice of the military authorities that such a payment has been made.

359. But then the civil officer who makes the issue from the treasury is not bound to report the fact that this excess has been incurred to his own chiefs?—No, the Civil Accountant-General could not exercise any check, because it does not follow that it is an excess issue on the whole; it may be only an excess in that district or in that province, covered by a saving in another.

360. The Military Controllers appear to discharge very important financial duties. They learn from the military disburser, the actual military expenditure in progress, *i.e.*, the imprests the disbursing officers have received, the expenditure defrayed out of those imprests, and the balances in hand, and by means of this information they are able to warn the Military Accountant-General and the Military Member of the progress and prospects of expenditure. Is that so?—Yes.

361. Do the Military Controllers learn early in the month from the Military Disbursing Officers the amount of the military expenditure in the preceding month?—Yes.

362. I understand that by the 20th of the current month they can telegraph the account of the past month to the Military Accountant-General?—Yes, a preliminary account.

363. Your memorandum states that the Military Controllers telegraph on the 26th of the month "the "total debits for military expenditure incurred in other "departments as received through the Central Adjust-"ing Department." Would you explain rather more fully the nature of this information, and the sources from which it is derived?—Military expenditure may be incurred not only in the Military Department, but also in the Public Works, Post Office, Telegraph, and Marine Departments. Any such expenditure is in the accounts transferred to the Military Department, through the central adjusting account kept by the Comptroller General.

364. Then these are departments outside the Military Department?—Yes.

365. They are not sub-departments?—No, they are other departments, but they may incur expenditure which in the accounts is brought into the army charges.

366. Therefore by the 20th of a month the military expenditure carried on by the military disbursers is ascertained and telegraphed to the central office?—Yes; approximately.

367. By the 26th there is a supplemental account of what may be incurred in other departments?—(*Mr. Jacob.*) That is so.

368. (*Sir Ralph Knox.*) That is reported as a total, I suppose?—It is the Military Accountant General who receives the report from the Controllers The Comptroller-General compiles the total military expenditure he has received through the Military Controllers; he also receives statements from the other departments, and transfers into the Military Account any charges that should be reckoned as army expenditure.

369. But is what he telegraphs the total expenditure in the particular district or is it classified in detail, showing the expenditure under all the various heads of military expenditure?—It depends upon which date you are referring to. The first telegram is a total—in the second it is sub-divided. The telegram of the 26th contains the total disbursements of military expenditure incurred in other departments.

370. On the 26th of the following month?—Yes.

371. And then when is the further time?—The telegram of the 26th is the second. On the 20th the Controllers must telegraph to the Accountant-General in the Military Department the total military expenditure by military disbursing officers in the previous month, and on the 26th the total debits for military expenditure incurred in other departments as intimated through the central adjusting accounts.

372. But only the total?—It is only the total.

373. In either case it is only the totals?—Yes, they are only totals.

374. (*Chairman.*) And the second one is a mere supplemental account?—It is a supplementary account, to be added to the other.

375. (*Sir Andrew Scoble.*) Is that a grand total or a series of specific totals applying to specific departments?—We are speaking of the Military Department now.

376. In regard to the other items of civil expenditure on military account is the grand total given, or specific departmental totals, applicable to each of these departments particularly?—You mean the supplementary addition?

377-8. That on the 26th?—Yes. I think it is one total.

379. (*Chairman.*) Shall we not learn this from Sir Oliver Newmarch?—I am afraid it has been altered since his time. I took this from an order which was only published the other day—in 1894. The words are "total debits"; I think it is a lump sum.

380. (*Sir Andrew Scoble.*) A lump sum?—I think so.

381. (*Chairman.*) Have not the Controllers the power of authorizing a certain amount of extraordinary expenditure without reference to the Central Government? Is this power sufficient, if freely exercised, to create a noticeable excess in the Military Budget?—(*Sir Henry Waterfield.*) The Controllers have power to sanction

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

5 Nov. 1895.

expenditure not provided for by regulation up to a limit of Rs. 500 in each case, but not exceeding Rs. 1,000 in any month. The use of such authority is conditional on the amount being covered by the grant, under the particular head, for that command during the year; it is merely used to avoid petty references for formal sanction.

382. In fact there being only four military Controllers, it could only amount to Rs. 48,000?—If each used it to the utmost, it could only come to that.

383. Are there any further important periodical accounts in the Military Department, prepared for the Military Accountant-General, or by him, besides those based on the information received by the Accountant-General on the 20th and 26th of each month?—I am not sure that there are any other important returns prepared for or by the Military Accountant-General; but a very important series of returns is kept up in the Military Secretariat, of which copies are laid quarterly before the Military Member of Council. These give statements of all expenditure sanctioned during the year, which was not provided for in the estimates, (1) not recurring, (2) recurring in the following year; and also of proposals reserved for consideration with the estimates of the coming year.

384. Then there is no account laid before the Military Member of Council showing from time to time the progress of the military expenditure during the year?—(*Mr. Jacob.*) Yes, he receives the Comptroller General's return showing under each great branch the progress that is going on, which comes to him monthly.

385. And this is sent to him monthly?—It is sent to him monthly.

386. This sums up the whole military expenditure of India?—Yes.

387. For the preceding month?—For the preceding month and for the preceding period of the year; it is progressive.

388. (*Sir Ralph Knox.*) Under eight different heads?—Yes.

389. (*Chairman.*) And how long after date would this be furnished?—A little more than two months. I think the date is probably on it. (*Sir Henry Waterfield.*) You will see the date on the back; I think it is 2½ months.

390. Therefore the Central Military Department has this information by the end of the month following the month to which the expenditure refers? It is in sums total, the statement of the issues for military expenditure up to the conclusion of that month?—Up to the conclusion of the preceding month.

391. I mean the preceding month. Therefore at the end of May we will say the Military Department knows the total of the military expenditure for the month of April, and for any preceding part of the financial year?—You have selected the first month.

392. I have taken a bad month, let me amend it and say at the end of August they know the military expenditure for the month of July and the preceding portion of the financial year?—Yes.

393. But that is only in totals?—That is in totals.

394. About the middle of October the Military Department would get further information for the period to the end of July under separate heads?—Yes.

395. But intermediate between those times they have no information?—They have no detailed information.

396. Is there an account of the military expenditure of the year drawn up by the Accountant-General, after the conclusion of the year, comparing actual expenditure with estimate? Is such an account communicated by the Military Department to the Financial Department?—I think, in reference to my previous answer, I must make it clear that they have no return of the total expenditure, but they have a return from each Controller.

397. They could put it together?—They could put it together, but it would not have been compiled for them. With reference to the last question, each Controller prepares an Appropriation Report, which he sends to the Military Accountant-General, who compiles them into a report which he furnishes to the Comptroller General, at the same time sending those of the Controllers of Military Accounts. This report is also communicated to the Financial Department of the Government of India.

398. And how long is that after the conclusion of the year? As I understand, the Military Accountant-General, on the basis of the information rendered him by the Military Controllers, draws up an account of the military expenditure for the year, and furnishes that to the Controller-General, through whom it passes to the Finance Department?—I do not see any date mentioned for the despatch of the Military Appropriation Report. The Civil Appropriation Reports are sent in about the beginning of October. I think it must be about the same date.

399. Have you not a copy of a Military Appropriation Account?—I do not think I have; I have only the Comptroller-General's Appropriation Report.

400. Would there be one in the India Office?—I will send round to ask.

401. Would you say that the Military Accountant-General corresponds to the Accountant-General of the Army here?—Yes, I think so; very nearly so. The military accounts are kept by the four Controllers, and all transfers of account would be made in their offices, not in that of the Military Accountant-General, but otherwise I should suppose that the position is very nearly the same.

402. That is to say, he is the head permanent financial officer of the War Office?—Yes.

403. I think Sir Ralph Knox would admit that that is the description of his position?—(*Sir Ralph Knox.*) Yes, I think so.

404. (*Chairman.*) What happens when the drafts on a treasury threaten to exceed the receipts?—The Accountant-General is responsible for keeping all his treasuries adequately supplied with funds. To assist him in carrying out this part of his duties, he receives each month from each treasury an estimate of the balances, receipts, and expenditure, of that and the two succeeding months, which he checks by the information in his possession as to normal receipts and expenditure and as to any unusual demands. He is thus kept constantly informed of the position of each treasury, and he orders remittances of coin from surplus to deficit treasuries.

405. Therefore, there is no necessity to give a district treasury the power of borrowing?—No.

406. Could you describe generally the accounts which are rendered to the Comptroller-General through the Provincial Accountants-General or by other departments to aid him in checking the progress of expenditure?—The Comptroller-General receives by telegraph on the 8th of each month from each Accountant-General the following totals: on the receipt side Civil Revenue, Civil Debt and Remittance, Forest, Telegraph and Marine and Post Office, Guaranteed Railways, Military Department and Public Works Department, and the opening balance; and for the outgoings, Civil Expenditure, Civil Debt and Remittance, Forest, Telegraph and Marine and Post Office, Guaranteed Railways, Military Department, Public Works Department, and closing balance.

407. Who sends that to him, each Accountant-General?—Each Accountant-General telegraphs it to the Comptroller-General on the 8th of the month.

408. On the 8th of the succeeding month?—Yes. On the 15th, the Accountants-General telegraph to him in greater detail, under the following revenue heads: "Land Revenue"; "Opium"; "Northern India Salt Department"; "Salt, Local Manufacture"; "Seaborne Salt"; "Stamps"; "Excise"; "Provincial Rates"; "Customs"; "Assessed Taxes"; "Tributes of Native States"; "Total Civil Revenue"; "Payments," "Interest on Government Promissory Notes"; "Opium Expenditure in India, Bengal, and North-West Provinces, and Bombay"; "Total Civil Expenditure"; and then a check figure which is the total of all the preceding figures.

409-10. Those are the accounts which the Comptroller-General receives during the course of the year?—Yes, he gets those monthly; the first sent on the 8th, the second on the 15th of the month. Then the net military issues to each command are also sent to him, and the Public Works Receipts and Issues under these heads:—"Telegraph Department, Ordinary Branches, "Railway Branches, East Indian Railway," "Total."

411. Then in the course of the year, does he, at the end of three months or six months, or at any other time provide, or is there provided for him, a more elaborate account, the above-mentioned accounts being,

as I understand, only totals?—Totals under the above menticned heads. He shortly afterwards receives an abstract account revising the telegraph figures. That is compiled at the close of the month following that to which it relates, and is in greater detail.

412. And that is all he receives while the year is in progress?—Yes, that is all. (*Mr. Jacob*). I show you a form of the more detailed civil account compiled by the Comptroller-General.

413. Then what is the basis upon which the revised estimate of income and expenditure, which I understand is prepared and issued in the course of the year, is based?—The book of civil estimates which I have put before your Lordship shows the details of the revised estimate; the revision is based on the latest figures of actual expenditure available at the time.

414. We may say therefore that the revised estimate is really based upon the information contained in these monthly accounts?—On accounts drawn up in much greater detail. Each Accountant-General submits an estimate in full detail in the form of the civil estimates, but there is an additional blank page, on which he gives the actual expenditure under every head for eight months or nine months, as the case may be.

415. This is really got out of these monthly accounts?—The total is in these monthly accounts, but these are in much greater detail, and the estimate is framed with reference to the actuals under each detailed head.

416. Therefore you may say his account is complete for eight months, and he forwards that completed account to the Central Financial Department, and on that the estimate is revised?—Yes.

417. (*Sir Ralph Knox.*) He sends an estimate of the remaining four months?—Yes.

418. (*Chairman.*) The remaining four months being estimated on the concluding four months of the preceding year?—Yes, and this is also given in the form in which the Accountant-General submits the estimate.

(*Sir Henry Waterfield.*) And then, perhaps, the actuals of two months more may be available in the course of the compilation of the estimates.

419. Then after the close of the year, when does he prepare the Appropriation Account—how long after?—For the Civil Account, it is about the 5th October, that it is sent, I think. I have ascertained that we have not any copy of the Military Appropriation Report; I cannot put that before you.

420. And the General Appropriation Report of the Comptroller-General includes also the military expenditure?—Yes, it includes the whole. Shall I hand in a copy of that?

421. I should like you so to do (*report put in*). And that Appropriation Report is prepared within about six months of the close of the year?—The Comptroller-General's report is prepared nearly 12 months after the close of the year, but the Appropriation Reports of the several Accountants-General, from which it is compiled, have been prepared about six months before.

422. Are they published?—No, I think not.

423. You have something like six months to prepare your Appropriation Report?—(*Mr. Jacob.*) No, I get the appropriation reports of the Civil Accountants-General in October, and I submit my own report in February; that would give about four months perhaps. I find the date prescribed for the submission of the Military Appropriation Audit Reports is "the 15th, but "under no circumstances later than the 25th September."

424. They have to be ready by that date?—They have to be submitted to the Military Accountant-General by that date.

425. The Military Accountant-General is not responsible for the drawing of them up?—He compiles his own report from them.

426. But they come from the Military Controller?—Yes, they come to him from the Controllers.

427. By the 25th September?—By the 25th September.

428. And he prepares a compiled account?—Yes.

429. And at what time does he send it off to the Comptroller-General?—It reaches him about November.

430. So he has some three months to make his account up?—Yes.

431. And I suppose, without going into detail, something of the same kind of rule applies to the Public Works Department?—(*Sir Henry Waterfield.*) Yes, I think so.

432. The Public Works Department do prepare a separate Appropriation Account?—(*Mr. Jacob.*) Yes.

432*a*. Now what is the account which the Comptroller-General prepares for the information of the Finance Minister? I want to compare his account with what is done here. The Chancellor of the Exchequer relies on receiving on Monday afternoon—I think I am right—an account under the general heads of Army, Navy, Debt, Civil Service, and so forth of the issues from the Exchequer on the one side, the receipts on the other side, and the balance of account up to the Saturday night previous; and that is the standing account upon which he works. I think I am right in saying that every month during the year he gets an account for the completed portion of the year, and another for the quarter. Is the Finance Minister in India furnished with any account at all corresponding to that?—On the 9th of the month following the month to which it relates he gets this statement (*statement put in*).*

433. That is sent to the Finance Minister?—It is telegraphed to him if he is at Simla, and it is given to him if he is at Calcutta.

434. And that is for the previous month?—Yes.

435. It does not give the previous year; it is for the current year?—No, it compares the actual expenditure with the Budget; there are columns for that purpose as you will see.

436. But is it made up to date? Here would be two months of the financial year; does this statement include two months?—Yes, it gives both the expenditure for the month and the progressive total, and compares both with the Budget.

437-8. It is not a balanced account; is it?—Yes.

439. What is "progressive"?—The figures under "Progressive" are for the past months in the year.

440. Oh, you divide the statement into two heads, current and progressive?—Yes; current is for one month, and the progressive is for the months of the year that have elapsed, including that month.

441. And, therefore, the Finance Member of Council has no source of information, except that supplied by the Comptroller-General; and the Comptroller-General gives him, within nine days of the close of the month a monthly account?—Yes.

442. He gets no weekly accounts?—No.

443. On the 15th he gives him this other account?—On the 16th generally; it is prepared on the 15th, and gives further details, including the actuals under each of the principal heads of revenue, both for the previous month and the progressive.

444. (*Sir Ralph Knox.*) Those are compiled from telegraphic reports from the different Accountants-General?—Yes.

445. (*Chairman.*) At the close of the quarter is any more elaborate account prepared?—A civil account is prepared at the end of the following month.

446. That is still more in detail?—Yes, that gives every major head.*

447. Does the Financial Member receive any information from officials who understand, and who are watching the progress of, the revenue side as to what that progress is and the reasons for that progress or, it may be, falling off of revenue?—Yes, from the great Imperial Revenue Departments, such as the Salt Department, the Finance Member receives statements during each month.

448. But this is a point upon which I have been asking some questions previously. There will be some difficulty in getting information from the Customs, Excise, or Stamps, because there is no central authority to collect information such as our Board of Customs and Board of Revenue?—On the same date that the account of which I have just spoken is submitted, on the 16th, the Finance Member receives these statements from me giving details for every principal head for each province (*statement put in*).

449. This relates to Opium?—Statements for all the heads are there, Land Revenue, Opium, Salt, Stamps, Excise, &c.

---

* *See* Q. 2844*a*-5.

Sir H. Waterfield, K.C.S.I., C.B, and Mr. S. Jacob, C.S.I.

5 Nov. 1895.

450. All are here?—Yes, there is a statement for each of them, and they come from each province.

451. I see there is no comment upon these figures?—No, these are solely the figures.

452. And, except in the case of Opium and Salt, you may say there is no officer who is in a position to describe the reasons for the increase or falling off of revenue?—No.

453. We will take a very important measure passed in England, such as the alteration of the death duties. Last year at the close of each quarter the Chancellor of the Exchequer would have received, as a matter of course, an account coming from the Inland Revenue showing under each head the progress of the different taxes, and a short account of the reasons for any increase or decrease; and he would thereby have learned from the officers who were actually engaged in carrying out the law, the manner in which this new law was working. I have heard that the Finance Member of Council does not get such assistance in the course of the year from what I may call the Revenue Department?—If there is any difference from the Budget estimates in any province, I should call upon the Accountants-General to explain why the revenue was coming in more slowly, and I should ordinarily do it by telegraph. The Accountant-General would be in communication with the local heads of departments, and would be able to give such explanation as they could afford.

454. That would come by your asking; it would not come automatically?—The Accountants-General are told to explain any considerable difference when they send up the figures.

455. But the Accountants-General themselves have not necessarily information; they must go elsewhere?—They must get it elsewhere.

456. In fact, be the Indian system sufficient or be it insufficient, there is no centralised revenue authority who can immediately give information upon these revenue questions in the same way that our Board of Inland Revenue can here?—I am not quite sure about that; the principal revenue heads are provincial in India, and the Provincial Governments receive these returns at the same time that the Government of India does. They, being responsible for the principal revenue heads, would ordinarily at once take up any questions that may arise out of them. Of course, the Government of India cannot go into the details of every head of revenue in every province.

457. In fact it is the case that there is no person who at all corresponds in India to the Chairman of the Board of Inland Revenue or the Chairman of the Board of Customs here; a man who ought to have all the information under that department in his hands and be ready to produce it at any moment, sitting there at head quarters watching it day by day, knowing the policy of the Government under which it is carried out, and testing results by that knowledge?—For each province there is such a man.

458. In Bombay?—In Bombay there is a Commissioner of Customs, Excise, and Opium.

459. There is?—Yes, and in Bengal there is a Board of Revenue, and in the North-West Provinces also; each of these would know all about any particular head of revenue in the province, and each province is a very large unit.

460. Therefore the Finance Member of Council could, either directly or through the Accountant-General of the Province, communicate with the Board of Revenue, or the responsible head of the Revenue Department, and learn what the progress of the revenue was, and the reasons for any rises or falls?—Yes.

461. (*Sir Ralph Knox.*) Is that in every province?—That is in every province. (*Sir Henry Waterfield.*) He would do it through the Provincial Governments; but confidentially, he would very likely inquire from the officer himself.

462. (*Chairman.*) Passing now to the question of audit, would you describe in like manner the process of examining and reporting on accounts in the Public Works Department; who the examining officers are and where stationed; how and when accounts reach them; to whom and in what form they report the result of examination; whether they report irregularities or cases in which the assent of the Finance Department, if necessary, has not been obtained, and whether their reports and criticisms are communicated to the Finance Department?—There are 45 examiners at the head-quarters of the several provinces and chief railways.

463. Will you explain how the expenditure is examined?—It is by the examiners.

464. In the army they have Controllers who are engaged, you have told us, solely in examining these accounts?—Yes.

465. Then how do these accounts come before you?—(*Mr. Jacob.*) You are speaking of the Military Department now?

466. Yes; the Military Department?—The disbursing officers in each case will send up their accounts. They are required to submit their cash and store accounts to the examiners of accounts at such periods during the month as may be prescribed by the controllers, and they are responsible for submitting the accounts in the prescribed form. That is the duty of the disbursing officers. They must send up their accounts to the examiners at a given date which is prescribed, and then the examiners at once begin to audit these accounts.

467. And have those examining officers every access to the books of the department, from which the accounts are extracted?—I should say so, certainly. Yes.

468. Then these examining officers are purely audit officers, and they know nothing whatever of the expenditure until these accounts are sent in to them?

469. (*Sir Ralph Knox.*) Do the disbursing officers apply any check before they make a payment?—The disbursing officers can only make payments under the rules laid down.

470. Then they examine the vouchers to see that they are in accordance with the rules when paying?—They examine the demand, and if it is not according to regulations they will not pay. In many cases the demand bill is pre-audited by the pay examiner before it is passed and paid.

471. They pay on the order of the examiner?—Yes, in some cases.

472. (*Chairman.*) I thought I had understood that monthly accounts were sent for payment?—Yes, the accounts come up monthly. But individual bills—for instance, the salary bill of the commissariat officer—would be sent to the pay examiner at the end of the month for which pay is due, and he would examine, pass, and return it, and it would then be paid by a cheque on the Treasury. (*Sir Henry Waterfield.*) There is pre-audit as well as post-audit.

473-4. Exactly. Then I suppose the examining officer can only examine what the disbursing officer chooses to send to him to examine?—(*Mr. Jacob.*) Yes, but if any sum has been drawn from the Treasury, the disbursing officer must send to the examiner a voucher showing the amount and the account on which it has been disbursed.

475. (*Sir Ralph Knox*) But would the examiner examine the pay list for instance in the first instance, before he ordered the disbursing officer to issue the cash?—The pay of a regiment you mean?

476. Yes?—Yes.

477. He examines in detail and then sends to the disbursing officer to pay?—Yes; that is the procedure in the case of pre-audited bills.

478. (*Chairman.*) Do I gather that these examining officers are all at the head quarters of the Controller or are they scattered over the different places where the troops are?—They are all at head quarters, except in the case of Bombay and Rangoon. Poona is the head-quarters of the Bombay command, and the Controller is there; but for the convenience of officers embarking and landing there is a special paymaster at Bombay.

479. Does it not cause some awkwardness if the examining officers are situated at one place, and the principal audit which you have mentioned is carried on at another? Does it not mean sending a certain number of accounts for examination before they fall due?—Yes; that has to be done, of course. That procedure is followed chiefly in the case of salaries and establishments.

480. Then when the examining officer has examined the monthly accounts, does he report the result to the military Controller of the province?—Yes; he is the

assistant of the military Controller; he is really part of his office.

481. He is the head of the office?—Yes, the Controller is the head of the office.

482. And does the Controller send this audited result up to the Military Accountant-General?—No; he does not send any monthly audit report to the Military Accountant-General. He is the final authority so far as the audit is concerned, unless anybody appeals.

483. And he does not do anything until the year is passed?—Oh, yes, every month, on the monthly accounts.

484. But he does not send at all to the Military Accountant-General and the Central Military Department until the estimates are prepared?—He sends the body of the account, but he does not send any detailed report.

485. He sends in the account, but no report?—Yes.

486. Therefore, the Military Accountant-General knows the result of the audited account?—Yes.

487. Probably these accounts of which you have been speaking are two months after date, or something of that kind?—Yes.

488. Now, would the military examiner, when the monthly accounts are before him, note any case in which an order had been made for expenditure not provided for in the Budget, or not specially sanctioned and for which the sanction of the Government has not been previously obtained? — (*Sir Henry Waterfield.*) He would retrench any undue charge at once. In case of doubt he has to refer to the Controller.

489. But I presume the examining officer would not trouble himself about the sanction of the Finance Department, would he?—(*Mr. Jacob.*) Oh, yes, he would.

490. Though he is a military officer?—Yes.

490*a*. Not being one of your officers?—Yes, it would make no difference.

491. And also the sanction of the Secretary of State?—The objection in that case is made through the Controllers. If it was a question of over-payment of salary to an officer, the examiner would act at once.

492. (*Sir Ralph Knox.*) Supposing an objection to be made, has the Controller power to decide whether the demand shall be passed or not?—Yes, he decides absolutely.

493. (*Chairman.*) You say the stores accounts are sent by the disbursing officer to the examining officer. What check does the examining officer apply to the stores account; and by what agency does a survey of stores in stock take place, so as to ensure that the stock agrees with the account?—(*Sir Henry Waterfield.*) There are very careful rules laid down about the stores. Rules are given, varying according to the Department. I am taking now the case of the Commissariat Department. They require monthly returns of (*a*) the stores and transferable dead stock; (*b*) returns of surplus gear and uniform clothing in stock; (*c*) return of grass; (*d*) return of hospital stores and equipment; and (*e*) returns of reserve stock. And it is provided that "In "auditing commissariat store returns, the following "points will be attended to:—

"(1.) That the returns have been countersigned by "the chief commissariat officer.

"(2.) That corrections promised in replies to ob- "jection-statements have been made.

"(3.) That stores other than those to be accounted "for are not shown in the return.

"(4.) That the opening balances agree with the "closing balances of the previous month's return.

"(5.) That each entry of receipt and issue, which in "accordance with regulations should be supported "by a voucher, is so supported, and that the "transactions shown in the vouchers agree with "the corresponding entries in the return.

"(6.) That the calculations in the returns and "vouchers are correct.

"(7.) That the periodical verification reports of stores "and stock, as prescribed by regulations, are duly "furnished, checked with the returns on record, "and transferred to the Commissary-General with "a statement of discrepancies noticed."

494. Then I suppose that there are regulations for the survey of stores, so as to ensure the actual stock being in correspondence with the accounts? I suppose these Military examiners only examine the accounts.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

5 Nov. 1895.

and are satisfied by the signatures on the accounts, that the stores are really there?—Yes, but I read: "That "the periodical verification reports of stores and stock. "as prescribed by regulations, are duly furnished." Those regulations lay down how the examination of the stores shall be made.

495. Quite so: but the examiners have nothing to do with them?—(*Mr. Jacob.*) No.

496. (*Sir Ralph Knox.*) They see that a report is furnished to the effect that some officer has verified the stores with the account?—(*Sir Henry Waterfield.*) Probably a regimental officer, I suppose.

497. Board of Survey?—Yes, a Board of Survey.

498. (*Chairman.*) Would you describe in like manner the process of examining and reporting on accounts in the Public Works Department. I think you practically have told us that in telling us the strength?—The accounts of the several engineers are sent monthly to the examiners, who audit them and report to the Accountant-General if necessary on any point. They would certainly report to him if the sanction of the Finance Department had not been obtained, and, as in the Military Department, they at once disallow expenditure not duly sanctioned. The compilation of the accounts by the Accountant-General of the Public Works Department is furnished to the Finance Department.

499. And therefore the Finance Department, both in this case and in the case of the Military Department, is informed of the criticisms made by the examining officers?—So far as those criticisms have to be passed on, but many of the examiner's criticisms may have been settled at once.

500. And so they fall, of course?—Yes.

501. Are there any other departments in which there is a separate staff for the examination of expenditure, to which you would wish to call our attention, in order that we may fully understand the extent to which, and the manner in which, accounts of expenditure are examined in India?—There are other account departments; the Forest and Postal Accounts Departments are under the Comptroller-General; the Marine under the Military Accountant-General; and the Telegraph under the Public Works Accountant-General. But they all have their own accountants or examiners, whose accounts are sent to the Comptroller-General or Accountant-General, as the case may be.

502. Of course, for those under the Comptroller-General he can lay down his own rules?—Yes.

503. Having now learned the nature of these accounts, I would like to ask whether the Comptroller-General is an executive as well as an auditing officer?—Yes.

504. Who are the officers through whom the Comptroller applies his audit (1) in the treasury at head-quarters, (2) in the provinces?—The work of audit is primarily applied through the Accountants-General of the provinces and the Departmental Account Officers; but at head-quarters the Comptroller and Auditor-General is assisted by one deputy comptroller-general and two deputy auditors-general, and three assistants, besides a large staff of superintendents and clerks. I think I gave the number in a former answer.

505. Has he in each province an account office at head-quarters, the officers of which examine in detail the accounts of the Civil Treasuries; or has he an officer visiting each treasury, independent of the officer in charge of the treasury; and does he by means of that officer examine in detail the accounts of the treasury?—In each province the Accountant-General, who is an officer under the Comptroller-General, examines in detail the accounts of the civil treasuries, special officers being set apart for the purpose; the auditing officer examines the vouchers at the central office, and would not go to the district treasury unless the accounts showed some reason to suspect malversation. That step has, however, been taken occasionally by the Accountant-General; but it has been ruled that the revenue authorities are responsible for the detailed control of each treasury. It is not the Accountant-General who is primarily responsible for the treasury officer; that rests with the revenue authorities.

506. Because the officer in charge of the treasury is under the Collector?—He is an officer of the Collector's establishment.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

5 Nov. 1895.

507. Still, it is the function of the Comptroller-General to see that these accounts are audited, and to get the results?—Certainly; I was referring rather to the check on the treasury officers.

508. And are the auditing officers under the Accountant-General in a province his own officers—or are they the officers of the revenue authorities?—The auditing officers are officers of the Accountant-General's office.

509. And, therefore, officers belonging to the Comptroller-General?—Yes. (*Mr. Jacob.*) It is provided that the inspection reports of the land revenue officers shall always be sent to the Accountant-General, and the Comptroller-General has drawn up a list of questions with the view of bringing to their notice the important points to be noticed in the inspection of a treasury.

510. Do these examining officers send their accounts, with their reports and criticisms, to the Accountant-General of each province? and how long after the close of each month is it before the audited account of each treasury for the month is furnished to the Accountant-General of the province to which the district belongs?—(*Sir Henry Waterfield.*) The examining officer is, as I said, a clerk in the Accountant-General's office, and at once places in the objection book any charge which is not duly sanctioned, thereby bringing it to the Accountant-General's notice; and it is specially laid down that the Accountant-General is to pay constant attention to this book, which is formally reviewed once a quarter. The audit of each month's payments is carried on immediately, so as to avoid the repetition in the next month of any error that may have occurred.*

511. Therefore, all the criticisms or disallowances which are not settled at the time are sure to come on to the Comptroller-General through that objection book?—They come to the Accountant-General, and if he is not able to settle them they would go on to the Comptroller-General. (*Mr. Jacob.*) It is very seldom that any audit question comes to the Comptroller-General.

512. They are all settled by the Accountant-General?—Yes.

513. But the Accountant-General only settles them by delegated authority from the Comptroller-General?—No; he is the primary auditing officer.

514. Then what security is there that an officer, who, although a high officer, is a subordinate officer, may not give erroneous decisions in not disallowing certain charges?—It is for that purpose that I have the two Deputy Auditors-General. I send them round to all the offices in India; they test the accounts for two or three months, and bring to my notice any doubtful questions.

515. That is the test audit mentioned in the memorandum?—Yes.

516. They may be said to be the Comptroller-General's detective staff?—Yes.

517. There is then really no monthly audit report; the monthly audited account comes to you from the Accountant-General, but no remarks upon it?—No, it is the account, without any remarks.

518. But then what is done with an objection entered in the objection book if the Accountant-General is not satisfied on the point? Does he not send it up to you?—Yes; if he were in doubt he would refer the question to me; but as a rule objections get removed by correspondence.

519. The accounts of civil treasuries, I suppose, only give the issues of imprests from these treasuries for Military or Public Works expenditure, and show whether those issues have been made in accordance with the regulations of the service?—Yes.

520. If so, the Comptroller-General can only learn whether the actual expenditure of the Military and Public Works departments is in every respect regular, through the reports of the Military and Public Works Examining Officers. I think that follows from an answer which you made to the effect that even if a civil treasury officer pass an account in total for the military department, he still treats it as an issue to the department to be accounted for by the department?—(*Sir Henry Waterfield.*) Yes, the Comptroller-General has the means of knowing, through the reports of the Civil Accountant-General, that the total expenditure is within the budget or supplementary sanction; but he depends on the auditing officers in the departments for information as to the regularity of the details, and then, as Mr. Jacob was saying just now, he has that check, that he deputes from time to time one of the Deputy Auditors-General to examine the office account.

521. When the Comptroller-General has all the accounts of the year before him, does he then draw up a general audited account of the expenditure of the Empire for the year, accompanied by a report on each branch of expenditure, corresponding to the Appropriation Reports of the Comptroller and Auditor-General here?—The detailed reports correspond more or less to the report of the Comptroller and Auditor-General in England; but the final report of the Comptroller and Auditor-General is not of the same minute character. You will see, from the copy before you, that it is more in the nature of a review, comparing totals under each head with the Budget estimate and the expenditure of the past year.

522. That hardly answers to an audit report; it is more the report of an executive officer, is it not?—It is compiled from the audited accounts, but it does not exactly correspond to the Appropriation Report of the Comptroller and Auditor-General in this country.

523. The Appropriation Report is essentially the report of a critic, or ought to be?—Yes.

524. And I gather that this does not correspond to it. This is more in the nature of a review, I think?—(*Mr. Jacob.*) It brings to notice any case in which any sanctioned expenditure, or expenditure not provided for in the Budget, has been allowed.

525. Could you show an illustration of the manner in which the criticism is drawn up?—It is very seldom that the expenditure does exceed the sanction.

526. But I think the criticisms of an auditor would be addressed, not so much to excess upon the estimate, which no doubt he would note, but to cases in which in some respects an irregularity had occurred. It is very rare that you find an expenditure getting on to 70 or 80 millions ——?—Ninety millions.

527. With no irregularities, even venial irregularities?—Yes. This report of course does not draw attention to irregularities.

528. Then I think we must come to the conclusion that for India you have no Appropriation Report of the same kind as the Comptroller and Auditor General draws up here on the expenditure?—I do not know exactly what is the object of the report of the Comptroller and Auditor General here.

529. The Comptroller and Auditor-General, being entirely independent of the Executive, with full access to the books of the Executive, examines the account of expenditure under each vote submitted to him by the Department responsible for that vote, and guarantees the correctness of that expenditure on his responsibility by his signature. Then follows the report in which he calls the special attention of the House of Commons to any irregularity which he has found in the account. He has not, like you, the power of disallowance, and he can only report to Parliament irregularities for disallowance. Every vote of Parliament has such a report appended?—Then does not that account for the difference in the Appropriation Reports? I mean that the Comptroller and Auditor-General here has no power of disallowance, and consequently he must report the irregularities; the audit officers in India disallow at once, and so there really are no irregularities to report.

530. Yes, but then observe that that implies that they have power of allowing: and inasmuch as the auditing officers in India are also executive officers, the natural criticism one would make is, have you sufficient guarantee that items are not passed which ought not to be passed?—Yes. I think my test audit gives me a sufficient guarantee of that, and the report of each account officer is submitted to the Finance Department of the Government of India, with my comments appended.

531. Yes, but still you depend on a test audit for that guarantee; you can only guarantee it so far as your test audit enables you to form an opinion?—Yes, that is all.

532. But further than that, as I understand it, you do not present to the Indian Government any audit report of the nature of the Appropriation Report of the Comptroller and Auditor-General here?—No, it is not in the same form; it is an appropriation audit report;

* *See* Q. 2846 *et seq.*

it shows that there is sanction for every charge that has been incurred.

533. But it does not deal with irregularities?—No, not in that way. But the test audit reports do; I have found out errors sometimes through them.

534. What do you do with those test reports?—I pass orders on them, and require the account officers to explain; I also submit a copy of them to the Government of India, and finally when I get the explanations of the account officers, I refer again to the Government of India if necessary.

535. Have you one of those at hand?—I am afraid I have not. These test audit reports are very thorough; they run to 160, 180, and 200 paragraphs.

536. And these test audit reports go to the Government of India?—Yes; they are submitted to the Government of India *in extenso*.

537. With your comments upon them?—With my comments upon them.

538. Then whose is the final voice upon such irregularities as you have called attention to?—Well, if my decision was disputed, the question would be referred to the Government of India.

539. Your decision is final; but if the Commander-in-Chief, for instance, were to appeal against your disallowance of some payment made in the Military Department, the appeal would lie to the Government of India?—Yes.

540. And the Governor-General in Council would pass or disallow that item?—Yes. I never remember any case in the Military Department; but I remember there was a case in the Public Works Department, in which certain salaries had been passed which required the sanction of the Secretary of State. I ascertained it only by my test audit, and the Secretary of State's sanction was obtained.

541. Would there be in any case reference to the Secretary of State, even if the Governor-General in Council did not choose? Could the Finance Member of the Council, for instance, insist upon one of your reports being sent to the Secretary of State?—I could insist upon it.

542. You could?—Yes.

543. (*Sir Donald Stewart.*) It has been done, I think, quite recently?—Yes. (*Sir Henry Waterfield.*) I have a list of the instances where such references have been made. I think you will see that they are petty.

544. (*Chairman.*) Perhaps you will hand in the paper. But could you give us briefly what the cases are?—The final orders relating to the audit of expenditure requiring the Secretary of State's sanction were given in 1890; and the first case arose in 1892—the grant of free quarters to two officers whose salary exceeded 5,000 rupees; it was a question whether the grant of free quarters was an increase of salary or not; and the auditing officer held that he could not pass it; although the Government of India held that that was not an increase of salary, the auditing officer declined to pass it; the Secretary of State agreed that the Government of India might exercise discretion in such cases. The next case, in November 1892, was where expenditure on the East Coast Railway had taken place before the estimates had been sanctioned by the Secretary of State; in order to save time the Secretary of State had given his authority for the construction of the railway, but the estimates had not been formally sanctioned by him; the Government of India had provisionally sanctioned the estimates, but had called for a report on certain points before they submitted them for approval; Lord Kimberley held that the auditor's objection was justified in that case. The next case, in April 1893, was a personal allowance to a deputy native magistrate, on his transfer to superior civil service; the Secretary of State confirmed that allowance. The next was temporary continuance of the post of deputy inspector of cattle disease in Madras after the death of the person whose appointment had been originally sanctioned; the auditor said it was a personal allowance and not one for the office; the Secretary of State then confirmed it for one year. The next was a case where the Lieutenant-Governor of Bengal had agreed that gas might be supplied gratis to the official residence of the Commissioner of Police at Calcutta; the auditor said that that was an indirect increase of his salary, and therefore must receive the Secretary of State's sanction; the Secretary of State held that the Government of India could have passed it on their discretion, but, as it had been brought to his notice, he considered that it was an improper grant, and it was discontinued. The next was a case of an officer sent to Gilgit to replace one who had accompanied Dr. Robertson to Chitral, and while at Gilgit was allowed to draw a deputation allowance of 20 per cent.; that was not within the regulations, and it had to be referred for the confirmation of the Secretary of State. The next was the case of the private secretary of the Governor-General, who had been allowed during illness to draw his pay as if he had been present in the appointment; it would have been permissible if he had been in the Civil Service, but for an outside officer as he was there was no regulation to cover it; that was confirmed by the Secretary of State. The next was the case of the emoluments of an officer of the Bombay City Police, who was employed on special duty in connection with the forgery of notes in a native State, and he was allowed some addition to his salary to cover expenditure while on tour; that again, it was held, ought to have the Secretary of State's sanction. And the last case which I have was that of the linking up of the metre gauge railway systems in Northern India, where again the expenditure was challenged, as the estimates had not been approved by the Secretary of State, being under revision. In almost all those cases it was a mere question of whether a formal approval had been given, but it shows, I think, that the auditing officers are careful to draw attention where the forms have not been complied with.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob C.S.I.

5 Nov. 1895.

545. In the correspondence which followed the inquiry of 1880 reference is made to an appropriation account prepared by the Comptroller and Auditor-General which it was said might be published and about which there was a discussion as to whether it should be submitted to the review of a Committee in England. I was always under the impression that that was a report more or less in the nature of the appropriation reports to which we are accustomed here. I gather now that there is no such report, and that the appropriation report in question is different in its nature from that which the Comptroller and Auditor-General in England draws up, which is a critical review of every irregular financial act of the Executive Government during the year. I think—I am anxious to understand clearly—that there is no such critical report drawn up?—It is not of the same nature. It is, however, a report by an officer who is quite independent in his auditing capacity.

546. That I quite understand; and of course the question whether he is sufficiently independent is one that may come up for subsequent consideration. But for the present I gather that you have not for India a report of a critical nature and drawn up by an independent critic such as we have in England?—No, we have not. But I think, as Mr. Jacob has explained, it would be impossible to draw it up, for the reason that those criticisms have already been acted upon during the year; the criticisms have been made by the auditing officers, and have been acted upon from time to time, and sanction has been given to the expenditure. So that the irregularities no longer remain in the accounts.

547. As an illustration of my point I may say that on one occasion in this country a great irregularity took place—a high officer in the public service (there was no accusation of his taking the money himself) spent upon telegraph extension large sums of money which Parliament had not granted. I refer to what is ordinarily known by the name of the Telegraph scandal. If there had not been the Standing Committee of the House of Commons appointed to examine the reports of the independent auditor, I doubt whether Parliament would ever have been fully seised of this very grave irregularity. Now, of course, those things happen very rarely, but I do not quite see in the Indian system as it stands now, that there is absolute provision for such a case, because there is no provision for a critical report, or for an independent examination of the auditor's report?—(*Mr. Jacob.*) But the account officer would have stopped him at once. In India the audit is complete at the end of a month. It could not have gone on for more than a month; in fact, he could not have got any money to spend. (*Sir Henry Waterfield.*) I do not see how on the Indian system he could have spent the money.

548. That is satisfactory to know. But still what I want to point out is that, supposing the irregularity to take place—if it had not happened we should have thought it almost impossible—the great security that

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, S.C.I.

5 Nov. 1895.

Parliament has is that the independent Auditor-General by his critical report makes it quite certain that it will be known and brought to justice. I do not see as it stands that there is that provision in India—it may not be necessary; that I am not considering now—under your appropriation audit?—(*Mr. Jacob*). But is not the case this? The Comptroller and Auditor-General can only apply his audit in England, say one and a half years or two years after the expenditure has been incurred.

549. Oh, no; to the monthly accounts?—At the end of the year?

550. The monthly accounts go monthly to the Comptroller and Auditor-General?—His report is not submitted month by month?

551-2. No, that the law does not require, because, the Army and Navy accounts coming from distant parts, at the time the Audit Act passed, a very considerable margin of time, perhaps too great a margin, was left. But the Appropriation Report is laid before Parliament within 11 months?—(*Sir Henry Waterfield.*) Within 11 months of the last month of the year it relates to. It may be 22 months from the time in which some money has been misappropriated, if that has occurred early in the year.

553. It does not pretend to be preventive?—In the case to which your Lordship refers there must have been some special means of obtaining money which could not in an ordinary case exist.

554. Of course the telegraph scandal was a case of an irregularity in the Post Office, and the Post Office had very large balances passing through its hands, especially for Post Office Savings Banks, which it was the duty of the officer to send forward for investment directly. It was in the nature of capital expenditure, and was an illustration of one of the dangers of a loan service?—Yes. But then in India the capital expenditure is checked equally with the ordinary expenditure. The officer could not have there obtained sums of money in the manner you describe.

555. I am only giving an instance in which, gross irregularity having happened, it was detected through the fact that there was an independent officer and an independent critic.

556. (*Mr. Buchanan.*) You would say your test audit would detect that at once?—(*Mr. Jacob.*) In the first instance the Accountant-General would detect it within a month of the expenditure having occurred, and would not only detect it, but would actually have taken whatever steps were necessary for stopping any irregularity; and he would not have to wait for 11 months or until a report was presented to somebody else; and also, if it escaped the attention of the account officer, my test audit would give me a means generally of ascertaining if there was any such irregularity.

557. (*Chairman.*) I think you should say "might," because this audit only covers a small period of the whole account. Of course, it does not follow that detection would be certain?—But does not the Comptroller and Auditor-General in this country work only by a test audit?

558. With regard to the great services he accepts the statements of the examining officers, applying detailed audit to a certain portion of it at his own will. I am not in the least arguing that the same kind of thing would happen, but there are different kinds of irregularities; and what I understand from you is that, whether it is right or whether it is desirable to amend it, the Indian appropriation account does not represent, like our appropriation accounts do, a criticism on each head of expenditure by an independent critic; and there are no documents to prove that such criticism is not needed?—(*Sir Henry Waterfield.*) I think it must be admitted that you are right—that it is not the same.

559. (*Sir Ralph Knox.*) Do not the objections of the local Accountants-General or disallowances by them come up to you at all?—(*Mr. Jacob.*) No.

560. They do not reach you?—No.

(The witnesses withdrew.)

[Adjourned till to-morrow at 11 a.m.]

At the India Office.

SECOND DAY.

Wednesday, 6th November 1895.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

THE RIGHT HON. LEONARD COURTNEY, M.P.
THE RIGHT HON. W. L. JACKSON, M.P.
SIR WILLIAM WEDDERBURN, Bart., M.P.
FIELD MARSHAL SIR DONALD STEWART, Bart., G.C.B., G.C.S.I.
SIR E. W. HAMILTON, K.C.B.
SIR RALPH KNOX, K.C.B.
SIR JAMES PEILE, K.C.S.I.
SIR ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
MR. G. L. RYDER, C.B.
MR. T. R. BUCHANAN, M.P.
MR. W. S. CAINE.
MR. DADABHAI NAOROJI.

MR. COLIN G. CAMPBELL, *Secretary.*

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

6 Nov. 1895.

SIR HENRY WATERFIELD, K.C.S.I., C.B., and MR. STEPHEN JACOB, C.S.I., recalled and further examined.

561. (*Chairman.*) Mr. Jacob, I think you have a list of banks that you wish to hand in?—(*Mr. Jacob.*) Yes, that is it (*document handed in*).*

562. Then, Sir Henry, there was the question of putting in a paper about dissents which had been made?—(*Sir Henry Waterfield.*) Yes. I have not had time to make a complete search, but I think those that I have found will enable the Commissioners to understand the manner in which that power of dissent is used by the Financial Member of Council. I found that in 1885 Sir Auckland Colvin and Mr. Ilbert dissented from the proposal to increase the strength of the army. That was a measure affecting finance.†

563. What year was that in?—It was a dissent from the increase proposed in the strength of the army in 1885; and they demurred to it strictly on account of its financial effect. In the following year, 1886, Sir Auckland Colvin dissented from the proposal to construct the Bengal-Nagpur Railway, regardless of the financial burden caused by the fall in exchange; and I found that in that case the Viceroy stated that he was disposed to concur with his financial advisers, but the majority of the Council were in favour of constructing the line at once. Then I pass on to 1893. (I do not mean to say that there may have been no such dissents between those dates, but I looked in the later years.) In that year, in March, Sir David Barbour and Sir Charles Pritchard dissented from the proposal to accept in the

* *See* Appendix 5. † *See* Appendix 6.

Budget an increased amount for military expenditure; it was proposed to take some definite sum as what could be afforded, and they considered it higher than was prudent. Sir David Barbour, also, objected to give exchange compensation allowance without waiting for the Secretary of State's decision on the currency question. In November of the same year, 1893, Sir David Barbour dissented from the proposed extension of the limit up to which money might be spent in the coming year on the construction of railways and irrigation works; there, again, the majority of the Council was against him. Then, as an instance of what happens in minor cases, when a member of the Council does not think it necessary formally to record a dissent ——

564. I beg your pardon, these are formal dissents, which came on to the Secretary of State?—Yes, all of them; but, even if a formal dissent is not recorded, the Government of India in their despatch mention the fact of the divergence of opinion. They said, in October 1892, that Sir David Barbour dissented from the proposal to obtain in England recruits for the police; I am not quite sure whether he dissented on the question of policy, or whether he thought it was a more expensive plan than should be adopted. Then in 1894, Sir James Westland dissented from the grounds on which the amount of furlough pay for a certain officer was to be fixed; though on other grounds he did not object to giving the proposed amount; but he thought it necessary to have it recorded that he did not agree with the reasons for which it was given. A week afterwards he objected to a certain pension which was recommended, because he considered it was not authorised by the regulations; in this case no dissent was recorded, but the fact was stated that the Financial Member did not agree.

565. In the case of formal dissents, which are communicated to the Secretary of State, does the Secretary of State take any notice of the fact that a dissent has been recorded?—He would, in a case of any material importance; he certainly would comment on the fact in his despatch in reply.

566. (*Mr. Courtney.*) But it does not come before him in the way of appeal, but by way of record?—By way of record. It is one of the official papers which the Government of India send to him, to enable him to form his opinion.

567. (*Chairman.*) And of course the Secretary of State with the dissent before him might consider whether the reasons for the dissent were so weighty as to induce him to call for reconsideration of the decision?—Certainly he might do so. He might agree with the dissenting members rather than with the others.

568. (*Mr. Courtney.*) One Member of Council with the Viceroy dissenting constitutes an appeal?—The Finance Member of Council with the Viceroy. It is a special provision laid down in the case of the Finance Member.

569. No action is taken until the appeal is heard?—That is so.

570. (*Mr. Buchanan.*) Did the Viceroy concur in any of those appeals on the part of the Financial Member of which you have spoken?—In the case of Sir Auckland Colvin's dissent from the construction of the Bengal and Nagpur Railway, it was so stated, but not very positively; the Viceroy said that he was disposed to concur. It was a very doubtful matter whether the railway should be pushed at that moment, and he was disposed to concur with his financial advisers that the situation did not admit of its construction at that time.

571. It was not a formal dissent by the Viceroy, and the Financial Member, appealing to the Secretary of State?—No, it was not.

572. (*Sir Andrew Scoble.*) And that was before the rule was passed that enabled the Viceroy, in concurrence with the Financial Member, to suspend operations until the order of the Secretary of State had been obtained, was it not?—Yes; it was only two or three years ago, I think, that that was laid down.

573. It was in 1891, I think?—It was laid down in 1888-89.

574. (*Chairman.*) Therefore, we may define the power of appeal of the Finance Minister somewhat in this way: first of all, he can record a dissent from any measure that comes before the Viceroy in Council, and that dissent will, as a matter of course, go before the Secretary of State. Further, if the Viceroy concurs with him, even though there may be a majority of the Council against them, yet that constitutes an appeal to the Secretary of State; and that measure would not be carried out until the Secretary of State had considered the reasons which had induced the Viceroy and the Finance Member to dissent?—Yes; that is exactly the case. It ensures delay until the Secretary of State's opinion is received. (*Mr. Jacob.*) I do not think, as a matter of course, it does. It is only in cases where the Viceroy considers it of sufficient importance.

575. The Viceroy exercises, as it were, a kind of suspensory veto upon it for the moment?—Yes; that is how I think it is. I mean the mere fact that the Viceroy and the Financial Member were in agreement, and that they differed from the rest of the Council, would not necessarily result in delaying action.

576. But still the Viceroy could delay it if he expressed a wish to that effect?—He could.

577. (*Sir A. Scoble.*) I think the procedure is all laid down in the rules?—(*Sir Henry Waterfield.*) Yes, we have the rules in the room. Mr. Jacob's view is, I think, right. It is first provided by Rules 17 and 18 what are the subjects of which the Finance Minister has to take special cognisance.

578. (*Chairman.*) What are you quoting from, Sir Henry?—The rules and orders for the transaction of business in the Governor-General's Council. Then it is provided by Rule 24: "In the case of a proposal "referred to the Finance Department, under Rule 17 or "Rule 18, if the Finance Member of Council does not "concur with the initiating member, and if the "Governor-General concurs with the Finance Member, "the papers shall be circulated to Members of Council, "or be brought before Council at once, as the "Governor-General shall direct; but no order shall be "issued on the proposal, unless his Excellency shall "otherwise direct, until the instructions of the Secre-"tary of State in Council shall have been received "thereon." Therefore the Governor-General may give way if he thinks fit, and allow immediate action to be taken in accordance with the view of the majority; but he has the power of delaying it, although the majority is against him, until the Secretary of State's orders are received.

579. Has the Viceroy alone any power of suspending a decision of his Council?—No; if the majority were against him the Government would act as a whole, although the Governor-General might be opposed to it, but, in such a case, he might perhaps avoid bringing it before the Council. (*Mr. Jacob.*) He can overrule his Council. I forget what are the exact words, but he can do so, if he considers it a matter affecting the safety of India. I think that it is so provided in the Act of Parliament. (*Sir Henry Waterfield.*) That is in the Act of Parliament, but it does not relate to such matters of finance as those of which you have been speaking.

580. Would you say that that is an exhaustive list of dissents that you have read. There is a considerable gap between 1887 and 1890?—No. I had not time to look for those in the intermediate years. I took the last decade, and I have referred to the first two years of Sir Auckland Colvin's tenure of office as Finance Minister and the last two of Sir David Barbour's, merely because I happened to recollect that there were dissents recorded at that time. I am not at all prepared to say that there may not have been others from 1887 to 1892, but I have not looked at those years.

581. Then the paper that you have handed in is a sample of the action taken by the Finance Minister?—Exactly, it is a sample of the dissents.

582. We come now, Sir Henry, to the very interesting question of Provincial finance. You have given us a paper describing the present system of Provincial finance as it has been developed since its institution by Lord Mayo.* Would you say that that policy is intended (1) to interest the Provincial Governments in collecting closely and fully the revenue which its officers levy, and (2) to secure efficient and economical application of the moneys assigned for provincial services by giving the Provincial Government a certain control over its own provincial budget?—Yes, in the words of Sir Richard Temple, on the 9th of March 1871, it was hoped that the concession "will give the local "Governments an additional interest in the study and "the enforcement of economy in expenditure; will "afford them a just inducement to supplement their "local receipts from time to time by methods most "acceptable to the people, or least fraught with

* *See* Appendix 3.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

6 Nov. 1895.

"popular objection; will cause a more complete under-
"standing to arise between the executive authorities
"and the tax-paying classes respecting the develop-
"ment of fiscal resources; will teach the people to
"take a practical share in provincial finance, and lead
"them up gradually towards a degree of local self-
"government; and will thus conduce to administrative
"as well as financial improvement."

583. Did not Lord Mayo assign a fixed grant to each Provincial Government, and was not the system of fixed grants abolished in 1882, and a share in the revenue collected, given to them instead?—Yes, Lord Mayo assigned fixed grants. Afterwards a share in the excise and stamp revenue was given in 1877, in addition to the fixed grants. The system of granting the Provincial Governments a share in the revenue was extended in 1879 when agreements were made with Burma and Assam, and it was more generally applied in the agreements with all provinces in 1882.

584. I do not quite gather from the Memorandum whether the responsibility of the Provincial Governments for collection of revenue began in 1877 or in 1882?—The Provincial Governments were always responsible for the collection of the revenue; but until 1877 they derived no direct benefit by the more careful collection.

585. Therefore there was no change in the system. It was not that the collection of revenue was in any respect transferred from officers of the Central Government to officers of the Provincial Government. When those changes took place that system had been in force before?—Quite so. The same officers as before collected it. The revenue is necessarily collected by the officers of the various provinces, and the same officers continued to collect it when the system was altered, so as to give to the Provincial Governments a direct incentive to more careful collection.

586. In fact the Provincial Governments were given a percentage or bonus on the amounts they collected?—Yes, something of that sort.

587. Would you describe the nature of the change then made?—Up to 1877 each Government received a fixed annual grant—that was the system you referred to as introduced by Lord Mayo—merely varied from time to time by minor adjustments; after that date they were allowed a share of the excise and stamp revenue in place of a corresponding portion of the fixed grant. In 1882 the system was extended by giving to them, instead of any fixed grant, the whole or a varying proportion of the revenue under several heads, including a percentage of the Land Revenue, this latter differing according to the requirements of each province.

588. The proportion of revenue assigned to the Provincial Governments is revised every five years, is it not? Would you describe the nature and objects of this revision?—The object is, on the one hand, to ensure to the Imperial Government a due share of the improvement that has taken place in the revenue from the development of the country; and, on the other hand, while giving the Provincial Governments a fair proportion of the increase, to lessen the chance of their being called upon to render abnormal assistance to the Imperial Government. Gradually it has been found possible to extend the provincial system in some degree to all heads of revenue, except opium, tributes from Native States, Post Office, Telegraph, and Mint, and to all other receipts except Gain by Exchange on Remittance transactions, receipts from Railways, Military Works, and Army. Before the commencement of each quinquennial period, a careful examination is made of the circumstances of the several provinces, in order to see to what extent they may be able to spare for the assistance of the Imperial Government a portion of the increment in their revenues, or, on the other hand, whether in consequence of additional burdens being undertaken they require any further help.

589. And when you say that one object was to lessen the chance of the Provincial Governments being called upon to render abnormal assistance to the Imperial Government, I presume you mean that by increasing the Imperial Revenue there was less chance of the Provincial Governments being required to contribute a part of the sums assigned to them?—More careful collection of the Revenue made it less likely that there would be a deficiency.

590. In fact you looked to an improvement of the Revenue from it?—Yes.

591. Is the revision of which you spoke conducted by a Commission, or how is it made?—It is conducted by the Government of India in the Finance Department in correspondence with each Provincial Government. On at least one occasion the Finance Minister has gone round to the head-quarters of the several Provincial Governments, and personally communicated with the authorities, but I do not think that that step has often been taken?—(*Mr. Jacob.*) In 1886 the Finance Committee took up the revision of the provincial arrangements then pending.

592. What do you mean by the Finance Committee?—A special finance committee that was appointed to consider any possible reduction of the expenditure.

593. And did they undertake this executive function of ascertaining what ought to be the shares of the Imperial and Provincial Governments?—They examined the provincial expenditure to see whether any reductions were possible in it, and with reference to such reductions they proposed a reduction in the assignments of revenue.

594. They were a Commission inquiring into finance, and they offered advice to the Finance Minister on those points which affected the result of the revision?—Yes, they were expressly instructed to consider the provincial arrangements, as well as any other possible reduction in expenditure.

595. (*Sir Andrew Scoble.*) But their function was only to advise the Finance Minister?—Yes, to advise him.

596. Not to act on their own responsibility in regard to any arrangements?—Merely to advise.

597. (*Sir James Peile.*) They made suggestions which were referred to the Provincial Governments for their opinion?—Yes.

598. (*Mr. Courtney.*) Do the same proportions apply to all Provincial Governments?—(*Sir Henry Waterfield.*) No, they did not in past times, but now they have been made very nearly uniform, I think, excepting as regards the provincial railways and the division of the land revenue. Otherwise, I think that the proportion fixed under any given head is the same in each province.

599. (*Chairman.*) That is to say, that supposing half of certain heads of revenue were given to the Provincial Governments, half will be given alike in Burma and Bombay?—Just so. It is only in the later revisions of 1887 and 1892 that they have come to this uniformity.

600. (*Mr. Courtney.*) And the revision is made simultaneously throughout all the provinces?—Yes.

601. (*Chairman.*) This revision takes place before the expiration of the quinquennial period?—Inquiries are made a few months before the beginning of the coming year.

602. (*Mr. Courtney.*) Practically each Finance Minister will make a new revision?—It will usually happen that it would come under a fresh Minister on each occasion.

603. It would not come before the same man twice?—Probably not.

604. (*Chairman.*) The revision now in force lasts till 1897, does it not?—Yes.

605. Are the Provincial Governments allowed to impose any local duties for their own local use, and have they done so?—Such of the Provincial Governments as have legislative councils have, with the consent of the Government of India, imposed provincial or local rates since the alteration of the system made in 1877.

606. How would you describe those provincial rates?—They are rates or cesses on the land, collected generally with the land revenue, and applied either exclusively to local purposes, or under certain rules to the general purposes of the province. A proportion not exceeding 10 per cent. may be taken for public works in the province generally, but not necessarily for the district in which it is collected. The bulk of it is entirely for local purposes.

607. Are they at all analogous to what they call in France *centimes additionels?*—I do not know the French system.

608. Under that system, as I understand it, there is a certain rate of tax, and then for local purposes there is levied in addition, we will say, to every five francs, five centimes, which they call *centimes additionels.* Would it resemble that, or would it be an

entirely fresh tax upon the land?—In the first inception of these local rates it was very much of the nature that you have described. There was a 3 per cent. levied for general purposes, and then 1 per cent. more for local public works, but I do not think now that it is levied in the same fixed manner; it varies according to the province, and according to the Act that is in force in the province.

609. But it is a percentage on the land tax?—It is a percentage on the land.

610. On the land tax?—I see your point.

611. (*Mr. Courtney.*) Does it run throughout the whole province, or is it attached to districts or municipalities?—I think the local rate is the same for each district throughout the province. I think there is no variation in that, but it is levied on the land. (*Mr. Jacob.*) In some cases it is an actual percentage on the land revenue, and in some provinces before legislation was undertaken it was levied under the settlement arrangements; as a part of the settlement arrangement the land revenue was fixed, and then a percentage upon that of so many annas in the rupee, as we put it generally in India, was fixed for education, roads, and schools.

612. Education and schools?—(*Sir Henry Waterfield.*) Yes, and hospitals.

613. (*Sir James Peile.*) In Bombay it is one anna on the rupee of land revenue?—Yes.

614. (*Chairman.*) That is the common practice?—That is the ordinary practice, I think.

615. And I presume what you were describing as a variation is only a variation because the Land Tax varies in its nature in different parts of India, is not that so?—Yes.

616. Then when you say in some parts of India it is not a percentage on Land Tax, it is so generally?—Well, I was thinking specially of Bengal, where in many parts a permanent settlement is in force, and there the local rate is fixed independently of the Land Revenue.

617. By way of not appearing to be a disturbance of the settlement, I suppose?—Hardly so, but it is a matter not coming within my department.

618. (*Mr. Jackson.*) In such cases where the contribution to the Provincial Government is a percentage of the land revenue, if the land revenue tax—if that is the proper term—was increased, that would increase the contribution to the Provincial Government?—(*Mr. Jacob.*) Yes.

619. But in the case where the contribution is in the nature of a separate and an additional tax, the land tax might be raised and the other left as it was before; and in such case, although the revenue for Imperial purposes would be increased, the contribution to the Provincial Government would remain the same?—Before the Provincial Governments received a proportion of the land revenue, they did not derive any benefit from its increase.

620. And it is now altered, is it?—They now get a fixed proportion of the land revenue, but, where settlements are imminent which are likely to increase the revenue very much, allowance is generally made, when the agreements are under revision, for the probable increase under those settlements.

621. I see, they are adjusted?—Yes.

622. (*Chairman.*) May I put it in this way to you, that, taking the land revenue in a province, the Provincial Government is now allowed usually a fourth of what it collects, is it not?—Yes.

623. Therefore, whatever the rate of the land revenue may be, they gain one quarter of the produce?—Yes.

624. Besides that they levy on this land tax provincial rates which are, in one form or another, an extra percentage, the whole of which extra percentage goes to the Provincial Government?—I did not understand Mr. Jackson's question to relate to the provincial rates. I thought it was rather——

625. (*Mr. Jackson.*) My point was that I understand there is a contribution to the Provincial Government out of the sum collected for the Imperial Government?—Yes.

626. I wanted to know whether the result was the same in the case where the contribution is a percentage of the amount collected for the Imperial Government, as in the case where it is assessed and collected as a separate and additional tax to the Imperial tax. I am not sure that I am using terms that make themselves intelligible to you, but let me put it in this way. Supposing that for every rupee collected for Land Tax the Provincial Government is allowed to retain one per cent. If you increase the amount of the Land Tax, the contribution to the Provincial Government is increased?—Yes.

627. But supposing the one per cent. were assessed as an additional tax and remained the same, the contribution to the Provincial Government would remain the same although the tax itself might have been raised?—Where additional taxation is imposed, there is always a special arrangement made as to the distribution of that between Imperial and Provincial.

628. (*Sir Andrew Scoble.*) In point of fact it is a Provincial cess. This Provincial cess is in addition to the land revenue proper?—(*Sir Henry Waterfield.*) It is an assessment on the land in addition to the Land Revenue proper.

629. And this Provincial cess is independent of the proportion of Land Revenue assigned to the Provincial Government at the quinquennial settlement?—Yes.

630. So that the Provincial Government gets the whole of its proper amount of Land Revenue *plus* the cess that is collected for local purposes?—Yes. (*Mr. Jacob.*) As a matter of fact the Provincial rates are not all entirely provincial. (*Sir Henry Waterfield.*) Those rates are almost entirely provincial and local, but not Imperial. They are granted almost entirely in aid of provincial and local purposes, not for the Imperial Government. Mr. Jacob's point is that technically there is a difference sometimes between provincial purposes and local purposes; "Provincial" has a wider significance.

631. (*Chairman.*) Municipalities and subordinate local authorities have distinct powers given to them of collecting certain revenues, have they not?—Yes. That is quite different from what we are speaking of now as provincial rates.

632. Quite so; but we shall come to that, I think, afterwards?—Yes.

633. I think Mr. Laing, when Financial Member of Council in 1861, first mooted the idea of giving to Provincial Governments a certain control over their own finance, and allowing them to provide funds by levying local duties. As a specimen duty he suggested local tobacco taxes?—Yes. Mr. Laing found it necessary, in order to cover a deficit, to curtail the expenditure on public works; and, feeling the objection to such a course, he suggested that such works, of a minor character, might be entrusted to Provincial Governments to execute, with the aid of locally raised funds, for which purpose he thought that a tax on tobacco or an octroi would be suitable.

634. Are such local taxes levied?—No, not by the Provincial Governments. Octroi duties, house tax, &c., are levied by the municipalities, for municipal objects.

635. Was it found on consideration that a local tobacco tax would not answer the purpose intended?—Objections to a tobacco tax have been found almost invariably on several occasions when inquiry has been made, owing to the plentiful growth of the plant throughout the country. There is no tax on tobacco except a customs duty.

636. (*Mr. Courtney.*) Has that been investigated with reference to Imperial or local taxation?—There is a very celebrated note by Sir John Strachey on the whole question, in which he looked upon it from every point of view, and then came to the conclusion——

637. But the main purport of the inquiry was what?—For an Imperial tax, I think, mainly.

638. (*Chairman.*) Is there no kind of tobacco duty, no licence, for instance, on the sale of tobacco?—There is a Customs' duty; I do not think there is any internal duty on it, though an octroi duty may have to be paid. (*Mr. Jacob.*) In Bombay city they have a local tax on tobacco for municipal purposes.

639. That is like an octroi duty?—Yes, something of that kind. It is called a municipal duty, but collected by the Customs officers; in Madras it was tried,

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

6 Nov. 1895.

but the authorities found that they were obliged to abolish it.

640. Effect was not given to the idea of decentralisation in finance, suggested by Mr. Laing in 1861, until Lord Mayo's time in 1871?—(*Sir Henry Waterfield.*) No, it was revived by Mr. Massey in 1866, and worked out by Colonel Richard Strachey with especial reference to public works. I think that he developed it generally, but, being in the Irrigation Department at that time, he paid special attention to the manner in which it would apply to public works. It was afterwards supported by Sir John Strachey as applicable generally, and brought into operation in 1871.

641. Could you state, or could you put in a paper showing for each Province the different branches and amounts of revenue which are collected by officers of the Provincial Governments, and the proportion of each such branch of revenue which those Governments are allowed to retain for provincial services?—With the exception of the Salt Revenue in Northern India, and some departmental receipts, such as those of the Army and Military Works, it may be said that the whole of the revenue is collected by provincial officers. The proportion assigned to the Provincial Governments is shown in the table which I hand in (*paper put in*).* The further adjustments made under the head of Land Revenue are as follows, in the agreements of 1892:—Central Provinces + Rs. 22,05,000, Lower Burma + Rs. 41,43,000, Assam — Rs. 11,27,000, Bengal — Rs 14,39,000, North-western Provinces and Oudh — Rs. 25,06,000, Punjab + Rs. 34,85,000, Madras + Rs. 32,54,000, Bombay + Rs. 77,14,000.

642. Can you tell us upon what principle such adjustments are made in the amount which the Provincial Government is allowed to retain out of the Land Tax?—It is the principle of approximate equilibrium of revenue and expenditure. It is found on examining the circumstances of each Province, that the proportion of revenue which is assigned to it set against the proportion of expenditure which is debited to it leaves it either in a surplus or a deficit at the beginning of the quinquennial period. The Government of India then fix this addition to, or subtraction from, the 25 per cent. Land Revenue which is assigned in all provinces.

643. Quite so?—And thereby they bring about an approximate equilibrium.

644. Therefore the Provincial Government may get out of the Land Revenue these different sums. First of all it gets its 25 per cent. of the amount collected, then it may get under a provincial rate a certain extra sum; and, thirdly, if, when the revision takes place, there is not an equilibrium upon the estimate formed by the Finance Minister for the Province between income and expenditure, a certain further sum is allotted to them out of Land Revenue?—Yes, only I would rather say out of the produce of the land, because provincial rates are not part of the Land Revenue. Technically it is a different head of account altogether.

645. But it really comes at the same time and from the same source?—It is levied on the land, but it is not part of what we call the Land Revenue.

646. But still, as I understood you before, it generally takes the form of a certain percentage upon that revenue?—Upon the land, rather than upon the Land Revenue, I should say.

647. Then it is not like the *centimes additionels* that I have been describing to you; the provincial rate bears a certain percentage to the revenue, but it is a separate cess?—It is sometimes one and sometimes the other, according to the local Act.

648. (*Mr. Courtney.*) They bear a relation to one another, similar to what we should call rent and rate?—The Provincial Rates are a rate, the Land Revenue is a rent.

649. What do you mean by the assignment of expenditure to the provinces?—When an agreement is made with the Provincial Governments, as will be seen by the paper which I have just handed in, they engage to meet a certain proportion of the expenditure under each head, on condition that they should receive a certain assignment of revenue under each head.

650. Is the expenditure so assigned Imperial expenditure?—It is the total expenditure which is incurred, excluding certain large heads such as the Army, and the Military Works, which are entirely Imperial.

651–55. (*Chairman.*) In pursuance of Mr. Courtney's question, I have before me the Bengal Provincial Service Budget for 1894–5, and in that I find that in the estimate for 1894–5 there is put down for the salaries and expenses of civil departments a sum of 24,000,000 rupees; and I understand that that is the whole expenditure upon these services—Law and Justice (Courts of Law and Gaols), Police, Marine, Education, Medical, Political, Scientific, and other minor departments, and general administration within the province. The Imperial Government has no charge whatever for any one of those services within the province?—I think that paper will explain it. (*Mr. Jacob.*) The table will show it. (*Sir Henry Waterfield.*) The general administration is entirely Provincial, with the exception of the civil offices of the account and audit, the cost of which is mainly Imperial, and the general establishment of Local Funds, which is Local. All other charges coming under the head of general administration are Provincial.

656. Does the Central or Imperial Government of India keep the collection of any branches of revenue in its own hands?—The departments of Salt in Northern India, Post Office, Telegraph, Mint, Army, and Military Works, account directly to the Government of India.

657. And I suppose it is quite a separate method of collecting revenue. Would you not add that the Provincial Governments have nothing to do with the Opium revenue?—In the case of Opium, the officers are provincial in Bengal and the North-West Provinces, but the revenue is taken as entirely Imperial.

658. Why is there a difference in the method of collecting the Salt revenue? I think you said just now that the department of Salt in Northern India is an Imperial branch of revenue?—I think it is a matter of administrative convenience. In Madras it is collected on a different system; and in Bombay, again, the system is different from that of Northern India; at the time that the Customs barrier throughout Northern India was abolished, the collection of the Salt revenue in that territory remained under one large department called the Salt Department of Northern India; and in Madras and Bombay the collection went on as before, under the provincial Governments.

659. What is your definition of Northern India?—In that connexion it includes the Punjab, the North-Western Provinces, the Central Provinces, and Bengal.

660. (*Sir James Peile.*) And Rajpootana?—And Rajpootana.

661. (*Mr. Courtney.*) Has it anything to do with the salt lake?—The salt lakes are in Rajpootana, as Sir James Peile mentioned. The great salt source is in Rajpootana, in the Northern India salt area.

662. Is it more convenient that the Salt revenue should be collected or administered by an Imperial officer rather than by a Provincial officer?—I think so; in dealing with the Native States it is rather desirable.

663. (*Sir James Peile.*) There is no Provincial Government there?—No. Rajpootana is an aggregation of Native States.

664. (*Chairman.*) But does it not come to this, that the salt duty in Bombay and Madras is collected by the Provincial Government, and in the rest of India practically by Imperial officers?—They are not officers of the Provincial Government in whose territory they are serving.

665. By Imperial officers?—Yes; they are Imperial officers.

666. That is perhaps the remnant of an old arrangement, Bombay and Madras having been for a long time governments more or less independent, or with greater independence than other parts of India?—I think it very possibly may be; but I think also it is mainly from local considerations that the Governments of Bombay and Madras are better able to apply the rules and control the arrangements than the Central Government would be.

667. (*Sir Andrew Scoble.*) Is it not the fact, that in Bombay and Madras salt pans are frequently the property of individuals, while in Northern India they are the property of the Government?—Yes, that is so; that is what I referred to when when I said there were different systems.

* *See* Appendix 7.

668. (*Chairman.*) In cases where the Central or Imperial Government of India keeps the collection of any branches of revenue in its own hands, are the collecting officers a separate staff appointed and paid by the Central Government, or are they officers of the Provincial Governments acting as agents of the Imperial Government for the collection of their Imperial duties?—In the case of those departments, the staff is under the Central Government, and is not subordinate to the Provincial Governments.

669. And is paid by the Central Government?—It is paid by the Central Government. It draws its pay from the treasury at the place where it is stationed, but in the accounts the charge is brought against the Imperial Government.

670. It does not come anywhere into that list, which, in this provincial budget of Bengal, I found charged to the expenditure of the province?—No, it would not be there.

671. In the case of the taxes which the Provincial Governments collect, do those Governments pay out of the revenue which they collect, (1) the whole cost of collection; (2) all the charges of civil Government within the province, including public works?—At some of the large cities the payments are made by the Accountants-General, who are Imperial officers; in some cases, and generally in provincial towns, the payments are made by Treasury officers, who are under the Provincial Governments; in all cases the charges are debited in the specified proportions to Imperial or provincial account.

672. That is to say, the payment is made out of the cash balances of the Government in the most convenient manner; but afterwards an adjustment is made in bringing it to account as between the Provincial and the Imperial Government?—Yes.

673. Does the Central or Imperial Government leave the Provincial Governments a free hand in the methods which they may think fit to adopt for the collection of the revenue entrusted to them?—No change can be made in any existing system of revenue management without the approval of the Supreme Government.

674. For instance, a Provincial Government could not, if it thought it more convenient, transfer a duty from one head of revenue to another?—No, not without the sanction of the Imperial Government.

675. For instance, they could not levy an Excise duty by means of a stamp?—No, nothing of that kind can be done without the sanction of the Supreme Government.

676. Would the Central or Imperial Treasury be held responsible for exercising an intelligent supervision over the results of collection in the different provinces, *e.g.*, if one province were especially successful in the results it obtained, would the Central Treasury call the attention of the other Governments to those results, and to the methods by which they are attained?—Yes; the Financial Department of the Government of India takes notice of any successful method of collection adopted by one province, and calls the attention of other Governments thereto, possibly going so far as to give orders accordingly.

677. And I presume that the Imperial Government would always be ready to receive and examine into complaints or remonstrances against methods of collection adopted by the Provincial Governments?—Certainly.

678. That, then, means that though the Imperial Government delegates very considerable powers to the Provincial Governments, yet, at the same time, for the purpose of uniformity, for good government, and in the interests of the governed, it is always ready to hear and receive remonstrances?—Yes.

679. The memorandum says that up to 1877 the Provincial Governments had no interest in collecting the full revenue. The excise was notoriously evaded, and the Government suffered, through careless collection of the revenue, a loss of which the amount was unknown, but which was, in the opinion of the Finance Minister, very large. Can you give us any idea of the extent or manner in which the revenue has benefited by the decentralisation policy, or any facts illustrating the change?—As illustrations, I may refer to the increase that has taken place since 1880–81 under the following heads:—

	1880–81.	1890–94.	Percentage of Increase.*
	Rx.	Rx.	
Stamps - -	3,250,581	4,509,351	33
Excise - -	3,135,229	5,838,573	85
Provincial rates -	2,776,370	3,514,571	21
Registration -	281,230	416,146	46

This percentage is very much larger than can be attributed to the increase of population.

680. But it may have been affected, may it not, by a change in the duties?—I do not think that those heads have been affected, with the exception of the provincial rates, by any change that has taken place since that. More careful collection has brought it about; but I do not think that the taxation has been altered since in any way that can be said to have caused increase of revenue. There have been variations.

681. That is an important point. The figures you state are very striking, and most satisfactory if you are able to say that there has not been any alteration of taxation, which would invalidate the conclusion to be drawn from them?—I looked with reference to this point into the report of Mr. Baines, which was a very careful one, as to the decennial progress which has taken place. It was written for 1893–4, and I found that he there attributed nothing to increased taxation under these heads; there had been an increase of taxation for Imperial purposes, but not apparently for provincial purposes.

682. Now, taking the case of Stamps, of which I think half the profits goes to the Provincial Government—if the Imperial Government increase the stamp duties for Imperial purposes, does not half the increase produced go to the Provincial Government?—That would be the case if it had done so. (*Mr. Jacob.*) No, they would make an adjustment. I mean that if the Imperial Government imposed additional taxation, it would take the whole of that addition.

683. That is to say, supposing the stamp duty was increased by 100 per cent., and supposing the Provincial Government had up to that time taken 50 per cent. of the produce, practically it would only take 25 per cent. of the increased tax?—Yes, it would receive 50 per cent. of the whole; but it would give back to the Imperial Government whatever was estimated as the additional taxation at the beginning.

684. (*Sir Andrew Scoble.*) Do you happen to remember the date of the Stamp Act?—1879.

685. Has there been any material alteration, or any alteration at all in the Stamp Duties so far as you can remember?—Only very petty alterations, so far as I can remember. I believe the Stamp Act has been amended.

686. Not materially?—Not with a view to any general alteration of the taxation.

687. Then the figures which you have been giving would apply to the duties collected under the Stamp Act, which has been in force during the whole period during which those figures apply?—(*Sir Henry Waterfield.*) Yes, that is so.

688. (*Chairman.*) Speaking just now of the Stamp Duty, I said that the Imperial Government and the Provincial Government took half, and I think you accepted that. From this paper it appears the Imperial Government only take one-fourth?—Yes; I was not attending to that point; in the Stamps it is so.

689–90. Now, the next head—Excise. On that you show that in the 13 years the increase has been enormous—85 per cent., without increase in taxation?—Yes.

* NOTE.—These percentages of increase are not correct for the years given in the table. The increase per cent. in 1893-4 is as follows:—

	Over 1879–80.	Over 1880–81.	Over 1881–82.
Stamps - -	41	39	38
Excise - -	90	72	57
Provincial rates -	22	26	21
Registration - -	55	49	46

85 per cent., which is not far from the mean between 90 and 72, may therefore be taken as the increase under Excise in 13½, not 13, years. The other percentages in the table are the increase in 12 years.—H. W. *See also* Q. 2155 *et seq.*

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

6 Nov. 1895.

691. In that case, also, you feel convinced that there has been no appreciable addition to the duties?—That is my belief. I am not prepared to say that in no case has there been an alteration where the existing law admitted of a higher rate. The law did permit certain variations of the duties, and in some cases they have been raised; in some cases they may have been lowered, but, as far as I know, there has not been any alteration of the law which has affected the scale of taxation.

692. (*Mr. Caine.*) But are not the Excise rates based upon getting the maximum of revenue from the minimum of consumption?—Yes, that is so.

693. Surely there must have been a considerable increase of the rates of taxation to have carried out that policy?—Yes, the rates are altered according to circumstances. There may have been higher rates put on, but in other cases it may have been found necessary to reduce them, and, so far as I am able to speak, the growth of the provincial revenue is not to be attributed to increase of taxation. But I ought, perhaps, to tell the Commission that that is not my special province. The Revenue Secretary is the officer who deals with this; therefore I am not so competent, as Sir Charles Bernard would be, to give you an opinion upon that point. (*Mr. Jacob.*) I think, to a large extent, the increased revenue has been due to taxing liquor and other exciseable articles that previously escaped taxation.

694. (*Chairman.*) That would be a new tax?—No; they were liable to taxation before, but through more careful administration a larger amount has been taxed.

695. (*Mr. Caine.*) You mean by the suppression of illicit distillation and the transfer of the trade in illicit articles to licit?—Yes.

696. (*Chairman.*) Upon that head the increase is fairly attributable to an improved method of collecting?—Yes.

697. But if the Commission wish further information upon this, you suggest that they might call Sir Charles Bernard?—(*Sir Henry Waterfield.*) I think it would be more satisfactory to have him called.

698. Then, with regard to increase in provincial rates, I suppose that your opinion that the improvement is due to better collection would not apply?—No; I excepted provincial rates. But Mr. Jacob reminds me that, when we were compiling this table, we took the year 1881 in order to eliminate increase of taxation. The provincial rates were put on in 1878, after the famine of 1877-8; and we took 1880-81 as a year in which those new rates would probably be in full force.

699. In fact, you have chosen the years which were as free as possible from disturbing causes, such as increases of taxation?—Quite so; that was my intention.

700. The memorandum states that the Revenue of the Provincial Governments for the period 1882-87 was made up to Rx. 42,000,000, that their expenditure on heads of administration wholly under their control amounted to Rx. 15,000,000, and to Rx. 4,000,000 on heads of administration partly under their control. May we take this to mean that during that period the Provincial Governments were responsible for collecting a revenue of Rx. 42,000,000 out of which they retained Rx. 19,000,000 for provincial uses, accounting for the balance of Rx. 23,000,000 to the Central Government?—I think there is a little misunderstanding as to that sentence. The passage in paragraph 6 to which your Lordship refers is a quotation from Major Baring's Financial Statement in 1882; and the meaning is not exactly what you infer, as the expenditure administered by the Provincial Governments includes under certain heads expenditure charged to the Imperial as well as that charged to the Provincial Governments. The Provincial Governments had an interest, more or less direct, under the agreements of 1882, in the collection of revenue amounting to 42 crores of rupees, and in the administration of 19 crores of expenditure, for which the total revenue assigned was 15 crores for heads entirely provincial, and four crores for heads partly provincial but mainly Imperial.

701. But that would mean, would it not, that having collected 42 crores, and spending 19, they would hand over the remaining 23 to the Central Government?—The 23,000,000 is, mainly, the land revenue, and they had a certain proportion, larger or smaller, under those heads; but the whole 23,000,000 was not given to the Imperial Government—part of that was provincial. If you would allow me to refer to the passage—it says: "The general result of the arrangements of 1882 was, that the revenue of the local governments was, for the five years from that time made up of the whole of the revenue under heads producing about Rx. 4,000,000"—that would give the provincial governments Rx. 4,000,000; "half of the revenue under heads producing Rx. 8,000,000"—that would give them Rx. 4,000,000 more; "a larger or smaller proportion under heads (chiefly land revenue) producing Rx. 23,000,000;" I do not know the proportion of that Rx. 23,000,000 that they would receive; and then, "an almost nominal share under heads producing Rx. 7,000,000," which, perhaps, we might set down at only Rx. 1,000,000. "Thus, the local Governments had a direct interest in the collection of revenue to the amount of Rx. 42,000,000." But they only received Rx. 19,000,000 of that.

702. Therefore, the remainder?—The remainder was Imperial. No, I was mistaken; they did not receive Rx. 19,000,000. They received Rx. 15,000,000 under the heads for which the grant at the time of making the agreement was assigned to them; and then they had a very small amount under the other heads, producing Rx. 7,000,000. Altogether they only received about Rx. 16,000,000.

703. I ask the question because I cannot quite reconcile that statement with the description which follows of the fresh arrangement made in 1887. The memorandum says that the revenue estimated to arise from the revenues assigned to the Provincial Governments in the years 1882-87 had been estimated at Rx. 16,376,020, and the expenditure at Rx. 16,812,340, while the actual revenue had been Rx. 17,352,966, and the expenditure Rx. 17,399,398. Can you explain the apparent difference?—As I have explained, the figures in paragraph 6 relating to 1882 do not imply that the Provincial Governments were then receiving and administering 19 crores. The amount actually was about 16 crores; but, during the currency of the earlier agreements, many adjustments were made, by transfers of charges from Imperial to Provincial (or *vice versâ*), together with the revenue granted for the purpose of meeting those charges. In Table I., appended to the Memorandum, it is shown that the initial assignments in 1882 amounted to Rx. 16,376,020 towards an expenditure of Rx. 16,812,340; and that the actual figures for the five years gave an average of Rx. 17,352,966 revenue, and Rx. 17,399,398 expenditure, the revenue available having largely increased in the later years.

704. I gather from the memorandum that, on the principle laid down at the commencement of the new system, the Central Government has taken at each revision a large part of the net increase of the provincial revenue as estimated, or rather ascertained, at the time of revision. Thus in 1887—setting aside Burma—the seven Provincial Governments showed a surplus of Rx. 686,300, and under the revised arrangement the Central Government was to take Rx. 655,200, leaving a bonus of Rx. 31,100 to the Punjab and North-West Provinces?—The Government of India practically took the whole of the net increase (that is, increased surplus of revenue over expenditure), though for special reasons they had to forego a certain sum in one or two cases; it cannot be described as a bonus, it was a remission in consequence of the Provincial Governments having lost the revenue through the failure of an aqueduct and other causes. There were special circumstances in those two provinces.

705. In fact, the principle is that the Imperial Government takes the whole of the increase?—Yes.

706. There was a deficit in Burma. How was that met?—The agreement of 1882 with Burma was a failure, and the Government of India was obliged to meet the annual deficit, till the abnormal condition of the province passed away, and it was found practicable to make a new arrangement.

707. And is the arrangement with Burma now one that runs on all fours with those in other provinces?—Yes; the arrangement of 1892 is on a similar footing in all provinces.

708. In the next revision, viz., 1892, the Central Government proposed to take an increased revenue of Rx. 466,300, leaving the Provincial Governments a revenue and expenditure estimated in equilibrium at Rx. 18,852,100?—Yes.

709. Then in 1882 the Provincial revenue was estimated at Rx. 16,376,020; in 1892, Rx. 18,852,100; or an increase of somewhat under Rx. 2,500,000, an

increase exceeding 15 per cent. in 10 years; and the Central Government had added to its own revenue on the two revisions of 1887 and 1892 Rx. 655,200 and Rx. 466,300, or a total sum of Rx. 1,121,500, making a total increase of over Rx. 3,500,000 on a revenue calculated at something less than Rx. 16,500,000?—The initial assignment of revenue to the Provincial Governments in 1882 was Rx. 16,376,020. The increase in 1892 was, therefore, Rx. 2,476,030, or more than 15 per cent. in the 10 years; and, adding the amount of Rx. 1,121,500, by which the Imperial revenues were benefited, the increase is Rx. 3,597,580, over a former revenue of Rx. 16,376,020, or 22 per cent. in the 10 years.

710. Had there been any increase of taxation in that period?—In 1886 the income tax was substituted for a license tax, adding at that time some Rx. 350,000 to the Provincial revenues. I do not think that those revenues were affected by any legislation imposing further taxation during that period.

711. Therefore on that basis you would say that on these duties there had been no increase except to the extent of Rx. 350,000, which we must take into consideration when we say that the revenues concerned had increased 22 per cent. in 10 years?—Yes. Perhaps I ought there to mention a point which may be viewed in different ways. The increase, by adding the income tax, was Rx. 350,000 in the first year, and perhaps Rx. 450,000 or Rx. 500,000 at the end of five years. I should hold that the increase of taxation was Rx. 350,000 only, and that the rest was from more careful collection or the improvement of the condition of the people. Some people might say that Rx. 500,000 had been put on; I do not know which way the Commission would view it.

712–3. You look on it in this way; we are dealing with an increase of revenue not affected by legislation, and therefore, in deducting from the increase which appears upon the figures the one item upon which taxation has been increased, you take the initial sum laid on, attributing the balance to increased prosperity?—That is my view, although, of course, if you take off the income tax, you take off much more than that Rx. 350,000.

714. (*Mr. Jackson.*) And if you had not put on the income tax, taxation would not have increased by that amount?—That is true also. At the same time it appears to me that the burden which you put on the people was the initial charge, and that, if I may use the expression, they put the further amount on themselves; it arose from their prosperity, which enabled them to pay more.

715. (*Mr. Naoroji.*) Would it not be desirable to ask Sir Henry Waterfield to supply us with a statement of all the additions to rates and taxes, of new taxation, and the enhancements of land assessments and consequent enhancement of provincial rates during 30 years?—I suppose you are talking now of the increase of the revenue arising therefrom, both Imperial and provincial.

715*a*. If we have a direct statement of the increase—of the increase of rates, assessments, and so on—we will be able to judge much better than merely by an assertion?—I am afraid it would be impossible in this country to give you a statement of the increase of revenue arising from new settlements.

716. You can get it from India by next year?—I do not know what means the Government of India would have of compiling such a statement. In every province there is a re-settlement constantly going on, and in 30 years every district will be re-settled.

717. What I want is a statement of increase by the mere increase of prosperity and of increase by taking more from the people?—Yes, such a statement might show whether the Government is taking more from the people.

718. It is very desirable that the Commission should be able to come to a correct judgment upon the point, because mention has just now been two or three times made of the margin that is owing to increased prosperity. (*Sir William Wedderburn.*) Is it not the case that the increases in Bombay, for example, have been very large in the revision of the settlements?—I am afraid again I must say that this is a matter for the Revenue Secretary. I could answer from my own belief, but it would not be authoritative; I think it would be better if the Commission would allow me not to answer questions dealing with the Revenue Department specially.

719–20. My question only referred to the portion of the provincial rates which depend directly upon the increase in the land revenue. I think that you are aware generally that the rate of increase has been, especially of late years, larger than in former times, and that the limits have been relaxed which kept the increase down? I think you are aware that that has taken place in Bombay?—I cannot answer those questions, I am afraid.

721. (*Chairman.*) With reference to the point Mr. Naoroji has just taken, I will ask you what view you take of the effect of re-settlements in estimating that the whole of the increase in the land revenue is due to increased prosperity. You can hardly put the result of them down to increase in prosperity? The contract has come to an end, and that contract is revised?—You are speaking of the contract with the Provincial Governments, not the settlement of the land now?

722. I am speaking of the settlement of the land now; this large increase in income includes land income?—It includes the portion of the land revenue which the Provincial Governments receive.

723. Of course. Well then, so far as that is due to new arrangements, would you consider that to be a proof of increased prosperity, or is it not rather an increase of the tax?—I think in all re-settlements of the land revenues the Government did not take the full proportion that they might; I should say they never took the full increase which might be attributed to the improved prosperity of the land.

724. Quite so, but still they do take an increase?—They may take it.

725. And is not that practically an increase in the duty, rather than a sum attributable to increase of prosperity?—No. Take an estate through which a railway has come; that has greatly improved its prosperity, and the Government take a proportion of the improvement. Surely that is attributable to prosperity rather than to increase of a tax.

726. You reckon it, that the Government in making their addition simply take into consideration whether the land in question is more valuable than it was before?—Certainly.

727. And they take on that improved value rather a smaller proportion than they would be justified in taking if they were to act on an exact calculation?—I think so. So far as my knowledge of the settlements goes, that is so.

728. (*Mr. Courtney.*) That is true of the past as well as of the present; you would say that it has always been the policy of the officer who fixes the re-settlement to do so?—Yes.

729. Your position is, that increased rental—increased land tax—does not mean increase of rack renting, but increased agricultural prosperity?—Yes.

730. (*Sir Andrew Scoble.*) And increased land brought under cultivation?—Yes.

731. (*Sir James Peile.*) And in a great part of India the land revenue is assessed upon the rental?—Yes.

732. So that the increase of land revenue is assessed on an increase of rent?—Yes, in such cases.

733. (*Sir William Wedderburn.*) But is it not the case that by far the larger proportion of this increase is not a general increase put upon a district benefited by a railway, or by some work of the Central Government, but is a direct increase of the rate payable by the individual holder, even up to many hundred per cent. sometimes in individual cases, which are more or less upon the holder's own improvements; is not that the case? It is not a general increase upon a whole district with reference to a benefit to the Central Government?—I think it would depend upon the province and the nature of the settlement, whether, for instance, it was an increase due to a new railway or not, in such a case as that of which you were speaking. But I should not have thought that in any case some hundreds per cent. were imposed upon improvements. However, as I say, I am not qualified to speak on those points; I have no knowledge of the details of the settlements. (*Mr. Jacob.*) The improvement has been so great in some cases that Government has had to take a far lower rate than was enforced before, though, of course, the enhanced revenue is higher because of the very great improvement in the total rental; but in many parts Government has a right to take 50 per cent. of the rental of the land, but has contented itself with a smaller proportion;

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

6 Nov. 1895.

that is to say, owing to the very great improvement that has taken place, the Government has had to confine itself to 20, 25, or 30 per cent., instead of 50 per cent.

734. But my point is whether the improvement arises from any action of the Central Government, or whether it is not the improvement of the individual holding. I quite admit that if the Government have benefited a whole district they may claim equitably a general enhancement, but how does that justify heavy enhancement in individual holdings? It was with regard to the question of the railway or the general improvement of the district?—But the point I wished to bring out was that the enhancement where a railway had been introduced was entirely due to improved prosperity; that is to say, to an enhancement of the rental, because the rate taken by Government is in many cases far less than that which was taken at the previous settlement.

735. The prosperity caused by the action of Government, or by the industry of the cultivator?—The general enhancement of the rental. (*Mr. Naoroji.*) This conversation makes it clear that it is very desirable that we should have something like detailed information; that I now ask.

736. (*Chairman.*) I think that question that Mr. Naoroji raises we had better discuss when we have Sir Charles Bernard?—(*Sir Henry Waterfield.*) I think so; he will be able to tell you what can be done.

737–8. (*Mr. Courtney.*) Have you got a settlement officer at home?—I think there are sure to be some. I will inquire; I think that most likely there is someone who has recently retired, if not one on furlough.

739. (*Mr. Jackson.*) You used an expression that the Government had had to take a lower rate; I did not quite appreciate the meaning of that. Did it mean that a less rate was sufficient for the Government purpose, or that the Government had been prevented from taking a higher rate?—(*Mr. Jacob.*) I mean that, if they had taken the rate which was previously enforced, the enhancement would have been so high that it appeared to the Government impossible to enhance the revenue by that amount, and they have been obliged to content themselves with a less increase than the rate originally levied.

740. What determines the rate, the necessities of the expenditure?—No, there are detailed rules laid down. As a matter of fact, in almost every case a certain absolute limit is placed upon the enhancement of any individual rental.

741. But is it at your discretion whether you are to take 50 per cent. or whether you are to take 25 per cent.?—There is a maximum.

742–3. I am taking 50 per cent. as being the maximum. You spoke of 50 per cent., and in some cases you said they had had to take as little as 25 per cent. Is it at the discretion of some officer of the department whether he shall take anything between 25 and 50 per cent.?—The Provincial Government lays down rules for the guidance of the settlement officer, but the practical effect of these rules is that no individual enhancement exceeds a certain amount.

744. (*Mr. Courtney.*) The Settlement Officer discusses the matter on the spot with the head men?—Yes. (*Sir Henry Waterfield.*) The Secretary of State not long ago gave instructions that the enhancement should not exceed a certain amount.

745. (*Mr. Jackson.*) Ah, but a certain amount of the individual property, or a certain percentage, or what?—A certain percentage of the former assessment.

746. (*Sir William Wedderburn.*) Is it not a different percentage on the district and the individual holding?—(*Mr. Jacob.*) I think so.

747. It is higher on the individual holding; but is it not the case that not long ago the Bombay Government objected to enhancements being limited in that way, and put aside those limitations?—I am not aware of it. (*Sir Henry Waterfield.*) I did not know that.

748. (*Chairman.*) Might I ask you, Sir Henry, for the benefit of many of us present who probably are not familiar with the system of land revenue, and in order to understand what the meaning of this revision is, whether the land revenue is not levied in India under very different conditions in the different provinces?—Yes, very.

749–50. For instance, in Bengal there is what is called a permanent settlement?—Over a large part of Bengal.

751. Under what circumstances does this revision arise? Does it arise in Bengal where there is a permanent settlement, or does it only arise in places where there has been a settlement for a term?—In places where a settlement for a term of years has come to an end, and a fresh settlement has to be made

752. Where there is a permanent settlement there is no increase?—Not of that nature.

753. But where there are settlements for a term of years, it is a process constantly going on?—Yes.

754. Settlements are falling in, and they are revised?—Yes.

755. And it is then that the settlement officers discuss whether the rent does not justify an additional percentage being levied—a tax?—Yes, a portion of the rental. The Government sends an officer to see what is a fair proportion of the rental that shall be paid.

756. At the close of each settlement?—At the close of each settlement.

757. (*Mr. Naoroji.*) There is another question that arises from the suggestion about the prosperity of the country, that we should have that note of Sir David Barbour's, in which he calculates the total production or income of the country, and then if we have similar calculations from that year to this, we shall then be in the very proper position of knowing whether there is really an increase of prosperity or not.

(*Chairman.*) What do you say would be the basis of the comparison?

(*Mr. Naoroji.*) Sir David Barbour, I understand, has prepared a note in the year 1882, giving the total production of the country of British India per head, and if we have similar returns and calculations from that year to this, we shall then be able clearly to prove whether there has been really increase of prosperity or not.

757*a*. (*Mr. Naoroji.*) It would be a very important thing that that should be done?—(*Sir Henry Waterfield.*) I am afraid that question of Mr. Naoroji's has already been asked in Parliament several times. It has been referred to the Government of India who have said that it is impossible to prepare such a statement with any advantage.

758. It is not impossible, because it is done?—I said with any advantage.

759. (*Chairman.*) But, Mr. Naoroji, will not that question be best discussed with Sir David Barbour? If the Indian Government say that they cannot do it, Sir David would no doubt be ready to tell us on what basis he based his calculation?—(*Sir Henry Waterfield.*) I am afraid it is hardly a matter for Sir David Barbour. Sir David Barbour was at that time in a comparatively subordinate position. He was an Accountant-General, and was deputed on a special duty, to endeavour to ascertain the incidence of taxation. He wrote a confidential memorandum on the subject. I do not know in what way Mr. Naoroji learned that there was such a paper. Oh, yes, I do know how he knew that such a paper existed, for it was alluded to in the financial statement, but it has never been published, and when Mr. Naoroji asked in Parliament whether a similar paper could be prepared, a reference was made to India for the purpose. The Government of India said that they were not prepared to stand by this estimate, which had never been adopted by the Government, nor were they disposed to have another inquiry of the same kind, for they felt that no good results could arise from it, and they declined to prepare such a report. I do not think, therefore, that it would be of much use for the Commission now to ask for it again; the Government have thoroughly considered it, and they have said that they could not do it with advantage.

760. If we have Sir David Barbour here of course we can ask him upon what data he went when he made his former calculation, and whether he could make a similar calculation now?—Yes, but he is not the officer who would have to make it now.

761. No, but he might be able to find the same data, or similar data, now?—You will be able to put the question to him.

762. (*Mr. Naoroji.*) As to that statement not being used by Government, you remember that Lord Cromer

actually used that statement in his speech, and based certain questions and conclusions upon that statement?—You are quite right, he quoted one statement that was in it.

763. So it is better that the Commission should know what it is, in order to be able to judge the real prosperity; otherwise there is a great deal said of that kind—that there is increase of prosperity—but we must have the proper data?—Yes.

764. (*Sir Andrew Scoble.*) Before we quite leave this question of the settlements, I want to ask, is it not the fact that the recommendations of the settlement officer as to a new assessment, are merely recommendations, and must have the sanction of the Provincial Government before they are brought into operation?—Certainly; the point occurred to me, only I did not wish to interrupt Mr. Jacob in what he was saying. It is so.

765. It is not the mere view of the settlement officer, but it is the view of whole series of officers, culminating in the Provincial Government?—Culminating in the Secretary of State.

766. (*Mr. Jackson.*) First approved by the Provincial Government?—First approved by the Provincial Government, then in many cases by the Government of India, and then by the Secretary of State.

767. (*Sir William Wedderburn.*) With reference to the levy, I would ask whether the person interested has any opportunity of putting forward his case during those various stages, or does not much practically depend upon the recommendation of the first officer? Has the person whose rate is raised any opportunity of protesting before any of these authorities referred to?—He has the opportunity of putting his case before the settlement officer. I do not suppose that it is as you suggest.

768. Because he does not know what the recommendation is. (*Mr. Caine.*) He has no right of appeal, has he?—(*Mr. Jacob.*) I think he does know.

769. (*Sir James Peile.*) Is it not the case that in Bombay at any rate, and I believe elsewhere, anyone who objects to the revised assessment put upon him is invited to appeal to the Bombay Government, who consider his appeal before they finally sanction the revised settlement?—(*Sir Henry Waterfield.*) I have no knowledge of it, but I think what you say is much more likely to be the case than the other view.

770. (*Chairman.*) Had the Provincial Governments to pay over the Rx. 655,000 spoken of in a former question (704) to the Central Government, even if the revenue collected did not come up to the estimate, making in that event the deficiency good out of their reserve balance?—The Provincial agreements are balanced by a certain transfer of land revenue between the Imperial Government and the several Provincial Governments; and this amount is in each case so calculated as to give to the Imperial Government the improvement determined upon, after a consideration of all the circumstances. Any deficiency during the currency of an agreement must be met by the Provincial Government reducing its expenditure or drawing on its balance.

771. The increase would, I presume, arise in this way, that the Provincial Government being allowed a certain percentage of duties, if the proceeds exceeded the estimate upon which the arrangement was based, the Provincial Government would get more; if it fell off, they would get less?—Yes.

772. Apart from the effect of increased taxation, is not this the result, whether due to increase of prosperity or better collection of revenue, that the revenue assigned to the Provincial Governments has increased 22 per cent. in 10 years; that the Provincial Governments have taken two-thirds of that increase; the Central Government about one-third; and that the Provincial Governments will get the further benefit of any increase of revenue over that taken as the basis in 1892, during the five years to 1897?—Yes; but the chief gain to the Imperial Government during the period has consisted in its annual share of the improvement of revenue due to the management of the Provincial Governments.

773. That is a very remarkable result?—I think it is.

774. You know of no qualifying circumstances which may fairly be set against it, except those that you have mentioned?—No; I have put them before the Commission to the best of my ability.

775. Therefore, as it stands, according to the best of your belief, that is a fair statement of the case—that apart from a comparatively small increase in taxation, these revenues have increased in 13 years by 22 per cent.?—Yes. Perhaps I ought again to mention, as to some of the questions put to me, that I did not attribute it all to the prosperity of the country. It is no doubt largely due to better collection.

776. Would you adduce as a proof of the success of the decentralisation policy, that the increase is probably due to the better collection of the revenue owing to the Provincial Governments being given an interest in what they collect?—I think that is so.

777. Of course also allowing a share for increased prosperity?—Undoubtedly.

778. Passing to expenditure, I observe it stated that formerly the Provincial Governments had in preparing the provincial budget no rules as to the limits within which their expenditure must be kept; and they asked, therefore, vaguely for the sums which they thought could be usefully spent in administration. The Supreme Government, on the other hand, had not the local knowledge to enable it to check efficiently their demands. This, I suppose, was one of the main reasons which led to the adoption of a system of local or provincial finance?—Yes.

779. The expenditure on the services transferred by Lord Mayo to the Provincial Governments was, in 1868–9, Rx. 6,030,000; in 1870–1, Rx. 5,197,000. What is the cost of those services now?—The cost of such services as were provincial in 1870–71 is now about Rx. 7,700,000.

780. Did not a very great revision of expenditure take place about 1870; I observe that between 1868, 1869, 1870, and 1871, there was a considerable falling off in the expenditure?—I think it was by transfers from the Provincial to the Imperial Government. You must remember that the scheme of Provincial decentralisation only grew up gradually, and that during the earlier years there were continual transfers of some head which it was found more convenient to make Provincial, or to transfer back to the Imperial.

781. At present the Army, the Post Office, Telegraphs, the Account Offices, Political Services, and the movement of Funds, are the only branches of expenditure which the Imperial Government keeps in its own hands?—The foot-note from which your Lordship is quoting, at page 5 of the Memorandum, refers only to Burma and Assam in 1879 As applied to the whole of India, I would add Salt in Northern India, Debt, Mint and Paper Currency, Ecclesiastical, Survey of India, Geological and Archæological Survey, and Census.

782. The Imperial Government concedes a certain discretion to Provincial Governments, but does it not at the same time retain a complete control over the local expenditure?—Yes, subject to its allowing the Provincial Governments as much freedom as possible in regard to details.

783. The principle which guides the Imperial Government is that laid down in the Financial Resolution of 22nd March 1871, that the Governor-General in Council will not relinquish his general power of supervision and control in any department, but that he will, as far as possible, avoid interference with the details of the administration of the transferred revenue and services, and any embarrassment of local finance?—Yes, that general principle has been maintained, while the tendency has been to enlarge the powers of the Provincial Governments.

784. Would you state the powers which the Imperial Government reserves to itself?—The Imperial Government maintains a general supervision and control over the Provincial Governments in the exercise of their powers; without its previous sanction, no additional taxation may be imposed, no change be made in the management of the revenue, no new general service or duty be undertaken, no alteration be made in appointments of which the emoluments exceed Rs. 250 a month, no class or grade or the pay thereof be altered, no change be made in the excise rates which would affect another province, no money be removed from the public treasury for deposit elsewhere, no alteration be made in the form of the accounts, and no main roads be abandoned. The Imperial Government also reserves to itself a right of control over any proposal causing an excess over the total Budget grant.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

6 Nov. 1895.

785. You said that no change could be made in the Excise rates which would affect another province. What is the meaning of that qualification?—The alteration of the rate of excise on the borders of one province might make it very difficult for the Government of another province to maintain the same rate of duty that it had before. If a Provincial Government thought it desirable that any such alteration should be made, a reference would be made to the Governor-General in Council, who would consider the circumstances of the two or three provinces concerned, and would endeavour to adopt a system applicable to all.

786. But the Provincial Government would be able to alter rates of excise within its own province if no objection were offered?—In so far as the law permits it to do so, and if the Imperial Government sees no objection to it.

787. Then, in any case, if the Provincial Government desires to make a variation in the Excise rates within the province, application must be made to the Imperial Government?—I think they are permitted by the law to vary the rates on their own authority. Certain rates are prescribed. It does not follow that they should levy up to the maximum at first, but if they thought fit to raise the rate afterwards, they could.

788. The Imperial Government prescribes from time to time certain rates, with discretion to the Provincial Government as to levying those rates?—Yes.

789. If in so doing it does not interfere with the neighbouring provinces?—I think that is so.

790. Then you say that a power of granting or increasing salaries, up to 200*l.* or 300*l.* a year, is given to the Provincial Governments, provided always that the total of the Budget is not exceeded?—Yes, the limit is Rs. 3.000 a year, the same amount as that up to which the Government of India can act in regard to new appointments without the sanction of the Secretary of State.

791. Then the Imperial Government simply delegates to the Provincial Government its own power?—Exactly so.

792. This is rather going outside the Provincial arrangements, which we are dealing with now; but may I ask, does the necessity for referring home about sums so small as salaries just exceeding 200*l.* or 300*l.* a year, ever arise?—It is an old rule which was prescribed I think in the year 1864, and it has always been maintained, that no increase of salary beyond that limit shall be permitted without the sanction of the Secretary of State. It is very much mixed up, no doubt, with the question of the power of appointing European officers in India. The amount of 3,000 Rupees is such as a Native, or a Eurasian, or European in India, might receive in a subordinate capacity; such appointments are left to the Government of India, but, if they wish to appoint an officer of a higher standing, they would be obliged to have the sanction of the Secretary of State.

793. Then you look at it that it is rather to enable the Secretary of State to keep within his own hands, and within his own knowledge, the extent to which English-born people are employed?—Yes. I think 30 years ago it was thought necessary, in order to prevent nepotism on the part of the Provincial Governments.

794. (*Mr. Courtney.*) Has not the value of the limit very much changed in the 30 years?—Not in India, I believe. In England it has very much, no doubt.

795. (*Chairman.*) What power have the Provincial Governments of increasing casual and contingent expenditure?—Complete power, within the limits of the total budget grant.

796. The memorandum states that no new general service or duty may be undertaken without the assent of the Imperial Government. Is that rule absolute? If the Provincial Government wish to institute an inquiry, which would cost Rx. 100, Rx. 200, or Rx. 500, and they can do it within the limits of their budget, must they still get the sanction of the Imperial Government?—The rule is absolute, but the term "general "service or duty" is not intended to cover an inquiry of a purely temporary character. As a matter of fact, Provincial Governments institute such inquiries on their own responsibility.

797. The Memorandum states at the same time, that each Provincial Government can distribute at its own discretion its own budget receipts among the Departments for which it is responsible. Would you explain more fully the extent of this discretion, because the limitations previously described, seem to reduce the powers of the Provincial Government to little more than the duty of paying certain fixed exponses, with a very limited power in minor details?—The estimate of budget receipts and expenditure is prepared by the Provincial Government; and, even after its acceptance by the Government of India, the Provincial Government may re-distribute the amounts, provided that the total grant for expenditure is not exceeded.

798. My difficulty is to reconcile the extremely limited discretion which is permitted to the Provincial Governments, if the powers reserved to the Imperial Government are exercised, with such a statement as that on page 2 of the Memorandum. The Provincial Government may sanction an increase of charge in a fixed establishment, if met by an immediate equivalent reduction in the same establishment or a similar one in the same department. That would imply, would it not, a larger discretion than is compatible with the limitations described?—This refers to the power of a Provincial Government with respect to an Imperial charge. It has a much greater freedom in regard to provincial charges, though necessarily restricted in many ways by rules also restricting the Imperial Government.

799. Such as that relating to salaries of 3,000 rupees?—Such as that relating to the salaries which I have just mentioned.

800. In order that we may understand the point correctly, could you describe or show us an example of a provincial Budget? Is it divided into chapters and sub-heads? May a saving on a sub-head within a chapter be transferred to meet expenditure on another sub-head within the same chapter, or may savings on one chapter be transferred to another chapter, on the authority of the Provincial Government? or must the assent of the Imperial Government be obtained?—I hand in the Bengal Budget for 1894-95, as laid before the Legislative Council.* It is divided into major and minor heads. The major heads are such of the 33 of Revenue and 49 of Expenditure shown on pages 76 to 80 of the Financial Statement (laid before Parliament in 1895) as deal with figures included in the Provincial Budget. Minor heads are sub-heads of the major heads, which are prescribed in the Civil Account Code. I have a list here which I can give the Commission if they wish. A saving on any head (whether major or minor) in the provincial Budget may be transferred to meet expenditure on any other head, on the authority of the Provincial Government, the only condition being that the total budget grant shall not be exceeded. In the case of heads which are divided between Imperial and Provincial, the requisite transfer must be effected in regard to both branches of the expenditure. The Provincial Government is not allowed to make a transfer which would affect the Imperial Government, unless it makes a corresponding saving somewhere under a head which is Imperial also.

801-2. Could you point out to us in the local Budget where the major and minor heads are given?—Yes. I will compare the local Budget with the finance accounts. There you will see the major heads.

803. And that corresponds, I think, with the headings in the Bengal Budget which I have before me?—Yes, in the first part Is there any particular head which you would like me to illustrate?

804. Take Law and Justice No. 19?—Law and Justice is divided into "A" and "B"; "Courts of Law" is 19A, and "Jails" is 19B. "Courts of Law" has the following minor heads:—"High Court," "Law Officers," "Coroner's Court," "Presidency Magistrates, &c.," "Civil and Sessions Courts," "Courts of Small Causes," "Criminal Courts," "Pleadership examination charges," and "Refunds."

805. Those are all minor heads?—Yes, under the major head of "Law and Justice (Courts of Law)." Then under "Law and Justice—(Jails)" are the minor heads, "Superintendence," "Presidency Jail," "Central Jails," "District Jails," "Lock-ups," "Reformatory Schools," "Jail Manufactures," and "Refunds."

* "Abstract of the proceedings of the Council of the Lieut. Governor "of Bengal assembled for the purpose of making laws and regulations "under the provisions of the Indian Councils Acts, 1861 and 1892," 31st March 1894. pp. 122-139.

806-7. I observe, from a paper which you have handed in, that in certain cases of distress and pressure, the Imperial Government admits a claim on the part of the Provincial Government for extraordinary relief. Would you state what are the conditions on which such a claim can be entertained?—In case of severe distress from famine, a Provincial Government must not expect to receive aid from the Imperial Government until its current income is exhausted, and two-thirds of its accumulated savings in excess of the ordinary working balance have been spent. It is further provided that, after the pressure has passed away, the margin of normal income over normal expenditure shall be applied to the completion of the undertakings begun as relief works during the famine, or in some degree to the payment of interest on the loans that may have been raised in consequence of the famine in the province.

808. What would happen if a Provincial Government, transgressing its authority, incurred expenditure without the assent of the Imperial Government, and exceeded in consequence its budget?—It is the Accountant-General's duty at once to warn the Provincial Government of the probability of an excess in the expenditure, and, if its reply be not satisfactory, he can require that his report be sent to the Government of India. Unless a re-appropriation be effected, the Provincial Government must obtain the Supreme Government's sanction for the excess. In any case the excess would have to be met from the provincial balances.

809. That is to say, if the Provincial Government were to transgress the regulations under which it is bound to act, the only penalty upon it would be that the excess would have to be met out of its balance, which it has to keep at a certain minimum, and in the following year its powers of spending would be restricted in consequence?—That is the penalty if the Government of India condones the excess, and agrees that the excess may be allowed; but it is conceivable that the excess may be disallowed.

810. And then?—If it is a payment to an officer he may have to refund. If it is a payment which cannot be paid back, the Provincial Government would have to take it out of its balances.

811. Supposing it was a real difference of opinion between the Imperial Government and the Provincial Government, and the Provincial Government had knowingly disobeyed the Imperial Government; in that case would it simply be a question of the excess being taken out of the provincial balances?—That is the penalty; but I have here a case that has very lately occurred which will, perhaps, illustrate the point. It attracted my attention when I was looking at this volume of Proceedings. It happened only in January last. This is a letter to the Government of Bengal:—

"I am directed to acknowledge the receipt of your letter, No. 6656 F., dated the 15th December, 1894, requesting sanction to additional grants of Rs. 3,64,000 (distributed under nine major heads) for provincial expenditure, and Rs. 1,57,000 for local expenditure in Bengal during the year 1894-5.

"2. The increase in the grant for provincial services is made up of an excess of Rs. 5,74,000 likely to occur under certain heads of expenditure, and a saving of Rs. 2,10,000 under certain other heads. The largest items of excess expenditure are stated to be:—

"(*a.*) Rs. 1,68,000 on account of exchange compensation allowance.

"(*b*) Rs. 17,000 on account of the cost of cess revaluation in the Patna District.

"(*c.*) Rs. 20,000 due to the opening of new registration offices.

"(*d*) Rs. 35,000 for clearing the Gaighatta Khal and the Balighai Drain.

"(*e.*) Rs. 20,000 for contract contingencies under Police.

"(*f.*) About Rs. 14,000 for additions and alterations to the Sibpur workshops.

"(*g.*) Rs. 41,000 for improvements at Hastings.

"(*h.*) Rs. 50,000 on account of contribution towards the cost of acquiring land for a recreation ground for young men.

"3. In reply, I am to convey sanction to the additional grants asked for. I am at the same time to point out that in some cases—notably in those classed as (*d*) to (*h*) above—the extra expenditure appears to have been sanctioned by the local Government, although it was known at the time when the expenditure was incurred that no funds were available in the Budget. In the same way the local Government has passed Rs. 1,57,000 of additional local expenditure without objection, although the amount was not provided for in the Budget.

"4. The Government of India are obliged to raise strong objection to this procedure, and request that, whatever be the state of the balances, or the prospects as to the closing Provincial or Local balances, the Local Government will recognise its obligation to keep its expenditure during the year within the amounts granted in the Budget orders for the service of the year. The principle is one of the greatest importance, which has been repeatedly declared, and lies at the foundation of all Budget control." So that you will see the Government of India had no choice but to sanction it, but they coupled their sanction with those remarks.

812. There is no resource except to sanction. If it were a case of an officer deliberately paying a sum which he ought not to have paid, I understand that it would be recovered from him. If it were an act of repeated disobedience, it would, no doubt, be dealt with by the dismissal of the officer?—Probably, if it were a very serious matter.

813. (*Mr. Jackson.*) You spoke of a penalty. Supposing the balance were exhausted, how would the balance be re-established?—Each Provincial Government is required to keep, according to its Budget, a minimum balance which is proportionate to the circumstances of the Province, and it is a considerable sum of money. In the case of the Bengal Government it is 20 lacs of rupees, Rx. 200,000. It is not probable that any depletion of that balance could take place without it being soon discovered what was going on.

814. Yes, but that does not go quite far enough. Does it mean that additional taxation would have to be levied in order to recreate the balance?—No, probably what would be done is akin to what is provided in the case of a famine, in the case of a severe scarcity which exhausts the minimum balance. The Government of India will replace the balance after a time, but it requires that the Provincial Government shall pay interest on any debt that may have been incurred in consequence, or shall repay such sums as may be thought right, and the Provincial Government would not be allowed its spare revenues until such replacement had taken place.

815. (*Chairman.*) Then it would not be replaced by penalising the province by stopping its public works in the following year, until the balance was recouped? Even in the case of such disobedience as I have spoken of, the Central Government would find the money, merely charging interest upon it until such time as the Provincial Government found it convenient to repay the money?—I think so; there is no regulation exactly for such a case. I suppose it has never been contemplated, but undoubtedly the money would be found by the Central Government. I do not think it would be a case of putting on taxation.

816. (*Mr. Caine.*) It would be treated as an overdraft, I suppose?—It would be treated as an overdraft, and probably replaced, if it was a very great amount, by a loan, I think.

817. (*Mr. Buchanan.*) Has any case occurred in which a Provincial Government has reduced its balance below the minimum?—Yes, there have been some cases, and I think in one of the papers laid before the Commission I have given instances of it, but it has been replaced after a short time.

818. By the Government of India, in the way you have mentioned?—In the case of Burma the Government of India replaced it. This was because the agreement was found not to be based on a satisfactory footing. Bengal had considerably less than the minimum when that was first prescribed, and the Provincial Government had to be careful for the next year or two until they brought it up to the amount fixed.

819. Then, practically, sometimes the penalty is after this form: "Now, there is so much less for you to "spend, because you have to bring your balance "back?"—Yes, that is it.

820. (*Mr. Jackson.*) The penalty rather takes the form of having less money to spend than of increasing the revenue to be raised?—Yes.

821. (*Chairman.*) I observe two rules laid down which are thought in this country essential to sound finance, (1) that in absence of strict necessity, new expenditure should begin with the new financial year, and (2) that the mere insertion in the Budget of a charge requiring

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

6 Nov. 1895.

special authority, is not a sanction for the incurring of that charge without the special authority?—That is so.

822. Those are rules as to which the Home and the Indian Government are entirely in accord?—The Indian Budget system was set on foot by Mr. Wilson, who was very well acquainted with English finance.

823. An arrangement was made in 1877-8 with the Government of the North-West Provinces, whereby that Government undertook the charge of the canals of the province. The Imperial Government were at that time taking the profits of the canals reckoned at Rx. 256,300; and paying the interest on the capital expenditure, Rx. 244,000, thus making a net profit of Rx. 12,300. Under the new arrangement the Imperial Government freed itself from any charge on account of the canals, and took a net profit of Rx. 112,000, while the Provincial Government on its side had to provide Rx. 100,000 extra by increase of local taxation, until, by increasing the canal revenue or economy of management, the deficit was filled up. That seems rather a one-sided bargain, does it not, more profitable for the Imperial than for the Provincial Government? Where was the compensating advantage to the Provincial Government for the extra charge?—By the Local Rates Act of 1871, the whole of the revenue raised under the Act had to be spent on works of public utility in the district in which it was raised. In 1877 an Act was passed authorising the Provincial Government to allot 10 per cent. of that revenue for canals and railways in the province generally, irrespective of the particular district. This enabled the Provincial Government to accept the interest charge for the canals, relieving the Imperial Government of an amount corresponding to the 10 per cent. so assigned to them. Therefore, the measure, though adopted for Imperial purposes, did not injure the Provincial Government, but enabled it to spend part of its local rates in a more satisfactory manner. Moreover, the canals being thus provincialised, the Provincial Government was granted one-half of any saving which it could effect thereon.

824. You say that in 1877 an Act was passed authorising the Provincial Government to allot 10 per cent. of the revenue?—That is of the local rates.

825. Of the local revenue for canals and railways in the province generally; and no extra funds were given it to enable it to meet this charge. It had only a power of allotting to these services a portion of the revenue which had already been assigned to it?—It had the power of applying to one purpose what before was limited to another.

826. But no fresh funds were given it for that purpose, it was out of existing funds?—It was out of existing funds.

827. So far as it went, there is no doubt that the Imperial Government were the gainers?—The Imperial Government were the gainers by that change.

828. In the Bengal Budget of 1894-5, which you have handed in as a sample of one of these local budgets, I will take one item, "Public Works Irrigation." Irrigation receipts placed at the disposal of the Bengal Government amount to 243,000 rupees. On the other hand the expenditure is 550,000 rupees, and therefore, so far, the Provincial Government taking over the irrigation works, took them over at very considerable loss?—Yes, it may; under the head of "Irrigation" there may be a large deficit.

829. You would not be surprised to find that that was the case?—No, it is one of the points which would be considered in aiming at the equilibrium at the beginning of the agreement.

830. Is there any benefit that the Government gets out of these irrigation works that would lessen that apparent loss, because on those figures more than 50 per cent. is lost; the Government does not get back 50 per cent. of the charge on the canals?—No, the canals in Bengal are not remunerative. Some of them involve a very heavy charge, and the revenue for paying that deficiency has to be provided from other sources.

831. It does not surprise you that that should be the case?—No. I suppose under most of the heads you would find that there is not an equilibrium, that there is either a surplus of revenue over expenditure, or else the expenditure exceeds the revenue.

832. I see, as a matter of fact, taking State railways and irrigation together, they produce just about the total cost of the irrigation. You may almost put them one against the other; 553,000 rupees?—It is a coincidence, I think.

833. It is a coincidence, of course, but that only occurs because the Provincial Government receive a considerable sum on account of railways, while they pay nothing?—Yes. (*Mr. Jacob.*) That is merely a matter of adjustment. The Provincial Government in Bengal is allowed a certain proportion of the railway revenue.

834. Though it pays none of the expense?—It is allowed that amount under revenue, without any charge; it is a matter of account. The whole of the expenses are charged to the Imperial Government, but the Provincial Government gets its share of the net revenue.

835. Practically you may say that if you take public works in Bengal, the receipts and expenditure are almost the same. That is a coincidence; but as a fact the Provincial Government makes no profit out of them?—(*Sir Henry Waterfield.*) It is only a coincidence. The extent to which the railway receipts would be allowed to the Provincial Government varies in each case.

836. Do I understand that when this arrangement is made it is a question of arrangement; it is a question of equilibrium?—Yes.

837. Do you know the *present* financial result to the Provincial Government of the arrangement regarding the Canals in the North-West Provinces?—It is impossible, I think, to give the present financial result, owing to the great changes made in subsequent revisions of the provincial agreement. I find, however, that in 1881-2, the last year of the then existing quinquennial arrangement, out of a total revenue from the canals of Rx. 467,429, the Imperial Government received as its share of profit Rx. 49,053, which seems to show that under the new system the revenue of the canals must have been considerably developed. You will observe that the Imperial Government was to receive a share of the profit, and, when the charge was made over, they could not have received any portion, unless the whole arrangement had resulted in a profit to the Provincial Government.

838. I have had a paper put in my hands which you will put in.* It states the balances, and from that one can arrive at the meaning of two-thirds of "accumulated savings"—I suppose you mean by these "accumulated savings" the excess over the minimum balance required, in Bengal, for instance, over Rx. 200,000?—Yes.

839. The actual balance, we will take it in 1894-95, for Bengal, was Rx. 262,000, and I suppose you would call Rx. 62,000, that is the excess of the balance above the minimum balance, the "accumulated savings"?—Yes.

840. The arrangement, in fact, secures the Provincial Government a normal income, if the Revenue answers to the estimate. The Imperial Government takes the risk of war, and fall in exchange. The Imperial Government, further, in certain conditions of distress admits the claim of the Provincial Government to special assistance?—Yes, but, with reference to your words the fall in exchange, I may say that Provincial Governments have now to bear a part of the special allowance given as compensation for the fall in exchange.

841. That appears in the Budget of Bengal. Out of the share of land revenues assigned to the Provincial Government, I see that there is a deduction made for a sum which the Imperial Government has called upon the Provincial Government to find towards that charge?—I have not the figures before me, but I think probably that is only what is paid to the officers concerned in the collection of the land revenue. The compensation comes in respect of salaries under each head of expenditure.

842. That is what I am referring to. The Bengal share of the land revenue, was nearly Rx. 1,000,000. This total is subject to a further deduction which is made up of three items, and one of them is "Special "contribution during 1894-5 under the orders of the "Government of India, Rx. 300,000"?—No. That is a different thing altogether. That is a contribution to the Imperial Government, not compensation to the officers.

843. Why was it asked for?—That was owing to difficulties which the Government of India fell into in that particular year.

* *See* Appendix 8.

844. It was not to enable them to pay this particular compensation?—No, it had nothing to do with exchange compensation. I may, perhaps, explain, as my answer does not seem to be sufficiently clear, the meaning of that compensation for the fall in exchange. Under the rules passed in 1893 every officer who is a European or Eurasian, not domiciled in India, is allowed to receive, in addition to his salary, a certain percentage, which is quarterly fixed, as compensation for the fall in exchange. That compensation, if it is added to a salary paid by the Provincial Government, is charged against the Provincial Government, and the Imperial Government will not bear the charge.

845. And that, therefore, means an increase of the expenditure?—It is an increase of the expenditure charged to the Provincial Government which it has incurred through the fall in exchange.

846. But it is kept separate because, if the exchange rose, it would cease?—It is altered every three months, so that if the exchange rose to 1*s.* 6*d.* the rupee, it would disappear altogether.

847. On the other hand, the Imperial Government reserves to itself the right of calling on the Provincial Government to contribute to the Imperial expenditure in case of abnormal disaster?—Yes, I would rather say in case of abnormal pressure. My meaning is that, although you have quoted the word disaster quite accurately from the resolution of the 30th December 1891, I think it is hardly applicable in all cases. It was there said that the Imperial Government would make no demand on the Provincial Governments, "except in the case of disaster so abnormal as to ex- "haust the Imperial reserves and resources, and to "necessitate a suspension of the entire machinery of "public improvement throughout the Empire." Lord Hartington thought it undesirable that the Government of India should be pledged to place itself in the position of proving that such a state of matters existed, before it could require assistance from the Provincial Governments, and that it would be sufficient to state that they would not be called upon to surrender any portion of their revenues, unless the Government of India saw no alternative between such a course and the imposition of taxation, which it was not considered expedient to undertake. That is the reason why I preferred speaking of abnormal pressure.

848. And it is that claim for contribution under pressure of which we find an actual instance in this local Budget?—That is so.

849. (*Mr. Courtney.*) How often has that been levied?—On the occasion of the Afghan War, two amounts of Rx. 335,000 each were contributed by the Provincial Governments in 1879-80 and 1880-81, but the whole sum of Rx. 670,000 was restored in 1882-83. In 1886-7 there were contributions amounting to Rx. 400,000, owing to the deficit which arose through the fall in exchange and the military operations in Upper Burma; in 1890-91 from similar causes contributions of Rx. 490 000 were required; and in 1894-5 there were contributions of Rx. 405,000, in consequence of the heavy fall in exchange.

850. (*Chairman.*) That was rather a big transaction, that first one, was it not? In consequence of the Afghan War, first of all, the Provincial Governments were told they must not carry on certain works. Were moneys which would have gone to those works—moneys assigned to them—really taken back? Were not the moneys left in their power but not to be spent?—The contributions were withdrawn during the Afghan War, and then subsequently refunded.

851. Out of Imperial revenue?—Yes, the Imperial share of the land revenue was reduced by the total sum.

852. Then that contribution of 1894-95 is quite a separate matter from the increase of local expenditure, which arose from the compensation allowances given for a fall in exchange?—It is quite apart from that. The Imperial Government found itself in deficit, and it said, "rather than impose taxation to meet this "deficit, we must call on the Provincial Govern- "ments, according to their ability, to contribute to our "assistance"; the amount so taken was, altogether, Rx. 405,000.

853. I gather from the memorandum that, in the Afghan War, the Provincial Governments were told not to spend the whole of the sums advanced to them; but it would appear that the Imperial Government did not actually take the sums so unspent; these moneys remained in the hands of the Provincial Governments, and constituted what subsequently became the working balances of the Provincial Governments. Can you explain the transaction to which I refer? The Government temporarily checked Provincial expenditure, and withdrew Rx. 670,000 from the Provincial Budgets, which they later restored?—The contributions were withdrawn during the Afghan War, and subsequently refunded. The amounts do not, except in one or two instances, coincide with the minimum balance prescribed. It may, of course, be said, seeing that the total balances in India amount to 1,000 to 1,500 lakhs, that the 67 lakhs were not actually spent; but they were not at the credit of the Provincial Governments during those two or three years.

854. Exactly, but when they were eventually put back, the Provincial Governments were not allowed to spend them, but they formed the basis of that minimum working balance, did they not?—No. As a matter of fact they increased the balance so largely that the Provincial Governments spent very freely during the next few years.

855. (*Mr. Jackson.*) But they were placed at their disposal?—The sums refunded were placed at their disposal, and the Provincial Governments spent money on public works very freely.

856. (*Chairman.*) There is a question that occurs to one here. The words are constantly used, "the Provincial Government." What is exactly meant by the Provincial Government? Is it the Governor or Lieutenant-Governor in his Council? Take, for instance, the Punjab. Is it the Lieutenant-Governor of the Punjab in his Council who submits the Provincial Budget to the Imperial Government; and, if so, does he submit it to the Governor-General in Council, who refers it to the Central Treasury?—There is no Council in the Punjab. The Provincial Government means the Governor and Executive Council in the case of Madras and Bombay; the Lieutenant-Governor or Chief Commissioner, without a Council, in the other Provinces. In Madras, Bombay, Bengal, and the North-West Provinces, there are Legislative Councils, before which the Budget is laid for information, but the Budget is submitted to the Imperial Government by the Executive Authority. It is approved by the Governor-General in Council in the Financial Department.

857. That is to say, that the Governor in Council in Bombay sends the Budget to the Governor-General in Council in Calcutta?—In Calcutta, in the Financial Department.

858. And when you say in the Financial Department, that means that the Governor-General refers it to the Financial Department?—It is received in the Financial Department of the Government of India; that is the office to which it is addressed. Of course it is sent with a Secretary's letter.

859. And it is forwarded by the chief financial authority in the province, corresponding in the province to the Financial Member of Council in Calcutta?—In Madras and Bombay by the Governor in Council in the Finance Department, in other provinces the Lieutenant-Governor, would communicate with the Financial Department of the Government of India through one of his secretaries.

860. In the latter case is the secretary only a means of communication?—The distribution of work varies in the different provinces. In most cases the secretary in charge of the Finance Department has other departments under him.

861. Does he correspond directly with the Financial Member of Council about financial measures generally, or does he do so through the Lieutenant-Governor?—The Secretaries of the respective Governments correspond with the Financial Secretary to the Government of India.

862. On financial questions?—Yes.

863. The Accountant-General of the province, I suppose, communicates on questions of account with the Comptroller-General, but does he do so directly or through the Governor in Council or the Lieutenant-Governor as the case may be? Does he give to the Governor or Lieutenant-Governor copies of the financial returns which I understand he makes to the Comptroller-General?—He communicates directly with the Comptroller-General, informing the Provincial Government of his action when necessary, and giving it copies of such returns as are requisite for its information.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

6 Nov. 1895.

864. Therefore, it comes to this, that the Accountant-General being an officer of the Central Government, has a discretion as to what financial information he communicates to the head of the Provincial Government?—He has the discretion, but is bound to use it in such a way as to give the Provincial Government such information as it needs.

865. That is to say, if he were to refuse that information, the Central Government would censure him?—Certainly.

866. But he would not communicate directly with the Comptroller-General on reforms, or reduction of salaries, or alteration of duties?—The Accountant-General would correspond with the Comptroller-General on a question of account or audit; as a rule, in questions relating to the reduction of salaries, alteration of duties, &c., he would act as adviser to the Provincial Government, who would give such orders as seemed requisite, or refer, if necessary, to the Government of India.

867. Then I think my question to you was put rather under a misapprehension. From what you have said in answer to a previous question, I think I may bear in mind that the Accountant-General is purely an account officer under and subordinate to the Comptroller-General. With his considerable knowledge of finance and his considerable command over financial information, he is naturally an adviser to the Provincial Government; but he has nothing to do, I think, except in his own Department, with salaries, or duties, or rates?—Quite so; he is the adviser of the Provincial Government, but he is not their financial officer.

868-9. And except as regards officers in the Account Department, he has no interest in the provincial salaries, or rates of pay?—No. Only that the Provincial Government is accustomed always to refer a question to the Accountant-General in case of any proposed increase of salary or of establishment, to make sure that they have stated the case rightly, both as to the existing cost and the proposed increase. (*Mr. Jacob.*) Might I read the orders on the subject? They run as follows: "In matters relating to the appointment "and control of the officers gazetted and non-gazetted, "working under him, and to the administration of his "office generally, the Accountant-General, as an account "and currency officer, is subject to the direct control "of the Government of India in the Finance Department. All correspondence with the Government of "India on such matters, including reports of giving "and taking charge, should be submitted through the "Comptroller-General, except in case of urgency, when "a copy of the letter or report should be sent to the "Comptroller-General with the intimation that the "original has been sent direct to the Government of "India. The Accountant-General is in immediate "subordination to the Comptroller-General in all "matters connected with audit and account, and will "refer to him all questions bearing on the classification of receipts and charges and other matters of "account: such questions should not be referred to "the Government of India at all, unless the Comptroller-"General is in doubt, or the Provisional Government "does not accept the Comptroller-General's view." And then as to the relations with the Provincial Government, "The Local Government may require special returns "to be prepared in any form it likes; and the "Accountant-General will conform with all requisitions of the Local Government, though, if any seem "opposed to specific orders of the Government of "India, he should first respectfully make a representation to that effect. But all returns, accounts, and "statements for the finance and revenue accounts, or "required by the Comptroller, must be prepared in the "form prescribed by the Comptroller-General; and in "all matters relating to the procedure of the finance "and revenue accounts, the Comptroller-General's instructions should be followed, as it is essential that "there should be uniformity in the accounts of the "several provinces. If a Local Government objects to "any part of the procedure prescribed by the Comptroller-General, it should report its objections to the "Government of India in the department of finance, "but should never of its own motion interfere with "such procedure. It is usually found convenient for "a Local Government, before passing orders, to obtain "the advice of the Local Accountant-General as to any "particular application of financial rules or orders "concerning which there may be doubt. Also whenever an Accountant-General is of opinion that any "proceeding of a Local Government transgresses any "such rule or order, it is his duty respectfully to advise "the Local Government accordingly. In either case "the Local Government may follow or disregard the "advice of the Accountant-General as may seem to it "right. But if the Accountant-General does not "finally acquiesce in the correctness of the decision of "the Local Government, it is his duty respectfully to "request the Local Government to submit the question "for the orders of the Supreme Government. The "Supreme Government does not usually receive any "communications upon such matters from an Accountant-General except through the Local Government; but a Local Government must not withhold "any such representation made by an Accountant-General unless it yields thereto."

870-1. What is that quoted from?—That is from the Civil Account Code, Articles 1630, 1631, 1632, 1633.

872. I am anxious in dealing with this provincial finance that we should clearly understand the extent to which the Provincial Governments have independent powers of action, and the character and channels of communication between the Provincial and Central Governments; and therefore I will ask you whether on questions of military finance, the Military Controllers in the three provinces correspond directly with the Military Accountant-General, and, if so, whether they communicate copies to the Provincial Government to which they belong?—(*Sir Henry Waterfield.*) The Military Account Department is not provincial. There is a Controller for each of the four commands (Bengal, Punjab, Madras, and Bombay), who corresponds directly with the Military Accountant-General He would not now be in direct relation with the Government of the province in which he is stationed.

873. Therefore the Governor of Bombay, as far as ordinary routine business transactions go, is quite unaware of military movements and military expenditure within his province?—I hardly know what the recent orders are as to military movements; a change has recently been made by the abolition of the post of the Commander-in-Chief and his replacement by a Lieutenant-General in command; but as to military expenditure, correspondence would go to the Imperial Government; the Provincial Government would not have to deal with that.

874. Again, do the Public Works Departments in the Provincial Governments communicate directly with the Central Public Works Office in Calcutta, or is the correspondence with the Central Government conducted through the Lieutenant-Governors?—There is a Secretary to Government in the Public Works Department in each province, who corresponds with the Secretary to the Government of India in the Public Works Department, under the orders of the chief local authority.

875. Therefore, so far as public works are concerned, the Provincial Government is fully informed of what is going on?—Yes.

876. But still have we not gathered from you that the Public Works Department is an Imperial Department?—The civil buildings and roads are under the Provincial Government; the construction of a railway is generally kept entirely in the hands of the Imperial Government; it would depend very much on whether it ran through more than one province or not.

877. I meant to ask, are not the officers Imperial officers?—No. The officers are provincial, though they may be told off to an Imperial work.

878. While in the province they belong to the Provincial Government?—Yes.

879. Do any other heads of local Departments communicate directly with authorities in Calcutta?—Heads of local Departments in all cases report to and receive orders directly from the chief local authority, who corresponds through his secretaries with the Supreme Government.

880. But I think I have heard from you that there are certain services that the Imperial Government keeps entirely in its own hands. There are scientific services such as the Survey Department, for instance, and various others; I was rather speaking of those services?—I must have misunderstood the question then; they are called Imperial Departments, and they are directly under the particular Department of the Government of India which supervises their operations.

881. And act independently in Bombay, we will say, of the Governor of Bombay and the Provincial Government?—The Survey of India would not be under the Governor of Bombay at all.

882. The scientific services would not?—The scientific services generally would not be under the Provincial Government.

883. Does any friction arise from the fact that there are services within a province of which the Governor knows nothing?—I should think the duties are so distinct that there is no difficulty arising from it. I am not aware of any.

884. The powers of control which the Central Government reserves to itself are very large. Does not this mean a very large amount of correspondence between the Provincial Governments and the Central Government?—No doubt it does.

885. But so far as your experience goes you have no reason to think that that is in excess of what is necessary?—No; I think relatively it must have been very much diminished by the decentralization system. No doubt the correspondence that goes on in India now must be much larger than it was 25 years ago; but it would have been very much greater had not the Provincial Government the independent powers which they have.

886. Can you in any way illustrate the diminution that you think has resulted from the decentralization system?—The power that I have mentioned of rearranging the Budget (within the total grant), on its own responsibility, enables a Provincial Government to dispense with a vast amount of correspondence on details. It also has practically the same independent powers as to sanctioning new appointments and carrying out details of administration, so far as provincial expenditure is concerned, that the Imperial Government has with reference to Imperial expenditure, and thereby much correspondence on such matters is avoided.

887. Would you describe to us how the Budget of each province is prepared; that is to say, what officer prepares the draft of it, and by what officers is the draft corrected?—The method of compiling the Budget is at the discretion of the Provincial Governments, but the following is the usual course. The estimates for each office are prepared by the head of the office; they are revised and collected by the head of the Department, who usually sends the Departmental Budget to the Accountant-General. After examination to see that the expenditure has been sanctioned, he passes them on to the Provincial Government. That Government makes any alteration it thinks fit, and returns them to the Accountant-General for compilation. He submits the compiled Budget to the Provincial Government, with any observations necessary if expenditure not sanctioned has been proposed beyond the power of that Government; and at the same time he forwards a copy to the Comptroller-General. The Provincial Government then submits the Budget to the Government of India in the Financial Department.

888. By what date must it be forwarded to the Central Government, and what time does that leave for consideration then, and for correspondence with the Provincial Government upon disputed items before the time comes when the Central Budget must be completed and adopted?—The Budget must be despatched by the 15th of January, which allows about two months for correspondence with the Accountant-General, and, if necessary, with the Provincial Governments, before the final figures are accepted by the Government of India.

889. The Central Government requires the Provincial Governments, does it not, to keep a normal cash balance or reserve, in order to guard against fluctuations in the finances of those governments? When was this measure adopted?—It was laid down in 1883–4 that the budgets of the Provincial Governments should be so prepared as to show, at the close of the year, cash balances not below a certain amount, varying in each case.

890. How was this balance originally formed?—Excluding money held for purely local purposes, the Provincial Governments had balances at the commencement of 1870–71, amounting to Rx. 118,749. The Government of India then gave them grants aggregating Rx. 200,000, for a working balance to start the provincial service scheme. The following is a statement of the amounts held by them at the commencement of each year:—April 1, 1870, Rx. 118,749; 1871, Rx. 341,631; 1872, Rx. 808,692; 1873, Rx. 1,033,095; 1874, Rx. 541,353; 1875, Rx. 717,184; 1876, Rx. 324,719; 1877, Rx. 398,595; 1878, Rx. 721,182; 1879, Rx. 1,216,631; 1880, Rx. 1,740,374; 1881, Rx. 1,950,056 1882, Rx. 3,705,046; 1883, Rx. 2,648,626.

891. Was the tremendous increase in 1882 owing to the Provincial contributions being refunded by the Imperial Government?—I think it was partly due to that, and partly due to the fact that some of the Governments, especially the North-West Provinces, did not spend so freely, and they had accumulated large balances. It was at this time that the rule was laid down that minimum balances should be maintained, proportionate to the size of each province, and to its liability to famine, amounting in the aggregate to Rx. 1,090,000, which was well within the total of Rx. 1,254,000, with which the year had been estimated to close. The provincial balances actually, however, amounted on the 1st of April 1884 to Rx. 2,115,095. Perhaps I may mention here that the actual balance is almost always largely in excess of the Budget. The Provincial Governments are accustomed to prepare their estimates of revenue cautiously, and also to estimate for free expenditure on public works; and they very often found at the close of the year that they were not able to spend so much as they expected, and therefore their balances, as given on the 1st of April, were much larger than the balance which they had put in their Budget as the estimate for the close of the preceding year.

892. Could you give us a list of these normal balances, and of the actual balances kept during a series of years, compared with the estimated expenditure of each Provincial Government?—Yes; I hand in the Table.*

893. Does it occur to you that these are not very large sums as a reserve on which to draw in times of difficulty?—I think it must be remembered what a very large country India is, and how very unlikely it is that a difficulty such as these balances are meant to meet, namely, famine, or scarcity, or any local emergency, would arise in all the provinces at the same time. These balances were not prescribed to meet contingencies of Imperial necessity, such as war, or a fall in exchange, but rather for local emergency.

894. Under what conditions can the normal balance be drawn upon?—There are no conditions, except that no Provincial Government may estimate to reduce its balance below the prescribed minimum without the special sanction of the Government of India.

895. That is to say, it is possible that a Provincial Government might send in a Budget in which the expenditure exceeds the income, telling the Government of India that they propose to draw to a certain extent on their balance?—They might make a proposal to that effect beforehand, and, if it were sanctioned, they might place it in the Budget; but they would not be allowed to send up the Budget in that state without having previously obtained the sanction of the Government of India.

896. Where is the normal balance kept, and how is it employed?—The balances of the Provincial Governments are not earmarked, but form part of the general balances, for the location and management of which the Government of India is responsible.

897. Is any part of those balances which is not wanted invested?—Only by the Government of India; it was one of the conditions that I read, that the Provincial Governments must not remove the balances for deposit elsewhere.

898. If the Government of India think that the balance in the hands of a Provincial Government is larger than necessary, would they invest a portion of it?—It is one of the duties of the Comptroller-General to keep a proper balance, and, of course, not more than is wanted, at the various stations.

899. As a rule do you invest?—(*Mr. Jacob.*) We do not invest, if you mean an investment which would bring in interest.

900. (*Sir Edward Hamilton.*) Do bankers allow any rate on deposits?—Yes, they do on small deposits.

901. (*Chairman.*) In the case of this Provincial expenditure, what is the process of audit?—(*Sir Henry Waterfield.*) I think I had better read to the Commission an extract from my note on the system of account and audit.†

* *See* Appendix 8. † *See* Appendix 1.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

6 Nov. 1895.

902. This is applicable to the Provincial audit?—Yes. The system of audit applies equally whether to Provincial or Imperial expenditure.

903. Well, we have already inquired as to what I may call the central audit, the Imperial audit, and the central expenditure and the local expenditure is so much intermingled that a good deal of what applied to the one would apply to the other: but I wish to arrive at the process of audit as it touches the Provincial expenditure?—It would be audited in the same way and by the same officers. In the accounts the expenditure would be distributed between Imperial and Provincial.

904. Perhaps you will read the passage?—The passage I was going to read relates to the process of audit generally. I do not know whether you would wish to have that read.

905. It would merely be a repetition of the process of audit?—Yes.

906. Perhaps I might ask you then, in order to keep this branch of our inquiry together, to tell us shortly who are the auditing officers of the Provincial expenditure?—(*Mr. Jacob.*) They are the Civil Accountants-General and Comptrollers of the Provinces.

907. They are Imperial officers, are they not?—They are entirely Imperial.

908. And they audit the Provincial expenditure?—Yes.

909. And so far, in this case, the auditor is an officer entirely independent of the Provincial Government to which he belongs?—Yes, he is quite independent.

910. And in addition to his audit functions he discharges no executive functions?—No, I should say not.

911. Perhaps you would make a qualification there, because you would say the Accountant-General is considered the adviser?—Yes, he advises the Provincial Government.

912. But he has not got the same executive functions, if I may so describe them, as the Comptroller-General has under the Central Government—management of the debt and so forth?—No. I do not know whether the preparation of the Budget is considered an executive function.

913. Oh, yes; the preparation of the Budget is considered an executive function; but I did not gather that he had anything to do with the preparation of the budget. I thought that in the provinces the different departments prepared the local budgets which are then made up, and it is the Provincial Governments which send them up to the Viceroy and the Finance Department?—But they go to the Provincial Governments through the Accountant-General.

914. Oh, it is through the Accountant-General?—The Accountant-General actually compiles the Budget.

915. (*Mr. Courtney.*) They do not appear among the officers of the Province in the official list of the Province?—No, they are not under the Provincial Government in that sense—(*Sir Henry Waterfield.*) I think you will find them under the Financial Department of the Government of India.

916. There is a Financial Department in each Province apparently?—Yes, that shows their local distribution.

917. (*Chairman.*) If the audit officer objects to a charge to whom does he report his objection and what action is taken on such an objection?—(*Mr. Jacob.*) If the Accountant-General sees reason in audit to object to a charge, he does not *report* the objection, but *orders* the recovery, at the same time communicating with the officer to whom the erroneous payment has been made. The Treasury Officer is bound to enforce the recovery. If the officer concerned should appeal to the Provincial Government, and that Government should support his view, the recovery may be temporarily suspended pending a reference to the Government of India, who alone overrule the Accountant-General.

918. Therefore the Accountant-General, or it may be an officer of the Accountant-General, as I gathered, has the power to disallow a direct order, say, of the Governor of Bombay?—Yes.

919. Absolutely disallow it?—He would object to it.

920. And he might disallow it?—Yes.

921. And in case the Governor objected, his only method is to appeal. The Governor must appeal to the Supreme Government?—Yes, and of course the Accountant-General would temporarily suspend any action if the Provincial Government informed him that it was desired to obtain the orders of the Government of India.

922. That is to say the Central Government would probably not back up its officer in rigidly exercising his powers in case a higher functionary was concerned?—There is an absolute order that, if the Provincial Government so directs, the enforcement of the disallowance should be suspended pending a reference to the Government of India. (*Sir Henry Waterfield.*) That is only a temporary suspension.

923. Oh, yes, quite so?—(*Mr. Jacob.*) Only temporary.

924. (*Sir Andrew Scoble.*) But it is a fact, is it not, that the Government of India frequently supports the Accountant-General in disallowing?—Yes, very frequently.

925. Even in very small amounts as well as large ones?—Yes.

926. (*Chairman.*) It appears to me rather a strong measure that a subordinate officer should have the final power of disallowing against the Governor of a province what is supposed to be an irregularity?—Of course the Accountant-General exercises no discretion in a matter of that kind, it is a matter of absolute rule. I might mention, perhaps, that the Accountants-General are not very subordinate officers; the highest Accountant-General gets 3,000 rupees a month.

927. The Accountant-General of the Province I look upon as a very high officer from your description of him, but I gathered that the officers under him have the power of disallowance?—The original order of disallowance might be issued by a subordinate officer, but, if it were disputed in any way, it would come before the Accountant-General at once.

928. Apparently the subordinate officer of the Accountant-General of a Province has authority to disallow an order of the Governor of a Province. That appears to me to be an arrangement which, though, no doubt, it works without friction in the hands of anyone understanding how to work it, yet, at the same time, is rather a strong measure since it permits a subordinate officer to have the final power of disallowance?—(*Sir Henry Waterfield.*) It shows that there is an independent audit in India.

929. But, I should say generally that the independent auditor ought not to have the final power of disallowance; it puts him in an awkward position, and, therefore, he should have only the power of reporting to a higher authority, and I should have thought in a case of this kind the natural course would have been, that the charge should not be disallowed, but reported for disallowance to the Supreme Government?—It is so, unless the Provincial Government accepts the disallowance.

930. The memorandum states that the Provincial Governments are invited to delegate part of their authority to local authorities, and boards, just as the Imperial Government has delegated part of its authority to them. Has this been done to any extent, and can you give us any instances of such decentralisation?—I am prepared to read a short note which Sir Charles Bernard gave me on this subject; but I do not know, if you are going to call him, whether you would not prefer putting the questions to him? If you would like to hear it read, it will not take two minutes.

931. Perhaps you might read it if it is not a long note?—No, only two pages: "Previous to 1881–82, "municipal bodies had existed under specific laws, and "these bodies administered municipal revenues and "municipal affairs; in rural tracts local committees "discharged similar duties with more restricted powers. "Since 1881–1882 this system has been carried much "further. Municipal Acts and Local Self-Government "Acts have been passed for nearly every province; and "everywhere, save in very backward parts, elected town "committees administer municipal affairs, and elected "district boards administer local rural affairs. These "bodies cannot impose fresh taxation without the "previous sanction of the local government, and can do "so only within the limitations laid down by law. But, "subject to supervision and report, they manage all "local and municipal affairs, even to a greater extent "than similar bodies do in the United Kingdom. The "scope of the local bodies' powers and responsibilities

" is not always the same in all provinces and cities; " for instance, in the Punjab and Burma, municipal " bodies manage schools and hospitals; in Bengal, " district boards manage primary schools; in the " North-West Provinces school management has not " been made over to municipal bodies. For their roads, " streets, drains, scavenging, water supply, and such " like matters, towns and districts have to depend on " their local rates and taxes; though on occasions, as " for instance, when new water supply schemes were " undertaken at Nagpore, Benares, Lucknow, Delhi, " and elsewhere, the local government contributed a " special grant. But, wherever schools or hospitals " were made over to local bodies, the local government " makes to each municipal or district body a permanent " yearly grant from Provincial funds; such grant bears " some proportion to the sums the local government " used previously to spend yearly on the departments " or undertakings transferred to such bodies." As to the progress of the measure, the following are the statistics :—

———	1881-2.	1893-4.
Population within municipal limits.	14,201,962	15,666,903
	Rx.	Rx.
Total income - -	2,906,242	4,598,705
„ expenditure - -	2,318,793	4,527,231

932. Then how is that income raised—to a certain extent by octroi duties?—Yes, and house tax.

933. And tolls?—Tolls, and carriage tax. Various local taxes of that kind.

934. Are these given over by the Provincial Government to the Municipal Government under general conditions laid down by the Supreme Government?—I should say that the power to levy the tax is given over; they raise it themselves.

935. On that point Sir Charles Bernard, perhaps, had better speak?—I think he would be a better authority.

936. That finishes my questions to you, Sir Henry, but I should like, having this Bengal budget before me, just to run through one or two of the items. I see that the Provincial budget first of all deals with the principal heads of revenue, and under that head there is a certain sum assigned out of land revenue subject to a deduction on account of adjustment?—Yes, that is so.

937. Those adjustments really mean in most cases a return to the Imperial Government of certain sums, do they not?—It is so; it is a portion of the land revenue that is taken by the Imperial Government beyond the three-fourths that it would otherwise receive. The adjustment might in some provinces take the form of an addition to the Provincial Government's share, but I am speaking now of Bengal.

938. Well, then comes the head of interest; how would that arise; what are the Provincial Governments' investments bearing interest?—It is interest on advances to municipalities and other local bodies, interest on advances to cultivators, interest on advances to land holders, &c., interest on drainage and embankment advances.

939. They are public loans?—Yes, and advances.

940. Then I have already called your attention to and had from you an explanation about the irrigation and the railways, public works in Bengal not being a paying business: and the last entry I find is " buildings and roads, civil works " by Public Works Department. I gather from that that there are certain receipts, but they are only on minor heads of public works. I think I understood you to say they are local?—The receipts on civil works are chiefly from tolls or ferries.

941. But those are only for minor works, are they not. Did I understand from you that the greater works are kept in the hands of the Imperial Government?—I thought you were speaking of the revenue head.

942. I am speaking of the revenue head. The Provincial Government only derives a revenue from the heads of services which it undertakes?—Yes. (*Mr. Jacob.*)—Almost entirely tolls on ferries. (*Sir Henry Waterfield.*)—It is entirely provincial and local, and almost entirely from ferries.

943. Yet I see that the expenditure by the Public Works Department is a very large one. Here it is between 200,000*l.* and 300,000*l.*?—You are speaking of civil buildings and roads?

944. Public Works Department buildings and roads?—Yes, buildings and roads, civil works.

945. On works in charge of the Public Works Department I have got 2,636,000 rupees as spent, and by the Civil Department 138,000 rupees?—Besides the expenditure which is carried on by the engineers in the Public Works Department, there is also an expenditure in each district of a petty character under the civil officers.

946. (*Sir William Wedderburn.*) I should like to ask a few questions with regard to this printed correspondence regarding financial control and appropriation audit.* I think it will be found that the Secretary of State has on several occasions—(I would refer specially to page 32 and page 44 of the correspondence), expressed an opinion that an appropriation audit analogous to that made by the Auditor-General in this country to the House of Commons would be advantageous. I would just read at the top of page 32. He says, " This question was discussed by the Committee which " was appointed by me in 1880 to report on the system " of military accounts. They were unanimous in " recommending that the detailed audit with vouchers " which is effected by the local Accountants-General, " and the results which are monthly reported to the " Comptroller-General should be supplemented by an " appropriation audit, which would be embodied in a " comparison and report for the year, analogous to that " made by the Auditor-General in this country to the " House of Commons"?—Yes.

947. That is in 1882. Then afterwards in 1888 he again returns to the subject, and in paragraph 6 of that despatch, at page 44, he says: " It has " been found, as a matter of experience, that most " important public advantages have been secured " by the operation of the system which I have de- " scribed. The independent auditor, far from encroach- " ing upon or hampering the action of the Chancellor " of the Exchequer, has become his most valuable ally. " Through the auditor alone he learns that his own " regulations are observed, and by the aid of the " auditor alone he is able to enforce the financial " order for which he is responsible to Parliament." What I should like to ask you is whether there is at present any system of audit that can be called analogous to the system which is here referred to under which the action of the highest executive is brought under the revision of the ultimate authority of Parliament?—No, I think there is no such at present.

948. There at present exists, I think, an appropriation audit?—Yes, there is an appropriation audit as Mr. Jacob explained yesterday.

949. I should like to know what is the exact advantage that is obtained by the existing appropriation audit at the end of the year as separate from the detailed audit that goes on from day to day?—Perhaps Mr. Jacob, as he has written such reports, had better answer that question or give an opinion thereon. (*Mr. Jacob.*) It brings to the notice of the Government of India, which has made the grants, that the grants have not been exceeded.

950. But that is brought to notice, I think, from day to day. As you explained to the Chairman, there can be no continuing irregularity. It would be at once checked. So that at the end of the year if that check had been effective, there is nothing to report except that the expenditure has been in accordance with the Budget?—There might be something that would come to the notice of the Government of India for the first time in the appropriation report. (*Sir Henry Waterfield.*) The appropriation report brings to the notice of the Government of India any excess that has occurred over the Budget, even though it has been sanctioned.

951. Is there any advantage? I notice that is the advantage stated by the Government of India from the present appropriation audit, but is there any practical advantage from that, seeing that the authority that sanctions the Budget is the same authority who spends the money? All the effect of that is to let the Government of India know whether at the end of the year they have been of the same mind as they have been at the beginning of the year, but it is the same authority that frames the Budget and afterwards spends the money? (*Mr. Jacob.*) As regards Imperial expenditure, that is so, but not as regards Provincial expenditure. (*Sir Henry Waterfield.*) Perhaps I may also read to you a

* *See* Appendix 2.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

6 Nov. 1895.

passage of Lord Hartington's despatch from the same page, 32, from which you quoted. He referred to the opinion of certain members of the Committee of 1880, which you read, but he went on in paragraph 4 of his despatch to explain the difference between the positions of England and India. He said: "The "case of India is not to be governed by the rules "laid down in European countries. In the United "Kingdom the supplies are annually voted by Parlia- "ment, which exercises a very jealous control over "the Executive Government in the disposal of those "supplies, and requires that an officer independent of "the Government shall report to it whether the law "has been in all cases observed, and the moneys dis- "tributed according to the intention of the House of "Commons. In India the case is different; although "the taxes are only imposed by the authority of the "Council for making laws and regulations, the allot- "ment of the supplies is made by the Governor- "General in Council; and it is, therefore, primarily "for his satisfaction that an appropriation audit is "needed, in order that he may have brought before him "in a clear and precise manner any deviations which "have occurred in the expenditure of the year from "the original intentions of the Budget." That, I think, is the effect of the appropriation audit as it is now carried out.

952. Is that the whole advantage that is obtained from the present arrangement?—Yes, I should think that comprises all.

953. Is it not very small? It is only a sort of review by the same authority of what they have done themselves, practically, because the Government of India both prepared the Budget and had the ultimate control of the whole of the expenditure?—It corresponds in that respect to the action of the House of Commons. The House of Commons votes the grants, and has a report placed before it, to enable it to see whether the expenditure has been in accordance with these grants. The Governor-General in Council makes the grants out of the revenue of India for specific purposes, and has an audit report placed before him to see whether these orders have been carried out.

954. But is not the case of the House of Commons that they vote the Budget and they do not have any detailed information regarding the progress of the expenditure, and therefore at the end of the year they want an annual report which will put them in possession of the fact as to whether the money has been spent in accordance with the object?—Yes, in accordance with the votes that have been passed.

955. But it seems to me that there is no analogy at all between that and this Appropriation Report, which is only a summary of the daily proceedings of the Financial Department?—Yes, I think you are right, but it is a summary for the authorities who have made the grants, of the action taken.

956. But there is no fresh check or fresh security caused by that. Is it not the case that this annual appropriation audit, so far from being a most important thing, is practically of no use at all after the daily audit has been thoroughly well carried out during the year?—I think that probably the detailed appropriation reports are only of use as enabling the Comptroller-General to prepare his review for the Government; but I should not say that the review by the Comptroller-General, which is called an Appropriation Report, and the review by the Secretary of State afterwards, are of no use; I think they are very important checks on the expenditure.

957. I do not mean to say that there is not immense value in the review by the Comptroller-General and Auditor-General of India of the whole financial arrangements, but it appears to me to be entirely foreign to the purpose of the British system, and will not carry out that object even in that small degree?—I think it has sprung from the British system, and I think that it meets Lord Hartington's intention as expressed when it was initiated.

958. I think that it has been suggested by the Government of India that as regards this Audit the Governor-General in Council in the Financial Department takes the place of Parliament?—They make the grants out of the revenues in very much the same way as the House of Commons passes votes for expenditure.

959. But is not the whole object of the Auditor-General's report to bring to the notice of the highest ultimate authority, how the Executive, however high, has carried out the orders of that ultimate authority?—Yes, if you mean by the ultimate authority the authority which makes the grants. It is intended for that purpose, I think.

960. Well, I mean the ultimate authority, the master. You say in the British system Parliament is the master, the officials or executive are the servants, and that the auditor is an independent authority which brings to the notice of the master whether the servant has carried out his instructions. That is the analogy of the thing. Now, what I want to know is, in what way the Government of India, in the Financial Department, can claim to be the ultimate authority to which the ultimate report is to be made by the independent auditor?—No, I do not think it is the ultimate authority, but, I think, as the authority which makes the grants, it is the final authority that can review the expenditure in detail on an Appropriation Report. Parliament has delegated to the Secretary of State in Council, as you are aware, the control of all expenditure out of the revenues of India, and the Secretary of State in Council necessarily delegates the detailed appropriation of the revenues to the Governor-General in Council. It is to him that the Appropriation Audit Report is made.

961. So that the Governor-General in Council is distinctly not the ultimate authority?—No, undoubtedly Parliament has an authority over India; the Secretary of State is responsible to Parliament.

962. He is only acting with delegated authority from the Secretary of State, who is responsible to Parliament, as I understand?—Yes.

963. Therefore, so far as an audit is useful in bringing the acts of the executive to the notice, and under the control of the ultimate authority, the present system is not effective in any way—does not touch that at all?—No, the Comptroller-General's report is not laid before Parliament, and, therefore, you may say that Parliament is not cognisant of it.

964. I think you mentioned that there would be a great difficulty in detailed interference by Parliament, or any authority here, with the details of administration in India?—Yes.

965. But would not detailed interference be made, in many respects, unnecessary if there were some formal annual review, general review, of the administration, especially the financial administration of India by the ultimate authority, that is, by Parliament? Would not that obviate a good deal of the detailed interpellation and questions which are made necessary under the existing system?—The Secretary of State has always accepted the responsibility of explaining to Parliament the financial position; he does so in his statement every year. I should not have thought that Parliament would wish to have the details submitted to it, or, at least, that any great advantage could arise from that.

966. My question rather pointed to the suggestion that there should be some committee of the House of Commons which would deal with a report similar to that which the Auditor-General puts before the House of Commons for British accounts?—I think the Public Accounts Committee would find very little use in the Comptroller and Auditor-General's appropriation report, if it had not the officers to come before it with explanations; and that is a very practical difficulty with regard to India.

967. A good deal has been said about the independent audit; a good deal of anxiety has been expressed as to the necessity of placing the auditor in an independent position, and suggestions have been made with regard to making him irremovable, that he may have no fear, and that he should be provided with certain definite promotion, independently of the Government of India, so that he might not look for any favour. Is there any reason to think, in regard to officers whose duty it is to make such reports that there is undue pressure brought to bear upon them, that such precautions are necessary?—I should have thought it was quite certain that they are absolutely independent; but, perhaps, Mr. Jacob, who must have performed that duty in several capacities, can answer the question better.

968. There is rather a peculiar reason given ultimately for expecting independence. It says that the position of the Comptroller and Auditor-General is such as to put him beyond such influences. I think you find it in Lord Hartington's despatch of the 23rd March 1882?—I think the passage to which you refer is in

the summary of the Government of India's view, given on page 32, paragraph 3, clause 4.

969. Does it not say, with regard to the Comptroller-General, that his position in the service is so high as to render him a thoroughly independent officer, who can be trusted to do his duty conscientiously and fearlessly. I have made note of it, paragraph 6, page 33. It says:—"In my opinion, the Comptroller-General is the proper "officer to conduct the appropriation audit. His "position in the service is so high as to render him a "thoroughly independent officer, who can be trusted "to do his duty conscientiously and fearlessly." Is not that a reflection upon the officers who are not so highly placed?—I do not think it was intended so at all; I think that there was no such insinuation and that all that was meant was that there could be no ground for supposing that either anticipation of favour or fear of disfavour would affect the auditor's report.

970. But as far as I can make out, this is the only reason which is given ultimately for the adoption of the present system?—I think that passage was rather in reply to the suggestion that the auditor should be irremovable, save with the sanction of the Secretary of State in Council.

971. These were the precautions proposed to put him beyond the reach of pressure?—Yes.

972. But the Secretary of State thinks that his high position will have that effect?—Yes.

973. And I would rather point out that officials who have never reached those high positions would think that this was a reflection upon them, to suppose that it is only the height that the Comptroller-General has reached that makes the security?—I do not think that it was intended as any reflection upon the lower officers, but that it was merely a way of stating that the Government might be assured that they would have a true report.

974. What I wanted to lead up to was the nature of the sanction which the Comptroller and Auditor-General requires in order to pass the different items of expenditure. I think there was a correspondence in which the Secretary of State asked that he should certify, not only whether the Governor General in Council had given his sanction, but also, in cases where the additional sanction of the Secretary of State was necessary, whether that sanction was obtained?—(*Mr. Jacob.*) Yes.

975. I think that is the present state of the thing?—Yes, that is so.

976. Now, is it also within his duty, supposing that the Secretary of State in his belief is exceeding his authority, to represent that in his report?—I cannot conceive a case in which the Secretary of State could exceed his authority.

977. But that is not the point. If, under an Act of Parliament, the power of the Secretary of State to apply the revenues of India is limited, and if outside those limits he were expending the revenues of India, would it be within the functions and of the control of the Auditor-General to report that defect of authority?—No, I should say not.

978. You are no doubt aware that under the Government of India Act of 1858, the Secretary of State is not entitled to employ the revenues of India, without special sanction, beyond the frontiers of India?—Yes.

979. It would not be within the present functions of the Comptroller and Auditor-General to check amounts that would be expended out of the revenues of India contrary to that Act of Parliament?—No, I should say not.

980. Then in that respect the audit fails as regards the ultimate authority of the House of Commons—of Parliament?—(*Sir Henry Waterfield.*) The Secretary of State is directly responsible, and is amenable to the House of Commons, before whom he must justify himself, but the Comptroller-General's report would not bring that to notice.

981. No, and he would not check at the time, because, as I understand, the main and effective check is when the first sum of money is spent. In the ordinary course of administration the check is applied at the first few rupees that are spent wrong?—(*Mr. Jacob.*) Yes.

982. So that large sums are not spent; but unless that daily check is applied in the case of a Secretary of State, many lakhs of rupees might be spent beyond the frontier without their being checked in any way or brought to notice?

983. (*Chairman.*) May I ask whether, under the Act of Parliament, the Council of India is not the body which has to check the Secretary of State under the circumstances that Sir William Wedderburn suggests?—(*Sir Henry Waterfield.*) It is the Secretary of State in Council, undoubtedly.

984. He must have the consent of the majority of his Council?—Yes.

985. (*Sir William Wedderburn.*) But when I was speaking of the Secretary of State, I was meaning the Secretary of State in Council acting as such. I wanted to know whether that check was there employed. Then there is another point I should like to clear up, and that is with reference to the special funds. I think it is mentioned as one of the particular objects of the audit to see that the special funds are properly appropriated. That is at page 33 in Lord Hartington's despatch; but it is also stated in Lord Ripon's despatch of the 1st October 1881?—I think there is no doubt that they would be duly audited.

986. That is an important part of the duty of the Auditor-General, I think? (*Mr. Jacob.*) Each Accountant-General has to submit an annual report reviewing the expenditure from local funds.

987. And it will be part of his duty to prevent or to put in a protest?—To report, certainly.

988. Against any wrongful appropriation of these funds?—Yes. I will just read the order:—"The "Accountant-General will submit, through the Local "Government, a yearly statement of the total income, "total expenditure, and balance of every local or other "independent fund upon his books, with a few brief "remarks upon the finance of each, with the object of "showing—first, that each fund is solvent; secondly, "that it is applied to the purposes for which it is "intended; thirdly, that it is not overlooked, but is "being fully utilised; fourthly, that its continuance "is expedient. In submitting these statements to the "Government of India, the Local Governments should "add their own remarks."

989. Is there any check or any means of preventing these special funds being appropriated by the Government of India to itself? Would it be within the duty of the Comptroller-General to point out that these funds were not available for general purposes?—The Government of India would be the ultimate authority to decide whether they were being applied properly or not.

990. But as far as check or audit goes, have you, as Comptroller and Auditor-General, any means of preventing the whole fund being taken by the Government of India?—The order of the Government of India would certainly be final upon that point, and would be so accepted.

991. There would be no means of checking or protesting. The particular case I wished to refer to is what is commonly called the Famine Insurance Fund. There are differences of opinion as to what the nature of that particular assignment was, but that is what it is generally called, and I think you will remember that special taxes were raised for the purpose of forming that particular fund?—(*Sir Henry Waterfield.*) Not for forming a particular fund; it was an appropriation for a particular purpose.

992. Well, as I say, there is a difference of opinion as to the real position of it; but considering there is a general feeling—a very considerable feeling—that there were particular taxes raised for that particular purpose, I would ask, taking this as an example, whether there was any sort of protest, or whether there was any means of making a protest to prevent this fund being taken by the Government of India?—(*Mr. Jacob.*) The Famine Relief Appropriation was never treated as a fund in any account of the Government of India.

993. Did not Sir John Strachey say that no separate fund was established because of convenience in the accounts?—I am not aware of its ever having been treated as a fund of any kind, in the technical sense of a fund appropriated for a particular object.

994. (*Chairman.*) And the auditors will not report upon it?—Not upon that fund; no, not upon any such fund.

995. I think, Sir Henry, Sir William Wedderburn has drawn a distinction between the ordinary day-to-

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

6 Nov. 1895.

day audit and the appropriation audit. The idea of the appropriation audit is doubtless borrowed from the home system?—(*Sir Henry Waterfield.*) Yes.

996. Before the appropriation audit was introduced here in its full extent in 1866 there was an audit of almost all Government expenditure by the Audit Office, which examined the vouchers and saw that payments were regular, but did not report to Parliament whether the necessary authority for the payment had been obtained. That is the business of an ordinary auditor, is it not? He goes through the payments, and he sees there is a voucher for each payment?—Yes.

997-8. When the necessity comes for an appropriation audit the extra duty is imposed upon the auditor of ascertaining whether each payment is not only duly vouched, but duly sanctioned. I would go further and say (following the strict analogy, which you have pointed out, Sir Henry) that as Parliament votes the supplies. naturally the report is made to Parliament to show that those supplies have been devoted to the objects for which they were voted; and in the same way the strict analogy is that, as the Governor-General in Council appropriates the supplies, it is to the Governor-General in Council that the reports should be made, showing whether his officers have applied the money in the manner in which he in Council has granted it?—Yes.

999. The analogy so far is perfectly strict. It becomes a further question as to whether, in the case of India, a further check is wanted; but I think, as far as it goes, the exact analogy is correct?—I think a report is made to the authority which granted the supplies; the audit does much more than merely see that a voucher is obtained; it is for the purpose of appropriation.

1000. (*Sir W. Wedderburn.*) But is the analogy complete when, in the one case, the authority is simply reporting to itself, and the whole essence of the other is to let the granting authority know whether its orders have been carried out?

(*Chairman.*) What I meant was that — whether, rightly or wrongly, I am not entering upon that—in the one case the Governor-General in Council is the granting authority, and a report is made to him; in the other case Parliament is the granting authority, and a report is made to it. So far the analogy is complete. That does not touch the further question. whether Parliament, as the supreme authority, has any communication made to it. Then, again, with regard to the independence of officers in this position, probably the correct way of putting it is this. What is sought by the arrangement in England is to get an officer in a position independent of pressure. That is done by assimilating the position of the Comptroller and Auditor-General to that of a Judge. You may say he has practically nothing to look for beyond; he has arrived at the summit of the official hierarchy. He is also irremovable, except by an address from the two Houses of Parliament. In the same way what I suppose is meant by the mention of the high position of the Indian Comptroller-General is that it is so high that he has very little more to look to.

(*Sir W. Wedderburn.*) I do not think so.

(*Chairman.*) I think that the meaning that would be attached to the statement that the high officer is independent, is that he has not got much to look to. Whether he has or not, is, of course, a question of opinion, but that is the meaning of saying that a high officer is more independent than an officer in a lower place, that a lower officer has much more to look to in the way of promotion that could be given to him?—(*Sir H. Waterfield.*) Perhaps I may, with reference to Sir W. Wedderburn's position, quote from page 47 of the papers, in which the Government of India said: "An efficient system of audit must be such "as to insure (1) audit against vouchers; (2) audit "against Budget grant; (3) audit against appli- "cation of grant; (4) audit against sanction; (5) "audit against the powers of sanction of the sanctioning "authority; (6) that all irregular and unauthorised "expenditure is brought to notice," and then they go on to say in the next paragraph, "We may point out "that the system of audit which is now in force in "India certainly aims at the attainment of all these "objects," and I think there is no doubt that it succeeds in attaining them.

1001. (*Mr. Naoroji.*) When, on account of the error in the estimates owing to the Afghan War, a committee was appointed here, it recommended a certain scheme, and with regard to that scheme of a complete audit and so on, the Government of India said: "The "organisation would certainly be far more perfect if "the Auditor-General and his subordinates exercised "no executive or administrative functions whatsoever. "The question is mainly one of money. It is obvious "that, if the Auditor-General and his subordinates "were to carry out annually in detail an administra- "tive audit of the whole of the accounts in all depart- "ments, a very large establishment would be required. "The expense of such an organisation would be so "great that we think the idea may be at once set "aside." So, then, in order to have this, what would certainly have been a very great and very important improvement, has been set aside on account of want of money, has it not?—The proposal was put aside on account of the expense.

1002. Then the Government of India proposed a certain reduced scheme instead, costing about a lakh and 53,000 rupees?—Yes.

1003. That, again, the Secretary of State did not allow?—Yes.

1004. He asked the Government of India to reduce that as well?—He asked them to reconsider it.

1005. The Government of India then proposed 55,000 rupees?—Yes.

1006. Even to that the Secretary of State for India objected, to a certain extent, and sanctioned 51,000 rupees, allowing Sir J. Westland a special allowance?—Yes.

1007. Well, all this means, then, that, if there were means, an improvement of this kind would have been very great, and it was only the want of means that induced the Government of India to ask that proposal to be set aside?—I do not think that the Secretary of State ever expressed the opinion that the proposal for an independent auditor would necessarily be a great improvement. The Government of India having accepted the view of the minority of the Committee that it would be a great improvement, the Secretary of State said that he thought the expense prevented its being carried out, and they then considered what could be done.

1008. I am giving actually the words of the Government of India that it regarded it as important?—The Government of India did accept it.

1009. And had they had means, they would have been glad to have carried it out?—That was the view of the Government of India of that day.

1010. In this memorandum, at page 48, there is a table giving the number of officers and clerks, and the annual cost comes to about 60 lacs of rupees?—Yes.

1011. Now, suppose, Mr. Jacob, the Government gave you a free hand to devise a perfect scheme, so that, without any difficulty about means, you might go to all necessary expense, what do you think would be the cost of such a scheme over and above this 60 lacs of rupees, just approximately?—(*Mr. Jacob.*) I should find it very difficult to give any idea offhand.

1012. 50 per cent., 100 per cent., or anything like it?—I think the present audit is quite sufficient.

1013. The opinion of the Government of India, as I read just now, showed that, had there been more money, there would have been so much improvement and a more perfect audit would have been organised. As the want of money prevented them from doing that, still they have shown that, if you had more money, you would be able to devise a more perfect scheme, according to the view of the Government of India?—(*Sir Henry Waterfield.*) I have already said that I am not at all sure that that was accepted by the Secretary of State.

1014. I am not saying that it was accepted by the Secretary of State; I am only saying that, as the Government of India gave us to understand that if such a thing could be done, it would be desirable, but that want of money would prevent it; therefore let such a scheme be put in theoretically. Suppose the Government of India could have supplied and found the money, how much more would have been necessary, and instead of going to a matter of 55,000 rupees as a small addition, how much more would have been required to carry out what the Government of India thought a thorough organisation?—They gave what would probably be the cost of the

original scheme. I think that is the lac and the 50,000 that you quote. They said that was the most that could be done. I think that is on page 18,—1,53,168 rupees. That is the estimate that they made at the time, of the cost of carrying out the suggestion for an independent appropriation audit.

1015. In fact, they put the suggestion altogether aside, and suggested that a modest scheme to the extent of a lac and 50,000 rupees would do for the present; that is what they would recommend?—Yes, they said that the expense of such an audit in full detail would be so great that they thought the idea must be at once set aside. The plan they proposed was a reduced scheme costing a lac and 50,000 rupees. Therefore, it is quite clear that, if the Government of India had desired a more effective audit, it would have been very much more expensive.

1016. I am only giving the views of the Government of India myself?—Of the Government of India of that day.

1017. I can only speak from what is put before me. Can you tell us how much of this 60 lacs of rupees is paid to Europeans?—Mr. Jacob may know. (*Mr. Jacob.*) I could not say off-hand.

1018. We will have an approximation. Perhaps to-morrow some figures may be put in which will enable us to come to some approximate amount, whatever that is, be it 20 lacs, or 30 lacs, or whatever it may be?—(*Sir Henry Waterfield.*) I will see if I can give you any figures to-morrow. I will make a note and see about that.*

1019. Now, in a despatch of the Secretary of State for India, dated the 17th July 1879 (I do not think it will be necessary for me to refer to it at length) in the little extract which I read, the Secretary of State said:—"I "have already expressed my decided opinion that the "salaries to be appropriated to native gentlemen "serving in their own country must in justice to the "taxpayer of India, be fixed at a lower rate than those "which have been found necessary to attract the "members of the existing Civil Service to leave their "homes, and I think it desirable at once to lay down "a clear rule on the subject. After mature considera-"tion Her Majesty's Government has decided that the "salaries to all native gentlemen appointed under the "new rules, except probationers, shall not exceed two-"thirds of the salaries assigned to English civilians." That is the Secretary of State's despatch. Now, supposing that the Government thought it desirable to increase that Indian contingent, there would be immediately a saving of 33⅓ per cent., would there not?—No.

1020. That is to say, for the same number of native officials appointed in place of the Europeans. Supposing Indians were appointed, and their salaries were two-thirds what was being paid to English civilians, there would be a saving of 33⅓ per cent. in their salaries?—If appointed when vacancies occurred.

1021. If appointed when opportunities should be made; I do not say, to appoint immediately?—I thought you said, immediately.

1022. Without any prejudice to existing interests, if the Government of India carried a scheme by which the English Civil Servants were displaced and their places taken by native gentlemen, according to this standard (which might still be further reduced) there would then be a saving of 33⅓ per cent. in money, so the Government of India would have at its disposal 50 per cent. more servants than it has at present, would it not?—If the officers were appointed on two-thirds of the existing salaries, and were equally efficient, there would be a saving of one-third.

1023. Then there would be this other effect of it, that whatever is paid to the Indian servants remains entirely in the country, and in point of fact does not affect the total wealth of the country. Is it not so, just as it is here? 2*l.* 11*s.* 8*d.* are drawn per head from the people here for the purposes of State, but all that returns to the people, and therefore the fund from which the State can derive its wants is always full, as it were—the ocean kept filled by rain or river—so that the Government is able to draw as much as may be absolutely necessary. That would be the effect if the Indian Civil Service was so much Indian?—If the money is spent in the country it remains in the country, and it is conceivable that it might be taxed.

1024. That would therefore increase, or rather preserve and enable the people to increase, the fund from which the Government has to draw for its own purposes; of course any waste or extravagance is quite a different thing. Now there is another question. Can the administration and management of the expenditure of any individual or of any people be more satisfactory, or can it be effected in a more responsible manner than by that individual or that people? Supposing they had the administration and management, or at least a potent voice in the administration and management, of that expenditure?—It depends very much on the character of the people, I should say.

1025. If I am to spend my own money, I shall certainly be more careful how I spend it than if I spend for somebody else, to whom I am entirely irresponsible, and have also an interest in the expenditure; and I will not give the same anxiety to see that the expenditure for another person is not more, or not unnecessary, or that it is as much as is absolutely necessary. That is only natural?—I do not think I can admit that. Many a man cannot be trusted with his own money; someone else will look after it better for him.

1026. (*Mr. Ryder.*) I should like to ask you, Mr. Jacob, whether, when you apply your test audit to the accounts that have been already audited, by your officers and the Provincial Accountants-General, you do that on behalf of any different authority from that on whose behalf the auditors of the Accountant-General's Department acted?—(*Mr. Jacob.*) No, not on behalf of any other authority.

1027. You all audit on behalf of one and the same authority, viz., I suppose, the Governor-General in Council?—Yes.

1028. Therefore we cannot say that you introduce any new element into the audit by your action. You regard the accounts from just the same standpoint as the immediate auditors do?—Yes.

1029. You do not audit the accounts in any different way from the other auditors?—No.

1030. All that you do is to apply a test which sees that they have done that which they ought to have done?—Yes.

1031. And then you compile the results of what they have done? Am I not right in saying so?—Yes.

1032. You summarise the results and show them to the Governor-General in Council?—Yes.

1033. Would it make any difference whatever if you acted on behalf of the Secretary of State in Council, and not on behalf of the Governor-General in Council?—I do not see that it would.

1034. That would not put you in any more independent position?—No. I have been Accountant-General and Comptroller-General for 8 or 10 years; and I cannot remember a single instance in which any pressure has been put upon me which could in any way be considered as improper.

1035. No. Nevertheless, when once you are satisfied that anything has been sanctioned deliberately by the Governor-General in Council, you drop the matter?—No. If it requires the Secretary of State's sanction, I require proof that this sanction has been obtained.

1036. So far, therefore, you may be said to be a controller of the action of the Governor-General in Council?—To that extent.

1037. And, so far, you do act on behalf of the Secretary of State here in England?—Yes. That duty has only been laid on the auditors in India for the last three or four years. Before that, we never went behind the order of the Governor-General in Council.

1038. But even in that respect you only do what the Provincial Accountants-General do?—Yes; certainly.

1039-40. There is no special function that belongs to you in the matter of auditing which does not belong to them?—No.

1041. Your report is always sent to the Secretary of State in Council?—Yes, it always goes to the Secretary of State.

1042. But you do not address your report to him?—No; I address it to the Government of India.

1043. Could you insist upon its being sent to the Secretary of State if the Government of India did not send it to him?—I do not think that the question has

* *See* Q. 2638.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

6 Nov. 1895.

ever arisen. It goes to him as a matter of course. It is published in the "Gazette" too.

1044. You do not audit home expenditure, do you?—No.

1045. That is done here?—Yes.

1046. (*Chairman.*) May I ask this question: Your report is published, you say, in the "Gazette"?—Yes.

1047. Is that by a Parliamentary Order, or is it by a Standing Order of the Government of India?—It is by a Standing Order.

1048. And, therefore, as a matter of course, it is published in the "Gazette"?—Yes.

1049. That is secured?—Yes.

1050. It is not laid before Parliament here, is it?—(*Sir Henry Waterfield.*) No, it is not.

1051. (*Sir Ralph Knox.*) The treasury officers who make payments in the first instance are auditors, I suppose, as to the authority of all the payments they have to make?—(*Mr. Jacob.*) To a certain extent; the Government has laid upon the drawing officers the responsibility for everything they draw except salaries and establishment charges.

1052. Then the treasury officer does not examine the bills that are presented to him except in respect of some order directing payment to be made?—Yes, that is all.

1053. He does not go into the details of the charges to see that they are in accordance with any code of regulations, but only that they are approved by an authorised officer to be paid?—You are referring to charges other than salaries and establishment?

1054. Yes?—The salary charge he would never pay without the order of the Accountant-General naming the fixed salary of the particular officer.

1055. And that authority would be obtained every month for that payment?—No, it remains in force until the Accountant-General withdraws it.

1056. Therefore, he, in that case, examines the document which is presented to him to see whether it is in accordance with the Accountant-General's authority?—Yes, as regards salaries, certainly he does.

1057. As regards other payments, he only sees that they are ordered for payment by an authorised person?—Yes, that is, generally. There are a few conditions that are laid down—certain charges may only be drawn on the countersignature of a superior officer, and so on; but ultimately it does depend upon the authority of an officer who either signs or countersigns.

1058. The paying officer does not then go into the details of the charges; he does not see that a payment to a contractor is in accordance with the contract, or anything of that kind?—No, not at all.

1059. But with regard to salaries, or lists of salaries, he does examine these, because he has been authorised by the Accountant-General of the district to pass certain salaries until the authority is withdrawn?—Yes.

1060. Therefore, as regards salaries, he may be regarded as an auditor?—Yes, with reference to this definite order of the Accountant-General.

1061. He does not go into any question of rules or regulations, but he just sees he has an order from the Accountant-General to pay a definite specified salary to a certain specified officer; and when the salary of that officer would be increased there would be necessarily the order of the Accountant-General to increase it?—Yes; he would not pay him any increase until he received the order of the Accountant-General.

1062. Then the examination of the Accountant-General subsequently is in complete detail of every voucher?—Yes.

1063. Does not he accept the examination of the treasury officer in any way?—No.

1064. And he goes through every item of charge, and checks every rate and compensation and so on?—Yes.

1065. Then, subsequently to that, you apply a test examination by your officers to see that every regulation is more or less carried out?—Yes.

1066. To what extent does your test go? Is it a continuous test, overhauling all the Accountant-General's accounts, or is it only a review just at the last month of the year?—No, it is not necessarily even an annual review. The Deputy Auditor-General goes to any office that I send him to, and examines two or three months of the accounts. That comes to about a month a year on the average.

1067. But that is going on continuously throughout the year? Your officers may be in one place at one time and another place at another?—But he need not necessarily examine each office once a year; he may examine an office once every two years or once every three years, but he will take a certain period, and will examine in detail every voucher and account for that period.

1068. The responsibility that is thrown upon the treasury officer in making the payments is simply that he has a formal authority to make the payment?—Yes, on the Treasury officer.

1069. I do not know that I quite understood the new powers that have been conferred upon the provincial authorities as regards their incurring new items of expenditure as within their control. Is it possible for the provincial authorities to estimate for an increase of the expenditure, so as to be able to present an increased Budget for any particular year?—Yes; they can enter any amount in the Budget, within the revenue, without any further sanction, provided the expenditure is within their general powers.

1070. Can they estimate an increased revenue and then propose increased expenditure as against that? If it was the opinion of the provincial authorities that the revenue would come up a lac or so in the next year, could they, as against that, propose increased expenditure, and would it be accepted?—Generally, I should say it would not be accepted, unless there was some specific cause to be assigned for the increase of the revenue. The general rule is as regards the principal heads of revenue, that we take, for the following year, the nearest estimate we can make of the probable revenue during the current year.

1071. Then, so far as their increased powers are concerned, it really depends on the revenue which has already been received, whether they can propose increased expenditure, or not?—Yes, practically; unless the expenditure is to be out of balances.

1072. Then really the power of provincial authorities is limited in this way, that they must have obtained the increased revenue before they can propose an increase of expenditure?—Yes, practically, that is what it comes to.

1073. But then, when they have ascertained the revenue that is in existence, supposing they make proposals within that to the Central Government, those proposals are, of necessity, accepted?—Yes; they are accepted as a matter of course, subject to the special limitations.

1074. They always require the special sanction of the Government for an increase of salary, and so on?—Yes.

1075. But the actual revenue must have been received during the previous year, must it not, and ascertained by fact to be a provincial revenue, before any proposals for increased expenditure are allowed?—Yes.

1076. As against that revenue they may add something on account of the improved balances of the previous year?—Yes, if they have obtained the sanction of the Government of India beforehand for it.

1077. They have not a discretion as regards that; they must get special sanction to spend that money, which is already in their coffers, before they can set down expenditure against it?—Yes. The order with regard to any considerable expenditure from balances, is that the sanction of the Government of India must be obtained to it beforehand. No objection would be taken to a small excess.

1078. (*Chairman.*) Sir Ralph Knox put it to you, that the Provincial Government make an estimate of increased revenue. That, I suppose, is a point on which the Treasury, the Financial Member of Council, exercises a very distinct and immediate financial check; that is to say, he would at once refuse anything like a speculative estimate of revenue?—Certainly.

1079. Then again, I think you spoke as if the expenditure asked by the Provincial Government would be accepted—I think Sir Ralph Knox's words were "as "of course,"—but I suppose the Central Government would exercise a very distinct control and decide whether

certain public works were necessary or not? Though they would give all due weight to the recommendation of the Provincial Government it would not be at all matter of course that it would be adopted?—The Government of India would not enter into any detail as regards any particular public work in the province, if it were to be executed provincially.

1080. Is that left entirely to the Provincial Government?—Entirely to the Provincial Government.

1081. (*Sir James Peile.*) The appropriation audit was introduced in India in 1882, I think?—Yes.

1082. There had been a very great breakdown in the financial system just before then, had there not?—There had been a serious mistake in the estimates.

1083. For the Afghan War?—Yes.

1084. A Committee was appointed in England which made certain proposals?—Yes.

1085. Those proposals were:—first, an independent audit in India; second, that there should be a final review of the Indian accounts in England under the direction of the Secretary of State for India in Council, by a committee composed in great part of members of the Indian Council or officers of the India Office, supplemented by one or two persons altogether independent of India. It was a minority of the committee that recommended that? There never has been any proposal for review or audit by a Parliamentary Committee?—Not that I know of. (*Sir Henry Waterfield.*) No; it was not proposed.

1086. The Government of India adopted, I think, the first suggestion for an independent auditor?—Yes.

1087. And said, "If the proposals we now make are "adopted, your Lordship will no doubt consider that "any further audit in England will not be necessary"?—Yes.

1088. In reply to that, Lord Hartington did not entertain the proposal for an independent auditor?—No.

1089. He said, "In my opinion, the Comptroller-"General is the proper officer to conduct the appropria-"tion audit; his position in the service is so high as "to render him a thoroughly independent officer, who "can be trusted to do his duty conscientiously and "fearlessly"?—That is so; yes.

1090. He did not put it on the Government of India having no money to do it with?—He considered it unnecessary to do it, and that it was a needless expense.

1091. Then, on that, the Government of India submitted a scheme to carry out Lord Hartington's views?—Yes.

1092-3. They said, "By the scheme which we now "submit for your Lordship's approval the essential "objects of an appropriation audit will be secured, and "the office of Comptroller-General finally placed on a "sound footing, and we trust that our proposals may "receive your Lordship's sanction." The proposal then to have an audit in England had been dropped?—Completely.

1094. And the Government of India did not revive it on that occasion?—No.

1095. Then substantially that scheme was sanctioned and adopted with some little reduction?—With a slight reduction of salary it was.

1096. Then these questions were revived later by Lord Cross in 1888?—Yes, not precisely the same questions.

1097. No, but substantially. He compares, for instance, the English system?—Yes, he raised the question whether the Secretary of State had sufficient cognizance of the expenditure.

1098. And he desired in the first place that the auditors in all departments should be required to assure themselves that all expenditure which requires the special sanction of the Secretary of State in Council has been so sanctioned?—Yes.

1099. And he also did one thing more—he requested the Government of India to take measures in the Finance Department of their Government to ensure that in all cases of proposed outlay due attention should invariably be given to the question whether such outlay did or did not require the special sanction of the Secretary of State?—Yes.

1100. That, I think, Mr. Jacob, has been done?—(*Mr. Jacob.*) Yes, it has been done.

1101. That requirement is always satisfied?—Yes.

1102. And that is the system which is embodied in the resolution given at the end of this compilation?—Yes.

1103. Do you consider that it has worked satisfactorily?—Yes.

1104. As far as the audit is concerned, there is first the detailed audit of the auditor which checks irregularities at once?—Yes.

1105. And beyond that there is the test audit which you have told us of, which catches any irregularities which may have escaped the auditor?—It does so.

1106. And I suppose that with these two provisions there is really no irregularity left to be discovered by the Comptroller-General's Appropriation Report?—No, I think not; that is my experience.

1107. That report you have told us is published in the Gazette and becomes public property?—Yes.

1108. There is only one question I want to put about the Provincial finance, and that is what are the principal objects to which Provincial expenditure is devoted?—(*Sir Henry Waterfield.*) Mainly, Education, Medical Service, Police, Law and Justice, Roads, the Administration of the Land Revenue.

1109. Those are the principal ones?—I think I have named the principal ones.

1109*a*. Medical Service means Hospitals and Dispensaries?—And there is a considerable charge under Superannuation.

1110. That I am not going into. The objects, then, are such as in a progressive civilisation would naturally be the objects on which an increase of revenue would be spent?—Yes.

1111. Directly for the public benefit?—Yes.

1112. (*Sir Andrew Scoble.*) Mr. Jacob, you have been questioned as if your audit merely had relation to the orders of the Government of India. Sir James Peile has just asked you whether under some recent regulations it does not also refer to the orders of the Secretary of State?—(*Mr. Jacob.*) Yes.

1113. That being so, do you not audit these accounts as much for the Secretary of State as for the Government of India?—Yes, I should say so.

1114. Well, now with regard to Parliamentary control, you are aware, of course, that the Indian Budget, after receiving the sanction of the Government of India and the Secretary of State, is submitted to the House of Commons?—Yes.

1115. And up to this time I believe it has been invariably adopted by the House of Commons without alteration?—(*Sir Henry Waterfield.*) It is not quite correct to say it is adopted. The resolution is a formal one, and it passes.

1116. Well, resolutions are passed which enable the Government of India to spend money for which provision is made in the Budget?—No, the resolution which the House of Commons passes is merely a statement of the facts which appear from the accounts; it does not deal with the Budget at all.

1117. Practically, it comes to this, that the House of Commons accepts the accounts on which the Budget is framed?—Yes, it accepts the accounts.

1118. Therefore it sanctions the Budgets?—It does not sanction the Budget of the year in which the statement is made.

1119. Is not that included in the financial statement which is submitted to the House of Commons?—Yes. The statement made by the Secretary of State explains the Budget, but the resolution which the House of Commons passes does not touch the Budget; and I hardly think it would be right to say that the House of Commons accepts or sanctions the Budget *sub silentio*; it finds no fault.

1120. Silence gives consent?—Yes.

1121. Would you think it part of your duty as Auditor-General to take into consideration a vote in the House of Commons varying these proposals, and to give effect to such a resolution?—(*Mr. Jacob.*) If a resolution were passed altering the Budget?

1122. Yes; what would be your position in relation to such a state of things?—I hardly know how to answer that. (*Sir Henry Waterfield.*) I think the answer that I should give would be that the action of

Sir H. Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

6 Nov. 1895.

the House of Commons must be communicated to the Government of India by the Secretary of State, and the Comptroller-General would act under the orders of the Secretary of State and the Government of India in regard to any alteration Parliament had made.

1123. That was the answer I expected. Then, in point of fact, in auditing these accounts for the Government of India you also audit them for the Secretary of State, and, also as a result, for the information of the House of Commons?—The Auditor's report is not communicated to the House of Commons; it could be, of course.

1124. It is a public document?—Yes, it is a public document.

1125. It is published in the "Gazette," and could be laid on the table of the House of Commons on the motion of any member of that assembly?—Certainly.

1126. Now you were asked about the opinion of the Government of India in 1882 with regard to improvements in the system of control; let us see what its opinion was in 1889. Will you look at page 50 of this compilation, Sir Henry Waterfield—paragraph 17. The Government of India states of the existing system of audit that it is well adapted to secure all the objects for which it is suggested that the appointment of an independent auditor might be advantageous; and further, at the end of the same paragraph, after pointing out the particulars in which the existing audit answers all the purposes which the appointment of an independent auditor might be expected to effect, it goes on to say, with regard to the question of cost, that the increased cost involved in such an arrangement, that is of an independent audit, would be "out of all proportion to the advantage " gained, and the financial position of India is not such " that we can recommend the undertaking of a service " of which the usefulness is doubtful"?—Yes.

1127. Was that opinion concurred in by the Secretary of State?—Yes.

1128. There is a further opinion to which I wish to call your attention and that is at paragraph 7 on page 57. Lord Cross, the Secretary of State, says, after recognising the efforts made by the Government of India in the matter, "In the hope that the more stringent rules now " laid down will, to a great extent, obviate laxity, and " that, if errors should occur, they will be promptly " brought to the notice of the Government, both in India " and in England, through the report of the Comptroller " and Auditor-General, I concur in your Excellency's " view that it will be better, for the present, at any " rate, to allow the existing system, as recently " modified, to continue, in order that I may learn by " experience whether the orders that I have given are " sufficient to secure to the Secretary of State in " Council the power of efficient control which it was " intended by Parliament that he should exercise." That was in November 1889. After the experience of six years, are you able to say whether or not the system of audit then introduced has proved successful for the purpose which Lord Cross had in view?—I think it certainly has. I gave the Commission yesterday a list of the instances which I have found after careful search, in which it appeared necessary for the audit officers to report that the Secretary of State's sanction had not been sufficiently obtained; in most cases it was merely a question of discretion, of interpretation; but in all such cases the Government of India at once reported it, and the Secretary of State was made cognizant of the facts immediately.

1129. Then I take it that (in your opinion) the present system of audit is sufficient and successful?—I think it gives the Secretary of State full knowledge, and is sufficient and successful.

1130. (*Mr. Naoroji.*) Can any member of the House of Commons propose any motion to reduce any item in a budget when that budget is brought forward, or is it simply a form that such and such has been the budget adopted? Can any member propose a motion that a certain item, say the salary of the Viceroy, should be reduced by 5,000*l.*?—The motion which is proposed is simply a formal record of the accounts. A member can bring forward a motion that some expenses in India ought not to be allowed, but that would be a distinct motion.

1131. That is when the Speaker leaves the chair to go into Committee?—On the motion to go into Committee.

1132. But on the Budget itself we cannot propose any amendment to any item in the Budget itself; it is simply a record of a fact, that such and such are the accounts?—The resolution which is finally proposed is simply a record of facts.

1133. Then I may ask another question. I think I understood you to say that the proposal made in 1882, or the suggestion made in 1882, was somewhat different from that which was ultimately regarded by the Government of India as satisfactory; that there was a difference between the proposal made in 1882 and 1888?—Certainly, the Government of India in 1889 thought the proposal made in 1882 too expensive.

1134. (*Sir Donald Stewart.*) In respect to the mistakes made with regard to the expenses during the Afghan War, can you explain whether the mistake was due to the system of accounts then in force, or to any want of vigilance on the part of the audit officers; and whether a similar mistake could occur again under the existing rules?—(*Mr. Jacob.*) I should say it could not occur under the existing rules.

1135. Can you explain how the mistake occurred then?—The chief mistake was that the finally audited accounts were taken as the first intimation of the progress of the military expenditure, instead of the preliminary accounts which are now submitted to the Government of India, and which show the issues to the Military Department at once.

1135*a*. (*Chairman.*) I think, Sir Henry, that the resolution of the House of Commons is put in this form:—" That it appears by the accounts laid before " this House that the total revenue of India for the " year ending the 31st day of March 1893 was " Rx. 90,172,438; that the total expenditure in India " and in England charged against the revenue was " Rx. 91,005,850; that there was an excess of expendi- " ture over revenue of Rx. 833,412, and that the capital " outlay on railways and irrigation works was " Rx. 3,986,290." Therefore, I suppose, first of all, there would be a power of making a motion on going into Committee on the Accounts of India, which might be carried; and next, I suppose, when the resolution is put, it would be in the power of a member of the House of Commons to submit, instead of that, another resolution; (*Sir William Wedderburn.*) It has been ruled by the Chairman of Committees that an amendment must be something that negatives the correctness of the resolution, and last year the Chairman allowed an amendment which I moved to the effect that, in a certain respect, the accounts were incorrect and misleading. (*Chairman.*) Therefore the only amendment that could be moved would be on going into Committee on the accounts of India.—(*Sir Henry Waterfield.*) I think you are reading from Hansard. That relates to the accounts of the closed year, and not to the Budget for the year then current.

1136. Quite so. Well, I suppose in that case, if there had been an error, it might be made the subject of censure?—If there was an error in the statement of accounts, if, in drawing up that resolution for the Secretary of State, I was to make an error in the statement of facts, any member might correct it.

1137. But then that would not apply to the mistake of 1880, because when the accounts were finally audited then they were correct?—Oh, no, it would not have affected that at all.

1138. In the case of pensions, your officers in auditing them see that the pension has been duly authorised; and then, I suppose, they require proof that the person who comes before them is the person to whom the pension ought to be paid?—(*Mr. Jacob.*) Yes; the Accountant-General actually reports the amount of the pension permissible.

1139. I mean there is no difficulty?—No, not as regards identification.

1140. (*Mr. Buchanan.*) There is no control as to whether the pension is granted in conformity with the terms of the Pension or Superannuation Act under which you act?—Oh, yes; we should certainly object to any pension which is granted outside the rules, and should require the Secretary of State's sanction to be obtained to it.

1141. Where and by whom would your objection be taken?—By any auditing officer.

1142. I understood from your answer to Mr. Ryder, that the local auditors simply acted upon your instructions as to paying *A.B.* so much money, whether

for salary or for pension?—That was to Sir Ralph Knox, I think. The Treasury officer acts upon the authority of the Accountant-General, but the Accountant-General is an auditing Officer, and he would be entitled to take objection, and would take objection to any pension which was sanctioned outside the rules.

1143. He does so?—Yes, he does.

1144. And such irregularities are dealt with?—Yes.

1145. (*Mr. Naoroji.*) I understood Sir Henry Waterfield to mean that it depends upon the character of the person to whom you entrust the expenditure, though the party himself concerned may not have a voice in it. Am I right? I said where an individual or a people have the expenditure not in their own control it cannot be well administered or managed, and then you said it would depend on the character of the person?—(*Sir Henry Waterfield.*) Yes.

Sir. H, Waterfield, K.C.S.I., C.B., and Mr. S. Jacob, C.S.I.

6 Nov. 1895.

1146. I suppose the character of the Government of this country is certainly above any cavil, quite high enough to be entrusted with the expenditure; and yet the people of this country will not have anything to do with things of that kind, unless the Budget of the whole thing is under their very control; is it not so?—Yes.

The witness withdrew.

Adjourned till to-morrow at 11 a.m.

At the India Office.

THIRD DAY.

Thursday, 7th November 1895.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN), PRESIDING.

THE RIGHT HON. LEONARD COURTNEY, M.P.
THE RIGHT HON. W. L. JACKSON, M.P.
SIR WILLIAM WEDDERBURN, Bart., M.P.
FIELD MARSHAL SIR DONALD STEWART, Bart., G.C.B., G.C.S.I.
SIR E. W. HAMILTON, K.C.B.
SIR RALPH KNOX, K.C.B.
SIR JAMES PEILE, K.C.S.I.
SIR ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
MR. G. L. RYDER, C.B.
MR. T. R. BUCHANAN, M.P.
MR. W. S. CAINE.
MR DADABHAI NAOROJI.

MR. COLIN G. CAMPBELL, *Secretary.*

MAJOR-GENERAL SIR OLIVER NEWMARCH, K.C.S.I., called and examined.

Major-Gen. Sir O. Newmarch, K.C.S.I.

7 Nov. 1895.

1147. (*Chairman.*) What position did you hold in India?—I was Military Accountant-General and subsequently Secretary to the Government of India.

1148. Military Secretary?—Yes.

1149. The high military officers of the Government of India being, first of all, the Military Members of the Council, and next the Military Secretary?—Yes.

1150. Next comes the Military Accountant-General?—Yes. He is a Deputy-Secretary in the Military Department. He has two offices—he is the Military Accountant-General and he is also Deputy-Secretary of the Military Department.

1151. Therefore he is second officer in the Military Department?—Yes.

1152. For how long did you hold those offices, and when did you cease to hold them?—I was Military Accountant-General from 1878 to 1885, and I was secretary, acting and permanent, from 1885 to the end of 1886.

1153. And at the end of 1886 you came home?—Yes.

1154. Therefore your knowledge of the military regulations, and the military law, of India is limited, at all events in detail, to that time?—Yes. There have been a great many changes in the system since then.

1155. But from subsequent connexion with the India Office, are you acquainted generally with the changes which have taken place?—Yes.

1156. That is to say you would be able to tell us if regulations which were in force when you were in India have been so far modified since as to require some further explanation?—To some extent, I should, no doubt.

1157. Do you hold any position in the India Office now?—I am Military Secretary there.

1158. May I ask, first of all, as to the position of the Military Member of Council compared with that of the Commander-in-Chief; as I understand, the Military Member of Council roughly corresponds to the War Minister here?—Quite so.

1159. And—very roughly, of course — the Commander-in-Chief would correspond to the Commander-in-Chief here?—Certainly. The Military Member deals with the Departments and the financial side of the army, and the Commander-in-Chief deals with the *personnel* and the executive side.

1160. They are never the same?—No, never.

1161. And the Commander-in-Chief is *ex-officio* a member of Council, is he not?—Yes.

1162. Therefore the Military Department may be said to have two representatives on the Viceroy's Council?—Yes.

1163. Of course here the Secretary of State for War is responsible to Parliament, and therefore, I think, it has been ruled that his authority, within the whole Department, is paramount inasmuch as he is responsible to Parliament?—Yes, certainly.

1164. Does the Military Member of Council occupy the same position in India—is he the superior officer—or are the Commander-in-Chief and the Military Member absolutely independent of each other?—No, the Commander-in-Chief, as regards all finance matters, is subordinate, not to the Military Member in Council, but to the Government of India.

1165. In the Military Department, I suppose?—The Government of India as a whole—the Governor-General in Council delegates to the Military Member the power of dealing with military expenditure, within certain limits; anything beyond those limits would be referred to the Governor-General in Council.

1166. Of course we are only dealing with finance; and on a financial question, supposing there to be a difference of opinion between the Commander-in-Chief and the Military Member of the Council, would the Commander-in-Chief have to give way to the Military Member of Council, or is that a matter in which their authority is exactly equal, and therefore the Governor-General would have to decide?—The Military Member of Council has no authority to over-rule the Commander-in-Chief on any important matter without going to the Governor-General.

1167. We have heard from Sir Henry Waterfield and Mr. Jacob a general concise description of the financial administration of the War Office in India; but the Commission desire to hear from an officer of the War

Major-Gen. Sir O. Newmarch, K.C.S.I.

7 Nov. 1895.

Office itself, his view of that administration and of its relations to the Finance Department. I think you have had the opportunity of looking through the evidence that has been taken?—Yes; I have seen that. I have very little to add to what Sir Henry Waterfield has recorded in that; I think in this army circular, which was published on the re-organisation of the army in India the other day the whole military system of finance is laid down.

1168. Is that a recent document?—It was published in October 1894, and came into effect from the 1st of April 1895.

1169-70. Is it a long document?—That is the paper. It gives the whole system of military finance.

(*Chairman.*) Of course this document could not be put in or appended to the Report of the Commissioners, but I dare say two or three copies would be obtainable by such of the Commissioners as might desire to consult it, would not they?—Yes.

1171. (*Sir Ralph Knox.*) It is a public document, is it not?—Yes; a public document.

I think if copies were obtainable here in the Commission it would be useful.

1171*a*. (*Mr. Buchanan.*) Was that circular issued in view of the new arrangements of the commands?—Yes. Some of the rules are old, but they are adapted to the new system of four commands, on the abolition of the Commands-in-Chief in Madras and Bombay.

1172. (*Chairman.*) That is, as it were, a new code consequent on the abolition of those commands?—Yes; quite so.

1172*a*. I use the "War Office" as a convenient term. Of course, I understand it is the Governor-General in the Military Department. We understand that the War Office is administered by the Military member of Council; that under him comes the Military Secretary and the Military Accountant-General; under the latter come again the four Military Controllers attached to the four military commands, and under them the Military Disbursing Officers?—Yes; that is correct.

1173. Could you tell us what is the strength of the establishment of the Military Accountant-General at Calcutta?—There are three officers; the Accountant-General, the Deputy Accountant-General, and the Assistant Accountant-General.

1174. And under them have you a large staff of clerks?—Yes. I cannot say exactly how many, but a staff of clerks which is part of the office establishment of the Military Department.

1175. It is a separate branch?—It is a section of the Military Department Office.

1176. I wish to understand what is the kind of business that comes there. The Military Accountant-General is actually responsible for the collection of a great number of returns, or for the compilation of them, and for the keeping of the very extensive accounts which the military establishment of India involves?—Yes; that is so, but he is more a consolidating officer; he gets no direct accounts himself, he simply gets the compiled accounts from the Controllers.

1177. And, therefore, his function is really summarising and digesting into one set of accounts, those accounts which come to him already reduced to order?—Yes, he is more, if I may say so, a Deputy Financial Secretary in the Military Department of the Government of India.

1178. But at the same time I suppose he is responsible for seeing that the finance of the War Department in India is conducted regularly and in accordance with authority?—Certainly.

1179. And, therefore, he must receive and judge a number of reports in order to satisfy himself on that point?—Yes.

1180. Then in each of the four commands there is a Controller; has each of these Controllers a large staff under him?—Yes; each Controller has an Examiner of Commissariat, Remount, and Medical Accounts, a Pay Examiner, and an Examiner of Ordnance and Clothing Accounts.

1181. That makes four or five examiners?—That makes three, really, because the Ordnance Accounts are examined by the same examiner as the clothing accounts. One examiner does those two—ordnance and clothing.

1182. And those officers are purely audit officers?—They are purely audit officers, but the Pay Examiner also pays Staff and departmental officers.

1183. We shall come afterwards to their functions, but first of all I should like to take the disbursing officers?—Yes.

1184. Of course the Controller has a considerable number of disbursing officers at the place where he is stationed, which must be the central office?—No; only the Pay Examiner, as explained above.

1185. But under him there are disbursing officers at the different stations, are there not?—Yes, a great many, but they are not directly under the Controller; they are not part of his establishment.

1186. Are they under the Controller?—No, not as part of his establishment. The Regimental Paymaster, for instance, is a Disbursing Officer, under the Controller to a certain extent, but not part of his establishment.

1187. They would not in fact be paid through him?—No.

1188. And he would not be responsible for increases of salary to them, or reductions or increases in their number?—No.

1189. Therefore we may take it that the disbursing officers whom you have described are officers of the War Department not immediately under the Controllers and are stationed wherever troops are stationed?—Yes speaking generally, wherever troops are stationed. I can tell you who they are.

1190. Have you got anything to show us the particulars of one command, the number of officers, and the number of stations?—For instance, every Commissariat Officer of a large station is a disbursing officer; every Regimental Paymaster, or Commanding Officer of a native regiment or battery, is a pay officer; the Superintendent of Family Pensions is a disbursing officer; the Pension Pay Officer, Poona, is a disbursing officer; the Military Paymasters at Bombay and Rangoon are disbursing officers; and the Remount Officers and the Clothing Officers—they are disbursing officers. I think that is about all the disbursing officers.

1191-2. Would they come under one head of the Budget?—No, they come under all the grants.

1193. Can you show us in the Budget one place where any number of them occur?—Well, Grant 4, for instance. commissariat.

1194. I have got commissariat accounts. Do you mean on page 36?—No; if you look at page 50.

1195. Are we dealing with the same estimates?—I think so.

1196. 1895-96?—Yes.

1197. Page 50?—Commissariat establishments.

1198. Yes?—Commissariat officers of large central stations are disbursing officers.

1199. Going down to the Assistant-Commissaries General, I suppose?—Yes.

1200. Or lower than that?—Yes.

1201. Exactly; they are put under the commands here. And all those officers in the course of their duties have payments to make, and are entitled to draw for money on the district treasury?—They get a cash assignment at the beginning of the year.

1202-4. Could you give us the number of Disbursing Officers and the number of stations?—The number of Military Disbursing Officers is 582, and of stations at which they are located, 191.

1205. (*Sir Ralph Knox.*) Does a Commissariat Disbursing Officer discharge any other duties besides that of merely making those disbursements?—Yes. The arrangements for the commissariat supplies and service are conducted by the principal officer and his subordinates, one of whom makes payments and submits accounts.

1206. He is not only a Disbursing Officer?—No.

1207-8. (*Chairman.*) I suppose the duties of Disbursing Officers in districts which are very large, at great centres, would be heavy, and at small centres, where there is a small number of troops they would be very light?—Yes; at some stations there would be no Commissariat Officer at all. In that case the only Disbursing Officer at that station would be the officer commanding the regiment or battery there; they are Disbursing Officers.

1209. I think, perhaps, it would be convenient if, following out the manner in which money is appropriated and spent, we first of all were to take briefly the method of preparing the estimates; then pass on to the method in which money is issued under the budget; and lastly, the manner in which the audit is conducted. Would you tell us the manner in which the military estimates are prepared? But, in the first place, I should like to ask as a general question whether there is any regular consultation, before the estimates are prepared, in which the financial circumstances of the time are considered and the amount that is available for army expenditure is discussed, so that there may be an opportunity for ascertaining early whether reductions are necessary or possible?—Yes, that always takes place every year. The Commander-in-Chief is present. He confers with the Military Member of Council, and subsequently the Military Member of Council confers with the Financial Member.

1210. And that is before the estimates are set on foot?—No, before they are finally settled; that is after the estimates have come into the Military Department.

1211. But the point is, whether any general consultation takes place before the estimates are finally settled, in which the financial position is taken into consideration?—Certainly.

1212. Is that consultation confined to those two or three officers, the Commander-in-Chief, the Military Member, and the Finance Member?—Yes.

1213. Or does it take place in Council?—No, it does not take place in Council, but of course in any very important case the matter might be discussed in Council.

1214. That is to say, when the Finance Member comes into consultation and differs from the Commander-in-Chief and the Military Member of Council, then the question would go to the Governor-General, and probably to the Governor-General in Council?—It would be discussed in Council; certainly.

1215. Would you tell us how the estimates are prepared, perhaps beginning from the bottom; who are the people entrusted with the duty of compiling them?—Every Disbursing Officer sends in an estimate for the following year to the Controller of Military Accounts.

1216. That is to say, from every station there arrives an estimate of expenditure at that station under the different heads?—Not from all stations, only from Disbursing Officers. Every Disbursing Officer sends in an estimate of his requirements for the following year, and every Departmental Officer sends in a statement of his requirements for the following year, and all these are consolidated by the Controller of Military Accounts.

1217. Into one estimate for the province?—Into one estimate for the command, and then those estimates are all sent up to the Military Accountant-General, who consolidates them into one estimate for all India, very much in the form which you see here.

1218. And are those estimates, as they are originally formed, based on the maintenance of the *status quo*?—Yes, on existing facts.

1219. Is there any date by which the Disbursing Officers are bound to send in their estimate?—Oh! yes, the dates are fixed, so that they all reach the Government of India in ample time for consideration of the Budget estimates. You have had that evidence from Sir Henry Waterfield.

1220. We have had from Sir Henry Waterfield the process of the compilation of the estimates at headquarters. I want to get from you by what date they reach the Military Accountant-General, and what time he takes to consolidate them, so that he may place the Government in possession of the consolidated estimate?—He closes the Military Budget estimate on the 25th of January.

1221. The Accountant-General does?—The Accountant-General does.

1222. And then of course as soon as he has done that, the estimate is ready for the consideration of Government?—Yes.

1223. And that means that by the 25th of January he must have concluded his own discussions with the Controllers in each command?—Yes, he has got by that time all their consolidated estimates, and he consolidates them into one for the Government of India.

1224. But when he comes to look through them, I suppose he may object to certain charges which are put down by the Controllers, may he not?—Yes, certainly, and he may reduce their estimates if he thinks proper, if he thinks they have estimated too high.

1225. For instance, they may have taken the prices of stores and provisions too high: it would be for him to revise that I suppose?—Yes, or some orders of Government may have been passed intermediately between the preparation of the estimate by the Controller, and the date of its being compiled by the Accountant-General, and he takes that into account.

1226. Then he must require a certain amount of time after he has received the estimate from each command to satisfy himself that the estimate in each command is correct?—Certainly.

1227. Then immediately after the 25th of January he puts the consolidated estimate before the Military Member of Council, and in fact, before the Government of India?—Yes.

1228. After the estimates have left his hands, are there any further consultations and discussions in which he takes part?—Certainly, that is the time when the consultation between the Military Member of Council, and the Commander-in-Chief, and the Financial Member takes place, and they can then issue any orders they please as to an increase of the estimate, or any reduction, if possible, before it goes to the Financial Department formally in a final shape.

1229. We have heard from Sir Henry Waterfield, that somewhere about the last week in March is the time when everything must be concluded, and the Budget estimate of the Empire entirely completed?—Yes.

1230. Therefore, you may say that from the time the Accountant-General completes his estimate, there are about two months left for the consideration of his estimate and for checking it together with other estimates from other departments by the Comptroller-General?—Something less than two months.

1231. Then when the Budget has been passed, the money it provides is appropriated by the Governor-General in Council—in Executive Council, is it not?—It is simply passed: it is accepted by the Financial Department.

1232. Not accepted by the Council formally?—No, by the Finance Department. The Finance Department has already submitted it to the Governor-General, and possibly it has been discussed in Council, but it comes to the Military Department as formally accepted from the Financial Department.

1233. But does it ever come before the Governor-General in Council, so that the general provision for the year is discussed?—Oh, certainly.

1234. It does not come before the Legislative Council?—No, the Executive Council.

1235. As we understand, it is the Governor-General in Executive Council who appropriates the Revenues of India to the different branches of the public service?—Yes.

1236. Do you mean that the military estimates are separately before the Governor-General? Eventually the complete Budget, including Military and Civil Expenditure, would come to be considered as a whole by the Governor-General in Executive Council?—Both would go before the Governor General in Council.

1237. Then when the Budget has been accepted by the Governor-General in Council and comes back again to the Military Department from the Finance Department, how is the money assigned to the different branches entrusted with the military expenditure?—Each Controller then sends the Disbursing Officer an assignment on the Civil Treasuries for the whole amount of the year, divided into months, and the Disbursing Officer can only draw on that assignment up to the amount provided for up to that month, that is, he could not draw at the end of May more than the amount which was provided for the two months of April and May together, month by month.

1238. Does the Controller in each command inform the Treasury independently of the amount of the assignment, or does the Treasury only learn that from the Disbursing Officer of the district?—The Treasury Officer learns it from the Accountant-General of the province.

1239. The Controller, as it were, opens a general credit with him in the name of the Disbursing Officer?—For a certain amount. He communicates that credit

Major-Gen. Sir O. Newmarch, K.C.S.I.

7 Nov. 1895.

to the Treasury Officer through the Accountant-General of the province and also to the Disbursing Officers.

1240. Therefore, the officer in charge of the Treasury knows that the Military Disbursing Officers are authorised to draw upon him for a certain amount during the month?—Yes.

1241. But in case of emergency, or in case of a sudden demand of any kind, there is a power on the part of the officer in command of the station to open what I may call a supplementary credit with the District Treasury, subject to reporting such a fact to head quarters, is there not?—If it was not very emergent, the Disbursing Officer would apply to the Controller for a supplementary cash assignment. If it was very emergent he would go to the officer commanding the station and get an order for the amount, and the officer commanding the station would report that the same day to the Controller of Military Accounts. The Disbursing officer would also report that he had applied for this extra assignment.

1242. The Disbursing Officers act under the Military Code do they not?—Yes.

1243. Is that Code very minute?—Yes.

1244. I ask the question because the volumes which we have seen of the Codes under which officers act in India are, quite necessarily, no doubt, numerous?—In addition to those codes there is the Pay Code which is the guide really for all Disbursing Officers as regards pay, and allowances, and so on. There are also various Departmental Codes, such as ordnance, commissariat, &c. The Disbursing Officers would not be authorised to pay anything which was not provided for by these regulations, that is, independent of the Account Code.

1245. Quite so. In the case of any payments they make for pay and allowances, they must satisfy themselves that they are in accordance with those regulations?—Yes.

1246. May I ask whether, in your view, the Military Code—the Military Account Code—is, as far as circumstances will admit, simple and intelligible?—I think so.

1247. From what you have seen?—I think so. I think it is very well understood in practice by those who have to deal with it.

1248. Exactly, that is what I mean?—I think so.

1249. The Codes, are not so complicated in their interpretation as to lead to unnecessary correspondence and friction between the Disbursing Officers and the persons who are entitled to receive money?—I should be rather sorry to express an opinion about that. There is correspondence, of course—a good deal of correspondence.

1249*a*. I am speaking on the question of the interpretation of the rules, whether the rules are of so minute and complicated character as to give rise to questions?—No, I do not think they are.

1250. You have already told us that the Disbursing Officers at a station are three or four, we will say, in number. Take an ordinary station; there are the Commissariat Officer, the Ordnance Disbursing Officer, and so forth; is an assignment made by the Controller in favour of each of these officers to a district treasury?—Yes. Each officer. The Ordnance Officer does not get a cash assignment.

1251. He does not?—No, he does not have any cash accounts of that kind.

1252. You have told us just now who the officers are. Would you mind repeating to us—take an ordinary station—who would be the Disbursing Officers?—The officers commanding native regiments.

1253. They are Disbursing Officers?—And batteries.

1254. Yes?—The Paymasters of British Regiments, the Commissariat Officers, the Circle Paymaster (Bombay and Rangoon), the Superintendent of Family Payments (Madras), the Officer in charge of Pensioners (Poona), the Remount Officers, and the Clothing Agents.

1255. And a credit is opened in favour of each of those officers?—Each one.

1256. You said just now the Ordnance Officer has no credit opened in his favour?—No.

1257. How are his payments made?—He gets for payment of temporary and extra establishments a permanent advance from the Controller, which he has to account for month by month.

1258. Therefore he has probably at times a large balance?—No, he gets a fixed permanent advance.

1259.-60 Where does he keep that advance?—He may make arrangements for a Treasure chest in his own office, or he may open an account with a bank at the station. All his bills for supplies are paid by the Commissariat Officer; he does not pay them. He gives the Commissariat Officer a bill vouched for and supported by the authority of the Inspector-General of Ordnance, and the Commissariat Officer pays that bill without further check, so that the Ordnance Officer has no cash account or cash assignments.

1261. For stores?—For stores, yes.

1262. Then the sums that are issued to him are for what kind of expenses?—The expenses of temporary establishments, and petty charges.

1263. It is comparatively small?—Comparatively small, certainly. The amount is fixed by the Inspector-General of Ordnance.

1264. Is it for contingent expenditure?—Contingent expenditure.

1265. (*Sir Ralph Knox.*) That would include some small payments for labour, I suppose?—Some small payments for labour, yes. The establishment charges are on a separate account.

1266. (*Chairman.*) Why is there a difference between him and other Disbursing Officers that he should have an advance which the other Disbursing Officers do not appear to have?—The other Disbursing Officers have a regular cash assignment for the whole of their expenditure; they do not, therefore, want any advance.

1267. The distinction, if I understand you, that you wish to draw is that the other Disbursing Officers have a cash assignment upon which they can draw for the whole of their expenditure?—Yes.

1268. Whereas the main part of the Ordnance Officer's expenditure is paid through the Commissariat Officer; therefore he only wants a small sum for contingencies?—Yes.

1269. In that respect he is like the other officers who are allowed, if they like, at the beginning of the month, to draw the whole sum assigned to them to cover their contingencies?—No, he gets one advance which is always with him, a permanent advance.

1270. He has a permanent advance of 10,000 rupees, or whatever it might be?—A permanent advance that goes on throughout the year.

1271. Is there any reason for that? It appears to be an exception to the ordinary method in which the financial business is conducted?—It saves him the trouble of keeping accounts, and to a certain extent it saves trouble to the Military Accounts Officers also, who have fewer accounts to deal with.

1272. Is not that rather an argument for doing the same to all these officers? I do not quite see why it is specially necessary that the Ordnance Officer should have a standing advance, when the others do not?—I am afraid I cannot answer that question. It was introduced very many years ago. They never have been Disbursing Officers.

1273. Is it really a very petty standing advance that is made?—I cannot state the exact amount. It is fixed in the manner already explained.

1274. (*Sir Ralph Knox.*) But he accounts for that expenditure?—Certainly.

1275. Therefore, he has to keep an account?—Just for those petty charges.

1276. (*Chairman.*) And I suppose he accounts for that monthly?—He replaces the money so spent by submitting bills for his petty charges.

1277. It does not seem to save the Ordnance Officer very much trouble in the matter?—Well, it does. He has only this one small cash account; he has not got to send in a regular cash account, like the Commissariat Officer has, going into a great many items.

1278. Now put an extreme case. Is it in the power of the Disbursing Officer to draw, we will say, on the first of the month, the whole of his assignment, or if he did so, would the Paying Officer, the Civil Treasury Officer, call attention to the fact?—Do you mean the whole of his annual assignment?

1279. No. I think you told us there was a monthly assignment?—No. The paymaster, Native troops.

draws the monthly assignment in one cheque, the regimental paymaster, British troops, draws it in four parts at four different periods of the month. The Commissariat Officer pays his various bills by cheque; he could not want to pay it all at the beginning of the month. Most, of course, of the larger items are in the earlier part of the month, but he pays them by cheques.

1280. Do I understand that his cheques are drawn on the Civil Treasury within the limits of his assignment, just as a man draws a cheque on his banker?—Yes.

1281. He does not actually draw the money himself and pay that money to the person to whom it is owing, but he gives a cheque?—He gives a cheque for sums over 10 rupees; everything under 10 rupees he pays in cash from a small cash balance which he draws from the Treasury by cheque.

1282. And that 10 rupees limit really corresponds very much, I take it, to the services for which the Ordnance Officer has a standing advance?—No; the Ordnance Officers have rather larger payments than 10 rupees.

1283. Quite so. But they are of a similar character, are they not? they are both for a contingent charge?

1284. (*Mr. Courtney.*) What we call a petty cash account?—Yes.

1285. (*Chairman.*) Now for the payment of British troops, you say the officer in charge of the payment of the troops draws four cheques monthly?—Four cheques monthly.

1286. That makes roundly one weekly payment?—Yes.

1287. Does he draw the exact sum which he has to pay or a round sum to cover that charge?—He draws, approximately, a round sum. The troops are paid weekly and so he draws this one-fourth in four weekly payments.

1288. He is entitled to draw for one-fourth of the monthly charge?—Yes.

1289. That is for regimental payments. There are other payments besides the payment of the troops, are there not? There are contingent payments of different kinds?—Very slight.

1290. Next take the officer in charge of pensions, which, of course, throughout India is a very large and heavy service. In what way is that branch of the expenditure conducted? I think you described an officer in charge of pensions?—Yes. That is in Madras and at Poona. Elsewhere the native pensioners are now paid through the Civil Treasuries.

1291. Therefore the Military Department is relieved of them?—Yes.

1292. Could you tell us in what way the Government satisfy themselves that the pensioners are really the persons who are entitled to draw the pension?—There are descriptive rolls for the guidance of the Treasury Officer who makes the payment.

1293. And does the pensioner always appear before this officer?—Yes; he appears in person, unless he is specially exempted from appearance; perhaps it is a woman, who does not appear in public and the Treasury Officer satisfies himself as to her identity before he makes the payment. But otherwise all the pensioners appear in person and draw their pension.

1294. Within your knowledge has it been found on the whole that the system is a sufficient one to prevent fraud?—The system was introduced since I left India, so I cannot speak very positively about that. When I was in India the pensioners were paid by the officers of the Military Accounts Department, who used to go on tour in the winter and in the summer, and the pensioners were collected at various stations and they then paid them in person. But that has been changed since I left India, and they are now paid through the Civil Treasuries.

1295. The officer in charge of the Civil Treasury, who has nothing whatever to do with the army, would, if I may so put it, be more easily imposed upon than a military officer?—It is possible.

1296. (*Mr. Courtney.*) But I suppose the number pensioned is very large indeed?—Very large.

1297. Would not the pensioners produce some paper bearing the signature of some military officer?—Yes, he has his pension certificate.

1298. I do not mean his original pension certificate; but would he not duly appear before a military officer before being paid?—He does not do so at present.

1299. (*Chairman.*) He merely comes and produces his original grant, and says, "I am the person entitled "under that grant," and, as I understand, the Civil Treasury Officer is not bound to go further than that?—The Treasury Officer compares his statement with the descriptive roll that he has got, asks him a few questions to satisfy himself as to his identity, takes evidence from other pensioners, and then pays him the money. I think, at home, there is a similar system of paying through the Post Office.

1300. Perhaps the Accountant-General of the Army will put one or two questions on this point?

1301. (*Sir Ralph Knox.*) All the pensions are paid through the Post Office at home. Have you many stations at which these payments are made?—Yes, a considerable number.

1302. Have the recipients to travel any long distances in order to be present at these payments?—No. They choose their own station for payment; it is somewhere near their homes—the nearest station to their home.

1303. What distance does that mean?—It might be 20 miles; it might be 50 miles.

1304. But they have to travel that distance in order to receive their pension?—Yes.

1305. Is not that complained of as being inconvenient?—Not that I am aware of.

1306. But they come from these long distances as strangers, more or less, to the stations at which they are paid; they are not known at the station, except as coming to receive their pensions?—They are generally brought up at first by old pensioners who vouch for their identity; then they come twice a year or more, and are soon well known.

1307. These payments are made only twice a year?—Twice a year or quarterly; but pensioners can be paid monthly if they wish it.

1308. For the information of the Commission, I may say that the payments of the pensioners at home—army pensioners—are paid monthly, and paid by means of postal orders practically.

1309. Do the recipients of the pensions bring with them any certificate as to their identification?—Yes; they bring their original pension certificate.

1310. But no certificate that the person named is alive, or was so within recent date?—No; the men or women themselves are present, and the Treasury Officer compares the pension certificate with the descriptive roll, which he has in his office, which notices certain distinguishing marks on the person, and so on.

1311. But does he examine the individual in that minute way?—Yes, and, if necessary, he takes evidence from other pensioners.

1312. Then that is the check which you have upon the identification of the person; you rely upon the paying officer being able to recognise the person who comes for the payment?—To recognise and identify him by the descriptive roll which he has got before him, and by other evidence as I have explained.

1313. (*Chairman.*) But the pensioner claiming the payment brings no life certificate signed by a known authority who vouches for his identity?—No.

1314. Taking the payment of bills of supply—civil bills—I think I understood you to say just now that the Disbursing Officer holds practically no balance, except for contingencies; he simply issues a cheque upon the Civil Treasury to the person entitled to payment?—Yes.

1315. Within the limits of his monthly assignment?—Yes.

1316. We have understood that the Civil Officer at the head of the District Treasury is bound to see that the drafts upon him are in accordance with regulations. In the case of military disbursements, what are the authorities which the Military Disbursing Officer produces? I suppose, first of all, the Treasury officer knows the assignment which the Disbursing Officer is allowed to draw for the month?—Yes.

1317. And that is sufficient authority for him?—Entirely.

Major-Gen. Sir O. Newmarch, K.C.S.I.

7 Nov. 1895.

1318. But now when the paymaster of a regiment draws for one of these weekly payments, does the Civil Officer, who honours his cheque, look to see that the cheque is not more than one-fourth of the total assignment for the month?—No; that is a matter which does not concern him.

1319. So long as it is within the monthly assignment?—So long as it is within the monthly assignment he would pay it.

1320. But on certain occasions when cheques for bills are presented, does he examine those cheques to see whether they are in order?—No; only just as a banker would examine a cheque.

1321. Not more?—Not more than that.

1322. Therefore, when it is said that the Civil Treasury Officer has to satisfy himself that the demands upon him are in accordance with the regulations, those regulations are very simple, and ought not to give rise to any delay or friction?—There is none whatever as regards the Treasury; the Treasury simply acts as a banker.

1323. (*Mr. Jackson.*) But it would not necessarily follow because a man draws four cheques in a month that they would be necessarily of equal amounts for each week?—No, they are not.

1324. (*Chairman.*) The Military Examiners are simply auditors, are they not?—Yes, except the Pay Examiner, as I have already explained.

1325. And they are a staff entirely independent of the Disbursing Officers?—Quite.

1326. It is by them that the War Office satisfies itself that the money placed at its disposal is actually disbursed in accordance with the regulations?—Yes.

1327. I think you have told us already that the Military Examiners are stationed at the headquarters of the command, and I think you told us that they were three or four in number?—Yes, three in each command.

1328. Could you give us any idea of what the military expenditure in any one command is—perfectly roughly?—I can give it you from the estimates.

1329. Yes, if you please; that is to say, the estimates that come in from any one Controller?—See for instance, the Budget estimate for the Bengal command.

1330. What page is that?—Page 8, at the beginning. Rupees 5,13,73,570. Budget estimate for the Bengal Command.

1331. That would roughly represent something like five millions, would it not—between four and five millions of our money?—Yes.

1332. And the examination of the accounts for the whole of the expenditure is conducted by three Examiners with clerks under them?—Yes, three in each command.

1333. They always have a staff of clerks?—Yes; a large staff of clerks.

1334. Now are these Examiners the people upon whom the Military Accountant-General or the Controllers in commands would depend in case of any irregularity arising or being suspected? Are they the officers who might be sent down to examine the books and accounts on the spot?—Officers from the Military Account Department are deputed occasionally by the Controllers to visit certain regiments and Departments, and to examine their accounts, their cash and their store balances, making a test examination and inspection of those.

1335. Then you have a real system of test?—By travelling inspectors, yes.

1336. The travelling inspector is one of these Examining Officers whom you have described at head-quarters?—Probably not the Examining Officer but one of the officers attached to the Controller; it is left to the Controller.

1337. An officer attached to the Examining Branch, you mean?—Yes, it is left to the Controller to depute any officer he pleases for these inspections.

1338. That being the case, one of these officers would be the person that the Controller would choose in case there were reason for thinking that there was anything irregular going on?—It rests entirely with the Controller.

1339. Under what regulations are the accounts of the Disbursing Officer sent to them; I mean by that, are they sent at stated periods to this examining staff at head-quarters?—Statements of payments, by the Commissariat Officers are sent every 10 days, but the complete accounts are sent as soon as possible, at the end of the month.

1340. Then from each station there comes up monthly, I suppose, the amount of money which each Disbursing Officer has drawn or ordered to be paid, supported by the vouchers of payment?—Yes.

1341. Those are examined, and the vouchers of payment include, among other things the authority by which the payment is made?—Where any separate authority is necessary.

1342. Where there is a standing authority, of course, that is on register?—Quite so. I may say that more than two-thirds of the military estimates are personnel charges which are pretty fixed from year to year; there is not much doubt about these charges.

1343. When the auditing Examiner comes to deal with the payments made by a Disbursing Officer to a regiment, does he satisfy himself in detail of the correctness of the payments made; for instance, does he receive a list of the soldiers with signatures against their names to show that they have received such money? Or how does he satisfy himself that the money has been properly spent?—He gets the general state of the accounts of the regiment which is supported by the company pay-lists and rolls, and he checks that in great detail.

1344. These rolls do not contain the signatures of the men, acknowledging that they have been paid. I suppose he is satisfied with the statement of the company paymaster?—I think the company officers see to that. I will not speak positively, but I think that those do not go to the examiner—not each soldier's individual receipt.

1345. That is the case here, Sir Ralph Knox, is it not? You do not take any signature from the soldiers actually paid, do you?

1346. (*Sir Ralph Knox.*) Yes; the soldier signs his account?—But does that go to you?

1347. No?—That is what I mean. The company officer is responsible for that.

1348. (*Sir Donald Stewart.*) It is kept as a regimental record?—Yes; but it does not go to the Examiner, I mean.

1349. (*Chairman.*) He accepts the company paymaster's statement?—The company pay abstract, yes.

(*Sir Ralph Knox.*) But our Comptroller-General has asked for the actual signed accounts to be sent up to him, so that he tests them from time to time.

1350-1. (*Chairman.*) In India, is any similar test applied by the Examiner; does he occasionally see these signed accounts?—Only by one of these inspecting officers, when he goes round to a regiment or Department.

1352. Now, if these examining officers find a payment insufficiently vouched or not sanctioned by proper authority, what course do they pursue?—They issue what is called an objection statement.

1353. To whom?—To the Disbursing Officer. Then the Disbursing Officer makes his reply to that, and then the Examiner either admits his explanation or he finally disallows the charge. If he disallows it, then the Disbursing Officer is required to credit that amount in his next account.

1354. And the Examining Officer has to that extent the power of disallowance, has he?—Yes; certainly.

1355. Supposing the Disbursing Officer, objects to the disallowance and thinks that the authority for the payment is sufficient, what remedy has he?—He can appeal to the Controller; but he must first credit the disallowance. If a regimental paymaster does not get any satisfaction from the Controller, he is then at liberty to appeal to the Commander-in-Chief.

1356. The Disbursing Officer is the officer of the Commander-in-Chief?—Yes, in this case.

1357. He does not appeal to the Accountant General?—No. He goes to the Commander-in-Chief, and then if the Commander-in-Chief were not satisfied with the Controller's decision, he might refer the case to the Government for decision.

1358. If the Commander-in-Chief receives such an objection, does he lay it before the Military Member of the Council, who, I think, you said was more particularly in charge of the finance of the Military Department?—If he supported it, he would refer it to the Military Department of the Government of India.

1359. Through the Military Member of Council it would come before the Military Accountant-General?—The Military Accountant-General would probably be asked to advise on the case, and the final decision would rest with the Military Member of Council.

1360. Now supposing a case of a grave financial irregularity taking place, would it be quite certain that the notice of it would reach the Secretary of State?—It would reach the Military Department of the Government of India.

1361. I am not speaking of a mere mistake in the interpretation of a regulation, or something of that kind, but of a grave irregularity—is there any provision by which that could be brought to the notice of the Secretary of State?—The Controller of Military Accounts would be bound to bring it to the notice of the Government of India in the Military Department.

1362. And would the Government of India in the Military Department send it to the Secretary of State for information? Would the Secretary of State, as the supreme authority, be safe to know if a grave irregularity had taken place?—No; unless it was something very extreme it would not come home at all.

1363. There is no necessity for it to come home?—No; it would not come home at all unless it was something very serious indeed.

1364. Supposing the most improbable case of the Commander-in-Chief and the Government in India condoning an offence, it would be written off in the accounts, and there would be no security that the supreme authority would know it? I am putting an extreme case in order to see whether under any circumstances of gravity the Secretary of State, as the supreme authority, would be certain to know of an irregularity?—Not unless it came beyond the limits of the powers of the Government of India.

1365. To condone?—To settle, yes. They have only limited powers in financial matters. When they want to exceed those powers they have to come to the Secretary of State; but an ordinary case of an irregularity in a Disbursing Officer's accounts would not come to the Secretary of State at all.

1366. No, quite so, not an ordinary case, but the case I was thinking of was a case of defalcation. Supposing a defalcation took place by a high officer? I have not the least doubt it would never take place, but supposing that it did and that the Government of India were to condone it, would there be any security that the Secretary of State would know the fact that there had been such an irregularity, and that the Government had condoned it?—No, I do not think there would.

1367. (*Sir Donald Stewart.*) Would it not necessarily be reported, if the character of an officer was involved?—Oh, certainly. I was speaking of something which is not beyond the powers of the Government of India to condone. If an officer committed so grave an irregularity as to necessitate his removal from the service, of course it would come to the Secretary of State.

1368. (*Chairman.*) I am confining myself to the purely financial question—the power of the Government of India in allowance and disallowance of irregularities is final, and there is no necessity in any case for their decision being reported home?—No, not unless some action had to be taken with regard to the offending officer.

1369. (*Sir Ralph Knox.*) If he were acquitted, as it were, in the judgment of the Government of India, it would not come home?—No.

1370. (*Chairman.*) Would you say that the power of the Examining Officer to pass irregularities is large?—He has no power to pass anything which is not in accordance with the rules, and properly vouched.

1371. But you say, supposing he thinks the payment is not sufficiently vouched, or is not sufficiently authorised, he sends an objection paper, which the Disbursing Officer answers? Has he full power to accept that payment if he considers that it is in accordance with the regulations?—With the regulations, and properly vouched. Perhaps his objection to the statement refers to the want of some voucher; then the Disbursing Officer sends the voucher, and that removes the objection.

1372. But supposing it is a question of the interpretation of the authority—we will take a case in which the authority of the Finance Department ought to have been obtained, and it has not been obtained. In such a case, can the Examiner pass the payment if he thinks the explanation given by the Disbursing Officer is sufficient?—Certainly not.

1373. He would be bound to report a doubtful case?—He would be bound to uphold his objection.

1374. And he would be bound to report a doubtful case to the Controller. He is not authorised to exercise a discretion in doubtful cases?—No.

1375. He would be bound to report it to his superior? Yes.

1376. When the Examiner has examined the accounts of a district or station, and passed them, does he send those accounts as passed by him to the Controller?—Examiners send in to the Controller what is called a compilation statement of all the charges under the various grant heads and sub-grant heads, and the Controller consolidates that compilation into the general statement of receipts and charges which finally form the Finance and Revenue Accounts of the year.

1377. And are these accounts rendered to the Controller monthly, for each month?—Monthly, yes.

1378. Does the Examining Officer accompany these with any statement of objections he has taken?—No.

1379. Therefore the Controller has no means of judging the manner in which the Examining Officer has exercised his judgment in doubtful cases?—Yes, he has occasionally a test audit of a portion of their accounts. He deputes someone to make a test audit of some portion of the accounts which each Examiner has audited, The Comptroller-General also has the power at any time of going into the Controller's office and making a test audit of the accounts, and he does so periodically.

1380. The point that was in my mind was whether the highest account officer in the War Office has any means of judging, on the face of the accounts that are sent in, how the Examining Officer has performed his duty—that is to say, whether he has any opportunity of seeing the irregularities to which the examiner has called attention and the evidence upon which he has been satisfied that those irregularities ought to pass?—No, he does not see those objection statements unless they come to him on appeal.

1381. At the close of the year is there a military appropriation account drawn up in the Military Department for the use of the Comptroller-General?—Yes, a military appropriation account.

1382. That is drawn up by each Controller?—By each Controller.

1383. And consolidated?—Consolidated by the Accountant-General.

1384. Is his account accompanied by any remarks on irregularities? I presume not, because, if the monthly accounts did not report all irregularities there are no means of stating them, except such as may have come to the notice of the Controllers?—That is so.

1385. And would the Controllers report to the Military Accountant-General the irregularities which had been reported to them?—If they were of a grave nature they would; but as I say, they do not see these objection statements unless they come on appeal.

1386. But I mean those which do reach them; would they report them?—No, not unless they had occasion to ask the orders of the Government of India; or in the event of any dispute between the Examiner and the Disbursing Officer, if the Disbursing Officer was not satisfied with his decision—otherwise it would not come to the Accountant-General.

1387. May I ask you if, judging from the experience you acquired as Military Accountant-General, you would not consider it an advantage if you had known of the cases of irregularities that had reached the Controllers, so that you might thereby form a judgment as to the manner in which your subordinate officers and representatives performed their duty?—You can form that judgment from the cases which come up on appeal; but it would be impossible for the Accountant-General to go through all these objection statements, which are hundreds in number.

1388. But would it not be an advantage if the Controllers accompanied their yearly account with a statement of the objections which had reached them, which the Examiners had either doubts about or had not passed?—I think not. That is the Controller's duty.

Major-Gen. Sir O. Newmarch, K.C.S.I.

7 Nov. 1895.

1389. You hold that the Accountant-General holds the highest place. Therefore would it not be desirable that he should know what kind of objections had been taken and had not been satisfied in the first instance?—I think not.

1390. The civil examining officers do not go into the detail of the military accounts, do they? they accept, as a rule, the examination by the military Examiners?—What civil officers are you referring to?

1391. The Civil Comptroller-General's officers who conduct the audit on the part of the Comptroller-General?—They accept the Controller's statements, subject to the test audit which the Comptroller-General can exercise at any time.

1392. There is no double or second audit on behalf of the Civil Auditor-General of the military accounts?—No, not beyond this test audit that I am referring to.

1393. Then in what form are the military accounts, so vouched by the proper Examining Officers, transmitted to the Civil Comptroller-General?—By the Controller.

1394. They send them to the Civil Comptroller-General?—Yes.

1395. And the Civil Comptroller-General, through his officers, sees that the military accounts in detail have been examined, and vouched, and tested by the signature of the proper Examining Officers?—They accept the Controller's signature; they do not go behind the Controller.

1396. But apart from that, it is a well-understood rule of Indian Finance that the Civil Comptroller-General is entitled to send auditors to make a test audit of any part he pleases of the military accounts?—Yes, certainly.

1397. At present do you think the regulations are such that the Military Accountant-General may, or is always in a position to, report at the earliest possible moment to his chiefs whether the military expenditure is running on all fours with the Budget—that no excess of expenditure is taking place?—Yes, he gets a preliminary statement on the 10th of the month of the actual issues of the previous month. Then later on, on the 20th, he gets that statement again in a little further detail. Then, on the 26th, he gets further detail, and in the meantime he has from the Civil Accountants-General their statement of issues to the Military Department, with which he can check the military statements with the receipts, so that there is no possibility of any excess of expenditure going on without his being aware of it.

1398. May I ask, with your experience of the military expenditure in India, whether you consider that the present system is a satisfactory and complete one, or are there any points upon which you think, in the interests of economy, an improvement might be effected, either in the way of simplification or in the way of modification of existing regulations?—I am not prepared at present to suggest any modifications or improvements.

1399. I am quite aware that I am asking you rather a large question, and perhaps it is hardly fair to ask for an off-hand reply?—It is rather a large question, if I may say so.

1400. (*Mr. Buchanan.*) The Military Accountant-General has no direct audit work to do?—No.

1401. These test audits that occasionally take place are by the authority of the Civil Comptroller-General?—And the Controller of Military Accounts.

1402. That is to say the Controller in each command?—Each command.

1403. He can have a test audit on any subject he pleases?—On any particular Examiner's work. He can have a test audit of the Pay Examiner, or the Commissariat Examiner; he can have a sample test audit made of any portion of their accounts for any month to see if their audit is correct or satisfactory, and the Comptroller-General can do the same, and does so periodically.

1404. From year to year does the Civil Comptroller-General in India carry on a certain number of test audits of the military accounts?—I cannot say very positively, but he has the power, and I know that he does it periodically; but under what rules exactly he does it, I cannot say. Mr. Jacob could tell you that.

1405. Then your position as Military Accountant-General was rather, as I think you said, that of an extra military secretary. You had no direct audit work?—No.

1406. Then there is one other question. You told us at the beginning of the examination about the method of preparing the regular military estimates from year to year; but, supposing there was a proposal for a considerable change, either in the way of reduction or of increase, in the military estimates, what process of consultation goes on between the military and the non-military authorities in the Governor-General's Council?—The proposal comes up to the Military Department or originates in the Military Department, or it originates with the Commander-in-Chief, and is then considered by the Military Department. If they are satisfied as to the necessity for this increase or alteration, then it goes over to the Financial Department. If it is a small matter, it goes over, as it is called, unofficially. The Financial Department see the papers and the notes on the case, and they give their concurrence or otherwise. If it is a larger matter, then it goes over officially to the Financial Department, and their decision is practically final, otherwise the matter comes up before the Governor-General in Council.

1407. But do you mean that the Finance Minister and the Finance Department would have practically a veto upon any large increase or decrease of the Military estimates of the year?—No; not any large increase or decrease. In the more important matters the Military Member, of course, could appeal to the Governor-General in Council, but he would not do so in ordinary cases unless he thought it was of sufficient importance; but the appeal would rest to the Governor-General in Council.

1408. Then where there is going to be a large change of that sort, do the Commander-in-Chief and the Military Member of Council first of all get the assent of the Financial Member to their proposals?—Yes.

1409. As a rule?—Yes; and in most cases it has to come to the Secretary of State, and then the despatch making the proposal comes not in the Military Department, but in the Finance Department.

1410. There is no obligation upon the Government of India to get the consent of the Secretary of State before the Budget is introduced with this increased or diminished Military estimate?—No; not unless there are any changes beyond their powers. The powers of the Government of India are limited; they cannot create new offices beyond a certain amount; they cannot make any changes in the organisation of the Army without the sanction of the Secretary of State. Anything of importance, in fact, has to come to the Secretary of State before it can be carried out.

1411. (*Sir William Wedderburn.*) I think you mentioned in answer to the Chairman that there were certain matters that would not necessarily become known to the Secretary of State; but is there not a monthly abstract of proceedings in the Military Department prepared which goes home regularly to the Secretary of State, in which any resolutions of the Government would appear?—Yes, and it is my business to examine that as it comes in and to submit anything which appears to require the attention of the Secretary of State; but it is not all *in extenso*, a great portion of it is merely in short abstracts, and from that you could not always tell what was being done.

1412. So that no matter of reasonable importance would fail to be detected through those?—Certainly not.

1413. (*Sir Ralph Knox.*) I am not quite sure that I understood exactly the *locale* of the Pay Examiner and his connexion with the Controller of Military Accounts—or of the Examiners, rather, of accounts. Are they only stationed at the same place where the Controller of Military Accounts is?—Yes.

1414. But they are not his officers?—Certainly.

1415. They are his officers?—Yes, subordinate to him in every way.

1416. They are the subordinate staff of the Military Accountants?—Of the Controllers.

1417. Of the Controllers I mean?—Yes.

1418. And they only exist at a station where he exists?—Yes.

1419. And that is at the head-quarters of a command?—No, they do not audit at the head-quarters in all cases.

For instance, there is one in Calcutta, which is not the head-quarters of the command.

1420. But would there be one at Bombay, and another at Madras?—There is one at Poona, there is one at Madras, and there is one at Rawal Pindi.

1421. There are only those four?—Only those four.

1422. Then these Examiners of Accounts only exist at those four stations?—Yes.

1423. And all the accounts from the Disbursing Officers are sent up to them to be audited?—Yes.

1424. Do these Examiners do anything in the way of pre-audit? — Occasionally, when a Commissariat or a Regimental Officer has any doubt as to a particular charge or claim which is made, before paying it he sends it down to the examiner with the necessary vouchers for pre-audit, and the examiner then sends him a letter authorising him to charge it, but does not send him back the vouchers or the statement; he keeps them, but he sends him a letter authorising him to pay and charge that sum. In any difficult case that is generally done.

1425. The Disbursing Officers seem to follow very much the various services which have to be administered. In connexion with the Army you have Commissariat disbursers, and Pay disbursers, and Pension disbursers, and so on?—Yes.

1426. And they all seem to disburse payments which are practically ordered or administered by themselves. That is so, is it not?—Except in the case of the Commissariat, for instance; they pay Ordnance charges, with which they have no concern whatever. Merely as a matter of convenience, they pay the Ordnance Officers' charges for supplies of tents or other stores.

1427. But so far as the Commissariat expenditure is concerned, they practically disburse under their own orders the expenditure which is thus incurred?—Yes, that is so.

1428. Therefore, they are in no respect, as it were, independent auditors of the expenditure; they examine it themselves, and send in an account of it?—Yes.

1429. As regards the Ordnance expenditure which they pay, they do not apply any audit to that, do they?—None whatever.

1430. They simply pay on the certificate of the Ordnance Officer?—Yes.

1431. In the case of the Regimental Disbursing Officer, his disbursements practically are, so far as he is concerned, issues to the company officers, I presume?—Yes.

1432. And the company officers send in their accounts of their expenditure to him?—Yes.

1433. Does he apply any audit to those accounts before he sends them in?—I think he examines them, but I cannot speak positively about that He would certainly check them to some extent; although the company officers are responsible for their pay lists, it would be his duty to point out any mistake.

1434. But would it be his duty to examine it, and see that it was all right before he sent it on?—To the above extent.

1435. So that as the payments are made, there is no immediate local audit or check, except in so far as the responsible officer feels his responsibility in making the order for the payment?—Yes.

1436. That is all?—That is all.

1437. There is no independent check?—No.

1438. (*Chairman.*) You are speaking now of the payment of the regiments?

1439. (*Sir Ralph Knox.*) And of all of the disbursements—the commissariat, and the pensions, and other charges?

1440. (*Chairman.*) But are you speaking now of payments to individuals—either pay or pension?

1441. (*Sir Ralph Knox.*) No, accounts as well. Is there any limit as to the amount which a Disbursing Officer may pay in the way of a bill?—The limit is his cash assignment.

1442. But he pays a bill however large the claim may be. He would pay a bill for 200*l.* or 300*l.* to a contractor?—Certainly.

1443. A Commissariat disburser would in his case, and the Pay disburser in his, and so forth?—Certainly.

1444. There are no direct payments made from head-quarters?—No.

1445. When the Disbursing Officer makes payment on account of several services, as you described was the case—for instance the regimental paymaster, being the only local disburser, is sometimes the officer who sends in the estimates for all those services for that station?—He does not pay any services beyond those of his own regiment.

1446. I thought in some cases the officer in charge of a battery or a regiment made the payments on account of commissariat services?—No. If I gave you that impression it was wrong. He makes no payments except those connected with his own regiment or battery.

1447. There is always, then, a Commissariat disburser at every station where payments have to be made?—No, not necessarily. The payments might be made from the Commissariat Office at another station, in which case there would be no Commissariat Officer at the particular sub-station.

1448. Who would actually make the payment?—The Commissariat Officer at the centre station.

1449. How would the claim be presented to him. Would the local tradesmen send in the claim to him although at a distant station?—Yes, and he would pay it by cheque.

1450. And then this Chief Disbursing Officer, or the officer who is in charge of the station at which the payment was to be made, would send in the estimate for the sub-stations?—Certainly.

1451. The estimates themselves furnished by these local disbursers of course only represent the state of things as they are at the time they send in those estimates, based upon their current expenditure, upon prices, and upon numbers, and pay of establishments?—Yes.

1452. And, therefore, they form simply the basis for considering the estimate; they are not accepted, as practically forming the estimate; they have to be modified very considerably?—They might have to be modified by the Controller if any changes had taken place since the estimates were prepared, which the Disbursing Officer was not aware of.

1453. But as regards new expenditure of a considerable amount, such as re-armament, or anything of that kind, that would be considered at head-quarters?—Yes; no officer would be authorised to insert anything in his estimate which had not already been sanctioned.

1454. Therefore, at head-quarters, very often the estimates, consisting of compilations of those which are sent in, are considerably modified?—Yes.

1455. On grounds of general policy or change?—Yes, reduced or increased.

1456. (*Chairman.*) In supplement to one of Sir Ralph Knox's questions about the revision and completion of the estimate at head-quarters, I wish to ask whether, a very large amount of the supplies being only procured at head-quarters, there are not, therefore, in finally completing the estimate at head-quarters, very large additions to be made? For instance, I will take Ordnance stores, which I see come to about Rs. 40,00,000 or so in the course of a year. I suppose the larger part of those are got together at the head centres, are they not, either at the headquarters of the four commands or at Calcutta?—Those would be included in the estimates of the officers in charge of the arsenals, or the superintendents of the large factories.

1457. Exactly; they would come into the estimates from the command?—In the ordinary estimates, yes.

1458. I suppose practically the larger part of these stores are ordered at the central and big towns, are they not?—No, they are ordered wherever the factories may be. There are factories at Madras, there are factories at Poona, there are factories at Cossipore, and at Ishapore near Calcutta.

1459. But those are big towns, are they not?—No, not all of them.

1460. They are big centres of command?—No; Ishapore is some miles from Calcutta; Cossipore is a few miles from Calcutta. There is a factory at Futtyghur, which is far from any centre. There are various factories and arsenals dotted about the country, in the same way; they are mostly at large stations, but they are all over the country; and all these officers send in their

Major-Gen. Sir O. Newmarch, K.C.S.I.

7 Nov. 1895.

estimates of what they want for the following year, which are based on established proportions.

1461. How does the Government in Calcutta get the estimate of expenditure in England; for instance, the estimate of the services payable here?—That is all furnished from home.

1462. It is?—Yes.

1463. And furnished by a certain time, I suppose?—By a certain time.

1464. Does any criticism of that estimate take place by the Governor-General in Council?—I am not familiar with that. It is generally done in the Financial Department. There is a good deal of telegraphic communication at the last moment about those estimates.

1465. I am asking that question about the military part of the expenditure?—There are telegraphic communications as to any possible reductions or increases at the last moment.

1466. But of course the estimate is sent out from here, as it emanates from the Secretary of State; it is more or less a final estimate; the Governor-General in Council cannot over-rule it?—No, but it is very often altered on his representation.

1467. One other question. Going back again to the payment of pensions, I see the payments to native soldiers are very large indeed?—Very large.

1468-9. They amount to 72 lacs of rupees, do they not?—A little less than 72 lacs.

1470. At all events, they amount to a very large sum. Are you satisfied that the precautions, of which you have spoken, are such as to prevent, as far as possible, there being room for fraud there?—As I said, the system has been changed a good deal since I left India, so that I am not very familiar with the details of it; but I have no doubt all necessary precautions to guard against fraudulent personation are adopted, and the statistics of military pensioners are reviewed every year to see whether the actual mortality agrees with the anticipated mortality according to life tables.

The witness withdrew.

Mr. A. R. Becher.

Mr. A. R. BECHER, Deputy Accountant-General, Public Works Department of the Government of India, called in and examined.

1471. (*Chairman.*) I think you are at present engaged in the Public Works Department of the Government of India; would you say what your position is?—I am Deputy Accountant-General in the Public Works Department.

1472. That is to say you are the second officer in the Public Works Department?—Yes, in the Accounts.

1473. In the Accounts Branch?—Yes.

1474. How long have you held that post?—On and off I have held it for about seven years now.

1475. Could you give us a sketch of the manner in which the Public Works Department is organised, the branches or chief sections into which it is divided?—There is what is called the Buildings and Roads Branch of the Department, the Irrigation Branch, and the State Railway Construction Branch, and the Open Line Branch.

1476. By Open Line, do you mean those which belong to companies?—Lines which are working.

1477. Are those all the sections or branches into which the Public Works Department is divided?—That is the whole of the executive.

1478. Then besides that, there is the Accounts Branch?—Besides that, there is the Accounts Branch, which is concerned with the audit of the transactions of all these executive branches.

1479. Has the Public Works Department anything to do with the Guaranteed Railways?—Yes; it has to a certain extent. There is a consulting engineer, who is a member of the Public Works Department, attached to each guaranteed railway, and there is a Government Examiner.

1480. That is to say, questions connected with or arising out of the relations between the Government and the Guaranteed Railways are dealt with by the Public Works Department?—Yes.

1481. In which branch of those that you have named would that business come?—In the Railway Branch.

1482. I have got here the Buildings and Roads, Irrigation, State Railways Open Line Branches, and the Accounts Branch; but you mentioned a Construction Branch?—I divided the Railway Branch into two, the State Railway Construction and the State Railway Open Lines.

1483. Then the Public Works Department is divided into four branches, and the Accounts Branch?—Yes; four branches and the Accounts Branch. The two railway branches may properly be considered as one. It would be better to deal with Railways, Irrigation, Buildings and Roads, as the main divisions.

1484-5. Is that so in the Budget?—That is as in the Budget.

1486. But I see this account is divided into Telegraph, Railways, Irrigation, Buildings and Roads?—The Telegraph Department is under the Public Works Department. The Public Works Department proper consists of the Buildings and Roads, Irrigation, and Railway Branches.

1487-9. I see the total expenditure provided under these headings is somewhere about 32 crores?—This is Rx. 33,000,000. Those are "Rx."

1490. Now, taking the Accounts Branch, will you tell us what the strength of your establishment is in that branch?—I could not tell you, straight off, I think, without looking up the papers.

1491. Have you a large number?—I think the sanctioned strength is 84 officers.

1492. And you described it just now as an Audit Branch?—Yes.

1493. Is it not also the Finance Branch of the Department?—The Accountant-General and his deputies and assistants may be called the Finance Branch of it; but all the Examiners who are attached to provinces or to lines of railway are purely auditing officers.

1494. But it is by the Accounts Branch in the Public Works Department, first of all, that the Budget is made up?—It is compiled in the Accounts Branch. The details for it—for works or railways that have to be constructed—are prepared by the Executive Branch of the Department. That branch says what works have to be carried out and what money spent on them within certain limits, which have already been fixed for them by the Finance Department.

1495. They, in fact, make the first draft of the estimate for their separate Departments; that comes to the Accounts Branch—it is revised and compiled there?—It is hardly revised—it is compiled.

1496. Then, I presume, from the Accounts Branch also issue the orders for payment and orders for the supply of funds, do they not?—Orders for the supply of funds issue from the Accounts Branch, but payments are made by the executive officers themselves within certain fixed limits. They have letters of credit as has, I think, already been explained.

1497. We will come to that in a moment. I would now ask you if you would describe to us the manner in which the estimate of the Public Works Department is framed. But first of all let me ask you this: The Public Works Department is an Imperial Department, is it not? The officers of the Department, wherever they are situated, are held to belong to the Central or Imperial Government, are they not?—No; they are provincial. In each province the Public Works Department is under the Provincial Government—the Executive Branch of it is.

1498. It is under the Provincial Government?—Yes; under the Provincial Government. The Accounts Branch is under the Central Government.

1499. Quite so?—The Accounts Branch is the Imperial Branch.

1500. The Accounts Branch belongs to the Central Government?—It belongs to the Central Government.

1501. There is the Accountant-General and the Deputy Accountant-General. Who represents the Accountant-General in the different provinces?—There is an Examiner of Public Works Accounts in each province, and he has certain assistants, according to the size of the province and the amount of work which he has to deal with.

1502. And are these Examiners in the provinces finance officers, or are they purely audit officers?—They are finance advisers, but they are really audit officers. They advise on any point of finance which the Local Government wishes to get their advice upon, and they also advise the Local Government as to any irregularities that may happen, or anything of that sort. But their principal duty is that of auditing the expenditure on works.

1503. They have nothing to do with the supply of funds within the province?—They arrange that the Executive officers shall be supplied with funds.

1504. By the Provincial Government?—By the Provincial Civil Accountants-General. It is on their requisitions that the Civil Accountants-General give the orders to the Treasury officers to issue money to the Executive Branch.

1505. These Examiners are officers of the Imperial Government, are they not?—Yes.

1506. Because they belong to the Accounts Branch?—They belong to the Accounts Branch.

1507. Then the provision of funds is not a duty of the officers of the Provincial Government, but lies with the finance officers of the Public Works Department who are stationed in the province?—The funds are provided by the Provincial Government.

1508. Quite so, but from whom does the order come?—The order for the issue of funds emanates from the Examiner, who is an Imperial officer.

1509. Now, will you tell us, beginning with the estimate, which is the beginning of all finance, how the Budget estimate is prepared, and when?—The Budget estimate is prepared in the first instance for the different funds—provincial and local funds, and Imperial funds. The amount which can be found in any one year from provincial and local funds for expenditure on works, is settled by the Provincial Government; the amount of Imperial funds that can be found is settled by the Imperial Government, and is communicated to the Provincial Government.

1510. Then does the Imperial Government communicate to the Provincial Government before the time for the preparation of the estimates the amount of Imperial works which they propose to execute within the province?—Yes.

1511. And is that then included in an estimate for the province which is prepared by the Provincial Government?—Yes, in a separate estimate.

1512. But sent up from the province?—Sent up by the Provincial Government.

1513. Then when the Budget of each of the provinces is prepared it comes up to your Central Office?—They all come up to the Central Office.

1514. And are they revised and criticised by the Accountant-General and yourself?—By the Accountant-General,, as well as by the other branches of the secretariat at head-quarters

1515. The Secretaries also consider them?—Yes.

1516. And by what time of the year are the Provincial Governments bound to send you the estimate?—They have to send their Budget estimates in on the 15th of January.

1517. To the Central Office?—Yes.

1518. And how long a time after that have you to consider them before you are obliged to submit your estimate to the Governor-General in Council?—The Public Works Estimate has to be submitted about the 15th of February.

1519. You have only about a month at head-quarters to consider the estimate and to correspond about it?—Yes. But there has been a preliminary consideration before that. In October of every year the Provincial Government sends up what is called a schedule of demands, which is merely a forecast of what it is proposed to do and the money which is required to admit of the proposals being carried out. These proposals are considered, and the Government of India say: "Of the "amount that you have asked for we can only give you "so much; you must cut down your demands to this "sum." Then the Budget estimate is prepared for the amount specified. But it is still subject to further revision.

1520. But, practically, the Imperial Government and the Provincial Government have come to a general agreement beforehand upon the extent to which funds can be found for works?—Yes; before the 15th of January.

1521. Now at the time that that consideration takes place, is there any general consideration in the Council and with the officers of the Public Works Department—first of all as to the general financial situation of India; and, secondly, as to the amount which, bearing in mind that general financial situation, can be afforded for public works?—The Financial Department tell the Public Works Department what money they are likely to be able to provide, and the Public Works Department frame their estimates accordingly.

1522. The Financial Department inform the Public Works Department that for their work, we will say in this particular year, Rx. 33,000,000 will be available?—Yes.

1523. And then the Public Works Department apportion that in the manner that they think will best meet the needs of the country?—Yes.

1524. Of course, in taking that into consideration, a great part of your expenditure is settled beforehand: by previous arrangements you have got works in hand which must either be suspended or be continued at a certain rate?—Yes; of course they are the first works that are considered.

1525. And, therefore, the amount of discretionary expenditure entrusted to the Public Works Department is comparatively small?—Quite so.

1526. I mean the amount out of this Rx. 33,000,000 upon which you can veer and haul?—It is comparatively small.

1527. I suppose that the way in which economy is effected for the year is, that you go on with the works already begun, but you stop works which are not begun?—We stop new works. We are obliged first of all to provide for works which are in progress; then for the essential repairs of works which are in existence; and then the question of new works is considered.

1528. Your Department has not only a large expenditure of what I may call voted moneys, but it has also a large expenditure of capital moneys; that is to say, of money provided by loan. How is the question decided whether work shall be paid for out of the annual revenue of the year or out of borrowed moneys?—No work can be paid for out of borrowed money without the sanction of the Secretary of State.

1529. That is the first thing?—That is the first thing.

1530. Therefore the Central Government of India must represent to the Secretary of State that it wants such-and-such works, and ask to be allowed to pay for them out of loan money?—They must ask to be allowed to pay for them out of loan money.

1531. But are there any rules which guide the Public Works Department and the Government of India in making these applications to the Secretary of State?—Yes, there are.

1532. Could you describe shortly what they are?—Works which are paid for out of loan money are technically called "productive" public works, and to admit of a work being classed as "productive" certain rules are laid down:—

> "(*a.*) There must be good reason to believe that the revenue derived from it will, in the case of a railway, within five years, and in the case of an irrigation project within 10 years, after the probable date of its completion, repay the annual interest on the capital invested with all arrears of simple interest up to that date, and also the capitalised value of the land revenue and of leave allowances and pensions; but in preparing a project for sanction, no deduction is to be made from the total capital outlay on account of anticipated excess of revenue over simple interest.
>
> "(*b.*) It must be susceptible of having clear capital and revenue accounts of it kept.
>
> "(*c*) Its classification as a productive public work must be authorised by the Secretary of State."

Those are the principal.

Mr. A. R. Becher.

7 Nov. 1895.

1533. Then, practically, I suppose you may say that the only works executed out of borrowed monies are railways and irrigation works?—Railways and irrigation works.

1534. Are there any other works?—No other works.

1535. And may we take it that the whole or the larger part of irrigation and railway works are executed out of borrowed monies, or are annual revenues brought in aid?—There are a good many irrigation works which are constructed from other monies.

1536. Out of annual revenue?—Out of annual revenue.

1537. Now, are these great works, conducted by the local officers, or are they conducted by officers belonging to the Central Department?—You mean to say the executive management of them?

1538. Yes, the Executive management; because you were saying just now that the officers of the Executive Department are local officers?—They are attached to certain provinces.

1539. I will take, as an instance, that great work, which we have all just been reading about in Madras—the Periyar. Would that work be executed by the chief engineer officer of the Public Works Department in Madras, or would it, being so great a work as it is, be executed by a special officer deputed from headquarters?—No; by the chief engineer in Madras, with the aid of the local officers under him. But in the case of a railway there would be a different arrangement.

1540. Because the railroad would pass through several provinces?—Yes; and railways would be more directly under the Central Government.

1541. And one engineer would, I suppose, probably be responsible?—There would be an engineer-in-chief, and a staff of officers under him, who would be appointed from the head-quarters of the Central Government. It would not be a local work.

1542. Now, following up what you were saying about productive works, I suppose this heading of "Buildings and roads" would be entirely provided out of voted moneys?—Yes, entirely. There is no loan money spent on that; it is only on irrigation and railways.

1543. I see one heading here—"Special defence works." Are those military works?—Those are military works.

1544. Why is that under the Public Works Department, and not under the Military Department?—Because the accounts of the military works are dealt with by the Public Works Department—by the Accountant-General of the Public Works Department. The accounts of expenditure on military works and special defences are sent to the Accountant-General of the Public Works Department, not to the Military Department. The Executive management remains with the Military Department, but the accounting is to the Public Works Department.

1545. But I see there is no provision made here for military works, except these special defence works, in the Budget, is there?—There is a separate estimate for military works which is distinct from the Public Works Department Estimates, but which is included in the figures for "Buildings and Roads" which are now before you.

1546. Would that charge be borne on the Military Estimates? Is it paid for out of the Military Budget or out of your Budget?—There is a special branch for the execution of military works which is distinct from the Military Department—and which is not provided for in the Military Estimates.

1547. Is that paid under the Military Estimate or is it paid under your estimates?—It is distinct from the Public Works Estimate, but is, for accounting purposes, treated as a portion of them, since it has nothing to do with the Military Estimates.

1548. Quite so. It is not paid by them; but the special defence works are paid for out of the Public Works Estimate?—No.

1549. (*Sir Donald Stewart.*) Usually there is a crore of rupees spent annually on military works?—Yes. The accounts of this expenditure come to the Public Works Department. There is a special department for administering these works under the Military Department.

1550. (*Chairman.*) But why are these special defence works borne on the Public Works Estimate and not on the estimate of the Military Department?—Because the special defence works are more in the nature of expenditure of loan money—not voted money.

1551. (*Sir Donald Stewart.*) And I think there is a reason for it. They wished to keep that account separate from the other branches?—Yes; quite distinct from everything else.

1552. (*Chairman.*) But that expenditure, if you were reckoning what the military expenditure of India was, ought to be added to that military expenditure ought it not?—It is part of the military expenditure of India.

1553. Now, when your Budget is approved, what is the method in which the money which is provided is put at the disposal of the executive officers?—The Provincial Governments are informed that the Budgets have been sanctioned for particular sums, and they pass that on through their Public Works Secretariat to the Superintending Engineers and the Executive Engineers, who are the executive spending officers. The Superintending Engineer is told that for his Circle he has certain funds provided, and he tells the Executive Engineers who are in the Divisions in his Circle what moneys they can have.

1554. And in what form is the intimation given to the officers in charge of the Treasuries that the Public Works officers are entitled to draw to such and such an amount?—Every month the Executive Engineer of the Division makes out a statement showing what he wishes to spend in the following month. He sends that to his Examiner. The Examiner compiles from these one general statement.

1555. By his Examiner you mean one of your officers?—Yes; one of our officers. The Examiner compiles the statement from these, showing the amounts required to be drawn on each Treasury, and sends that to the Civil Accountant-General who is a Finance Department Officer.

1556. He is the head Finance Officer, you may say, in the province?—In the province; and he advises the Treasury Officers of the amounts up to which they should cash the cheques of the Public Works Officers.

1557. Within the month?—Within the month.

1558. Then the officer of the Civil Treasury raises no question so long as the drafts upon him do not exceed the monthly assignments?—No; quite so.

1559. Supposing that either through bills not coming in in one month and falling due in the next, or from work being more quickly prosecuted than had been anticipated within any one month, your Department found a larger demand made upon it than had been anticipated, is any provision made in such a contingency for the enlargement in any given district of the monthly assignment?—Yes. A supplementary letter of credit can always be given at any period during the month.

1560. But I suppose the officer in charge of the Civil Treasury, in the absence of such a supplementary credit, would absolutely refuse to honour a cheque in excess of the monthly assignment?—Yes.

1561. Then the money having been so expended by the officers of the Public Works Department, the accounts are rendered to your Examiners, as I understand?—Their accounts are rendered to the Examiners.

1562. You having a Chief Examiner in each province?—In each province.

1562*a*. How does that Examiner get seised of the accounts from the different spending stations within the province? Are the accounts, with vouchers, sent by the disbursing officer, whoever he may be, to the head-quarters where the Examining Officer is stationed, monthly, or at different intervals?—Yes, monthly.

1563. And the account comes up supported by vouchers?—Supported by vouchers.

1564. And your officer examines and sees that each account is duly vouched, and is supported by proper authority?—Yes, and is supported by proper authority: that is to say, he not only sees that the expenditure is duly vouched for, but that the expenditure is only on works which have received competent authority.

1565. Quite so; and are within that authority?—And within that authority.

1566. Now, supposing the Examining Officer sees reason to object to any item in the account, what course does he pursue?—He disallows the charge, or else he

passes it provisionally, subject to reference to a higher authority, which, in the case of an Executive Engineer, would be in the first place, the Superintending Engineer.

1567. He would send it to the Superintending Engineer, and he would say he objected on such and such grounds to that charge?—He would ask the Executive Engineer, first of all, to explain why he had incurred this expenditure irregularly. That explanation would go the Superintending Engineer. If the Superintending Engineer had sufficient authority to sanction it he would do so, or would ask for further information. If it was beyond his power it would go to the Provincial Government; if it was beyond the power of the Provincial Government it would go to the Government of India.

1568. Quite so; and therefore there would be a series of appeals to higher powers. But would it be in the power of the Examining Officer of the Province to object to the sanction given, we will say, by the Government of the Province; or in that case would it be necessary for the Examining Officer to refer to head-quarters, to the Accountant-General?—If he saw any reason to object to the decision of the Provincial Government, he would then refer to the Accountant-General with the Government of India.

1569. Exactly, but it would be in his power, if he were satisfied with the sanction of the Provincial Government, to pass the item?—Yes.

1570. Would you know what objections your Examiner has taken in the course of his examination, so far as those are concerned which he has subsequently passed on explanation? Would he report to you that he had taken such and such objections?—He would only report to us items of principal importance. He has to send to the Accountant-General either every month, or quarterly, at the option of the Provincial Government a statement of the important items regarding which there is any irregularity.

1571. That is provided for?—That is provided for.

1572. Therefore there is a provision made under the regulations that the chief financial officer of the Public Works Department should know any apparent irregularities of importance which have taken place?—Yes.

1573. Even though they may have been explained?—Even though they may have been explained.

1574. And so the Accountant-General has a means of watching how his Examiners perform their duty?—Quite so.

1575. How they act, in fact, in difficult cases?—He has that opportunity.

1576. That is an important power which the Accountant-General reserves to himself, is it not?—Yes, it is.

1577. It is rather difficult to say that a system is perfect unless the chiefs of it have some means of that kind of seeing how their officers perform their duty?—He has that power of seeing.

1578. And you would attach importance to it?—Yes; a good deal of importance to it.

1579. Now do you find at the end of a year that there have been many questions of financial importance raised between your Financial Officers and your Disbursing Officers?—No; generally speaking the questions raised are mere questions of rule—very often only the interpretation of a rule, or something of that sort. There are a great many questions of that sort which arise.

1580. But supposing—what is always a possible thing—some gross irregularity happened, would you be certain to know of it?—That would be specially reported at once.

1581. It would?—Yes. If there was anything of a grave nature it would be specially reported. They would not wait for the ordinary periodical report, but would send that in—that would be reported at once on coming to notice.

1582. Therefore you have every security that any point of importance in the financial administration would come to your knowledge?—Yes; I think so.

1583. When are these examinations completed? Are the accounts and vouchers sent monthly to the Accountant-General?—The accounts are sent every month.

1584. And in what form does the Examiner pass the accounts? When he has passed them, does he report them to the Central Office or does he report them to the Provincial Government?—No; he tells each officer who submits an account to him that he has passed his accounts for such and such a sum of money, so as to give him a clearance for the month.

1585. Yes; but in what form does the statement that he has completed such and such an audit and passed such and such an account reach the Central Office?—The Examiner compiles one general account from the audited accounts, and this he submits to the Accountant-General.

1586. And does he accompany that account with any report which would specify such doubtful questions as may have arisen during the examination?—That would come in separately.

1587. But still the report would come in?—It would still come in periodically.

1588. Is any provision made in your code of regulations for such a report; for the report of an objectionable expenditure?—Yes, there is. There is what is called a divisional statement of objectionable items, and that is what the Examiner deals with in the first instance.

1589. What Article is that in your Code?—It is chapter 3, volume 2, from paragraph 98 onwards.

1590. Can you tell us very briefly what is the gist of it? We only want to know what I may call the enacting part, which says that such and such information is to be given?—It says the irregularities to be noticed are—

> "(*a.*) Expenditure incurred without adequate authority or in excess of sanction.
>
> "(*b.*) Expenditure incurred without Budget appropriation or in excess thereof, but objections on this score need not be raised before the accounts for the month of July if estimates have been duly sanctioned for the works on which the outlay is incurred.
>
> "(*c.*) Miscellaneous irregularities, such as unauthorised advances, losses of cash or stock, not covered by adequate sanction, irregular charges," &c.

Those are the principal objectionable items.

1591. And therefore you have the security that under that Article in the Code any important questions that have arisen will be brought to your notice?—Yes; quite so.

1592. Even if they might have been satisfactorily answered eventually?—That would depend on circumstances.

1593. That would be matter of discretion with the Examining Officer?—Yes. If they were satisfactorily settled by the Provincial Government it would not go beyond them, if it were in their power to settle it; but if there was any doubt about it it would come on to us.

1594. All your financial administration is regulated by code, is it not?—Yes.

1595. You mentioned two volumes just now; is that a very voluminous code?—There are four volumes. But they are not entirely on accounts matters. There are a good many other matters which are dealt with. Volume 1 principally deals with other matters—such as the *personnel* and the distribution of the Department.

1596. You have had a long opportunity of watching the working of the Code; are you satisfied that its apparently minute form is essential?—I do not think there is much that is really superfluous in it, and I think it works smoothly. I think the officers understand it.

1597. Quite so. If both sides to the transaction are satisfied there is nothing to be said?—I think we are both fairly well satisfied.

1598. Well, in addition to this examination in ordinary course by your officers of the accounts monthly, have you any test audit?—Yes. The Examiner goes on tours of inspection every year. The object is to inspect, in the divisional offices, certain documents which never come to him at all.

1599. Does he then pass and accept certain expenditure without seeing vouchers?—Yes, there is such expenditure as daily labour payments, for which no vouchers are submitted to the Examiner. He has to accept the statement of the executive disbursing officer that certain moneys have been spent in such a way. But then he tests this once a year, or sometimes oftener, by going to the office and actually scrutinising the documents on which payments have been made.

Mr. A. R. Becher.

7 Nov. 1895.

1600. Is that test merely confined to that point?—Oh, no; it is a general test. He takes up perhaps the accounts of one month in a year at haphazard—any one month—and he thoroughly tests them.

1601. And sees whether the books agree with the accounts that have been forwarded to him?—That the accounts that have been forwarded to him have been correctly compiled from the documents in the office, and that there are no discrepancies between the two.

1602. After that examination is complete, and after you have received the accounts from the different provinces, do you compile at the close of the year a general account of the expenditure of the Public Works Department?—We compile a monthly account and send it to the Comptroller-General.

1603. And do you make also a yearly account at the close of the year?—Each province sends us in a yearly account, and then we compile these provincial accounts into a portion of the accounts which are prepared in the Financial Department. We prepare the Public Works portion of those accounts—what they call the Finance and Revenue Accounts, which we generally call the Yellow Book. Besides this the Accountant-General, Public Works Department, publishes annually a note on the accounts of each branch of the Department, in which he reviews the progress of outlay, and mentions the special irregularities which have still to be remedied.

1604. Do you ever communicate with the Finance Department upon the manner in which the finance of the Public Works Department has been conducted; that is to say, merely with a view of letting the Finance Department know whether there have been any important irregularities?—If a matter of grave importance came up to the Government of India, it would be referred to the Finance Department before the case was settled.

1605. Perhaps I may explain the object of my question. In the Home System, in every branch of the expenditure, the Comptroller and Auditor-General here reports to Parliament, that the expenditure of each office on his examination has been duly vouched. I must make an exception in the case of the Military Department, in which he accepts to a great extent the audit of the Military Examining Officers. Also in his report he calls attention to any departure from regulation which has been condoned, to any irregularity which has not been satisfactorily explained, even though it may be an irregularity of a nature that ought to be, and is condoned. By that means Parliament learns what exceptions there have been to orderly finance during the year. It does not seem that there is any information of that kind to the highest authority in India, or any guarantee or assurance of exceptions to orderly finance being brought to notice. It seemed to me, from what you have been saying, that in one point the Public Works Department comes nearer to it than the other Departments, namely, that if any question arises within that Department of at all an important character, the Accountant-General of the Public Works Department is informed of it?—Yes; he is.

1606. But that information is not published? You do not communicate those questions, for instance, to the Comptroller General in the Finance Department?—No; we do not communicate with the Comptroller-General; we do communicate in certain instances with the Finance Department, but not as represented by the Comptroller-General. We work with the secretariat branch of the Finance Department. The Finance Member would see cases of that sort generally unofficially, and on his note on the case would usually rest the final decision on the matter; whether it was condoned or not.

1607. I do not quite understand whether, at the end of the year, there is a general appropriation account drawn up in the Central Public Works Department, or is it a provincial account?—There is a provincial account, which is submitted to the Accountant-General from each province.

1608. And compiled into one?—Compiled into one by us. But it forms a portion of the general account which is published by the Finance Department. We do not publish it as a separate book. We do, however, publish a review of the transactions of each branch of the Department separately.

1609. It forms part of the general account of the Finance Department?—It is the Public Works Chapters, as it were, of the general accounts of India.

1610. And it forms part of the general appropriation account which is published in the "Gazette"?—Yes. The figures that refer to public works are all supplied by the Public Works Accountant-General.

1611 (*Mr. Buchanan.*) The statement that you alluded to in which any irregularities during the course of the year in the administration of the Public Works Department are noticed, is not submitted to the Government of India, or made a public document in any way, is it?—Not necessarily. If the sanction of the Government of India is necessary before the objection can be removed or confirmed, then a reference is made to the Government of India.

1612. (*Chairman.*) But such a reference is only made when the sanction of the Government of India is required?—Only when their sanction is required. It is distinctly laid down in the rules and regulations in what cases a reference to the Government of India is necessary, and in what cases the Provincial Governments have powers to finally dispose of questions.

1613. Now, when your own examination of the accounts is completed, are they communicated in that form to the Comptroller-General? Because, as I understand, the Comptroller-General does not exercise by himself, and by his officers a second audit of these accounts; but he accepts the examination of your officers?—Yes.

1614. That is to say he is satisfied, when he has seen that upon examination of the vouchers for payment your officer has passed it, that that charge is correct?—Vouchers for payment do not go to him.

1615. Then he receives the compiled account, I suppose?—He receives a compiled account which is signed by the Accountant-General.

1616. That is what I mean. He receives an account which is signed by the Accountant-General?—Which is vouched for by the signature of the compiling officer.

1617. And he accepts that as evidence?—He accepts that as a true statement of audited expenditure.

1618. And beyond that, except in so far as he institutes his test audit from time to time, he makes no further examination?—No further audit of Public Works Expenditure. The Accountant-General is supposed to be responsible for that, and he exercises a test audit over his own officers in addition to that of the Comptroller-General.

1619. But the Comptroller and Auditor-General does institute a test?—He has a test audit: but then the Accountant-General has another test audit of his own independently of that, and the two are generally fitted in so that, perhaps every year and a half or two years, every account officer is subjected to a test audit.

1620. I suppose the Public Works Department deals with a large quantity of stores?—Yes.

1621. How are they obtained? Are they obtained by contract at head-quarters?—In the Buildings and Roads and Irrigation Branches the amount of stores used is comparatively small, but in the case of important works such as railways, of course it is very large, and in railways the stores are principally obtained by indent on England through the Secretary of State.

1622. Then who examines the stores accounts?—The store accounts are submitted at the same time as the cash accounts to the Examiner. The Examiner audits the store accounts just as carefully as the cash accounts.

1623. But how is that examination of the store accounts made? is it conducted at any time by an actual survey of the stores, so as to assure the Accountant-General that the stores for which credit is taken are actually there?—There is a half-yearly, or at all events a yearly survey of the stores in every division, and a balance return is prepared.

1624. At uncertain times?—No; regularly, at certain periods.

1625. At fixed dates?—Yes; September and March.

1626. And does the Accountant-General make any provision for such an examination of that survey as will assure him that the articles actually in store correspond with the amount taken credit for in the store accounts?—He does not actually make any inspection of the stores themselves; but he sees through his Examiners that the accounts that are prepared are duly vouched for as having been counted by certain responsible officers of the executive branch. These officers have to certify that the stores in stock have actually been

verified. The Examiners are required to certify each year that the audit of all balances has been carried out under certain definite rules.

1627. Quite so; I quite understand he does not do it himself, but he does take such precautions as would enable him to see that the number of articles shown by survey on a given date to be in the store corresponded with the amount that should be in the store as shown in the accounts which had been submitted to him?—Yes, he would see that.

1628. And he does see that?—He sees that, but he does not see, of course, that the stores are actually there.

1629. No; but he sees the result of the survey?—He sees that the result of the survey corresponds with the result of the accounts which have been compiled.

1630. I should like to ask you on the whole, whether from your experience you are satisfied that the regulations under which the Public Works Department conducts its finance are satisfactory, or whether, on any point you think that they are open to amendment?—That is rather a wide question. I think that I may safely say, that I consider that they are generally satisfactory.

1631. I put the question in rather a wide form; but perhaps I had better put it in this way:—You have had a long experience; have you found the regulations within your experience intelligible and working easily; and do you think, that on the whole they satisfy the requirements that are necessary for orderly finance?—I think they do.

1632. (*Mr, Buchanan.*) With regard to that last question, do you think that they tend towards economical administration of the Department?—Yes; I think they do. I think, perhaps, there was at one time a tendency to over-elaboration of details; but of late years we have got rid of that to some extent, and as the regulations now stand they show, with as little labour as is really possible, clearly what the state of things is.

1633. There is only one other question I want to ask you. I did not quite understand something you said at the beginning of your evidence. Is it the case that the Government of India intimate to you, and you intimate to the Provincial Governments the amount of money that they will be able to spend for public works during the year, beginning the next following March?—No.

1634. I do not quite understand—you said there was a sort of provisional estimate made?—I said that in October in each year the Provincial Government made out a statement of what they thought they could spend satisfactorily and economically during the next official year; that was sent up to the Government of India and scrutinized by them; and taking together all these from all the Provincial Governments and the intimation that would be received from the Finance Department of the amount of money likely to be available, the Government of India then told the Provincial Government that certain funds would probably be placed at their disposal for the official year.

1635. And they intimate that as early as October?—It is received in October, but it is not intimated till November or December.

1636. Is there ever any variation made in that amount before the Budget comes out, owing to any financial necessity; is it ever cut down?—Oh, yes, frequently.

1637. Frequently?—Yes. The variation is not very large frequently. But there is always a closer scrutiny of details when the Budget comes up, and of course if any financial difficulty has arisen in the meantime there may be a very considerable alteration. For instance, in some years it has been necessary, after the Finance Department have scrutinized their figures more closely, to say that all the money we can find for the year is the money that you want for works in progress and repairs, and we shall be unable to undertake any new works.

1638. And does that occur? You said "frequently," just now?—I said frequently there may be small alterations.

1639. And large alterations?—Not frequently; but they have occurred.

1640. In your experience on several occasions?—Well, on two or three occasions. I was principally thinking of the year 1893-4.

1641. That was because of the import cotton duties? At that time.

1642. (*Mr. Nuoroji.*) Can you give me some idea of the amount of pay and allowance made to Europeans in your Public Works Department?—I am afraid I could not do so off hand.

1643. You could give it, I suppose?—It could be compiled.

1644. And you know also that the rule of the Secretary of State is that if an Indian is employed instead of a European, he should be paid not exceeding two-thirds of the salary; perhaps you know that?—Yes.

1645. And supposing an arrangement were made to employ Indians in place of Europeans, there would be, in the first instance, a saving of 33⅓ per cent.; is it not?—One third.

1646. Or in other words there would be a capacity to employ one-half or more as much service as is employed at present; and would it not have another effect also, that all that is paid to the Indian will remain completely in the country, and will keep up and preserve the fund from which Government can draw its own wants as necessary?—Well, I should rather doubt that.

1647. It is a simple economic question. There is nothing to doubt?—Natives of India at present spend a good deal of money in England just as the Europeans do.

1648. I am talking of the Indians—that whatever is paid to them is kept in the country and remains in the country; it returns to the people themselves. That is only a simple fact that does not require any doubt or argument. As the present inquiry, Mr. Chairman, is specially for account and audit as a compartment by itself, I do not think I would go any further into this matter of the apportionment.

1649. (*Sir Ralph Knox.*) You said just now that the estimates were reduced at head-quarters when the Budget was sent in: but no reduction would be made in the works submitted from the Provincial Governments, provided they could cover them by their provincial revenue under the arrangements with regard to provincial revenue?—I was talking more especially with regard to what we call Imperial funds. The Provincial Governments practically settle the amount that is available for their own provincial wants.

1650. And those are not criticised by the Central Government if they are covered by the funds which the Provincial Governments find to be available?—They are criticised, but not in as great detail as works carried out from Imperial funds; the responsibility for the provision of funds rests principally with the Provincial Government.

1651. You said that the objections that were principally raised by you were as regards interpretations of regulations or rules?—Not by us. I meant to say that those raised by Examiners very often were of this nature.

1652. But they did not detect any very great irregularities. It was found that there were none?—The grave irregularities were not very numerous.

1653. But it may be asserted, I suppose, that the effect of the examination generally has a distinct check upon the possibility of such irregularities?—Yes, quite so.

1654. That the moral effect of the audit although it finds few flaws, is that there are no flaws?—Yes.

1655. And that is the object of that audit?—That is the object of that audit.

1656. And it may best serve its purpose when it has a clean sheet?—Quite so.

1657. What is the check that is exercised as to the consumption of stores in construction?—That check would be entirely an executive matter. A work is sanctioned for a certain amount of money. It is not always sanctioned for stores and labour separately, though in some cases this is done. As a rule a sum covering stores and labour is sanctioned, and it is left with the executive authorities to procure what amount of stores they find necessary for the construction of the work, and the Superintending Engineer is the authority who would supervise that.

1658. But that is not subject, in fact, to any examination?—Not to an audit.

1659. It is left to the Executive Engineer to sanction—to write off—all stores?—Well, not to write off.

Mr. A. R. Becher.

7 Nov. 1895.

1660. Well, to write off for consumption?—Yes, for consumption.

1661. And is that systematically carried out? Is there any regular period for the officer to attach his signature to the consumption of so much stores? Does he watch that by any system?—Yes. Every month he has to submit a regular store account showing what stores he has drawn out of his general stock and the works on which he has utilised them, and the balance that remains in his hands.

1662. But that is not subject to audit?—It is subject to audit. The Examiner is not called upon to say that so many thousand bricks were required for the construction of a certain amount of brickwork, but he is called upon to see that the brickwork is only charged with bricks which the executive authorities state to have been used on that work, and that any balance that remains over is duly accounted for.

1663. Then the control—the chief control—is practically the original estimate of the cost of the work?—Yes.

1664. Which is made up in accordance with well recognised rules in the Executive Department?—Yes.

1665. Is it found generally, that the results of the expenditure upon any particular work, closely agree with the original estimates?—Very generally. Of course, there are cases in which the estimates have to be revised. Unforeseen circumstances arise during the construction—either foundations have to be carried down lower than was anticipated or there may be some accident during the construction of a work—which upsets the original estimate and necessitates its revision; but, generally speaking, I think the estimates fairly represent the cost of the work.

1666. These cases of divergence from original estimates are always subject to financial control?—Yes, they are subject to financial control. They require just the same sanction as the original estimates.

1667. (*Sir Donald Stewart.*) Are not the powers of the Provincial Governments with regard to works limited?—Yes.

1668. The amount that they may spend?—Yes; there are regular limits laid down.

1668*a*. (*Sir Ralph Knox.*) Dependent upon the revenue, is it not?—No.

1669. (*Sir Donald Stewart.*) No. I mean to say the Provincial Government cannot sanction a work over a certain amount?—Each individual work must not cost more than a certain amount. If a work paid for from Provincial funds were to cost more than 10 lacs of rupees, it would be out of its own power to sanction it. As regards works constructed from Imperial funds the limits are placed at a much lower figure.

1670. (*Sir Ralph Knox.*) But if these Provincial Governments had in their local revenues sufficient to meet the charge?—That would not be sufficient.

1671. That would not be sufficient?—No; in the case of very large works or in the case of certain irrigation works or railways the sanction of a higher authority than the Provincial Government is required.

1672. (*Sir James Peile.*) There are similar restrictions on the Government of India?—There are similar restrictions on the Government of India.

1673. That is to say, they cannot undertake a certain class of works without the sanction of the Secretary of State?—Quite so.

1674. (*Chairman.*) I should like to ask you one or two questions about the estimate for military works which I think you said was under the Public Works Department?—The accounts come to us.

1675. Who execute those works?—They are executed by the officers of the Military Works Department, who are Royal Engineers, principally.

1676. Why should the accounts of these works come to the Public Works Department rather than to the Military Department?—I think the reason is chiefly this: that originally, these works were carried out by the Public Works Department, before the Military Works Department was established as a separate Department.

1677. When was that—some time ago?—Some little time ago.

1678. (*Sir Donald Stewart.*) Twelve or thirteen years ago?—Twelve or thirteen years ago. I could get you the exact date.

1679. (*Chairman.*) Then the old custom was still retained, in so far as the accounting for this expenditure was retained in the hands of the Accountant-General of the Public Works Department?—Yes; because the system of accounts is the same as the Public Works Account system; and it was thought better to allow the Accountant-General of the Public Works Department and his officers, who are familiar with that system, to continue the duty rather than transfer it to the Accountant-General of the Military Department, whose system was entirely different.

1680. Could you show me under what head of the Military Budget that charge would come?—What charge?

1681. The charge for the Military Works?—The Military Works?

1682. It would be in the Military Budget, would it not?—It is not provided for in the Military Budget.

1683. (*Sir Donald Stewart.*) Is there not a crore set aside every year for Military Works?—Yes, there is a crore every year.

1684. It is not in the Public Works Estimate?—It does not come into the Military Estimates, but is included in the Public Works Estimates.

1685. (*Chairman.*) It does not come into the Military Estimate?—No.

1686. In the Appropriation Account where would you find it?—You will find it in the Public Works Estimates.

1687. Perhaps you could just show it to me, could you?—In the Appropriation Report. That is where the Military Works Expenditure appears (*showing place to the Chairman*). It is shown under the general head "Buildings and Roads." It is under a distinct account Head, 44 Military Works.

1688. Where?—I think there is a list on this side; here, 44, "Military Works." That shows the distribution. It is about a crore of rupees.

1689. About eleven million rupees?—Yes, it would be in that year.

1690. And that is quite outside the Military Estimates?—Yes, quite outside the Military Estimates.

1691. But it occurs here in this volume that I have been looking at, under "Buildings and Roads"?—Yes, it is included under "Buildings and Roads" here.

1692. Who makes the estimate for that?—The Director General for Military Works.

1693. And he merely forwards it to the Public Works Department to include in their estimate?—Yes.

1694. (*Sir Donald Stewart.*) He is in communication with the Commander-in-Chief and his staff in regard to the military requirements?—The Director-General of Military Works is in communication with the Commander-in-Chief in regard to military requirements.

1695. (*Chairman.*) The office of Public Works have nothing to do except to put in the amount?—They do not frame the Estimates. The Estimates are framed entirely in the Military Department under the orders of the Military Department, and the Honourable Member in charge of the Military Department is the final authority within the limits which have been assigned by the Finance Department. The expenditure is accounted for in the Public Works Department.

1696. Because this amount of work is carried out by military officers?—By military officers in the Military Works Department.

1697. Is not that rather a defective arrangement in itself? Over here there is always a very strong objection felt by the officers of one Department, if they are charged with expenditure which they do not carry out, and for which they are not responsible?—Well, it is hardly charging the Public Works Department with the expenditure. It was expenditure on work which was formerly carried out by the Public Works Department.

1698. Yes, I know, but at the present moment your Department is not responsible for these works. They are executed by officers who are not under your Department, and yet you are called upon to pay for them; would it not appear to an ordinary observer that that amount should be drawn from the account for military expenditure?—The works would have to be carried out by the Public Works Department if there was not a separate Department to carry them out; they would come out of the ordinary account.

1699. That would appear to be a natural arrangement. But as I understand, they are executed by officers of the Military Department?—There is a separate branch of the Military Department. It is a Military Works Department. They are Military Officers.

1700-1. But still that is part of the Military Establishment?—Yes.

1701. And not part of your establishment?—And not part of our establishment.

1702. These officers are not under you?—It is part of the Royal Engineers establishment which has to be kept in India.

1703. They are not under you?—They are not under the Public Works Department.

1704. Nor under your orders?—No.

1705. Do you think that in the ordinary course there is any good reason for your Department being charged with the cost of works which you do not carry out, and for which you are not responsible? Would it not be more correct that the cost of these works should be placed in the Military Estimates?—Yes; I think so.

1706. (*Sir Donald Stewart.*) Do you know the reason why the Military Works Department was formed at all, about 15 years ago?—I am afraid I could not answer that question satisfactorily.

1706-7. (*Sir Ralph Knox.*) There was a difficulty of *personnel*, was there not, as regards blending the Military Officers with the Civil Officers of the Public Works Department?—That no doubt had something to do with it.

Mr. A. R. Becher.

7 Nov. 1895.

1708. (*Chairman.*) Then who audits that expenditure?—Our auditor audits it.

1709. (*Mr. Buchanan.*) And do you audit that expenditure on behalf of the Public Works Department?—Yes, exactly in the same way as if it was Public Works expenditure. There is an officer in the Public Works Accounts Branch who is called the Examiner of Military Works Accounts, and he holds the same position there that a Provincial Examiner would hold.

1710. And he audits the Military Works for the whole of India?—For the whole of India. In each province there are, however, certain petty military works which are carried out by the Public Works Establishments. It is only lately that the Military Works Department has been extended to Madras and Bombay. Formerly the Public Works Department carried out the whole of the Military Works in Madras and Bombay.

1711. These are merely minor works, such as Military Stores, &c.?—They are principally barracks, and repairs to barracks, and works of that nature.

1712. (*Chairman.*) Is there any other remark you would like to offer to us?—No, I do not think so.

The witness withdrew.

Sir CHARLES BERNARD, K.C.S.I., Secretary in the Revenue Department, called in and examined.

Sir C. Bernard, K.C.S.I.

1714. (*Chairman.*) You are Secretary, are you not, in the Revenue Department?—In the Revenue Department of the India Office.

1715-6. May I ask what offices you have held in India?—I have held many offices up to the post of Chief Commissioner, in different parts of India.

1717. In India did you hold any post connected with the collection of revenue?—I was settlement officer of the Land Revenue and Commissioner of Revenue afterwards.

1718. While you were in India had you any opportunities for observing the conditions under which the excise duties are levied there?—Yes, undoubtedly.

1719. And that, of course, has come more under your consideration now as Secretary of the Revenue Department here?—Yes, my knowledge of it has been continued.

1720-3. Yesterday the Commission had under consideration the effect of the decentralisation policy, which has been to give so much greater discretion to the Provincial Governments in the management of their own Budget, and a statement was laid before us, which you will find at answer 679, if you have the print of yesterday's evidence before you. I will just read it through:—

"(*Chairman.*) The Memorandum says that up to 1877 the Provincial Governments had no interest in collecting the full revenue. The excise was notoriously evaded, and the Government suffered through careless collection of the revenue, a loss of which the amount was unknown, but which was, in the opinion of the Finance Minister, very large. Can you give us any idea of the extent or manner in which the revenue is benefited by the decentralisation policy, or any facts illustrating the change?"

"(*Sir H. Waterfield.*) As illustrations I may refer to the increase that has taken place since 1880-81 under the following heads:—

——	1880-81.	1893-94.	Per-centage of Increase.
	Rx.	Rx.	
Stamps - -	3,250,581	4,509,351	33
Excise - -	3,135,226	5,388,573	85
Provincial rates -	2,776,370	3,514,571	21
Registration -	281,230	416,146	46

This per-centage is very much larger than can be attributed to the increase of population." Further on, a discussion took place upon the increase that took place under the head of Excise in the 13 years, and Sir Henry Waterfield was asked (Q. 691) whether he could say that during that time there had been no appreciable addition to the duties, and he answered:—

"That is my belief. I am not prepared to say that in no case has there been an alteration where the law admitted of a higher rate. But the law did permit certain variations of the duties, and in some cases they have been raised; in some cases they may have been lowered, but, as far as I know, there has not been any alteration of the law which has affected the scale of taxation."

"(*Mr. Caine.*) But are not the excise rates based upon getting the maximum of revenue from the minimum of consumption?—(*A.*) Yes, that is so.

"(*Q.*) Surely there must have been a considerable increase of the rates of taxation to have carried out that policy?—(*A.*) Yes, the rates are altered according to circumstances. There may have been higher rates put on, but in other cases it may have been found necessary to reduce them, and so far as I am able to speak, the growth of the provincial revenue is not to be attributed to increase of taxation. But I ought, perhaps, to tell the Commission that that is not my special province. The Revenue Secretary is the officer, who deals with this; therefore I am not so competent as Sir Charles Bernard would be to give you an opinion on that point."

(*Chairman continuing*) There was, therefore, a reference to you, and you see the question upon which it arose, namely, that whereas in 1880-81 the excise was 3,135,226 Rx., in 1893-94 it was 5,388,573 Rx., showing a per-centage of increase of 85. That struck the Commission as a tremendous increase to occur, if there was no material alteration in the rates of duties, and they thought they would like to ask you whether you could confirm what appeared to be Sir Henry Waterfield's opinion, that though there might have been variations to a certain extent on the one side or the other, there has been no such material alteration of duties as would really affect that per-centage of increase, and therefore that that per-centage of increase in round figures represents either a better collection of revenue under the provincial system or increase of prosperity, or both?—I think some of it is due to increased prosperity, but I do not go so far as Sir Henry Waterfield if he said that there has been no increase of rates; there has been a decided increase of rates. For instance, an increase has been made by law in the duty on imported spirits. Within the past ten years the duty was raised on spirits—London proof spirits—from 4 rupees a gallon to 5 rupees a gallon, and then again to 6 rupees a gallon. That is an increase, as you will see, of 50 per cent. within the period.

1724. You are speaking of Customs duties on imports?—Customs, yes. And then somewhat corresponding increases have been made in India in the excise duties.

1725. Countervailing duties?—Not precisely countervailing duties, but somewhat corresponding to them.

Sir C. Bernard, K.C.S.I.

7 Nov. 1895.

For instance, in Bombay, Calcutta, and Rangoon, seaports where the home-made spirit comes into direct competition with the imported spirits, precisely the same enhancements have taken place. Up country the enhancements have not been quite the same, but everywhere there has been an increase of rates on spirits, and nowhere that I can recall has there been a reduction of the excise duty on spirits. Everywhere there has been an increase—that is, on spirits. Then take the other branches of excise—beer. Beer brewed in the country paid no duty at all in the beginning of the period. The same duty of 1 anna a gallon that is paid by imported beer has been levied during that period. Then, again, we will take opium. The excise revenue on opium is raised by Government selling opium for consumption in India.

1726. But is not the opium excluded from this table?—No, there is excise opium. The opium of which you speak is the foreign opium, but in the excise revenue there are included the excise receipts on opium consumed in India—not exported. That is raised by selling the Government opium from the Treasuries to licensed vendors in every province in India. During the period taken, the selling price of opium to licensed vendors has been greatly raised. For instance, in Assam it has now reached 37 rupees a seer. It used to be 22 rupees a seer; and in other provinces there have been similar, though not such great, increases. Then take another source of excise revenue, ganja—that is, hemp drugs. The selling price or the duty on the hemp drugs has been similarly raised, and these enhancements of excise duty account for a great deal of the increase in the excise revenue. I take the figures of Bombay as an instance. In Bombay city, in 1883–84, the licit spirit sold and excised was 600,099 gallons—London proof spirit—and that yielded a revenue of 166,000 Rx.; and then 10 years afterwards the consumption was 561,000, somewhat less, yielding a revenue of 229,000 Rx. These Bombay figures give an example of the increase of rates that have been imposed.

1727. Could you give us a rough measure of what the effect of this increase might be upon the total excise revenue derived from spirits between those dates?—I have got the precise sum of the increase in the 10 years.

1728. In the 10 years; Sir Henry Waterfield referred to 13 years; but if you have the 10 years at hand let us have the result?—I have only got the 10-year book in my hand. There was an increase in the 10 years of 1,377,000 Rx. of the excise revenue.

1729. Yes, but how much of that was due to spirits, do you know? It would be some help to us in the matter if we took these headings, on which you say there has been an increase of rate, and ascertained whether there had been a noticeable increase of duty received on those?—The figures are as follows:—

Sub-head, or Source of Revenue.	Gross Receipts in the Year.		Increase of the later over the earlier Year.
	1880–81.	1893–94.	
	Rx.	Rx.	Rx.
From spirits and liquors	2,117,000	3,881,000	1,764,000
From opium consumed in India - -	738,000	967,000	229,000
From other narcotic drugs, hemp, &c. -	305,000	468,000	163,000
Miscellaneous - -	28,000	43,000	15,000
Total - -	3,188,000	5,359,000	2,171,000

It should be understood that this revenue is independent of the customs duties paid on imported spirits and liquors, which amounted to Rx. 380,000 in 1880–1, and to Rx. 595,000 in 1893–4.

1730. (*Mr. Caine.*) Is that 1,377,000 of increase in excise revenue in 10 years an increase as compared with the first of the 10 or the last, or is it spread over the whole 10?—That is as between the first of the 10 and the last.

1731. The first of the 10 years and the last?—1883–84 and 1893–94.

1732. Thank you; that is to say, in the latter year it was 1,377,000 greater than in the former year, 1884?—Yes.

1733–6. It might have been inferred that it was spread over the 10, that was all?—Yes.

1737. Could you give us the consumption of liquor for the whole of the Bombay Presidency which has been under Sir Charles Pritchard for considerably more than the 10 years under review?—Yes, but you know in some of the districts the outstill system was only replaced by the other system a few years ago.

1738. Will you give it us whenever you can for Bombay, and estimate the other?—I can give it for Bombay.

(*Sir Andrew Scoble.*) I should like to know how that arises out of the reference to us.

(*Mr. Caine.*) I do not think it does.

(*Sir Andrew Scoble.*) Surely we are not entitled to ask for it unless it arises out of the reference to us.

(*Chairman.*) Mr. Caine admits that it does not, therefore, of course, the question fails.

(*Mr. Caine.*) I do not press it at all, my Lord; I quite agree with you. I do not think it does arise; it was brought up.

(*Chairman.*) You see how the question of increased excise revenue has arisen.

(*Sir Andrew Scoble.*) Oh, I quite see how the general question has arisen, but as regards this particular inquiry, I do not see how it does arise.

(*Mr. Caine.*) It appears to me that the Commission was a little startled with the statement that the increase in excise over 13 years has been 85 per cent.

(*Chairman.*) That is the point.

(*Sir Andrew Scoble.*) That is now explained.

(*Mr. Caine.*) Well, not altogether explained, but I think a reason is given for it. I do not press the matter. The Chairman appeared anxious to clear it up. I was anxious to help him, that was all.

(*Chairman.*) The point I want to come to is this. On the figures a very marvellous result is shown under the decentralisation system; but I do not think any people studying finance would be justified in accepting that as a result of the system without inquiring whether the circumstances of the opening and closing years of the period in question are similar.

1739. (*Mr. Caine.*) I would like to ask Sir Charles Bernard whether, in his opinion, this unusual and abnormal increase in revenue is the result of the system on which the Government of India professes to base its excise, that of raising on the minimum of consumption a maximum of revenue, by increasing the taxation on spirits to the utmost limits that consumption would justify without driving people to illicit traffic?—It is the case that everywhere the duty on spirits has gradually been raised during the last 13 years with that view.

1740–1. (*Chairman.*) Sir Henry Waterfield's evidence leads us to the not at all unreasonable conclusion, that a great part of this increase is due to that more careful collection which has followed the admission of the Provincial Governments to a share of the receipts. Do you agree with him upon that point?—Yes, the administration of the revenue has improved. Smuggling is put down very much more strongly than it used to be. Within the last 13 years every province has set up, or else has strengthened, its subordinate staff for preventing smuggling and for collecting the excise revenue, and no doubt it has been able to do that with a freer hand since the provincial decentralisation.

1742. (*Mr. Caine.*) May I ask if there has been, to any extent, a stimulation of the sale itself in the way of opening increased numbers of shops, or anything of that kind?—On the contrary, I should say there has been no stimulation of the consumption; and as to opening increased shops, if you look at the papers presented to Parliament, you will find that the shops have gone down immensely. For instance, the province of Madras in 1888–89 contained, in all, 43,916 liquor, spirits, opium, drug, and toddy shops. In the year 1893–94 it contained only 30,557.

1743. I am quite aware of that, but I thought it an interesting fact to bring out.

1744–5. (*Chairman.*) Perhaps, Sir Charles, your comparison (Q. 1729) of the spirit revenue received under the head of Excise in the beginning of this period and at the end, inasmuch as you have shown us that the duties have been very considerably increased here, will enable us to judge to what extent that increase of duty modifies

the rather startling conclusion that the revenue has increased 85 per cent.?—Yes.

1747. Then I think a further question arose also in reference to Sir Henry Waterfield's evidence as to the extent to which you can fairly take an increase in the amount of land revenue credited to the province as due either to better collection or to increased prosperity. Was the increase in any considerable degree due to the fact that there had been a re-settlement of the land revenue during that period, meaning a larger rental? I think the questions to which I would draw your attention in connexion with this are 715 and 711?—Yes.

1748-9. Now I would like to ask you whether you think that increase would come under the head of provincial rates or not?—Under land revenue, I suppose.

1750. And so far as any share of the land revenue is concerned, do you think we could say that the increase is due to increased prosperity and better collection, or should you say that we must make some allowance for re-settlements of the revenue?—Some part of the increase is due to re-settlement of the land revenue, which takes place at periods of 30 years; another part is due to extensions of cultivation, new land broken up and newly coming under the tax collector in the provinces of Bombay, Madras, Burma, and Assam; but I do not know that any part of the increase is due to better collection. The revenue was collected with fair punctuality before, and is collected with punctuality now.

1751. You, of your own knowledge, would not attribute any part of this increase to the fact before us—the fact of decentralisation. That was the simple point?—No; I think I can say that the land revenue was assessed and collected in a satisfactory manner before decentralisation, and it is assessed and collected in a satisfactory manner now.

1752. Of course bringing new land into cultivation may be fairly taken as an advance of prosperity?—An advance of prosperity.

1753. And a question arose as to how far you are to look upon an advance in revenue rates in consequence of re-settlement as an increase of duty, or how far it is a mark of increased prosperity. Of course there may be increased revenue based upon capital outlay, or increased yield for which there has been no outlay. Naturally any increased yield in the latter case would be a mark of prosperity. If, on the contrary, it results from an outlay, from improved cultivation costing a certain amount, then I think you have got a right to look upon that as increase of duty?—I would just like, if I may, to give an instance of what I mean when I speak of the increase of prosperity. In the one province of Lower Burma alone the cultivation extends every year 100,000 acres or more, and that means an additional revenue of two lakhs of rupees in Burma alone. As to the increase of land revenue at re-settlement, I do not think that is due to any increased yield of land, except where irrigation may have been introduced. We cannot say that the land yields more than it did per acre under the same circumstances; the increase in the rate of land revenue per acre is due mainly to the increase in the price obtained by cultivators for their crops in many parts of the country which have lately been opened out by railways.

1754. Quite so; that is the point?—Broadly, that is the reason.

1755. Owing to the opening out of the country a better market is given to the produce, and the value of the land is increased?—And also increased external commerce. For instance, in the last 13 years the export of oil seeds from India has gone up in value from Rx. $6\frac{1}{3}$ millions in 1880-1, to Rx. $16\frac{3}{4}$ millions in 1893-4. This represents an important addition to the cash return which Indian farmers (ryots) get for their crops.

1756. Then you yourself would attribute a great deal of the raising of the rent, when a re-settlement takes place, to the result of an inquiry as to what the effect of opening up the country and opening up fresh markets has been?—Yes; if you would allow me to give an instance, I would quote Chattisgarh, in the Central Provinces, which was thoroughly land-locked up to the year 1880. Since then railways have been opened, and the settlement has come under revision. At the close of the term, 20 years, prices had gone up quite 80 per cent., and in places more than 100 per cent.

1757. And what was the result, do you recollect, of the re-settlement in that case?—In round numbers I should say 45 to 50 per cent. in that province.

1758. I think that that is a reply to the point which arose on this table of Sir Henry Waterfield, namely, how far expert opinion would say that those per-centages were attributable to the decentralisation policy; the decentralisation policy may take credit for a considerable amount of that increase, but by no means for the whole?"—Not in land revenue.

1759. Quite so; I understand you make that exception?—Yes.

1760. May I ask whether you are satisfied that the supreme authority for the collection of the chief heads of revenue at Calcutta, at the head-quarters, is strong enough? I will bring before you what I mean by a comparison between what takes place in India and here, as a test by which to understand the system of India. Here we have in the Board of Customs and Board of Inland Revenue a central authority by which all changes and modifications of the law are prepared, and which are the ultimate authority for interpreting the provisions of the existing law. These Boards have for their chairmen men who are always at hand, and as I may say, are the standing counsel of the Chancellor of the Exchequer on revenue questions. To the Chancellor of the Exchequer, as Minister of Finance responsible to Parliament, having under him the Treasury, there is the right of appeal from those Departments of Customs and Inland Revenue, and he has his own officers in the Treasury to advise him also. Now, from questions which have been put to Sir Henry Waterfield, we have gathered that the power of the Finance Minister and his Department corresponds rather to the power of the Treasury here; and that the actual collecting authority, the expert authority, which is responsible for the proper collection of the revenue, has no supreme representative at Calcutta, but that the authorities are scattered throughout the provinces. Therefore, if the Finance Minister wishes to be instructed in technical matters, and to receive the advice of real experts in questions connected with the revenue, he has to send for a chief officer either from Bombay or Madras, for he has no one officer who can describe to him the system and the results of the system over the whole of India. That, I think, came before us in the evidence, and I want to ask you whether it represents, in your view, the constitution of the Revenue Departments in India, and whether from your experience you are entirely satisfied that the present system is an altogether sufficient one, and one which you think needs no amendment in the direction in which I speak. Of course I am comparing the system in India, as far as we understand it, with the system here; but one always understands that the conditions of the United Kingdom, in many respects, are extremely different from those in India, and therefore it does not in the least follow that what is found satisfactory in the United Kingdom is therefore a model for what should take place in India?—I think you must divide the revenues. If you take Salt, Excise, Opium, and Income tax, you will find that in the bureau of the Financial Department there is an officer called the Deputy-Secretary, who has the work of reviewing those departments all over India; but if you take the Land Revenue, it is different. The Land Revenue cannot be administered from any central office in India; the systems of land revenue, the tenures and the ways of the people are so entirely different, that the land revenue must be administered separately for each province; and in every province you have a sufficiently strong administration with whom the head of that province is in touch. But when a Finance Minister goes out newly and wants to ascertain the facts, and how far it is possible to impose new taxes, his plan is generally to travel. You will find that Mr. Wilson, when he went out and proposed increases of taxes after the Mutiny, to fill up the terrible gap that then existed, travelled all over India. I was then a young officer. I recollect his coming to my district and asking questions, and so he went all over the country. But with Land Revenue you cannot have a central authority.

1761. I quite understand that with regard to Land Revenue; but you say that within the Finance Ministry there is a Deputy-Secretary charged with revenue business?—Charged with the supervision of Excise, Opium, Income tax, Salt revenue, and so on.

1762. Here, in London, is the Board of Inland Revenue. The Chairman of the Board of Inland Revenue is in daily attendance at Somerset House, with the Board; and apart from the Board, his whole year is engaged in superintending, and in directing and controlling the actual levying of the revenue; the consequence is that he becomes an expert in all details of

Sir C. Bernard, K.C.S.I.

7 Nov. 1895.

revenue administration, because he, with his colleagues on the Board, is every day interpreting and settling the conditions on which a tax shall be imposed, and the validity of claims for exemption. Also he is in daily contact with the officers of his Department, and from them he learns all the particulars, the secret history, of the revenue, from which he can form an opinion as to whether the law is good in its present condition, or whether modifications of it are required, and in what direction. Now a Secretary in the Finance Department, who would rather correspond to one of the principal officers in our Treasury here, does not represent an officer so versed as I have described the Chairman of the Inland Revenue Board to be in the every-day administration of taxation, and that could be put on the same footing as an adviser of the Finance Minister?—That is quite true; he does not represent in any way the Chairman of the Inland Revenue at home, but in every province you have an officer who corresponds to that official, one for each province.

1763. And therefore the Finance Minister, if he wants really practical information upon the collection of a tax, must get it by travelling?—Travelling or summoning chief revenue officers to meet him.

1764. But the advantage of the system here is that the Chancellor of the Exchequer has an expert always at hand; he can summon him at any time he likes daily. Of course, it is very important that the Finance Minister should travel throughout India; but he can only do it from time to time, and of course he can only also from time to time see those officers who are engaged in the work of collection?—That is so; but what I submitted was that no single officer could direct the details of revenue affairs over all the 10 provinces of India. The circumstances differ so greatly.

1765-6. Quite so, that I quite understand; but if you were Finance Minister, and had the choice of the two systems, would you like to have your technical adviser near at hand, so that you could always have reference to him, or would you prefer the present position, which only enables you to avail yourself of his advice, either by travelling many hundreds or thousands of miles to meet him, or bringing him many hundreds or thousands of miles to meet you?—What I would say is that the Government of India is conducted, not by the Supreme Government directly, but by the Provincial Governments. They are the people who are responsible, and I think the Finance Minister must look to them, and not attempt to place himself in direct relations with the local officers.

1767. Against that I should say that the management of the finance of an empire like India seems to me a very heavy charge, in many respects more so than the management of the finance of a more compact and smaller country like England; and I may put it to you whether, in order that the Finance Minister may be thoroughly efficient for his purpose, he should not have his skilled advisers close at hand? If that is not possible, there is a defect in the system, though it may not be possible to amend it, in the direction in which we have been speaking?—I do not think it is possible usefully to amend it in the direction you are speaking of: but I will go further, and say that I do not think in that direction amendment is wanted, because I explained that the revenue is administered and the country is governed by the Provincial Governments, and you must look to them, and the Finance Minister must look to them, and influence the detailed working of the machine through them; he cannot do it himself, it is too big a business, and too complicated.

1768. Of course, if you apply that fully you may apply it to everybody. Would you apply it to the Viceroy, who governs through other people? But the question is: You must always hold that the Finance Minister is eventually the man who is responsible for the finance of the country, and it is hardly sufficient to represent him as a person who simply delegates finance to the Provincial Governments?—But the Provincial Government system, of which you have been speaking, was the consequence of the recognition of that fact, was it not? I mean, the Government of India devolve the responsibility of governing and administering these revenues on the Provincial Governments.

1769. But you observe, in doing that, that the Central Government is very careful to preserve a complete control, and, while it devolves this full responsibility, it retains complete powers of superintendence?—Quite so.

1770. That involves the full responsibility of the Finance Minister under the new system and also the full responsibility of the Supreme Government that the system of finance is as good as they can make it. But I will not press this point very far, because the point at which it touches us is that of the collection of the revenue, and we have extended it rather far on to the question of taxation. But, *qua* collection of revenue, the Finance Minister, you think, has, though he has not got these expert officers at hand to consult, sufficient information available to make you justify the system?—That is my view.

1771. (*Sir Andrew Scoble.*) And he could always get his officers if he wanted them?—He does have them from time to time.

1772. (*Sir William Wedderburn.*) With regard to the addition to the excise; I think you divided it rather between the increase from increased duty and increase from prosperity?—Some part of it may be due to prosperity; I do not recollect saying it. I think it is partly due to increased rates, and partly due to improved administration; but mostly to increased rates, I think.

1773. It was only with regard to the use of the word "prosperity." When it was not from increased rate it would be from increased consumption, I suppose?—I have been trying to show that, as far as I can judge, the consumption has not been increased. I quoted figures to show that, did I not?

1774. Then would it be only from increased rates?—Increased rates, and increased prevention of illicit transactions.

1775. But preventing the illicit consumption would not have an effect on the revenue, unless it increased the consumption of Government liquor, would it?—That is so.

1776. (*Mr. Caine.*) It is the case, though, that in the excise reports the officers constantly say that the revenue has improved in consequence of better trade, or better crops, and so on. The fact is that those who use drink, being in the habit, take more?—Sometimes, if there are good crops they buy more; if there are bad crops they buy less.

1777. (*Sir William Wedderburn.*) And with regard to the land revenue the enhancement, the increase of land revenue; I think in the Bombay Presidency there have been of late years very large enhancements, have there not, in the re-settlement?—The revision of the land revenue in Bombay is now almost done. It was made at the end of 30 years' settlement, and it has resulted altogether in an increase of a little over 50 lakhs of rupees.

1778. I think I referred to a case in the Bassein district regarding which an answer was supplied from the India Office with regard to very large enhancements in individual cases. I brought to notice cases in which an individual holding had been raised as much as 10 times the assessment on one holding. Such cases are incompatible with the idea that it is a general raising of the assessment on account of improved general prosperity or any beneficent action of the Central Government, are they not?—If such cases were common your deduction would be correct, but I am not aware that such cases are common. I can quite conceive of a case where the land revenue has been raised 10 times. For instance, I was settlement officer of land revenue in Chanda 30 years ago, and there were occasional villages in the jungle that I assessed at 5 rupees each. I should be quite prepared to go now, 30 years afterwards, and find that they were assessed at 50 rupees, because the cultivation has improved and greatly extended. The single case, I believe, that you are referring to is probably something of that kind.

1779. I think those were ryotwari cases on small holdings?—Quite so.

1780. Small holdings. It was a case of raising, perhaps, 4 rupees to 40 rupees?—I think it was a case, probably, of raising 12 annas to 8 rupees, something of that kind.

1781. Something of that sort. But my question was whether those individual enhancements were not incompatible with the idea of only raising the assessment generally on account of public works such as railways, carried out by the Central Government?—If there were such a case it would not have been on account of any central works, but for instance, if a man had a holding of which nine-tenths at the last settlement was grass,

and paid no revenue, and now he has cultivated it all, then he pays revenue on it all.

1782. But I think you know in Bombay the system is of fixing a rate upon a number, with the assurance that there will not be any increase upon taking up the uncultivated land within that number.

(*Sir Andrew Scoble.*) Mr. Chairman, are we to go into this?

1783. (*Sir William Wedderburn.*) I think I am right in saying that these are enhancements upon the improvements of the tenants?—I have no knowledge that they are; I should say generally that enhancements are not made on the improvements of the tenants; but I cannot speak upon particular cases without particular inquiry.

(*Chairman.*) We had better confine ourselves to the question which came up yesterday, namely, how far the deductions from that table were justified by the facts—and as to whether there was reason to modify them in consequence of taxes having been raised or altered. That I think was the leading question.

(*Sir William Wedderburn.*) Sir Charles Bernard thought the decentralisation had not had much effect in raising the land revenue?—That is what I submitted.

1784. I was rather suggesting that it had stimulated the settlement officers to run up the rent upon individual holdings, and that it had had that effect?—I cannot think that for a moment. Having been a settlement officer myself under the old system, and having controlled settlements under the new system, I decidedly say that decentralisation of the finances has not conduced to further enhancement of the land revenue.

1785. (*Mr. Naoroji.*) From the evidence yesterday, it was suggested that the increase in the revenue was owing, to a large extent, to increase of prosperity of the people. I have asked Sir Henry Waterfield if he could supply us with a statement of all the additions to rates and taxes, all new taxation, the enhancement of land assessments, and consequent enhancement of provincial rates during 30 years or during any period. Till we have that information before us, we can hardly judge properly whether an increase is owing to the additional levy or additional prosperity. Can you supply us with this information; because I was referred to you as being the best person who would be able to say whether it can be supplied or not, either now or afterwards, from the Government of India?—It will be possible to say, after a time, how much increase of land revenue is due to revision of settlement. Is that the question?

1786. Increase of all revenue owing either to increase of taxation or increase of assessment; that is to say, increase by levying instead of the increase of the prosperity of the people?—Of which revenue do you speak?

1787. The whole revenue; because that was urged here that the increase of revenue proved that the people were more prosperous, and this matter would be cleared up if we knew exactly the whole of the information. That was the reason why I put this question?

(*Chairman.*) Must we not, Mr. Naoroji, at the present time confine questions to the increase of taxation rates under the heads which are affected by the table that Sir Henry Waterfield put in? You see, your question would refer to the whole scheme of taxation.

(*Mr. Naoroji.*) Yes.

(*Chairman.*) Before we go into that subject it would be necessary, I think, to consult the Commission as to how far it lies within the scope of our inquiry.

(*Mr. Naoroji.*) Yes.

(*Chairman.*) I think where a witness puts before us in proof of the beneficial result of a financial measure certain figures, that there, and within the limit of those figures, we have got a right to ask whether any changes in taxation have taken place affecting that result which ought to be borne in mind as modifying the general result shown by those figures; but I think we must confine ourselves to the items shown in that table.

(*Mr. Naoroji.*) I am quite willing to confine myself to any portion that you may direct. Therefore, I will only say that the general conclusion should not be admitted, that increase of revenue is owing to the increase of prosperity, unless we have distinct information to show that.

(*Chairman.*) I think Sir Henry Waterfield when he spoke was confining himself to his own table, and that table is the one at 679.

(*Mr. Naoroji.*) Then, therefore, even as to that table, even to that partial extent we should have information as to what is known.

(*Chairman.*) I think on that point, and up to that point, you are entitled to ask questions. If you go beyond that point I think we must consider whether it lies within our scope.

(*Mr. Naoroji.*) I do not want to go on at present. Simply because it was proposed here, and therefore I said it.

(*Chairman.*) Then, if that be the case, your question would be modified in this respect, would it not? That you would ask Sir Charles Bernard whether, over a certain period of years, he would be able to tell you what changes of taxation had taken place in the heads of revenue to which that table refers?

(*Mr. Naoroji.*) To that extent then we will limit it, if it is so limited and so understood.

1788. (*Chairman.*) Quite so. Then now we should hear what Sir Charles Bernard thinks on that point?—I think it would be very difficult to make such a table as Mr. Naoroji requires—of course it could be attempted. I do not know whether reference to India would be necessary or not—probably it would. It would be very difficult to do it.

(*Mr. Naoroji.*) If that is not done, then all I can say is, nobody is justified in drawing conclusions that the increase in the revenue is the proof of the increase of the prosperity, because, on the contrary, the position of the political condition of India, and its political drain in the employment of Europeans, notwithstanding the increase of revenue in any particular Department, would not at all prove that the people are prosperous. The people may be deteriorating on the contrary, which is just possible.

1789. (*Mr. Naoroji.*) Then, in the course of further questions, I asked for the production of a note prepared by Sir David Barbour.

(*Sir Andrew Scoble.*) I thought that it was settled that Sir David Barbour was to be asked about that.

1790. (*Mr. Naoroji.*) I asked this question, and then I was referred to Sir Charles Bernard, that I should ask him; and I will put it in another form, because we know that in one of the financial statements Lord Cromer said this:—

"It has been calculated that the average income per head of population in India is not more than 27 rupees a year, and though I am not prepared to pledge myself to the absolute accuracy of a calculation of this sort, it is sufficiently accurate to justify the conclusion that the tax-paying community is exceedingly poor. To derive any very large increase of revenue from so poor a population as this is obviously impossible, and, if it were possible, would be unjustifiable."

Now, I am not going to discuss that. I only wanted that we should have here a copy of the calculations, by which Lord Cromer came to this result, supplied to us, and if with that calculation of that particular year—1881—or whatever it might be, if we should have any similar calculations for succeeding years we should then be in a position to see whether the condition of the people or the prosperity of the people was in any way increasing or diminishing the average per head. Now I do not suppose there can be any difficulty in getting the calculations from the Government of India, for they actually exist in the records; would there be?—I think a somewhat similar question was asked in Parliament, was it not?

1791. Yes?—And I think the Secretary of State gave a reply.

1792. Yes, but that reply was unsatisfactory, and I want the information here?—I cannot presume to add to the Secretary of State's reply.

1793. The reply of the Secretary of State was unsatisfactory, and that is the reason why I ask you whether—the thing exists—any public records can be produced here to enable us to judge fairly what the real condition is. All I want is that there is a public record which throws light upon a very important question which we will have to discuss here, and that therefore this record will be of very great use?—I think, if I may say so, that that question repeats what was put in Parliament one or two years ago, and which

Sir C. Bernard, K.C.S.I.

7 Nov. 1895.

was answered by the Secretary of State, and I have nothing to add to the Secretary of State's answer.

1794. What I want here is your answer for the Commission; whatever it is; let it be recorded on the Commission's reports?—I shall be happy to look up the Secretary of State's answer, and submit it.

1795. Why should it not be supplied?—I shall be happy to look up the Secretary of State's answer and submit it, but I cannot go beyond it.

(*Chairman.*) Mr. Naoroji, you will recollect the conversation that took place yesterday. You will see that the witness is put in a rather difficult position. When the Secretary of State has made an answer, it must be clear that the officer of the Secretary of State can hardly go beyond that answer. There was a solution suggested for the moment. This was a calculation made by Sir David Barbour; as I understood it, it was not a calculation for which the Government of India would be responsible?—That is so.

(*Chairman.*) And, that being the case, I thought we suggested, and I rather thought you, Mr. Naoroji, accepted the suggestion at the time, that we should reserve the question till Sir David Barbour comes, and that he was the proper person, as he made the calculation, to discuss the matter with.

(*Mr. Naoroji.*) Yes, but then as it is said that the Government of India is not responsible for it, and that is the reason why I am obliged to put it in this form that the Government of India is responsible for it, because they have actually used this in an argument in a certain financial speech and that, therefore, they have made a public use of that calculation that we ask the Government of India to produce it. That is my position.

(*Chairman.*) You are quite entitled to ask the question, but I would submit to you that the witness could not give any other answer.

(*Mr. Naoroji.*) But I am afraid Sir David Barbour would say that he was a subordinate, therefore he did work for the Government over which he has no control, he can give no information.

(*Chairman.*) We shall hear that from him.

(*Mr. Caine.*) Surely, my Lord, if the Government of India have repudiated this document, that particular document becomes Sir David Barbour's property. If he chooses to put it on the table of the Commission he can do so. I think we had better wait till he comes and ask him to lay it on the table of the Commission.

(*Mr. Naoroji.*) The question cannot arise, the Government of India has used that document.

(*Sir William Wedderburn.*) Is it a confidential document? What is the nature of the objection, can you state, to producing it?—I cannot go beyond what the Secretary of State said.

(*Mr. Naoroji.*) Perhaps the Secretary of State's answer may be brought here and then we shall be able to see a way out of it.

(*Chairman.*) The witness has already alluded to the Secretary of State's answers, and perhaps the best way would be that he should put them in—I think that would be quite sufficient so far as the witness is concerned (*see at the end of evidence*).

1796 (*Mr. Naoroji.*) Then there is another matter on the same subject. A correspondence has taken place between me and the India Office, or the Secretary of State for India in the year 1880, beginning with my letter, dated 24th May 1880, and I should like you to say, if you can, whether that correspondence can be put here, because it is upon the same subject, and it would throw much light, as actual discussion has taken place between the Secretary of State and myself on this question of prosperity or adversity?—Was not the request for the correspondence also made to the Secretary of State sometime ago?

1797. Not in Parliament, I think?—By you: did you not ask for it?

1798. I asked from himself?—And what was the answer?

1799. His answer was it was antiquated, or something of that kind; I do not remember. If you will bring the answer we will deal with it?—I cannot go beyond the Secretary of State's answer on the point.

(*Mr. Naoroji.*) Then if you will bring that answer we will see.*

* NOTE.—The witness found that the reply which is cited in Question No. 1799 is not on official record; so he is not able to produce it.

1800. (*Mr. Caine.*) I should just like to ask a single question to clear up that matter of the 85 per cent. of the excise, because I think, as the question now rests there will be slight confusion. I understand, and perhaps you will correct me if I am wrong, that you attribute the increase of the 85 per cent. over the 13 years under review to three causes—firstly, to the transfer of consumption from illicit to licit supply in consequence of the suppression of smuggling; secondly to enhanced taxation; and, thirdly, to increased purchasing capacity of habitual users of exciseable articles?—I do not know about the third. I do not remember saying that.

1801. I rather gathered it; you used the word prosperity?—In some regions, no doubt the people are richer, and have bought more, but over the whole of India, you cannot say they have bought more.

1802. I think those three points are really a very fair summary of the argument of the Indian Government with regard to this increase?—Yes, I think they are.

1803. May I just ask a single question. There was a little discussion yesterday on the question of the tobacco tax. I should value your opinion perhaps more than any other I can get upon the subject. Do you think it would be possible to tax tobacco?—I think it would be extremely difficult. May I tell you my own experience of it.

1804. I should like it very much, if it is in order?—I am perhaps the only man in India who has ever had to draw a Bill for enacting a tobacco tax. That I had to do in 1872 in Bengal, and that Bill had got so far that it was in print, and I was to have introduced it into the Legislative Council the very morning that orders came making it unnecessary to impose the tax. I was greatly relieved by not having to introduce the tax, for this reason, that such an impost practically interferes with the comfort and the pleasure of almost every one of Her Majesty's subjects in India. For instance, in Bengal, let me tell you what we had to do. At the present time in Bengal, tobacco is grown in every single village in the country almost without exception. In order to levy a tobacco tax we proposed to prohibit the growth of tobacco in all but about six or seven districts, and then to excise it there, and to excise its passage into every district. We probably should have raised the price of tobacco two or three fold, and only got a very small revenue indeed; while we should have had to interfere with and harass the people in almost every village of the province. When I was serving in Burma I went through the jails to see how many of the people actually consumed tobacco. I could hardly find a single person, man or woman, who did not consume tobacco. The tobacco tax would practically, in some provinces, touch in the same way every single person that the salt tax touches; and besides touching such an enormous number of the people, it would immensely enhance the cost of tobacco to the consumer, and also it would be an interference, which the Government of India is always most slow to make, with the people in the management of their estates, and the crops they grow. Those, to my mind, are the objections to it; and although the salt tax is a dreadful tax, if money must be raised from the poorest people of India I would rather see it raised by a small enhancement of the salt tax than by any attempt to introduce into India a tobacco tax with all its attendant evils.

1805. (*Sir James Peile.*) It is a fact, I think, is it not, that there has been a very active development of *abkari* excise administration contemporaneously with the decentralisation of the finance?—That is a fact

1806. And that development of the excise system has been carried out by means of Acts for different provinces in which permission is given to levy duties which the Government can increase if it wishes. There is no fixed rate of excise duties?—There is no fixed rate, but there is an attempt in most provinces to make the tax on spirits bear some ratio to the Customs duty.

1807. That is what I was coming to. The attempt is to raise the excise duty up as nearly as possible to the level of the Customs duty on imported spirit?—That is so at the great marts on the coast.

1808. And in the development of the excise administration it extends itself, we may say, outwards, from the central to the backward districts, or say, from the city of Bombay, as a centre, to districts at a distance from the city of Bombay?—The rates are not enhanced so high in the backward places.

1809. The backward districts are under lower rates, and the duties are gradually increased as the administration gets a firmer grasp, and smuggling is put down?—They have been increased gradually over all India during the last 15 years, even in backward places.

1810. As a result of the better administration of the excise business?—Undoubtedly. More attention has been paid to excise in the last 15 years than before.

1811. So there is a combination of better administration and a rise in the trade?—Until you had a firm administration you could not trust yourselves to raise the rates.

1812. And it is connected with the decentralisation of finance?—It is contemporaneous with the decentralisation of finance; but I believe that the Indian officers would have done their duty in those matters, even if the finances had not been decentralised.

1813. Still, the Provincial Governments have had a greater interest in developing the system than they would have had otherwise?—I do not think that the interest makes the local officers take any other course than they previously took. I do not think so myself.

1814. (*Mr. Caine.*) They get none of the excise revenue, do they?—Yes, the Provincial Governments get a part of it; a share of it. I do not think that in order to do that, to increase their revenue, they would take any special steps. It is within your recollection that the Burma Government proposed greatly to reduce the consumption of opium, and caused themselves a loss of about five lacs they expected of provincial revenues.

1815. (*Sir James Peile.*) I do not mean that the Provincial Governments increase the duty in order to increase their revenue, but that they have a greater interest in close administration?—It has been made over to them entirely, the responsibility and the power, therefore they discharge the responsibility and they exercise the power which they had not got before.

1816. (*Mr. Caine.*) What commission do they get, or what share?—One quarter of the excise revenue is treated as provincial income in all provinces.

Paper handed in in consequence of Question 1795.

ANSWER sent to Mr. Naoroji, M.P., on 29th March 1893.

The Secretary of State, having consulted the Government of India, does not think it expedient to present the note prepared by Sir D. Barbour in 1881. It is now partially out of date, while some of the opinions it contains are necessarily of a speculative nature, and, if published now, might be misleading.

Sir C. Bernard, K.C.S.I.

7 Nov. 1895.

ANSWER given in Parliament to Mr. Naoroji, M.P., 27th April 1893.

To the first part of my hon. friend's question my answer is in the affirmative. There is reason to think that Major Baring's statement had reference to the confidential note described by my hon. friend. The information upon which that estimate was based is from 13 to 23 years old, and the Secretary of State thinks it inexpedient to present to Parliament a statement which is now so much out of date. He has consulted the Government of India, who concur with him.

ANSWER given in Parliament to Mr. Naoroji, M.P., 5th May 1893.

For the reasons given on the 27th April, the Secretary of State is unable to lay on the table the confidential note to which my hon. friend refers.

ANSWER given in Parliament to Mr. Naoroji, M.P., 4th April 1895.

Considering that the statement to which my hon. friend refers was confessedly founded upon uncertain data, and that any similar calculation which might now be made must be founded on equally uncertainda a, and might probably be misleading, the Secretary of State is unable to agree to my hon. friend's motion.

The witness withdrew.

Adjourned till Tuesday next at 11 a.m.

At the India Office.

FOURTH DAY.

Tuesday, 12th November 1895.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN), PRESIDING.

SIR WILLIAM WEDDERBURN, Bart., M.P.
FIELD MARSHAL SIR DONALD STEWART, Bart., G.C.B., G.C.S.I.
SIR E. W. HAMILTON, K.C.B.
SIR RALPH KNOX, K.C.B.
SIR JAMES PEILE, K.C.S.I.
SIR ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
MR. G. L. RYDER, C.B.
MR. T. R. BUCHANAN, M.P.
MR. W. S. CAINE.
MR. DADABHAI NAOROJI.

MR. COLIN G. CAMPBELL, *Secretary.*

SIR DAVID MILLER BARBOUR, K.C.S.I., called in and examined.

Sir D. M. Barbour, K.C.S.I.

12 Nov. 1895.

1817. (*Chairman.*) I think you were Financial Member of Council in India. During what years?—From the end of 1888 to the end of 1893.

1818. Would you tell us what other posts you have held in India?—I was a member of the Bengal Civil Service from 1863 to 1893; and from the beginning of 1872 to the end of 1893, that would be about 21 years, I was employed chiefly under the Financial Department and in connexion with the Financial Department. I was Under Secretary in the Financial Department and Secretary afterwards, and I was Accountant-General of Bengal and Financial Secretary to the Government of Bengal. I was employed on special duty at various times; in fact, I was attached during the greater portion of my service to the Government of India and the Financial Department. I saw the working of the Government of India under six successive Viceroys.

1819. And during the early part of your service, from 1863 to 1872, were you engaged in financial business?—No. From 1863 to 1872 I was not. I was employed in what is called the Regular Line of the Service. Miscellaneous duties, some judicial duties, collection of the revenue, and looking after the Excise, and so forth.

1820. That is the point I wanted to ask you; had you, during that time, intimate acquaintance with questions connected with collection of the revenue?—With some portions of the revenue, certainly.

Sir D. M. Barbour, K.C.S.I.

12 Nov. 1895.

1821. Therefore, you have seen collection, of the revenue or of some portions of the revenue in detail?—Oh, certainly, for about eight years.

1822. We are confining our inquiry at present to the organisation of financial administration in India, and we are anxious to obtain the opinion of those who, like yourself, have held the highest financial posts in the Indian Empire. Various questions will arise at another stage of the inquiry connected with what I may call the progress of expenditure; but for the present moment we are confining ourselves purely to the financial machinery. You have, I think, seen the evidence given by Sir Henry Waterfield and Mr. Jacob, and you have gathered from that the nature of the information which we seek?—Yes, I have seen their evidence, also Sir Oliver Newmarch's, Mr. Becher's, and Sir Charles Bernard's.

1823. May I call your attention to the question at the beginning of Sir Henry Waterfield's evidence on the respective powers of the Chancellor of the Exchequer here, and of the Financial Member of Council in India?—What is the number of the question? I think the question is this: Is the position of the Financial Member of Council similar to that of the Chancellor of the Exchequer?

1824. I endeavoured to describe to the witness what I considered to be the functions of the Chancellor of the Exchequer, and after that I asked the witness whether he thought the powers of the Finance Minister in India were equivalent to those of the Chancellor of the Exchequer?—I think the position is very much the same. Theoretically I should say the powers were the same, practically I should say there was a very great difference; but theoretically the powers and the position would be about the same.

1825. Do you consider that the Financial Member of Council in India has a control over expenditure as complete as that of the Chancellor of the Exchequer over expenditure in England?—I am not very well acquainted with the exact nature of the control of the Chancellor of the Exchequer, but I think that according to the rules, all questions of expenditure come before the Financial Member of Council as completely as could be expected or would be reasonable. The questions come before him I should say very fully and thoroughly.

1826. The theory, and I think I may say the practice, here is generally summed up in the Treasury maxim, that the assent of the Chancellor of the Exchequer must be obtained to any measure increasing or tending to increase the public expenditure?—Well, that would be the case in India. Of course there is an appeal. But all questions involving expenditure, either questions of immediate expenditure or questions of policy directly involving expenditure, would certainly under existing rules come before the Financial Member of Council.

1827. From what I have been able to learn of financial administration in foreign countries, the power of the Treasury, that is, of the Chancellor of the Exchequer, in controlling and regulating public expenditure is much greater here than is, at all events, usual abroad?—Oh, I think there is no fault to be found with the Indian system from the financial point of view, so far as the system provides for the coming of these questions before the Financial Member of Council.

1828. In other countries the Financial Minister is rather the Registrar than the Controller of the expenditure of his colleagues. May I take it that your opinion inclines to the view that the Indian Finance Minister's powers more closely resemble those of our Chancellor of the Exchequer than those which I attribute to the foreign Ministers of Finance?—Well, theoretically, they more closely resemble the powers of the Chancellor of the Exchequer, but practically and at times he might be much more in the position of registering the expenditure which other authorities wish to incur than in that of actually controlling it himself.

1829. The power which I have described as residing in the Chancellor of the Exchequer is in theory, and I think I may add in practice, complete. The greatest and the smallest measures of the kind described are alike subject to it, and it includes measures which indirectly as well as directly increase or tend to increase the expenditure. I put that view in order to ask you whether you would in any way qualify what you have stated already when the powers are described as broadly as that?—No, I would not qualify it. I think, theoretically, the position of the Indian Financial Member of Council corresponds to that of the Chancellor of the Exchequer.

1830. The checks on the Chancellor of the Exchequer are, in the first instance, the Prime Minister, who is usually First Lord of the Treasury; in the second place, the Cabinet; and lastly, the action, or the anticipation of the action, of Parliament. Is it your opinion that the control over the Financial Member of Council is as complete as that over the Chancellor of the Exchequer? and, if you consider that it differs, either in theory or practice, would you state in what respects it differs?—Well, theoretically, as I said, his position is the same as that of the Chancellor of the Exchequer. Practically, it is very different: in practice his powers are very different, because, of course, he has not got behind him the control of Parliament or of any authority at all corresponding to Parliament.

1831. And therein you agree with me in what I described as a considerable check upon the Chancellor of the Exchequer, namely, the anticipation of the action of Parliament?—Quite so, and a check upon those who would over-rule the Chancellor of the Exchequer.

1832. Quite so?—That of course is a check that is wanting entirely, or almost entirely, in India.

1833. May I ask you whether, theoretically, you would wish the powers of the Finance Minister strengthened?—I do not wish to see his position strengthened in so far as the present system provides that all questions of expenditure must come before him. I think that is provided for; but I certainly think that something is very desirable, which would ensure greater attention being paid to financial considerations in connexion with the Government of India. I do not know that I am prepared to suggest alterations in rule or machinery that would secure that; but I have no doubt that something is desirable, if it can be obtained.

1834–5. At present we are only anxious to obtain your opinion as to the sufficiency of the powers of the Finance Minister. In England, the assent of the Chancellor of the Exchequer is sought by official letter from the department seeking to incur expenditure and given by official reply from the Treasury. By that means we have on record here the applications and the replies? Is that the course in India?—Yes. Assent is sought by application from the department; but it is not necessarily official application, that is to say, the notes or proposals would be prepared in one department and sent over as they stood to the Financial Department—that is done in order to save time.

1836. But those notes would be available for official purposes?—Oh, certainly, they would remain in the Department.

1837. The Finance Minister would be able to show that such and such questions had been submitted to him, though they were only submitted to him in the form of the note which you have described?—I do not know what distinction you make in this country between official papers that are brought on record and papers which are not brought on record, what we used to call in India unofficial papers. Those papers to which I refer, would probably not be brought on record, that is to say, they would never be published, nor would they be ordinarily given to the public; but they remain in the Department, and are generally printed.

1838. Quite so. They are on record?—They are on record in the sense that they remain in the Department, they exist. I do not know that they would be produced in any public inquiry or anything of that sort.

1839. That would be a question of discretion?—As a rule, they would not.

1840. Quite so. The possibility, the probability perhaps, of parliamentary questions usually makes the Chancellor of the Exchequer anxious to have applications of this kind, even though they may have received his private sanction, placed upon record in official form. That consideration naturally does not weigh so much in India, because the Indian Government has not got that anticipation of parliamentary action, which is so constantly present here?—Yes, that would be so. It saves time for the actual notes to come over—the proposals to come over in their original form.

1841. If expenditure is incurred here without the assent of the Chancellor of the Exchequer, the Comptroller and Auditor-General reports the irregularity to the Treasury; and if the Treasury does not give its covering sanction, or if in doing so it exceeds its

powers, the Comptroller and Auditor-General reports the irregularity to the House of Commons, and the House of Commons through its Standing Committee on Public Accounts pronounces judgment on the irregularity. Is there in the Indian system any equally efficient guarantee for the detection and judgment of irregularities?—I think there is. I am not sufficiently acquainted with the English system to say that there is an equivalent check upon irregularities, but there is, I consider, a sufficient check upon irregularities of that sort.

1842. I shall have to ask you some questions later on on the details of audit and the manner in which the check operates, and I now desire to confine my question simply to the point whether there is a certainty of the fact of the sanction of the Finance Minister not having been obtained being brought to notice?—Of course, you must understand that though you talk of the Financial Department, the Home Department, and the Foreign Department, the Government of India is looked upon as one and indivisible. It is the Government of India in the Financial Department that deals with financial questions, and it is the sanction of the Government of India in the Financial Department to which the Audit Officer looks.

1843. But if the sanction of the Government of India in the Financial Department is required, and if, we will say, the Government of India in the Military Department do not obtain that sanction, that would be an omission which through the agency of the Comptroller and Auditor-General would be put on record?—Not through the agency of the Comptroller and Auditor-General, but through the agency of the audit officers in the first instance; and, if that sanction was not obtained, then the Comptroller and Auditor-General would bring it to notice afterwards; but in the first instance it would be brought to notice immediately by the Audit Department concerned.

1844. In using the word Comptroller and Auditor-General I mean the head of the Department, who I presume we should both agree is eventually the responsible person?—No doubt; but practically the different Audit Departments deal with these questions; the different branches deal with these questions in India.

1845. That is the point of the evidence given by Sir Henry Waterfield and Mr. Jacob, on which I will ask you a question later on when we deal with audit machinery. What are the checks on the Financial Member of Council which would correspond to the Prime Minister, the Cabinet, and Parliament here?—Well, the check upon the Finance Member of Council would be the Governor-General in Council.

1846. I do not know the machinery sufficiently to understand the distinction. Is there any check upon him by the Viceroy personally?—Of course the Viceroy has got great influence in the Council, and if the Financial Member of Council took one view and the Governor-General or Viceroy took the other view, the opinion of the Governor-General would carry great weight. At the same time, if the Financial Member of Council stood out against the opinion of the Viceroy, the case must come before the Council.

1847. That corresponds rather to the position of the Prime Minister here. As probably you are aware, it very often happens, and must happen, in questions of expenditure, that the Chancellor of the Exchequer and his colleagues differ. Then what I may call a friendly reference is made to the Prime Minister, and it struck me that possibly the Viceroy personally occupied, *mutatis mutandis*, the position of the Prime Minister here?—I think that is close enough.

1848. Then, of course, the Parliamentary action is wanting; but I suppose you would say that behind the Viceroy in Council there still comes an ultimate authority in the Secretary of State?—Oh, of course, and in the remote distance comes Parliament.

1849. Quite so; that is to say, questions may be taken up in Parliament?—May be taken up in Parliament, yes.

1850. Those men conversant with the English system who are old enough to remember that system before the establishment of the Public Accounts Committee, and the passing of those provisions in the Exchequer Audit Act of 1866, which ensure the presentation of the reports of the Comptroller and Auditor-General to Parliament, are well aware that the Comptroller and Auditor-General is the best friend of the Chancellor of the Exchequer. It is true that officer checks irregularity on the part of the Treasury itself; but on the other hand, it is only through him that the Chancellor of the Exchequer learns that the regulations laid down for the orderly administration of the finances are duly observed throughout the public service. In your opinion does the Comptroller and Auditor-General in India in the exercise of his powers, give similar assurance to the Financial Member of Council?—By Comptroller and Auditor-General am I to understand the Audit Department?

Sir D. M. Barbour, K.C.S.I.

12 Nov. 1895.

1851. Yes?—In that case I think the Financial Member of Council receives a similar assurance.

1852. And does this action of the Audit Department give similar assurance to the highest authority in Indian administration, that the Finance Department has not itself committed an irregularity?—Yes.

1853. For the present moment I am looking upon the Secretary of State as the ultimate authority. In case there was any irregularity committed, any excess of power exercised by the Government of India in a financial matter, would there be security that the Comptroller and Auditor-General would point out that irregularity, and that that irregularity would come to the notice of the Secretary of State?—Certainly; the Audit Department check such irregularity now. I may mention that as the Financial Department is from the nature of things rather weak practically in India—I consider that it is practically weak, though theoretically strong—the tendency has always been for the Financial Department to shelter itself as much as possible under the authority of the Secretary of State, and consequently the Financial Department has always been extremely anxious to see that the orders of the Secretary of State in financial matters are carried out—quite as anxious as the Secretary of State has been himself, I should say. Therefore the orders of the Secretary of State have always been, as far as the Financial Department could secure it, fairly well carried out, and on the whole have been thoroughly carried out; but quite recently—that is, within the last seven or eight years, say, an arrangement has been made by which the audit officers will bring to notice the fact that the sanction of the Secretary of State is required in certain cases. Formerly they did not do so, but the Secretary of State was anxious to be assured that his orders were fully carried out, so an arrangement was made that the Audit Officers should exercise this check. But in practice the orders of the Secretary of State have always been carried out at least fairly well, because it was very much to the interest of the Financial Department to see that they were carried out.

1854. And it was also very much to the interest of the Financial Department that any question concerning the relative powers of the Finance Department and other departments should come to the knowledge of the Secretary of State?—Oh, certainly; a weak Department always tries to shelter itself under the strongest authority it can find.

1855. And in that respect, perhaps, as I have described the Comptroller and Auditor-General as the best friend of the Chancellor of the Exchequer, may I put it that the Secretary of State is the best friend of the Finance Minister?—Yes, he is certainly a friend of the Financial Department, there is no doubt about it. It would be better, in my opinion, if he was a stronger friend.

1856. The Military Department is, I presume, the most powerful department in Indian administration and its relations with the Finance Department will best illustrate the working of financial control?—The Military Department is a very strong department in India, and it has the control of a great deal of expenditure, but I do not know that it is the strongest department. The fact is that to understand the Indian system of government you must realise the very great power of the Viceroy. His power is, from various reasons, which I need not go into, very great, and if the Viceroy supports the Military Department, the Military Department is the strongest; if he supports the Financial Department, the Financial Department is the strongest; and whether great attention is paid to financial considerations or not, depends entirely—or almost entirely—on the Governor-General for the time being. If he is favourable to economy, the Government is economical; if he is inclined to be—not extravagant, but liberal, we will say—the Government is liberal.

Sir D. M. Barbour, K.C.S.I.

12 Nov. 1895.

1857. If he leans to efficiency?—If he leans to efficiency the Government is liberal.

1858. In comparing, as we naturally do here, the two systems we must never forget the exceptional position occupied by the Viceroy personally in India?—Yes, and it is a position which I should say has tended to become more powerful as time goes on rather than weaker.

1859. Indeed; in spite of the easy communication with home?—I am now dealing with matters in which he is not overruled from home. I am referring to his authority inside his Council.

1860-1. But at all events if we are to take the relations of any one Department with the Finance Department, the Military Department would be as good a one to take as any?—Oh, quite as good, and the Military Department, of course, has the special advantage of having, generally speaking, but not always, two votes, the Commander-in-Chief and the Military Member, in Council.

1862. Further, the Military Department is that in which there is the greatest scope for a perfectly legitimate difference of opinion between the Finance Minister and his colleague, is it not?—Of course, there is always room for difference of opinion where questions of expenditure are involved; there is always room for difference of opinion between the officer who wishes to incur the expenditure and the Financial Member who wishes to keep down expenditure as much as possible.

1863-4. Of course when we speak of differences between the two Departments it does not necessarily mean a condemnation of either?—Oh, no.

1865. (*Sir Donald Stewart.*) But is it not a fact that the Military Member in Council is usually held to be a check on the Commander-in-Chief rather than a supporter?—That is the theory, and, no doubt, in some cases that is the practice, but I have known the opposite to be the case—it depends upon circumstances. I have known cases where the Commander-in-Chief and the Military Member of Council have really supported each other, but the theory is that the Military Member of Council would be the adviser of the Government of India.

1866. That is the point?—That is the theory, certainly.

1867. And my own experience is that it is the practice too—most strongly so?—That may be, but you must recollect that my experience and yours do not come precisely in the same periods of time.

1868. (*Chairman.*) Is the Military Member of Council ever a civilian?—Oh, no, never; I do not think he could be, in India, at all.

1869. On the occurrence of a difference of opinion between the two Departments, would it be reasonable to infer that the decision of the Government in India would depend in a great degree upon the personal judgment of the Viceroy; that is to say, the Viceroy, if he agreed with the War Minister, would overrule the Finance Department; and *vice versâ*?—I should say so, as a rule. Of course it would not be the case always, but as a rule the department that secures the support of the Governor-General on big questions would carry the day; sometimes, especially in minor matters, the Governor-General would be content simply to give his vote on one side or the other, and not really exercise his influence or put forth his power.

1870. There is one consideration, I suppose, which we should have to bear in mind, namely, that the Viceroy is not checked so much or so constantly as the Prime Minister is here by the consideration that the effect of his decision may have to take the shape of a vote, and is, therefore, subject to the direct criticism of the House of Commons?—Of course that is a very great safeguard that is wanting in the case of the Government of India.

1871-2. India is pre-eminently a country of small wars each of which costs, or may cost, sufficient to be a disturbing element in finance. Does the practice of Government when deciding on such wars, secure to the Finance Minister full opportunity of impressing upon the Government the financial consequences of an expedition before the decision is taken?—Well, no expedition would be undertaken until the question had been referred to the Financial Department, and, I should say, discussed by the whole Council. At the same time, of course, the proceedings that led up to that expedition, or made that expedition necessary, might not have come before the Financial Member in Council; and I do not know that they could in all cases be brought before him.

1873. And, therefore, to that extent the statement that the Finance Minister would have full opportunity of impressing upon the Government financial considerations, must be modified?—It must be qualified in this way; the information might come too late; an expedition might have become necessary and could not be avoided. When a proposal to have an expedition comes before the Council and the Financial Member the Viceroy has generally made up his mind about it. He is in charge of the Foreign Department—and matters may have got into such a position that the expedition may be unavoidable, or, at any rate, the Viceroy may have made up his mind on the subject, and I have already pointed out how great his influence is.

1874. Of course, in asking this question, I am not alluding in the slightest degree to policy, I am only endeavouring to learn the position of the Finance Minister, and to ascertain whether the security is ample that in all important questions involving expenditure, the Finance Minister has full opportunity of showing the financial effect of the measure?—Before the expedition is undertaken, he certainly has the opportunity; but of course the amount of business that is transacted by the Government of India is enormous, and he cannot see all details of the business of the Foreign Department beforehand, and if he did see them, I do not know that he could do any good, that his judgment would be better than anybody else's.

1875. It would not be a tradition of the Viceregal Office that the Viceroy should mention to the Finance Minister that circumstances were arising which might lead to difficulty on the frontier, in order to obtain the Finance Minister's view as to how the expenditure, if the necessity should arise, would be met?—It would depend very much upon the Viceroy for the time being, how soon he would mention it. Some might mention it sooner and some might mention it later; but before the expedition was undertaken, the matter would certainly come before the Council as a whole, so far as the rules on the subject go. I do not think that the Financial Member has any ground for complaint in that respect. It would be impossible for him to see, and it would be quite useless for him to insist upon seeing, all the details of the negotiations with the frontier tribes.

1876. I think you have answered the question, Sir David. I understand that you, as far as you were concerned, were generally satisfied that you knew of proposed expenditure early enough to have an opportunity of stating the financial considerations?—Yes, in any particular expedition.

1877. If the Finance Minister dissents, he can put his dissent on record, can he not?—He can do so—yes.

1878. In that case, as a matter of course, his dissent is forwarded to the Secretary of State?—His dissent would go to the Secretary of State.

1879. But in many cases, although he may have doubts as to the decision of the Government, he may hesitate to put formally on record his dissent. Has he in that case any means of expressing his views in a form which would reach the Secretary of State?—Of course, he may say, as I have done, "While I do not "want to record a formal dissent, I wish it mentioned "in the despatch to the Secretary of State, that I do "not concur in the decision." But in many cases the Financial Member in Council, like every other Member in Council, might oppose a particular decision, but would not consider it necessary to put his dissent on record.

1880. Putting his dissent on record is only a very formal method of protest?—That is a formal matter.

1881. Perhaps I may put it shortly this way: Are you satisfied that the Finance Minister always knows the proposals under discussion in time enough to make fully known his views as to their financial effect; and that he has as complete power and opportunity for making known his dissent from, or doubt as to, the financial matter involved in the Government policy, and assurance that that dissent or doubt will reach the Secretary of State, as you could wish?—Well, I think he has got, so far as the rules and regulations regulating the transaction of business go, as full opportunity of knowing what is proposed in the way of expenditure as is desirable. Practically, if the Governor-General chooses to do it, he and

one or two Members of Council might settle among themselves what they were going to do, or what the general policy was to be, and the matter would not necessarily come before the Financial Member of Council until it was actually proposed to incur expenditure in connection with some portion of that policy. Theoretically the Financial Member of Council receives early information of proposed expenditure; practically he might be put aside in that way. It would be possible; I do not say that it would be usual; I am sure it is not desirable; it is a thing that is in the discretion of the Viceroy. I do not see how any rule could provide for it, or could be made effective.

1882. (*Sir. A. Scoble.*) But in that case he could record his dissent?—He could record his dissent when the time came.

1883. And would do so?—Oh, no; he might agree with the proposal when it came before him. All I say is that he might not be personally consulted at the very first—he might or might not.

1884. (*Mr. Buchanan.*) But I thought you said that the Finance Minister was consulted in advance when there was any proposal coming from any department involving immediate or proximate increase of expenditure?—So he would be. Before the expenditure could be incurred he must be consulted.

1885. But then I do not quite understand your last answer, by which I thought you meant that proposals might be brought forward before the Viceroy in Council, involving considerable expenditure, which were quite new to the Finance Minister?—Oh, no, I did not say that. They could not be brought into Council without the Financial Member knowing.

1886. (*Chairman.*) There are two points, are there not? First of all, there may be discussions which in their result involve a policy; and in the second place the financial question would only arise when that policy took the shape of a formal decision?—That is the case; when it was necessary to incur expenditure; quite so. That is quite true.

1887. My reason for asking the question as to the power of the Finance Minister to make his views known is this—The Viceroy is most powerful. If his judgment leans against the Finance Member of Council he might possibly, though unintentionally, not let the Finance Minister's views have due weight; and in that case the Secretary of State should know those views at first hand. But, I think, from what you have told us, that you have the power of saying: "Express in the "despatch that I dissented," and possibly you may think that that is a sufficient safeguard?—No, I do not think myself that that is quite a sufficient safeguard in that respect. The Financial Member of Council might or might not formally dissent as regards a particular proposal. He might be of opinion that things looked rather threatening financially, and yet he could not easily indicate his views to the Secretary of State. The Financial Member of Council is very much in the dark as regards the policy of the Secretary of State and the India Office; he has got nothing but the formal despatches before him. There is a want of touch between the authorities in England and the Financial Member of Council. The Viceroy, of course, corresponds confidentially with the authorities in this country, and I cannot say that I would recommend that the Financial Member of Council should correspond with the Secretary of State, as it were, getting behind the Viceroy. I think it is very necessary to maintain the authority of the Viceroy, but there is that difficulty: there is a want of close touch between the Financial Department in India and the controlling financial authorities in this country.

1888. (*Sir James Peile.*) But there is a great deal of demi-official correspondence between the Finance Member in India and the Secretary in the Finance Department in the India Office?—There is correspondence between the Secretary in the Financial Department in India and the Financial Secretary in the India Office, and very frequently there is correspondence between the Financial Member of Council and the Financial Secretary in the India Office; but the Secretary in the India Office is not the controlling authority.

1889. (*Chairman.*) Would you consider that that freedom of unofficial correspondence is sufficient to secure the communication to the Secretary of State of the doubts or hesitations of the Finance Minister and his reasons for those doubts?—Certainly not.

1890. And therefore so far, you say, in this most important question of finance in India, there is a certain element of weakness, namely, there is no absolute security that the reasons which make the Finance Minister dissent or doubt will reach the Secretary of State?—There is no easy and ready method by which they could reach the Secretary of State.

1891. At the same time there is the great difficulty, that there should be no working round the authority of the chief responsible authority, namely, the Viceroy?—That, I think, is essential in India, that the authority of the Viceroy should be maintained.

1892. If sufficiently important results are at stake, has the Finance Minister, or even the Viceroy and the Finance Minister together a power, which you think sufficient, of suspending the execution of a decision of the Council until the judgment of the Secretary of State is obtained?—There is a rule to that effect in existence: but if the Viceroy and the Financial Member agree there is, owing to the great authority that the Viceroy possesses in the Council, nothing more required. There is a rule which enables the Viceroy and Financial Member of Council to suspend the execution of an order involving expenditure until the opinion of the Secretary of State is taken. That rule was introduced some years ago—about seven or eight years ago, I should think. It was invented in this country; it is not a rule which anybody who had had experience of the working of the Indian Council would invent or devise; it seems an excellent rule, it seems a very valuable rule, but in practice it is not worth anything. I was consulted about it before it was introduced or about the time it was introduced—I happened to be in this country—and I expressed the opinion then that it would never be used because if the Financial Member in Council and the Viceroy are in agreement they have got quite sufficient power; the influence of the Viceroy is quite sufficient. If they are not in agreement, the rule never operates; and therefore, though it looks an excellent and valuable rule, in practice it is not of much value, and in practice it has never to my knowledge been used, and it is quite possible that it never will be used and put into force.

1893. May I ask you, as a matter of fact, can the Council vote overrule the Governor-General?—They can.

1894–5. The influence of the Viceroy is so great that practically if he takes a strong line in concert, we will say, with the Finance Minister, the other members of Council would hesitate to overrule him?—Oh, very much hesitate; and they would know that it was very improbable that the Secretary of State would support them.

1896. There might be cases in which that rule would not be a dead letter?—There might be, certainly, but in practice it is not of much value, and it never has been used to my knowledge.

1897. (*Sir James Peile.*) Would that apply to any other Department—if the Viceroy and the Home Department agreed, would they carry the question at once?—Well, they would be very likely to. A good deal would depend upon whether the Viceroy took such an interest in the matter that he really put forth his influence. Owing to the existence of the Provincial System, the Home Department does not, now, control a large amount of expenditure.

1898. Does what you have said apply to other departments to the same extent as to the Finance Department?—No, I do not think any other Department would be certain to carry its view to the same extent as the Financial Department, because I think if the Financial Department and the Viceroy went together they would be pretty certain to have the Secretary of State behind them.

1899. Then the Finance Department is stronger than the Home Department?—As a rule I should say it would be; it would depend very much—at least to some extent—upon the officers filling the posts for the time being, but as a rule the Financial Department is stronger than the Home Department, and they do not come much into conflict on questions of expenditure, because the Provincial Expenditure is now in the hands of the Provincial Governments.

1900. (*Chairman.*) If the Viceroy found himself in a minority I gather that this rule would enable him to appeal?—Yes.

Sir D. M. Barbour, K.C S.I.

12 Nov. 1895.

1901. (*Sir Andrew Scoble.*) Or he may overrule his council?—He may in certain cases; that is a power which is used very seldom.

1902. But still he has the power?—I think there is some limitation to it.

1903. It must be a question of public danger?—Yes, he has the power of overruling in certain cases and it is very necessary that he should have it.

1904. (*Chairman.*) And, I suppose, that power is contained in an Act of Parliament?—It is contained in an Act of Parliament, but it is not a power that is given in every case.

1905. He must judge if the State is in danger?—I think so; it is something of that sort. You will find it in the Act of Parliament. He has the power, and I look upon it that it is essential that the Viceroy should have that power in the last resource.

1906. (*Sir Donald Stewart.*) But he exercises that power in very ordinary cases?—Well, you can look at the words in the Act of Parliament. I believe there has been a question whether it was rightly exercised in certain instances, or not.

1907. It is within my own experience that he has exercised it?—It is a mere question of the wording of the Act of Parliament; the Act of Parliament would give you better evidence on that point than I can.

1908. Is it in the Government of India Act?—I think so; it is in one of the Acts of Parliament. Perhaps it would be better to see what it is; it is a well-known provision.

1909. (*Chairman.*) Can you refer us to the Act of Parliament and the section which defines that authority, and then perhaps when we have got it you would just read it as your answer?—The Act is 33 & 34 Vict. c. 3. s. 5. It runs as follows:—"Whenever "any measure shall be proposed before the Governor-"General of India in Council whereby the safety, "tranquillity, or interests of the British possessions "in India, or any part thereof, are or may be, in the "judgment of the said Governor-General, esentially "affected, and he shall be of opinion either that the "measure proposed ought to be adopted and carried "into execution, or that it ought to be suspended or "rejected, and the majority in Council then present "shall dissent from such opinion, the Governor-General "may on his own authority and responsibility, suspend "or reject the measure in part or in whole, or adopt "and carry it into execution; but in every such case "any two members of the dissentient majority may "require that the said suspension, rejection, or adop-"tion, as well as the fact of their dissent shall be "notified to the Secretary of State for India, and "such notification shall be accompanied by the copies "of the minutes (if any) which the members of the "Council shall have recorded on the subject."

1910. (*Mr. Buchanan.*) The Viceroy, when he is in a minority has that power of overruling the action of the Council under this statute; has he any other special powers?—I do not think he has. Of course, the Viceroy regulates the business very much and he might bring a question up, and if he found the majority was against him he might let it stand over for a little—something of that sort; he regulates the transaction of business.

1911. (*Chairman.*) I think Mr. Buchanan's question relates to the power of suspending as well as overruling; because we learnt from Sir Henry Waterfield and Mr. Jacob that there is a rule that the Viceroy and the Finance Minister together can suspend the decision of the Council until the decision of the Secretary of State has been obtained?—Yes; that is regarding expenditure; that is the provision I have already alluded to.

1912. (*Mr. Buchanan.*) There is no similar power resting in the Viceroy alone; I am only asking for information?—I am not aware of any; but I suppose, the power of overruling involves the power of suspending.

1913. (*Sir Donald Stewart.*) No business can be brought before the Council until the sanction of the Viceroy has been obtained?—No, but practically if any member of the Council wishes he can bring it up.

1914. He has to get the Viceroy's sanction?—That is the ordinary course of business; the question comes before Council with the Viceroy's sanction. I do not know if he could refuse his sanction; at any rate, he does not, or ought not. It seems to me to be a rule for securing the *orderly* transaction of business.

1915. (*Mr. Buchanan.*) As a matter of your experience, the Viceroy is very seldom in a minority in Council?—He might be in a minority, certainly.

1916. But only on unimportant matters?—I cannot say that. A question might arise in which the majority of the Council might be against him on a very important matter. Questions of that sort have arisen

1917. And has the opinion of the Council eventually been carried out as the decision of the Government of India?—In this connexion there arises the question of home policy. If the Viceroy were overruled by the majority of his Council in a very important matter, it would probably be a matter in regard to which he had the support of the Home Government, and in that case the decision of the Home Government would be with the Viceroy.

1918. Within your experience do you know of any case of any importance in which action has been taken by the Government of India, where that action has been opposed by the Viceroy himself in Council?

(*Chairman.*) I think we must confine that question to financial procedure, must we not?

1919. (*Mr. Buchanan.*) Yes, certainly. I was only asking for information. I am very ignorant of the way in which they conduct business?—Where important action was taken by the Council in opposition to the Viceroy's opinion?

1920. Yes. Where the Viceroy has been in a minority in Council, and yet action has been taken by the Government of India in the direction indicated by the majority of the Council?—In very important questions?

1921. In an important question?—I cannot recollect any at this moment; there may be some.

1922. (*Chairman.*) Have you seen the list of dissents by the Finance Member of Council which Sir Henry Waterfield has given in?—I have seen the list of dissents given by Sir Henry Waterfield.

1923. Do you consider that fairly complete, and have you any remarks to offer upon it?—In what sense complete?

1924. Well, we noticed that there was a considerable gap in the dates, if I remember aright, and I think we understood from Sir Henry Waterfield that he had looked through the records, but he would not say that it was a complete list?—I think there was one dissent that I made which is not mentioned there, one or two. I dissented in connexion with the question of the division of territories between the Punjab Government and the Quettah Agency in the Gomul Pass—I and another member of Council—*I do not think that dissent is alluded to there. And there was a proposal that India should pay a subsidy towards the cost of the telegraph line* from the Mauritius to Zanzibar, and I did not think it was a proper charge on the revenues of India and I dissented. I do not think that that is mentioned in the list of Sir Henry Waterfield. I do not know if I wrote a formal dissent on that occasion, or whether I merely had it written in the despatch that I did not agree.

1925. Are there any further points in regard to the powers of control of the Finance Minister which you would wish to bring to the notice of the Commission, and does any suggestion occur to you for supplying defects, if there are any, in that controlling power?—I think that, theoretically, the position is sufficient.

1926. Then I think we have learned from your answers in detail where, in your opinion, there is a weakness in practice?—Yes, in practice. I do not think there is any in the rules and regulations. I think they are quite sufficient.

1927. I gather as the result of what you have been so good as to tell us, that the point at which you think there is a weakness is this:—There is not a sufficient security that the reasons which led the Finance Minister to hesitate, or to doubt as to the measures that may be resolved upon by the Government of India, are made known to the Secretary of State?—I should not say that that was the chief weakness. But there is a weakness there, certainly.

1928. May I ask what you consider the chief weakness?—To understand the chief weakness of the Indian financial system you have got to consider what the financial position in India is. We have not

got there a revenue which is very steady. It grows, but it does not grow regularly, year by year, as it does in this country. We are subject to great fluctuations. There is the opium revenue, and it may go up or down a million or two. Then railways resting on the financial responsibility of the Government of India, they can make a very great difference in the revenue and there are considerable fluctuations in their earnings. We are subject to wars, petty wars, very subject; and we are liable to famine; and over and above all there is the exchange question which has overshadowed everything; that is to say, there are great fluctuations in the Indian revenue, and India is a continent really, instead of one country. It is very difficult for anybody who has not made a special study of the question, to know the whole financial position; and as a consequence of the peculiar position of India we have periods of great apparent prosperity financially, and of real prosperity financially, and then we have periods of great depression. The Governor-General's Council is composed of a number of officials, and I think I may fairly say that the majority of them have never given very much attention to the Indian financial position as a whole. They have been occupied with their own particular departments. A good many of them are not acquainted with India at all beforehand. I think of the seven Members of Council, including the Viceroy, there are at present only three who really belong to the Indian Service. The Members of Council hold office for five years. Their interests lie in the direction of the efficiency of the particular services that they manage, and the tendency, therefore, is towards expenditure. We have periods of prosperity and I think that, as the Council is constituted, they overlook the fact that we are almost certain to have financial non-prosperity afterwards; and, therefore, there is a tendency to go too fast when we are well off: that leads to a check, what you may call a financial crisis, afterwards, and I believe that it would be better for the country, and we should in the long run make quite as much progress if we went a little more slowly at times and steadily and regularly. Now, within my own knowledge, we had a financial crisis in India, about Lord Mayo's time—I suppose, about 1870. We had another in Lord Northbrook's time. Then we had one or two in Lord Lytton's time. We had none in Lord Ripon's time.

1929. You had none?—We had none; we were fortunate in his time; Major Baring, now Lord Cromer, was Financial Member of Council then. We had one in Lord Dufferin's time, and then we had the recent one which appears to be passing away. Now I think in all these cases, in later years at any rate, the Financial Department saw when the difficulty was approaching before the others did. I think that more attention ought continuously to be paid to the peculiar conditions of Indian finance, and that, therefore, we ought to go more slowly when there is apparent prosperity and try and avoid these sudden checks which are very mischievous. In point of fact, taxation has been largely increased in India, and though I do not think we have reached the possible limit of taxation—I am sure you could raise a great deal more money—I am quite certain that there is no big tax left now which is not open either to great objections or which would not excite great discontent. I think we have put on pretty well all the taxation that could be put on without its becoming a very serious matter. The view I wish to put forward is this: it is not the machinery, that is the mere formal machinery, that requires improvement; but I think there ought generally to be more consideration given and more attention paid by persons in authority to the importance of the financial question in India, and to the fact that great financial—apparent financial—prosperity is generally followed in a few years by the reverse.

1930. And if I may draw the conclusion which I think your answer points to, it is a criticism which must be applied almost everywhere—that there are too few people entrusted with government who make a study of finance?—I am not prepared to say anything on so general a proposition; but, in point of fact, I think it would be better for India, better all round, if more attention was given to the financial question, and if we went more slowly in periods of great apparent financial prosperity.

1931. For instance, would you like a five-year Budget instead of a yearly Budget, in order to obtain greater stability?—I do not think a five-year Budget would work.

1932. Practically, is it an impossibility?—An impossibility.

1933. But what I mean is, would you like a more permanent arrangement made, which would not be subject, except in emergency, to yearly review?—I am afraid it is not possible. Of course, while I say I would like more attention paid to financial considerations, I must admit that there is an infinite possibility of finding objects for the expenditure of money in India, to which there is no objection in themselves; that is to say, that if you had double the revenue you could spend it on the country without being accused of wasting money.

1934. I quite understand that in a country, which you have described as a continent subject to these great fluctuations in its finances, the difficulties which the Finance Minister has to encounter must be far greater than the Finance Minister has to encounter here; and I can quite understand the feeling of anxiety that he must have that the controlling powers should always bear in mind the dangers that underlie the financial question. Those conversant with the English system cannot but be aware of the powerful factor Parliament is in our control system; I do not mean that it is always necessarily for good; but, whether for good or for bad, Ministers and parties have always before their eyes the fact that their action must very shortly be unsparingly discussed by the Opposition party in Parliament, and that the opportunity for such discussion must occur when the votes are taken. That prospect of open discussion and criticism is not always upon the Indian Government. Parliament may, it is true, take up an Indian question, but its direct and immediate sanction for the Acts of the Indian Government, except in very special cases, is not required. Ought not this distinction to be borne in mind, and ought not even a fuller power to be reserved to the Indian Finance Minister to insist on complete discussion of the financial effect of measures and of the financial effects of political action, before such measures are adopted or action taken, than is perhaps necessary here? and ought he not to have every opportunity of making his opinions or doubts on financial matters or results known to the Secretary of State, who in ordinary course is the ultimate judge of Indian policy?—It would be very difficult to give the Indian Financial Member of Council more formal or theoretical power than he has got at present. It would be desirable that the Financial Department should be strengthened, that some arrangement should be made to ensure that financial considerations shall be borne more in mind by the Indian Government as a whole, if it be possible. Of course you cannot have a perfect government anywhere, and as to the constitution of the Government of India I am not prepared to propose changes which would have the effect of securing better financial control.

1935. (*Sir Andrew Scoble.*) Has not the Finance Member of Council the amplest opportunities of bringing his views before his colleagues in Council at any time he likes?—He has.

1936. (*Chairman.*) Is not this consideration of the more weight since the Indian Government acknowledges the gravity of financial questions in India, the difficulty and danger attending new or increased taxation in that country, and the consequence that for the safety of the empire policy should, as far as possible, be rather the handmaid of finance than the reverse?—Of course it comes to this, that the financial question in India is a very important one and a very difficult one and the gravity of the question has increased in recent years.

1937. You were speaking just now of Members of Council holding office for a limited period. The ordinary period for the Finance Minister to hold that post is five years?—Five years, yes.

1938. Is there any rule to that effect?—There is a rule, but I do not think it is in the Act of Parliament. I think his successor is appointed after five years.

1939. But is there anything to prevent his re-appointment?—Oh, nothing, or his continuation for six, seven, or eight years if the Home Government think it desirable, nothing.

1940. But when he is appointed he knows that his term will come to an end in five years unless it is renewed?—Oh, certainly.

1941. Have you ever known any Finance Minister go beyond the five years?—I am not quite certain. It was

Sir D. M. Barbour, K.C.S.I.

12 Nov. 1895.

offered to me, to stay for more than five years if I wished, but I did not.

1942. Possibly five years of the responsibility is enough?—Well, I should think so. It was enough for me.

1943-4. I will now pass to the question of estimates. We have learnt from previous witnesses the manner in which the estimates are prepared and submitted, and it is not therefore necessary for me to trouble you with questions of detail; but may I ask whether you were satisfied with the form in which they were presented to you?—Yes, I was satisfied. Of course, there are certain difficulties in India which we have to contend against; we cannot get rid of them. That is to say, it is a very big country; the estimates have sometimes to come from a very great distance. We have some eight or nine local governments and some smaller provinces in different parts of India; and it is an immense mass of estimates that come to be dealt with in a very short time. These difficulties are inherent in the nature of the case, and we must accept them.

1945. Are these estimates presented to you in time to allow you to duly consider and, if necessary, amend them before the close of the financial year?—I think they came in as early as is practicable—I do not think you can improve the matter. Of course, if you had more time you might do a little more, but practically you have as much time as the nature of the case permits.

1946. You would require, I presume, more time than you require here, because the estimates are, in the first instance, prepared by the Provincial Governments, and correspondence must in India to a great degree replace personal communications?—Well, you see, so far as the estimates for provincial and local expenditure are concerned, I really had little or nothing to do; the Financial Department of the Government of India had little or nothing to do. You had just got to see that they kept within their limits. You do not interfere in details; it is not desirable that you should interfere in details. The provincial system was invented in order that you might escape the necessity of interfering in details.

1947. There is a considerable power, we observe, reserved to the Central Government in the matter of provincial finance. Do I gather from your answer that you were anxious not to exercise those powers unless you had special reason to do so?—I am a very strong supporter of the provincial system. I should like to see it, if it were possible, developed still further. I do not think it is possible at present, but I think it might be developed further in future; and personally I interfered as little as possible with the Local Governments.

1948. But still the estimates for which the Central Government are more immediately responsible, are originally prepared in the provinces, are they not?—Yes. They are checked and compiled by the Accountant-General in each province. He is under the Financial Department and thoroughly acquainted with financial rules; and therefore the estimates were got into pretty good shape in the provinces before they came to us.

1949. And therefore, so far as the Finance Minister is concerned, they come before him in such a complete shape that a comparatively short time suffices for his examination of them?—That would be so. Of course the examination—the details of it—is done very largely by the Financial Secretary, who passes on his examination to the Financial Member of Council.

1950. I regard the Financial Secretary in such cases only as the representative of the Financial Member of Council?—As the representative, just so.

1951. Had you the power in the last resort to amend an estimate if you thought it were not justified; that is to say, was the decision of the Finance Minister final in ordinary cases?—It would be. It is so always, subject, of course, to appeal.

1952. In ordinary cases if you chose to strike out an item, you could do so?—Certainly; it could not be included if the Financial Department objected. But the Department affected might show cause against the striking out of the item. If the Financial Member did not agree, they might appeal to Council.

1953. Where large questions or considerations of policy are concerned, the decision would rest with the Governor-General in Council?—And even in small matters.

1954. Before the estimates were prepared, did any conferences upon, what I may call, the programme of the year take place, in which you had the opportunity of explaining the financial prospects, and of making clear to the Government the amount available for extraordinary expenditure, say, for military purposes, for public works or for the improvement of administration or the benefit of the people?—I do not know that any formal conferences necessarily take place; but of course the question is considered beforehand—well, say, take the Public Works Department, they would send me in beforehand, before the estimates were finally prepared, a schedule of all the demands of the various authorities, and what they recommended, and they would go through them and say, "We agreed to certain items, and did not agree to "certain others, or could not afford them," and the estimates would be prepared in accordance with the decision come to.

1955. That is exactly what I mean. You, the Finance Minister, discussed with the Department the programme of expenditure very often before the estimates were actually prepared?—Oh, yes, as regards all important and new items certainly; and the same would be the case in regard to the Military Department. Certainly they would say, "We want certain things: here is what "we want." They would say that beforehand.

1956. Such previous proceedings would greatly facilitate the preparation of the estimates and lessen difficulty?—Yes, and of course those decisions were not final. When the estimates were put together, and we saw how things turned out, then the final decision would be taken and any matters that were still in dispute would go before the Council; and in any case when the estimates and accounts were completed, they would go before Council to show what the financial position was.

1957. You are aware that in England the management of the revenue is highly centralized. The two great Boards of Customs and Inland Revenue are resident in London. All questions of importance affecting the revenue come to them and they and their expert officers are intimately acquainted with all the details of revenue administration?—Yes. I am aware of that.

1958. The Chairmen of the Boards are in constant personal communication with the Chancellor of the Exchequer, and form, as it were, his standing counsel on revenue questions; who would in India represent such advisers to yourself? In India the Excise and the Customs and other branches of the Revenue are managed by the Provincial Governments and their officers; but in so far as questions connected with these branches of the revenue have to come to the Government of India they would come to the Financial Department, and there is a branch of the office of the Financial Department which deals with customs, one branch which deals with all questions connected with customs, and another which deals with all questions connected with excise; and if I wanted any information regarding Customs I would apply first of all, to that branch of the department which deals with Customs. If that branch could not furnish the information, I should have to refer to the Provincial Government.

1959. There are no officers outside the Finance Department at Calcutta that would at all correspond with the Chairmen of these Boards?—There is not. There is no officer who corresponds to the chairman of the Inland Revenue Board or of the Board of Customs.

1960. Here there is free appeal from the decisions of the Revenue Boards to the Treasury; and the Chairmen of the Boards themselves are anxious to obtain the guidance of their Chief, the Chancellor of the Exchequer, who ultimately must explain and defend their action in Parliament. There is a branch of the Treasury which deals with Revenue questions, and which has a general experience of them; but the Treasury officers have not, and cannot have, an intimate acquaintance with all the details of Revenue law, nor the knowledge of the operation of the law, and of its defects. Therefore, ultimately, the Chancellor of the Exchequer must, in the main, depend for his information on the heads of the two great Revenue Boards. Would not the same be the case in India? The officers of the Finance Department would not have that intimate acquaintance with Revenue administration in its details which would be equivalent to that possessed by the heads of the Revenue Departments here?—They would not.

1961-2. We have gathered from the evidence given that in India the Finance Minister must rely on local

officers at a distance for such information as the Chancellor of the Exchequer obtains from the Revenue Departments here?—Yes, in some cases he must.

1963. Does not that make it difficult for the Finance Minister in India to get readily and constantly that information as to the operations of taxation, which the Chancellor of the Exchequer gets here from the Chairmen of the Boards?—Of course, there is a difficulty there. Certainly it is not so easy for the Financial Member of Council to get immediate information as it would be in this country on certain questions connected with Customs and Excise; that is so.

1964. And may I ask, in pursuance of that question, whether you have ever felt the want of such expert officers at hand when you have been considering questions of taxation?—The question whether we shall manage a department for all India by a special officer at the headquarters of the Government, or whether we shall leave the business to the Provincial Governments, is one that has come before the Government of India frequently. The Post Office is managed by one officer—at least, the head of that Department is an officer who moves with the Government of India and is the Director-General of the Post Office of India. The Telegraph Department is managed in the same way. And there have been questions whether this system should or should not be extended to Salt. But you could not, I think, extend that system to many branches of the revenue. For instance, Excise; I do not think you could do it. The country is too big; the systems in force in the various Provinces differ very much. Consider the case of an officer at headquarters, managing, say, customs. He will be eight months of the year with the Government of India at Simla; I daresay the nearest port would be 1,500 miles off—at any rate a very long distance. It could not be done. You must leave it to the Provincial Governments. It is the same or similar reasons which have given rise to the establishment of the provincial system; that is to say, you could not attempt to govern in detail all Europe from one capital; therefore, though, on certain questions, it would be a convenience to the Financial Member of Council to have a man at headquarters who could give him information as regards many branches of the revenue, it would be a great mistake to have such an officer because he could not manage the details of the business throughout India.

1965. I think the Commission will quite understand the force of the reasons which you give for the present system, and I am putting these questions to you only for the purpose of obtaining your opinion as to these inevitable drawbacks—Inevitable drawbacks—just so.

1966. Your opinion as to the inevitable drawbacks in the present system, though the present system in itself is probably that which alone is suited to India?—It might be a question whether or not the centralised system could not be adopted as regards the Salt revenue. On the whole, I think it is desirable not to interfere; as regards Excise we certainly could not.

1967. (*Sir Andrew Scoble.*) Or Customs?—Customs, I think it ought not to be; but the difficulties are not so serious. In the matter of Excise they are insuperable.

1968. (*Chairman.*) In regard to Customs I should have thought it might be possible?—Oh, it is possible. But you see we have got a Collector of Customs at all the large ports, and officers who do Customs work at the small ports and possibly hold other posts under the Provincial Government. Well, it would not be convenient that an appeal should lie from the Collector of Customs to the officer at headquarters of the Government of India, who might be 2,000 miles off. There is a Board of Revenue at Calcutta who would hear appeals from the Collector of Customs at that port. Of course, it must be admitted there is not the same uniformity, and the Government of India has not immediately at its disposal the same amount of information as if the whole of the Customs were managed by one officer attached to the Government, as at home.

1969. I suppose there is a further disadvantage than that. I suppose you would consider that the taxpayer ought to have a very free right of appeal against local decisions?—Yes, there must be somebody to whom they can appeal against the Collector of Customs.

1970. And in that respect the Finance Minister is somewhat at a difficulty, though perhaps inevitably so, in having to decide on such a case without having the expert officers at hand?—But the appeal does not lie with the Financial Member in the first instance. For instance, if a merchant in Calcutta appealed against a decision of the Collector of Customs, he would appeal to the Board of Revenue on the spot, and all the pros and cons of the case would be put down on paper there. Then it would come to the Provincial Government, and then it would come to the Government of India, if it was carried so far; and all the facts would be placed on record, and all the questions of law explained and considered before the case got to the Government of India.

Sir D. M. Barbour, K.C.S.I.

12 Nov. 1895.

1971. It is an inconvenience, but not a very grave inconvenience—that is what I gather?—Yes, it is an inconvenience, but not a very great inconvenience, and to remedy it by appointing a separate officer would give rise to still greater inconvenience.

1972. Just to illustrate my meaning, I am going to ask you a question on a subject, the merits of which lie entirely outside the scope of this Commission. Take such a case as we have heard a great deal of lately, the imposition of a duty of Excise countervailing the Customs duty on cotton goods; how would the Indian Finance Minister obtain the information necessary, remembering that time may be of importance in coming to a decision on such a question?—Well, I do not see how he could obtain the information except by reference to the Provincial Governments. Of course he could telegraph to them all, and would largely use the telegraph in cases such as that.

1973. There, again, we come to this, that the circumstances of India make necessary a proceeding that has considerable inconvenience in itself?—That is so. You see, dealing with England, you could, assuming that it was proposed to introduce a new tax into England, decide much more quickly what were the objections to it, than you could if it were proposed to introduce a tax applicable to all Europe.

1974. The difference between the two countries is obvious?—Yes.

1975. In the French system of finance there is a staff of officers called Inspectors-General of Finance. I have made acquaintance with some of these officers who have been sent over here, and most able officers they seemed to be. If I have understood from them the nature of their duties, they were to a certain degree the eyes of the Finance Minister. By means of them, he studied financial questions on the spot. He despatched them as *legati a latere* to examine and report on matters of finance requiring his personal attention. Have you any officers at all similar to them in India, or do you think that such officers would be of value to the Finance Minister, considering the immense field over which his financial work extends?—Of course, if there was any special reason for sending an officer to inquire into any subject the Finance Member could find an officer—he could get one and send him; but he has no staff which is occupied in any general duties of that sort.

1976. But without your having a staff detailed for that purpose, is your method of proceeding in India something similar? In cases in which you had either to take an officer away from his work or otherwise might have to go yourself to the spot, did you depute persons in whom you had confidence to make the inquiries for you?—Sometimes you do that yourself: if necessary, you would do it.

1977. But it is not a regular part of the machinery of the Financial Government?—No, it is not. But, of course, you must be careful not to interfere, unduly, nor to send one of your officers to interfere unduly with Provincial Governments. You generally have to make the inquiry from them. You would have to be careful about that.

1978. Supposing the Finance Minister himself went down to make an inquiry, as a matter of fact he would make it through the Provincial Government; and therefore *a fortiori* so would his officers?—As a rule, he would; you have to be very careful.

1979. Would you tell us who are the chief officers in the provinces responsible for the administration of the revenue laws? For instance, in each maritime province is there a Head of Customs?—There would be a Collector of Customs at each port.

1980. But at the Provincial Headquarters?—The chief authority would not be the same in each province; it would differ. In Madras there is a Board of Revenue; in Calcutta there is a Board of Revenue. They would take up these questions. In Bombay, I suppose, the Commissioner of Customs. There is no Board of Revenue there.

Sir D M. Barbour, K.C.S.I.

12 Nov. 1896.

1931. The Board of Revenue in Madras and Calcutta would collect salt and excise as well as customs?—Yes, they do.

1932. Now, stamps?—That would be the Board of Revenue.

1933. Then in most of the Governments, there is a Board with the head of which you as Finance Minister would communicate?—Well, I would communicate with him officially through the Provincial Government? He is under the Provincial Government.

1934. You would not communicate with the head of that Board directly?—No; we would not write to the Board direct; one might write privately or semi-officially; but one would certainly not write officially to him.

1935. Allowing for the difficulties inseparable from the administration of the revenue law over such an immense area, were you satisfied with the organisation of the Revenue Departments and the manner in which you could obtain the information you required?—Well, if you ask me if the departments are perfect, I am afraid that I could not say that they are; but if you ask me if they are fairly good, as good as circumstances would permit, I should say on the whole they are. And they are being improved every year. In a great country like that you cannot turn out establishments perfect all at once. It is a matter of growth. I think that on the whole the revenue establishments are fairly good—and they are improving.

1936. We come now to what I may call a speciality of the Indian Government, namely, the District Treasuries?—Yes.

1937. Were you satisfied with the arrangements under which the receipts are paid into and held at the District Treasuries, which then became the bankers of the Government?—I think so. I have no fault to find with them.

1938. Do you think that banks are sufficiently used at places where there are banking establishments?—There is very little to be done in that direction. At most places where you could use a bank there is a branch of the Bank of Bengal, and that is used; or Madras or Bombay, as the case may be. There is very little to be done in that direction.

1939. Then you do not go outside those three banks?—I do not think we do lodge with any other bank. There was a proposal to lodge the Treasury balance at Aden with a bank there. But I think the negotiations broke down; I do not know why; I cannot recollect. But you see at most of those places where we have got treasuries there are no banks.

1940. Of course, where there are no banks, you must have a strong box?—You must have. The money is perfectly safe. It is under a police guard. There is a regular treasurer and a police guard.

1941. Sir Henry Waterfield and Mr. Jacob told us that there are practically no losses by malversation—in the custody of the Treasury chests, I mean?—If you take the amount of money that is handled, the losses are quite insignificant; and about ten or thirteen years ago I think some improvements were made.

1942. And at present you think that the security taken for the proper guardianship of these district treasuries is satisfactory?—Oh, yes; satisfactory. Of course there are cases where money is made away with; but the amount of money made away with in proportion to the amount of money handled is quite trifling.

1943. Of course no provision in the world can prevent an officer who has the handling of money going wrong; the only real guard is immediate and quick detection. Would it be your opinion that the District Treasury affords the most efficient and most economical means for providing, over the immense area of India, funds ready on the spot for the needs of the public service?—I think so. There is not the banking organisation that would enable you to make use of banks. It does not exist.

1944. Do you know whether any calculation has ever been made of what the cost of the District Treasury system is, so as to enable us to form some idea of the per-centage which that method of making payments involves?—No; I do not think the calculation has ever been made.

1945. The District Treasury Officers have other functions to perform, have they not?—They have; but the cost is not very great. The officers are not highly paid with the exception of the Treasury Officer. There is the Treasurer; he keeps the cash—at least, he keeps the key of one of the locks. He is generally a native banker. He gets a small salary. A native doing work of that class would work for a small salary, and in many cases he likes the position of being Government Treasurer.

1946. Then to open the chest it requires two officers to be present?—Yes; two officers must be present to open the Treasury. And the native Treasurer gives large security always.

1947 The treasurer gives security?—He gives large security.

1948. I suppose orders on the District Treasury always carry two signatures, do they not?—Orders for actual payment of money?

1949. Orders for actual payment of money?—Oh, yes. The Accountant would examine the order to begin with, and it would be signed by the Treasury Officer afterwards.

2000. I ask the question because I think here we hold the two signatures to be a very considerable safeguard?—Oh, we keep the Account Department and the Treasury Department quite separate. I do not think you could improve the system there.

2001. I suppose that the larger number of these numerous district treasuries have really comparatively small amounts to deal with? District treasuries in remote districts have not either very large receipts or very large amounts of payment to make?—No; nothing very large, not what you would call large in the City of London.

2002. And the bulk of the receipts and payments take place, I suppose, at the great centres?—Oh, I would not say that. The land revenue, for instance, is all paid into the district treasuries. The opium revenue would be paid in the great cities—the customs revenue, the land revenue, and a great deal of the excise, a good deal of the salt—not all, but a good deal of it.

2003. Is there much movement of coin from one district to another?—A considerable movement.

2004. In actual cash?—In actual cash; yes.

2005. I suppose banks in India are confined to the centres of commerce, and that they have few transactions and few agencies in the country?—They have in some of the large towns in the interior, Allahabad, Delhi, Lucknow, Agra, and places of that sort.

2006. Almost all those are great centres?—The great centres, certainly.

2007. They do not push agencies into the smaller places?—Oh, no; it would not pay them to.

2008. Therefore the cost of Government banking business or movement of funds cannot be compared with the cost of ordinary banking in India? Of course, if the banks are confined to great centres, they are very few?—Oh, no; it could not be compared at all. Of course, the only banks in our sense, that is, the European banks, are in large centres; yet in the smaller towns, and down even to the large villages, there would be a man who does a sort of banking business.

2009. A native banker?—A native banker. I do not know that he receives much in the way of deposits.

2010. But he would cash bills?—He cashes bills called "hoondees," issues them, and lends money. There are native bankers who have got very large agencies all over the country.

2011. Instead of sending coin from place to place, do you make use of bills at all?—Oh, whenever we can we make use of bills; we would sell drafts on a treasury, when it wanted us to do so.

2012. At Calcutta, I gather from what you have said, you employ the Bank of Bengal; do you employ it to anything like the extent that we employ the Bank of England?—Well, I do not know the extent to which you employ the Bank of England; but we do employ it largely.

2013. The Bank of England pays all the debt charge. It keeps almost every Government balance (I say "almost," because there are one or two exceptions) it conducts practically all our payments for us. It has got very few branches outside, but where there are branches it usually conducts our business?—Oh, we employ the Bank of Bengal largely. It holds the large Government balance, and it manages the debt—the

transactions connected with the debt; it pays the interest.

2014. Now, temporary advances; do you go to the Bank of Bengal for them?—We do not have any temporary advances; we work by our own balance.

2015. You work by a system of large balances?—I am not sure that we may not have got an advance once or twice; but, as a rule, we work by our own balance; and it is rather the other way—that they come to us for assistance rather than that we go to them. We must work in that way.

2016. Is not the Bank of Bengal big enough to give adequate assistance at times to the Government?—Oh, at times undoubtedly the Bank of Bengal could give assistance if we wanted it, but it is not considered safe to rely upon getting assistance. You see in India there is not that great supply of loanable capital that there is in this country, in London; nor can you get loanable capital from outside very readily, and transactions are much more carried out there by cash than by credit, so that an increase of business or demand not very great in itself leads to a scarcity of cash. Therefore we cannot depend upon the market; we must keep a balance.

2017. And, therefore, in your view, you are driven to working by means of large balances sufficient to meet your wants?—I think so. I would not recommend any change in the system—I would not. Of course, I see the advantage of working with a small balance. It is a saving of interest.

2018. Here, where there is large loanable capital kept always at the disposal of the banks, we work on a system of small balances?—Oh, that is the difference.

2019. We systematically work on the principle that at the beginning of the quarter we are borrowers from the bank in order to meet the debt charge?—Yes.

2020. That, practically, does not apply to you in any way?—No, practically, we do not borrow.

2021. May I ask about what sum represents your standing balance?—Well, it varies very much.

2022. It varies with the time of the year, I suppose?—Yes.

2023. But take the minimum?—I do not know that I would like to see the balance at the worst time of the year go below about 8 crores—Rx. 8,000,000.

2024. You are counting that roughly as eight millions?—Yes. It might reach up, to 15 or 16 crores, and when the Secretary of State did not draw his bills—trying to keep up a higher rate of exchange—money accumulated in the Indian treasuries, it went up to something very high. I do not think they have got the balance down to normal quite yet—12,000,000 or 13,000,000.

2025. The expenditure in England and India is not very different. Are you up to 90,000,000 yet?—I daresay we are, owing to the inclusion of railway transactions—you must really examine the accounts, I daresay, to get the exact figures.

2026. Quite so. But here we consider a balance of about 6,000,000*l.* a maximum; of course it varies?—You should of course recollect that the balance of India has to be distributed all over an enormous country, and is lodged in a large number of treasuries.

2027. Our 6,000,000*l.*, is in the Bank of England?—I do not think we could work with 6,000,000*l.*, I think we would collapse—I think we would collapse with only 6,000,000*l.*; but Mr. Jacob will be able to tell you correctly—give you the best information.

2028. But 8,000,000*l.* is your minimum, I understand?—I think that is about as low as we could go.

2029. The district treasury is the key of financial procedure in India; it focusses the receipts and payments of the State, and from it alone can the financial member obtain information as to the progress of finance; are you satisfied with the arrangements under which you receive information from the district treasuries?—Well, after the mistake in the estimates in connection with the Afghan war, that matter was gone into very thoroughly and very carefully, and the present system, I think, was drawn up by Mr. Westland, now Sir James Westland, Member of Council—and I think it was drawn up with great ability, and I never saw my way to making any improvement in it.

2030. Are you satisfied, as Minister of Finance, that, under the existing arrangements (of which I understand you to say Sir James Westland was the adviser) the Finance Minister is quite certain to know early enough the progress of expenditure to avoid any recurrence of such a mistake?—Certainly. He cannot, of course, get the information so early as the Chancellor of the Exchequer could in this country, but he gets it as early as the circumstances of the case permit, and he gets it sufficient early for practical purposes.

2031. We understand that you learn the total of receipts and issues at the district treasuries and the balances in hand about the 9th of the month following that to which the total related?—That, I think, is the date.

2032. Do you think that that is as early as it is possible to get the information?—Oh, I think so.

2033. We have been told that this monthly return, which the Finance Minister receives about the 9th of the succeeding month, is the one upon which he relies for his current information. We understand the difficulty of getting more frequent information from such a vast number of receiving and paying banks as you have in the District Treasuries; but did you ever find inconvenience from receiving only monthly accounts?—We get those figures on the 9th; then we get them in greater detail, I think, on the 16th.

2034. But only referring to the month that has expired?—Oh, yes; it is quite sufficient to get it once a month, and I think it would be found impossible—practically impossible—from the magnitude of the thing to get it oftener than once a month.

2035. But what I mean to say is, would you like to have them oftener?—I would not. But there is this to be said. I had been a long time Under Secretary, Secretary, and Accountant-General. I knew the whole of the system, and for me it was certainly sufficient. And the Secretary is, of course, in the same position in the Financial Department, and he would be able to give any necessary explanation to the Financial Member. I think the information now received is sufficient, and I think it is as good as could be got.

2036. I ask the question as a comparison. Here the Chancellor of the Exchequer receives every Monday a balance sheet of the state of finance up to the previous Saturday night. That return is, I consider, the Chancellor of the Exchequer's *vade mecum*, which is always in his hand, and on which he founds his constant communications with the Treasury and Revenue Officers. I think Sir Edward Hamilton will not say that that is an incorrect description of that account?

(*Sir Edward Hamilton.*) I think it is quite correct.

2037. (*Chairman.*) Would you say that an account of that kind received weekly would be a great advantage, as compared with what is possible in India?—I should not say that it would be of great advantage; no, I should not.

2038. In fact, from the circumstances of the case, the Finance Minister in India cannot keep such a close and daily watch over the progress of the year's finance as the Chancellor of the Exchequer can?—He cannot. As regards some heads of revenue he can keep a very close watch and make a very close estimate at the end of the year. Excise, for instance, Stamps and Opium; but when you come to the Land Revenue, the year closing at the very middle of the busy season for the payment of revenue, and the revenue being paid in in small sums—not merely at Treasuries, but paid in to collectors at various places, often far away from the telegraph, and with a slow post—we cannot of ourselves make a very close estimate as to the amount of revenue to be obtained in any particular year. Half a million may come in a little later or a couple of days earlier. It is thrown from one year into the other. We cannot do it, it is not possible. In the same way the Financial Department cannot of itself do very much with the estimates of railway revenue expenditure; we must rely upon the estimates of the Accountant-General in the Public Works Department, who must depend on the railway officials. We have not the means of making a close estimate, say, of the income of the East Indian Railway; we must take what the East Indian Railway Company gives us. That is a difficulty, and that is one of the reasons, I think, why we are often blamed, because the actual figures vary a good deal from the estimates as regards certain heads. Although we can tell you exactly, or pretty fairly, what the revenue would be on a series of years, we cannot tell you how much will come into one particular year rather than another; but we can do so in regard to Excise, Stamps, and Opium,

Sir D. M. Barbour, K.C.S.I.

12 Nov. 1895.

and a number of other heads. We know what the average Land Revenue will be, but we cannot say closely how much will come into this year and how much into next.

2039. You were speaking just now of the inconvenience caused by the fluctuations in Indian finance; first of all, in the districts, whether caused by famine or other emergencies to which India is subject; and next, which is partly the same question, in the revenue; but may I ask, do you not think that (putting aside the last two or three years of very unfavourable exchange) the surplus which you have secured in India over a long period of years compares favourably on the whole with the financial results in any other country that you like to name?—I think so. We will always aim at a surplus in India. We always take our principles of finance from England, and we will not tolerate a deficit. We may put on taxation, and take other measures, but in the long run we will have a surplus.

2040. Then in spite of these very disturbing elements to which Indian finance is subject, you managed to estimate so far correctly and secured this result of good finance, that over a series of years you have shown a very respectable surplus?—A good average. Oh, yes, certainly, we have done that, and we will do it, no doubt.

2041. That, I think, would strike an outside critic?—Oh, I think we will always do that. You see, where there are so many elements of uncertainty the tendency in estimating revenue is towards caution. The estimates of revenue whenever they come up to me are all a little below the mark—where there are elements of uncertainty everybody who has to deal with the estimate works cautiously.

2042. Do you make the basis of them the receipts of a series of years, or what is the basis?—Well, in the case of the Excise revenue, we would get from the local officers their estimates. They would base their estimates on the facts of previous years and on any changes that had taken place, or were about to take place, and on their local knowledge, and we would compare the total estimate of the local officers—the aggregate for all India—with the average for past years; and as regards all our main heads of revenue, I can only say that the growth of revenue has been very satisfactory. We can depend—taking Excise, Stamps, and a number of other heads—with, I might say, absolute certainty, on having a very fair rate of increase. It may not be so great in one year; but then we will have it twice as great the next year. But, on the whole, we can depend on a very steady and very satisfactory growth of the ordinary revenue.

2043. Speaking as a Finance Minister, and comparing yourself with other Finance Ministers, have you not had to deal with a pleasantly buoyant revenue?—If you will put aside Opium, which is rather a dwindling source of revenue from special circumstances, and which we have known to be a dwindling source of revenue for years, I should say that the Indian revenue was more than fairly buoyant. Of course, you must recollect that we have had a silver standard. What difference that made I cannot tell you. I do not think it made nearly so much difference as you would expect.

2044. We were just speaking about the difference between your monthly return and the Chancellor of the Exchequer's weekly return. The advantage which the Chancellor of the Exchequer finds in weekly returns is very much connected with his method of doing business, which is that of constant personal communication with the Treasury Officers and the Revenue Officers. The circumstances in India, which you have described fully to us, make that constant personal communication with the Revenue Officers impossible?—Impossible.

2045. And therefore if you had more frequent returns showing the progress of the receipts and expenditure they would not be so useful to you as they are to the Chancellor of the Exchequer?—Well, if you ask my opinion, I can only say that if you were to offer weekly returns similar to what we used to get monthly I would tell you that I would rather not have them. I do not want to look at four returns which practically give me the same information.

2046. I should like to ask you a question or two about the Budget statement. When you give in that statement an estimate of expenditure, to what expenditure does that relate? Does it mean the sums issued out of the different treasuries in the year ended 31st March for the great services, viz., war, public works, civil administration. or does it mean the expenditure as finally admitted?—Expenditure as finally admitted—as incurred.

2047. Not as issued, but as incurred?—No; we do not go by the issues; that, of course, causes delay.

2048–9. About what date is the Indian Budget Statement?—It is made about the 20th of March.

2050. Before the close of the financial year?—It is just at the close of the financial year.

2051. Then in the Budget statement you cannot profess to give an actual statement of the expenditure of the expiring year?—No; we do not. We give what is called the revised estimate.

2052. And when is that revised estimate made?—The revised estimate is made immediately before the statement.

2053. In fact, it is revised for the purpose of the Budget?—It is.

2054. (*Sir Edward Hamilton.*) What is supposed to be the object of laying the Budget before the expiration of the year?—It used to be a month later. I think it was made a month earlier to enable it to be laid before Parliament by a certain time.

2055. (*Sir James Peile.*) In May?—Some time in the "60's," I think it was made about a month earlier.

2056. (*Sir Ralph Knox.*) About four months of the expenditure is estimated in the revise?—Well, in some cases it would be very much less. As regards certain heads of revenue, we might have eleven months actuals and one month's estimate. As regards most I think there would be ten months' actuals.

2057. But as regards expenditure, it would be a four months' estimate, would it not?—No; not so much as that, I should say.

2058. (*Chairman.*) You think that the expenditure is admitted within less than four months?—Oh, I think so. I think we get the actuals for the month six weeks after it is closed. I then have the actual recorded expenditure.

2059. Sufficient for your revised estimate?—Oh, yes; I think so; and we get approximate actuals under some heads before we get the actual figures.

2060–1. Therefore, if the Budget is laid on the Table in the middle of March, you may say, as far as expenditure goes, that as regards two months it would be based upon estimate?—Yes, something like that; but these are two very important months; March is a very important month.

2062. Is it a great month of receipts?—It is a great month of receipts.

2063–4. (*Sir Edward Hamilton.*) We always find it the greatest inconvenience to have a Budget before the close of the financial year in this country. I remember one or two occasions.

2065–6. (*Chairman.*) I was going to ask whether you do not find it somewhat an inconvenience having to prepare your Budget before the close of the year? Would it not have been a satisfaction to you to have been able to close the year before making your Budget statement?—It would in one way, but, on the other hand, it is very desirable to have the estimates sanctioned in time, and distributed by the beginning of the next year.

2067. There is a reason why it is not so important to you as it is to us, and it is this: our Budget estimate is based entirely on the Exchequer issues?—Yes, that makes a difference.

2068. And, therefore, considering that by that means the Chancellor of the Exchequer is able on the night of the 31st March to state definitely his receipts and expenditure for the year, it introduces a confusion into his statement if he anticipates that by 10 days and brings estimate into that which a few days later he could make a certainty. But supposing the Budget were introduced at the same time that it is here, about the 10th or 12th of April, you would still have a considerable amount of estimate in your expenditure?—Oh, yes, a very considerable amount, because, of course, the closing of the accounts of the year is a very big business in India with so many departments. There are so many provinces and adjustments between them and so forth that the last month's accounts are the most difficult to close.

2069. (*Sir Edward Hamilton.*) You are not then, I suppose, able to present your Budget upon ascertained figures for the previous year, until you come to the end of June practically?—It would take some months after the beginning of the year to enable us to do so.

2070. (*Chairman.*) Without suggesting that there is reason for an alteration; I should like to ask you this question: Would you see any advantage in making your Budget estimate depend upon the issues from the district treasuries, and not on the admitted expenditure, so that, if the Budget were published about the 10th April you would have a definite account of your income and expenditure for the year not dependent upon estimate?—Well, I do not think that we could work under that system in India without a complete change; and, after all, if you get a definite account of that sort it is by sacrificing something. It is by accepting what are accurate enough in their way, but do not show exactly the expenditure of the year—it is by accepting issues instead of actual expenditures.

2071-2. Our Exchequer issues are imprests, and we generally find that one year with another the audited expenditure differs from the Exchequer issues —I speak, subject to Sir Edward Hamilton's better and later knowledge—by sums varying from 100,000*l.* to 500,000*l.* upon an expenditure of, we will say, from 90 millions to 100 millions; therefore, for all practical purposes of the public, that is sufficiently accurate. For the minute purposes of account, for the examination by the House of Commons of the accounts for the year, the audited account comes later and serves that purpose sufficiently; but what the public here have been accustomed to and like is, immediately after the close of the year, a statement which is not altered afterwards?—I think it would be very difficult to introduce it into India; it would require a great deal of consideration.

2073. That I quite understand?—A very great deal; our system is so totally different that the introduction of that system would be a revolution; it would require very careful consideration.

2074-5. In asking the question, I was not, for a moment, suggesting it to you as a desirable change; I would only ask you whether you yourself, as a Finance Minister, would prefer, in making your budget, to deal with an account that was definite rather than with an account in which a part is estimate?—Of course, I would rather have an account that was definite. I told you that in India, owing to uncertainties, we always estimated cautiously, and consequently in a series of years we showed surpluses over the revised estimate; now it is a most remarkable fact that the actual accounts always—I may say always—turn out better than the revised estimate.

2076-7. That is the next question I was going to ask you—I have often noticed that the final account turns out better than the revised estimate, and, therefore, when the Indian Finance Minister comes before the public with the Budget he is obliged to put before them a statement which is worse in all probability than that which he will eventually have to present?—Well, not his estimate for the coming year, but his revised estimate. I always said in my financial statement: "Here are the figures for the "revised estimate; here is the surplus or deficit; I "have no doubt that when the accounts are made up the "result will be somewhat better;" and the cause of that is that owing to the uncertainties nobody who makes an estimate will put down more revenue than he is certain of receiving, and every man who has expenditure to estimate will put down the maximum that he is likely to spend, and when you take the totals of those items of revenue and expenditure the margin comes to something very considerable for the whole country.

2078. (*Sir Edward Hamilton.*) But still you would consider it an advantage if it could be arranged for you to have your final figures before the Budget?—Yes.

2079. I understand that the reason why it is laid at this time of the year, usually March, prior to the close of the financial year, and some time before you get your final accounts, is that the Budget should be laid first before your Council in India, and then be able to be presented to Parliament here before the session is over?—Yes, it must be produced in March.

2080. But if the financial year closed on the 31st December, corresponding with the calendar year, then I suppose that difficulty could be surmounted?—Yes, there is no reason why it should not; I do not know any reason why it should not.

2081. (*Chairman.*) As it stands now, since you produce your Budget in March, therefore, whatever system is adopted, there must be a partial estimate in it. The comparison, therefore, which I have been suggesting for your consideration between the English system of Exchequer issues and your system really falls to the ground, if you are always obliged to base your final accounts somewhat on estimate?—Oh, yes, so long as they are presented in March.

2082. There is only one consideration, on the other hand, which seems to me a weighty one—that you are obliged under the circumstances to present an account not so good as that which you will present a few months later?—It is always certain that the final figures will give a better result than the revised estimate.

2083. I do not know that we have very much to ask you about the arrangement under which the provincial expenditure is conducted. I gather from what you say that you approve strongly the system of decentralisation?—Oh, yes. I think it would have been practically impossible to have conducted the administration under the old system.

2084. Do you think that that system could be extended further?—Well, what I should like to see would be the Provincial Governments—the chief ones at any rate—started in a position of financial independence; that there should be no more revisions of the contract. I do not think, however, the time has come for that.

2085. But you would allow the Provincial Governments to take a fixed proportion of the revenue they collect, subject to no such revision as that under which the Central Government has hitherto obtained a considerable gain?—Certainly; that is what I should like to see.

2086. Then how would you meet the necessities of the Central Government with the heavy demands that come upon it?—I would only give the Provincial Governments a certain proportion of the increase of revenue; I would settle that they should have that.

2087. But at present the Central Government constantly takes that increase?—Constantly takes a portion of the increase; but I must say when the provincial system was started I do not really think it was intended that the Provincial Government should have a portion of their resources taken away periodically. The difficulties, however, of the Government of India, owing mainly to the Exchange question, have been so great that it has been forced to take what money it could. Assuming that it had to meet a certain expenditure, it was better to take a portion of the large increase which the Provincial Governments had got than to impose additional taxation.

2088. That I can readily understand?—In the first instance there was a scheme as regards railways and canals that the Provincial Government should guarantee the interest on the railway or canal, and the Government of India find the money. The railway was made, and if it paid less than 4 per cent. the Provincial Government made up the difference. Well, if you have a periodical revision and a cutting of the surplus away from the Provincial Government you destroy all that. The Provincial Government may guarantee anything it likes, but at the end of five years you must leave it enough to carry on the administration. If you take all the surplus, you, to a certain extent, remove all the inducement to the Provincial Government to economise. It is a weakness; the periodical revision may be necessary under present conditions, but it diminishes the value of the system. Take the province of Bengal with a population of between 70,000,000 and 80,000,000 of people. Well, that province is big enough to have an independent financial system.

2089. But on the other hand is it not a benefit to the Provincial Government under your present system that practically the Central Government takes the risks of finance except in the case of famine?—Of course the Government of India takes all the great risks.

2090. And is it not fair, therefore, that you, the Finance Minister of the Central Government, should take part of this fairly buoyant revenue in order to secure yourself and have a reserve against these demands?—But we do take a part of the revenue. For instance, we take three-fourths of all the increase under

Sir D. M. Barbour, K.C.S.I.

12 Nov. 1895.

Excise as it is; we take one-fourth of the Stamps; but then when the periodical revision comes the necessity has been so great that the Government of India has had to take a portion of the increase that accrued to the Provincial Government.

2091. Have they not taken all the increase that has accrued?—After allowing for the increase of expenditure. I do not propose to change that at the present time—I think that the other system cannot at present be introduced. It has been proposed, and I had to go against it. The financial position of the Government of India is such that it cannot give up this system of revision; it must retain the right to take a portion of this increase.

2092-3. Then in fact your view is, if I may say so, an expression of pious opinion as to what might be desirable in case better days come?—Yes; in the future I should say very desirable. I should certainly look forward to that as the development in Indian administration, but I am not prepared to say that the change is practicable at the present day.

2094. (*Sir James Peile.*) It would not do to have the central administration embarrassed while the provinces were rolling in wealth, would it?—Well, if it came to a question whether the central administration should be embarrassed or the provincial administration be starved, I would rather see the central administration embarrassed.

2095. (*Sir Ralph Knox.*) Does not the provincial system somewhat encourage that which you deprecated just now, viz., that spending freely in years of prosperity?—Well, it does, but the Government of India keeps a certain check over the provincial system. We will not allow them to spend the last rupee; we make them maintain a certain balance.

2096. Still, when there is a prosperous year they have been trying to spend their income?—Well, they would no doubt; but as you see there are two ways in which they may spend it. They may spend it in increasing fixed establishments. That they would not do if they merely had a good year. They might spend it on public works; there is no objection to that because they can curtail that expenditure, if necessary—it is merely making so many more roads. There is, of course, a risk. But if they spend more than their income for some years then they have got to spend less for some years.

2097. But it is generally in that direction—in the construction of roads and buildings and public works that excess of expenditure does take place in a year of prosperity, does it not?—Well, you see it would not occur in the year in which the revenue came in.

2097*a*. But if the Provincial Government had very prosperous years and accumulated revenue, it would no doubt spend that surplus on roads and on public buildings, and possibly on railways; and that you would not object to?—I think not, because that could be stopped.

2098. It is rather to establishing a higher standard of expenditure that you would object?—That I would object to, unless they had permanent increase of revenue.

2099-2100. (*Chairman.*) Do you not think that people will always find a good useful object to which to apply revenues which come to hand? and can you always ensure that such money is economically applied? I think I gathered that you desire the Central Government to interfere as little as possible, and to leave them a free hand?—Of course, they may waste money; no doubt about that; but every Government wastes money more or less. They must learn to manage their own affairs. I think a province of 70,000,000 of inhabitants is big enough to have its own financial system, and to manage its own affairs.

2101. It is very evident that you are a firm friend of decentralisation?—I am.

2102. (*Sir Edward Hamilton.*) You said "periodical revision"; how often?—Every five years.

2103. (*Chairman.*) And that for the present you think must be observed?—I do not think you can extend the Provincial System much further for the present; I see no way of extending it further for the present.

2104. And, given fairly prosperous times, these heavy demands upon you and the great inconvenience of the fluctuation of the exchange being removed, you would not think that it was necessary to secure a larger share for the Central Government, than that increase which it would gain upon its normal share?—Well, you see you might look at the thing for a series of years and say "We have given you one half the increase of "the revenue under a certain head; we are going to "make a permanent agreement with you; we will give "you one-third permanently." The thing is to be looked into and settled upon reasonable terms, but I would certainly look forward to that as the course of development in Indian administration, and as a very great reform if it could be introduced. It was proposed, I think, by the Lieutenant-Governor of Bengal some years ago, and I had to go against it because we were not in a position to take it up.

2104A. (*Sir James Peile.*) Would you maintain the practice of special contributions being levied when the Government of India is in difficulties, which happens occasionally now?—It is a case of necessity knowing no law. I think it an extremely bad system.

2105-6. (*Chairman.*) Even in the last financial year, in 1894-95, the Central Government was obliged to make a great draft on the Provincial Governments?—It is one of those things that has to be done, but I think it is unfortunate; it is like putting on taxation; it is an evil, but you cannot avoid it.

2107. I think that you, in looking over the evidence that we have received, do not entirely agree with the interpretation which was put upon the provincial rate in Bengal. I think you thought the witnesses represented it as a percentage on the land revenue?—Yes. I do not think it is in Bengal. Of course you were examining account officers. My impression is that it is so much on the rent.

2108. Yes, quite so?—It would be quite unreasonable to put it on the land revenue in Bengal, for the land revenue bears a very small proportion to the rent and not the same proportion throughout.

2109. Therefore it would be incorrect to represent this as anything like the *centimes additionels* in France, which is a separate tax?—It is a separate cess; I think it is so much on the rent of the land, and it would be most unreasonable to put it on the land revenue in Bengal.

2110. You would guard us against forming too hasty an opinion that the large increase of revenue since the provincial system was introduced, is due to the introduction of that system?—Oh, I should, certainly; I am a supporter of the provincial system, and I have no doubt that the introduction of the system has developed the revenue. But if you take Stamps you will find that there has been a large increase there. Well, the Provincial Government could have done very little to develop the stamp revenue—very little, indeed; and if you look at the division of Stamps, I think you will find that the increase has been larger under what we call "court fee stamps," that is, stamps on documents put into court, and plaints, and so forth. The action of the Provincial Governments could not have affected this branch of the revenue in any appreciable degree, and yet I think there is a large increase. I would also wish to say that I do not think the increase of revenue due to the provincial system is due so much to the fact that zeal has been increased as to the fact that they work with greater latitude. I think that a Provincial Government managing a branch of the revenue for the Imperial Government is fairly zealous. I do not think there is much increase in zeal, but they were allowed a greater latitude.

2111. I think one of your predecessors gave as a reason for allowing such latitude of powers to the Provincial Governments that the revenue as collected when they had no interest in it, was carelessly collected?—I should hardly say so, but undoubtedly the provincial system is an improvement.

2112-3. And that opinion of yours carries all the more weight owing to the fact that you were cognisant of the system before the change took place, before the provincial system ever came in?—Yes. Now take the case of smuggling, excise smuggling, smuggling of liquor. I imagine that the Provincial Government was always anxious to put it down when the revenue went all to the Imperial Government, but they had not the same power, we will say, of appointing preventive establishments, or making other regulations to put down smuggling; they have been given greater latitude; I think that is the chief factor, not increase of zeal. The district collector does not get anything for himself in any form whether the excise revenue is large

or small; it goes into the general treasury, and is probably spent on public works in a different part of the province altogether. There is some increase of zeal I admit, but I think the improvement is due to the greater latitude given to the Provincial Government rather than to the increase of zeal in the collection of revenue.

2114. (*Sir Ralph Knox.*) You think that the Central Government rather starved the establishments, do you?—Well, I will not say quite that they starved the establishments, because whatever money they got they spent in some form or another; but the Provincial Government would, if it wanted to stop smuggling, have had to prepare a report on the whole question and send it up to the Government of India, saying: "We "think there is so much smuggling, and we would like "this preventive establishment," and that would go to the Finance Department, and the Finance Department would say, "Well, we have not got the money, and we "are not satisfied it would pay." When something like that happens on a few occasions, the Provincial Government would rather hesitate to make proposals. They would say, "Let things go on as they are, we cannot get the Government of India to agree to a change." Now, if they think it is necessary to make a change, they can make a change by their own authority, bearing the cost themselves.

2115-6. (*Chairman.*) Did you notice a table* which Sir Henry Waterfield put in, in which he showed a very large increase on the revenue that had been handed over to the Provincial Governments amounting in the case of the Excise to as much as 85 per cent.?—Yes.

2117. The per-centage of increase, of course, struck us very much; and a question arose as to whether that increase could in any degree or to what degree be looked upon as the result of improved administration. The tendency of the witnesses was to say there had been no noticeable increase of taxation that need modify to any great extent the deductions to be drawn from that per-centage; and therefore they could only say that that per-centage of increase was due (1) to the increase of prosperity of the country, (2) to better collection. May I ask if you have any opinion to offer?—Well, I should say in the case of excise there would be a decided increase of taxation.

2118. I ought to say that the witnesses guarded themselves by saying afterwards that there had been an increase upon spirits?—I fancy that the fact that it was due to increase of taxation has been overlooked, because in the case of the excise, as a rule, it was not necessary to pass an Act increasing taxation. The revenue authorities had power to increase the taxation.

2119. There are maximum rates?—Well, I am not sure that in some cases there was any legal maximum; practically there was a maximum, and very much above the actual rate. Then, take the case of opium. It comes under the head of Excise, in so far as it is consumed in the country. That is called excise opium. In Bengal, and in a number of provinces on that side of India, the Government which manufactures the opium sells it, and the way they increase taxation is by putting a higher price upon it. There is no Act; but the increase of the selling price is increased taxation unquestionably. And you will find that in Assam, for instance, and in Bengal, with a reduced consumption of opium there is a very much higher revenue. In the same way the rates of duty on Ganja have been very largely raised, and the rates on spirits have been raised; and higher rates have been put on licences for shops. You see we limit the number of liquor shops in many places, very strictly; consequently, the shop becomes a valuable property, and you can manage to get a high rent for it. If you reduce the number of liquor shops in London to 2 per cent. of what they now are, each liquor shop would become a very valuable property and the State might very fairly claim that increased value.

2120. And that, you think, is done in India?—In the case of Excise there has been increase of taxation in many ways. There is also a greater check upon illicit consumption; and, no doubt, good years in India mean an increase of Excise revenue and bad years mean a falling off. There is no question about that. I have traced the connexion through a series of years. And, no doubt, there are some sections of the Indian people whose position has improved. It does not follow that they drink more, but they are in a position to pay higher rates of duty. Then take the case of registration. It is a small department; it provides for the registration of documents. It is a growing department, and the receipts increase with the growth of the department, and also with increase in the number of transactions.

2121. In regard to the Excise, when we have this very large increase of 2,200,000*l.* on 3,000,000*l.* how would you account for it? I suppose you would not attribute the whole of this to increase of taxation?—Oh, certainly not.

2122. You would only caution us against deducing any hasty generalisation that that increase is to be divided between (1) increase of prosperity, (2) better collection?—That is it really, but, of course, you recollect that those figures are all under the silver standard. I am not sure that that makes much difference, because it is a very strange thing that although you find a great alteration in the relative value of gold and silver, you do not trace in the two countries with their different standards the same complete alteration; the complete alteration comes very slowly.

2123. You mean in prices?—Yes, prices and wages, and so forth.

2124-5. Have prices increased? At the time when the Indian Currency Committee was sitting I think the balance of evidence before us was that prices had not very much increased; but of late is not the tendency of opinion in India that prices are increasing?—Yes, there was that; there was some manifest indication of increase in prices, but I do not think there has been quite recently.

2126. You mentioned that the rules regarding claims by the Provincial Governments for extraordinary relief have never been applied in practice,—are they applied under no circumstances?—Well, you see we have not had a great famine since 1878, I think, and those rules were subsequent to that date. I am not sure that those rules are in force now. I merely expressed my opinion that hard-and-fast rules like that cannot be applied in practice. If there is a famine Provincial Governments must meet it as well as they can, and, when their resources are no longer able to meet that famine, the Government of India must assist them, and when that famine is over the Government of India must start the administration again on a fairly satisfactory basis. For instance, if the revenue of a province is one million, and we find that under those rules we had a claim of one million against it at the close of the famine, we could not possibly enforce the claim. The administration must be carried on; therefore my opinion is that these rules go into too much detail; that, when a province gets into difficulty owing to a famine, you must take the whole of the case into consideration at the end of the famine and start the administration on a fairly satisfactory financial basis.

2127. Then, on the whole, I take it that your opinion is in favour of the extension of the provincial system, and, next, that you would put in force as little as possible the powers of control reserved to the Imperial Government. On that point, do you think that these powers of control, which are reserved, give rise to a very great deal of correspondence?—I do not think so; they are understood.

2128. That is because the Government of India has acted, I suppose, in the spirit which you approve, viz., it exercises those powers to the least degree that is compatible with sound finance?—Partly because the powers are well understood by the Accountant-General or Audit Officer in each province who is responsible for applying them. If anything goes wrong he informs the Provincial Government at once. I must say these rules, which are very much the same as the rules first drawn up when the system was started, have worked very well in practice. I think they were drawn up by Mr. R. B. Chapman in the first instance, and there has been very little change indeed in them.

2129. And, therefore, the principle upon which decentralisation was based has been given full effect to, that is to say, the interference of the Central Government has been restricted?—Certainly; the only thing one can say is that the special contributions and those periodical revisions have been, I think, a little more severe than was contemplated in the first instance; and it would be desirable to get rid of them if you could: I do not think you can for the present.

* *See* Q. 679.

Sir D. M. Barbour, K.C.S.I.

12 Nov. 1895.

2130. (*Sir William Wedderburn.*) May I ask one question as regards this matter of provincial contributions. Besides the revision of the contract, after a period of years, there has been this occasional levying a distinct contribution from the provincial balances which have accrued?—Yes.

2131. Is the amount taken from the several provinces calculated with reference to the total of the balances that have accumulated or to some system of putting a rateable contribution upon each? What I want to bring out is whether the economy of a particular government becomes penalised by having a considerable balance which may tempt the Central Government?—It is not a rateable contribution. It is taken generally with reference to the circumstances of each province at the time. I cannot say how the last one was taken. I do not think a special contribution was ever actually taken in my time. I do not think the contribution can be taken by a rateable levy, because you might find a province was not in a position to make any contribution unless it put on taxation. Of course, as you say, the present system may operate as a sort of penalty on a government that had accumulated its funds and was economical, if it be economy for a Provincial Government to accumulate its funds. This may be the case, but I do not think a rateable contribution would work satisfactorily in practice.

2132. (*Chairman.*) I would like to ask you a few questions on the subject of the audit system of India. Do you share the opinion, which I think is now generally accepted by financial authorities in this country, in favour of an independent audit, that is to say, an audit by a man who is independent of the officer whose expenditure he audits?—Yes; certainly.

2133. Do you think that under the present system if is fully given effect to in India?—I think, without saying the Indian system is perfect, that it is very fairly given effect to.

2134. Now the criticisms I should like to put before you for consideration are these.—The officer who is charged with the duty of auditing in India is the Comptroller and Auditor-General. That officer described to us his duties, of which a considerable amount appear to me to be executive duties; first of all, we gathered from him that he is what we should call the adviser of the Treasury. To a certain extent he is adviser of the Finance Minister in financial executive measures. Some of his functions seem to us to correspond to those of the Comptroller of the National Debt Office here, which is distinctly an executive office. And again he has functions connected with currency, and with the management of the mint, which I think to a certain extent one would qualify as executive. Well, these functions being executive to a certain extent, he may be auditing expenditure of which he has been the adviser. Is that quite compatible, apart from reasons of expediency to which we shall come afterwards, with the independence of the auditor?—Well, I think in my previous answer I said that the Indian system was not perfect, but that I thought on the whole it was fairly satisfactory as regards the independence of the auditor. Now, in point of fact, the real audit is not made by the Comptroller and Auditor-General. There are separate auditors in the Public Works Department, also in the Military Department; and then there are civil auditors—Accountants-General—in the provinces; these officers who have no executive functions really make the audit.

2135. The functions of the Accountant-General have been described generally in accordance with what you have just been saying, but we understood also that they were advisers generally on financial questions to the Provincial Governments?—They are not regular advisers, but every Accountant-General must advise the Provincial Government if the Provincial Government asks him for advice. The Auditors of Military Expenditure are however appointed and promoted by the Military Department. I think the system has worked fairly well; but I think there is a weakness in it; I think the military auditors ought to be appointed and promoted by some other authority. I do not wish to change their functions in any way, or their relations to the Military Department, nor to alter the system of recruitment. They are generally military officers and they might remain so; but I think their appointment and promotion ought to be in the hands of some other authority. The same remark holds good in regard to the Public Works Department, although the work of the Public Works Account and Audit Department, as far as my experience goes, has been very satisfactorily carried on—I have got a high opinion of it. What you say is quite true as regards the Comptroller and Auditor-General, so far as he has to report on those duties which he himself performs. For instance, his duties in connection with the Currency Department. There used to be a rule, I think, that his expenditure was audited by the Accountant-General. I am not sure whether that is in force now or not; but there is a weakness as regards the functions which he discharges himself; though I do not look upon that as serious—I do not, because the audit is done, or might and ought to be done, not by the Comptroller-General's establishment, but by other establishments.

2136. That is to say, in the provinces?—Yes, and the real audit in India, the real check, is the original audit, not the Comptroller and Auditor-General's report. I must say that that report is not of much value to the Government of India.

2137–8. Apart from the question of expense, which was, I think, the one which weighed very much with the Government of India at the time the question was under consideration in 1881 or so, would you yourself prefer that the Comptroller and Auditor-General should more nearly correspond to our Comptroller and Auditor-General who, as you know, is hedged round by Parliament with extraordinary precautions in order to make him independent?—Well, you see the authority that is interested in India in the Auditor-General's report, is the Financial Department, and the Comptroller and Auditor-General is an officer of the Financial Department, and takes the financial view; so that, as regards the officers on whom he reports, with the exception simply of his own establishment, he is thoroughly hedged in. He has nothing to do with the Military Department and the Public Works Department; he is thoroughly independent of them. It is for the sake of the Financial Department that he reports, and he is an independent officer as regards the outside officers; but as regards his own particular officers, there is the weakness. You see that in this respect he is not a perfectly independent officer.

2139. It is an axiom of Parliament to trust nobody in finance?—Yes, that is the sound principle undoubtedly.

2140. We do not trust the Chancellor of the Exchequer?—Trust nobody.

2141. We do not trust any Minister, because under political pressure or under necessity, it is quite possible that he might be tempted, not to anything amounting to malversation, but to irregularities of expenditure that are incompatible with orderly finance; therefore Parliament has an independent officer who is more or less an adviser; he has a free right of comment and he calls the attention of Parliament to infractions of the regulations. It would strike one as an extraordinary thing if that duty were here entrusted to one of the high officers of the Treasury, because he would still be in some respects not only an adviser of the Chancellor of the Exchequer, but perhaps an adviser of, and assentor to, the very infraction of rule which he ought to criticise. Moreover the Chancellor of the Exchequer, the head of the office, is his chief, and it is almost more than you can expect from human nature that the subordinate should report against his chief?—I do not think the Comptroller and Auditor-General in India is the adviser of the Financial Department in the sense which you mean—not in the sense in which the Financial Secretary is. He is the confidential adviser. The Comptroller-General and the Financial Member of Council do not come into direct communication at all; but if the Financial Department wanted the opinion of the Comptroller-General, it would send the paper to him undoubtedly.*

2142. But does not the Member of Council come into contact with the Comptroller-General?—Not into direct contact, no; it would be through the Financial Secretary.*

2143–4. That is an important point. Of course no two officers in different systems exactly correspond, but the description we received from Sir Henry Waterfield and Mr. Jacob would have left those of us who are conversant with our own system here, under the impression that the functions of the Comptroller-General rather correspond with those here discharged by Sir Edward Hamilton; and I think Sir Edward

* *See* Q. 2842 *et seq.*

Hamilton would be rather surprised at the idea of his being constituted Comptroller and Auditor-General?—I think the Financial Secretary's position corresponds more closely to Sir Edward Hamilton's position as I understand it (which I do imperfectly. The Comptroller and Auditor-General is quite outside the Financial Department of the Government of India.*

2145. There is another question I want to ask. Have not the subordinate and thoroughly independent (as I gathered from you) auditors, the power of disallowance?—They have power to disallow, that is to say such and such an expenditure ought not to have been incurred, it ought to be refunded.

2146. And they have the power of saying whether or not it must be refunded?—But if it is contrary to rule, it must be refunded.

2147. But the interpretation of the rule lies with them; they have not to report to the higher authority?—Not in the first instance.

2148. Unless the accountant demurs?—Unless the person who is retrenched demurs.

2149. Does that correspond quite with your idea of a thoroughly independent audit? Does not a great deal of the value of an independent audit lie in the fact that a high officer has the opportunity of knowing what irregularities take place, so that he may be able to make public (because that is the object aimed at) any serious irregularities?—Of course, any serious irregularity would be reported to the Government—any serious embezzlement of money or anything of that sort.

2150. If the subordinate officer has power of disallowance, he may say, "Well, I will pass that"?—He can only pass it if he is satisfied—if the rule permits it. He has no discretion unless as regards very simple matters.

2151. But he may interpret the rule; he can say: "I consider that falls within the rules"?—Oh, certainly.

2152. And occasionally a subordinate officer may not be the best person to say that?—He may be wrong occasionally, certainly.

2153. In difficult cases it would be certainly better that the high officer should decide?—If the Audit Officer had any doubt about it, he would refer it himself; but if you think that all these disallowances should come up to the Financial Department, I can only say that I think any such course is impracticable. I do not know how you would do in this country when petty charges are disallowed, but the number of small disallowances in India is something enormous; it would be absolutely impossible to send them to a central officer. I mean to say the extent of business is such that the vast majority of those disallowances must be dealt with by the audit officer; they are generally very petty.

2154–5. Quite so. Of course, here, as with you, there must be filtration. But I think the principle of administration here is to secure that the Comptroller and Auditor-General himself shall know irregularities which have taken place, and I think he would feel pretty certain that any serious irregularity would really come to his notice. I did not quite gather that the Comptroller and Auditor-General had a like security in the Indian system?—I do not think, as far as I recollect, that there is any return of disallowances sent in to any central authority. Serious cases always would come up. I observed, I think it was in Mr. Becher's evidence, that the Accountant-General in the Public Works Department gets a return of serious cases. I do not think that that exists in the other departments. I see no objection to that. It would be on the whole rather a good thing: but what I would very strongly object to, would be a system by which all the disallowances made by all the audit officers all over India, came to a central authority. It would be an appalling amount of work, and absolutely unnecessary. A return of serious cases, sent in quarterly, I see no objection to; I think it would be very good. If I were in office now I would certainly take up the question.

2156. Lastly, I want to ask you about the Appropriation Report. It seems to me rather a review of the financial work of the Government than an Appropriation Report?—I have dealt with those reports both as Secretary and as Member of Council, and I cannot say that it was any value to me really, because all the questions raised in it of any importance had come before me previously and been disposed of; and when I got a sort of re-hash of the question 12 months afterwards, I thought it was rather troublesome.

2157. And that is, if I may say so, the weakness of the report. It takes the form rather of a financial report for financial experts than of a criticism by an independent officer upon the financial acts of Government. I must say that I think the Comptroller and Auditor General's reports here correspond much more nearly to what is wanted. He expresses, or ought to express, no opinion whatever about policy or about the acts of the Government as such. He has put before him by the accountant the account of expenditure; he goes through this, and he signs the account if it is correct; but at the same time he appends a report in which he calls attention to every serious irregularity that he has found. What I mean by "serious irregularity" is "infraction of rule." Of course, if an officer has infringed a rule and made it good at once, in nine cases out of ten there is no necessity to mention it; but he would call attention to any infraction of rule, either by the accountant himself or by the Treasury in passing it afterwards, if it was a serious one: and he would also call attention to any case in which a serious irregularity had been condoned. Now I do not see that the Appropriation Report of the Comptroller and Auditor-General in India corresponds to that?—In India, you will observe, the irregularities are brought to notice, as it were, from day to day; this is done by the Audit Department concerned, and I do not really think there is much left for the Comptroller and Auditor-General to do.

2158. That used to be said here. I am old enough to remember the time when there was no independent auditor here?—Well, I can only give my opinion for what it is worth. That is my opinion. I admit that in principle to have an altogether separate officer auditing all the expenditure, appointed by Parliament and so forth, might be more satisfactory. It would involve considerable expense. I should hardly say that the advantage is worth the cost. That is my opinion.

2159. (*Sir Donald Stewart.*) Is it not the case practically that in 99 cases out of 100, the retrenchments that are so made are eventually passed?—That I could not say, but no doubt the greater portion of them are eventually withdrawn.

2160. They are simply formal?—They are very simple matters, I know. I introduced what I thought was a reform in connexion with that. Under the old system, if an officer had overpaid, we will say, one penny too much, it must be pursued until the sanction of the Central Government was obtained to writing it off; and the amount of correspondence it gave rise to was very serious. So I suggested that the Accountant General should be given a discretion, in the case of very small sums, as to whether it was worth while pursuing them under all circumstances. But the number of objections made in the first instance all over India is very great.

2161. (*Chairman.*) All I would say about it is this. Anybody who was conversant with the operation of the audit here formerly, and who will go through the reports of the Comptroller and Auditor-General, will see the value to the public service of the criticisms of the Comptroller and the Auditor-General, and what an immense benefit the institution of the Appropriation Reports has been—first, to Parliament; and, secondly, to the departments themselves?—If it would strengthen the Financial Department in India I should be very much in favour of it.

2162. As one who has had an opportunity of observing this matter for many years, I cannot speak too highly of the excellent financial results which the comments of the Comptroller and Auditor-General on the public expenditure have had. His report is the biggest and best financial reform that has taken place within my recollection?—Yes.

2163. (*Mr. Buchanan.*) There is one point I wish to ask you about. In the early part of your evidence you spoke about the Financial Department being practically weak though theoretically strong; and you said, I think, that you could not suggest any amendment in the rules for altering the position of the Financial Department: but are there any other suggestions you could make to the Commission by which the Financial Department might be made stronger for the purposes of controlling expenditure?—No; I am afraid there are not. It is a weakness, I think, inherent in the

* *See Q. 2842 et seq.*

Sir D. M. Barbour, K.C.S.I.

12 Nov. 1895.

system of government; it is one of the things you must accept.

2164. That the Financial Department should be weak in itself?—I think it is weak.

2165. Then you told us, too, with regard to financial difficulties that have arisen within the last 20 years, or financial crises, I think you called them, that the Financial Department had foreseen them, but that the Government of India had not acted upon the warning?—I do not know that I said that.

2166. You said there was a want of continuity, I think. I have not got your words here; you said the Government of India did not go slowly enough?—I said I thought there was a tendency to go too fast in times of prosperity—I think there is—and not to bear sufficiently in mind the fact that periods of difficulty come; and that I imagine is partly due to the fact that the members of the Government change every five years, and that to really master the conditions of India requires a very great effort.

2167. Would you be disposed to extend the term of office?—No, I would not.

2168. The appointment of the Financial Member of the Council you have already told us is for five years?—For five years, practically.

2169. But I suppose a good deal of the actual financial work is done not by him, but by the permanent members of the Department?—No doubt a great deal is done by the permanent Secretary.

2170. And they do not change, of course, any more than the officers of the Treasury at home?—They do not, except that in India, changes are always rather more frequent than they would be in this country.

2171. They retire earlier?—Yes, and they take leave.

2172. But would there be any decided change that you would like to recommend in order to strengthen the Finance Department or the financial position of the Government of India?—I am afraid not.

2173. You stated, I think, too, with regard to the relations between the Finance Minister and the Secretary of State that they were close, that the Secretary of State was generally the friend of the Finance Minister, and that it would be better if he was a stronger friend. Would you like to increase his authority over the expenditure of the Government of India?—I would like very much as a preliminary to that to increase his knowledge of financial conditions in India.

2174. How would you propose to do that?—Well, that is the difficulty. I should not like to see him interfere much with the details of Indian administration unless he could interfere with greater knowledge of India.

2175. Would you alter the constitution of his council?—That is a question I have not considered. That is a very big question in which you would find great difficulty.

2176. You would not be prepared to make any suggestions to alter what in your knowledge is the difficulty at present in the government of India?—I had thought at one time that, instead of questions of expenditure being referred to the Financial Department alone, they should be referred to a sort of committee of expenditure consisting of the Financial Member of Council and two other men specially appointed for the purpose; but on thinking it over I am not sure that it would be an improvement.

2177. Two other members of the Viceroy's Council?—No; not of the Council at all; two separate men.

2178. (*Chairman.*) Officials?—They would have to be officials. You could not get them to do the work in India without pay, and so far they would have to be official; but, apart from that appointment, they might be non-officials. I came to the conclusion that on the whole I could not recommend it. It is the only thing that has ever occurred to me.

2179. (*Mr. Buchanan.*) Would you give them a kind of veto on extra expenditure?—Well, I do not think you could give them a veto; but they might be given a certain authority, and if they objected to certain expenditure, the objection would come with greater weight from them than if it came from any one member of the Council; but I think you must maintain the authority of the Viceroy in the Indian system of government.

2180. You stated very strongly your opinion as to the power of the Viceroy with regard to financial matters. With a view to economy would you be inclined to increase his power? Do you think that is good or evil?—I do not quite understand the question.

2181. To increase the power, as I understood from you, of the Viceroy in the Council?—Well, I do not see how you can increase it, and it would be very difficult to diminish it, and certainly great authority must be left in the Viceroy's hands. If he had no more authority than any member of the Council the business simply could not be carried on; he must be supreme in the Council, really.

2182. You told us, if the Viceroy was economical you had economical government. Are there any suggestions you could make by which you could permanently attach him to the study of economy?—I am afraid not. Recollect that the position of Viceroy of India is one of the most difficult positions in the world to fill. It involves an immense amount of labour and responsibility, and it is absolutely impossible to get a Viceroy who fulfils all the duties of the office perfectly; no such man exists.

2183. Do you think it would be a good thing that Parliament should exercise greater control than it does at present over Indian expenditure or the increase of it?—I think that the general control of Parliament over Indian expenditure and over Indian matters generally is most valuable, and I should be very sorry to see India removed from that general control, but I must say that I think that when Parliament interferes in particular matters, it generally interferes on very insufficient information, and I am afraid that it does rather more harm than good. I have the highest opinion of the value of the general control of Parliament over Indian expenditure; I think, I may say, I have almost a terror of its interference in details.

2184. You think it is ignorant, like the Secretary of State?—Taking Parliament as a whole, I do not think it has sufficient information to enable it to interfere in details; consequently it may be led away by sentiment, or by statements which it has no means of verifying.

2185. And the difficulty is to get men of sufficient knowledge and authority to be a good fulcrum for increasing the power in the financial element of the Government?—That is the difficulty.

2186. But there is no detailed suggestion you have to make to us to remove that difficulty?—I have not. I think it is a matter of great importance. If the present Commission should be of that opinion, it should say that financial considerations ought to have great weight attached to them in India. I suppose everybody would agree to that. The difficulty is in seeing that it is carried out in practice.

2187. I suppose we should like to take a step further, and ascertain whether you are able to make some tangible suggestions. We should like, from your great experience, to know whether you have any suggestions?—I gave you the only suggestion that occurred to me, and I am not prepared to press it, for I see great difficulties in the way.

2188. But you acknowledge the existence of the evil and that it is a considerable one?—Yes; on the whole I should like to see more weight attached to financial considerations in connexion with Indian affairs, and I should support any change that would have that effect, unless it gave rise to evils of equivalent magnitude.

2189. Do you think it is an increasing difficulty or a diminishing?—It is not diminishing.

2190. (*Chairman.*) When you were speaking of strengthening the information of the Secretary of State, you hesitated, as I understood, to make any recommendations as to the Council; but you wish to see some Indian experience brought into the Finance Department of the India Office?—I have had a great deal to do with Sir Henry Waterfield, and my relations with him have been entirely satisfactory. I do not think you can improve upon his knowledge of the subject.

2191. I quite accept that view with regard to Sir Henry Waterfield; it is one which we should all share; but I am speaking generally: do you think that the department wants or should have some actual Indian experience?—I think it would be desirable, certainly.

2192. (*Sir William Wedderburn.*) I think you mentioned that as Financial Member of Council you recorded a dissent in the matter of the Mauritius and Zanzibar

cable?—I think it was mentioned in the despatch that I did not agree to the proposal to pay that subsidy from Indian revenues, because I thought it was not a proper object for Indian expenditure according to the custom that regulates Indian expenditure. I am still of that opinion.

2193. On the ground that it was not equitable that India should pay?—Yes; I think India ought not to pay for a matter like that. It ought to be left to the Home Government.

2194. But when the Secretary of State decided that India must pay, there was nothing to be said against it?—The majority of the Council in India were favourable to India paying.

2195. Are these cases of doubt whether India should fairly be made to pay, the subject of correspondence between the Secretary of State and the Governor-General in Council?—Oh, yes; they would be.

2196. But, if you thought that the expenditure was either illegal or inequitable, the Government of India would have the opportunity of putting in a protest?—I suppose they generally would; the Secretary of State might decide here without referring to them that India should bear a certain charge; but they could afterwards protest against it if they liked. Certainly, they could address the Secretary of State on any question relating to Indian affairs.

2197. Because, of course, India has ultimately to find the money?—Oh, yes. The Government of India can take up any of those questions and express their opinion upon them.

2198. There were one or two other items. I think this Zanzibar and Mauritius cable stands at 18,300*l.* Is not that the cost of it?—To India?

2199. Yes?—It was a yearly subsidy. I do not know what it actually worked out at.

2200. (*Mr. Caine.*) I think it was Rx. 30,000? That would be pretty near it, would it not?—That would be about 17,000*l.*

2201. That is my impression; I am not quite sure?—It was something like that, I think.

2202. (*Sir William Wedderburn.*) I should like to ask whether the following items have been the subject of correspondence with the Government of India and of protest from the Government of India: the Indo-European Telegraph, which appears at 45,700*l.* These figures are, of course, merely roughly to indicate the thing?—Is that the Indian expenditure on that telegraph line?

2203. Yes?—No doubt there has been a great deal of correspondence about it; but I am not familiar with it, and cannot give you any information about it.

2204. Then there is the Red Sea Telegraph which India pays for?—They were all settled before my time, I think; they were accomplished facts, I think; I cannot give you any information about that either.

2205. Then the Persian and China charges?—I have had something to do with the correspondence about the Persian and China charges. I think there has been a reduction in them the last few years.

2206. I think that is shown at 97,900*l.*?—Yes, you will see the missions in China are under the Imperial Government, and India pays a certain subsidy towards the cost of them; and the same thing happened as regards Persia, and, I think, besides that India pays certain charges which are incurred in Persia, and have been sanctioned in recent years.

2207. Then for Her Majesty's ships in Indian seas there is 151,000*l.*?—Is that the old charge or the new one? India pays for and gets the services of certain gunboats and, I think, ships of war principally in the Persian Gulf, and pays a certain sum of money.

2208. Of course we are not dealing with the question of payment. My object in referring to this is to see what is the nature of a possible check upon illegal or inequitable charges being made upon India?—The Government of India might object to any of these charges.

2209. It has the opportunity in correspondence of objecting?—Oh! certainly.

2210. But whatever the Secretary of State decides in the matter is final, and there is no further protest to be made?—Well, there is nothing further to be done; he is the final authority.

2211. There is no means of formally bringing to the test whether the Government of India is right or the Secretary of State is right, supposing they differ?—I think there is no authority above them except Parliament, and I do not see how the Government of India could appeal to Parliament.

2212. Then one or two other items of a similar character, Cooper's Hill College, and the dealing with lunatics from India, questions of outfits. These are matters in which, as I understand, the Government of India has the opportunity of protesting in case it considers they are not fair charges?—Yes.

2213–4. So that the question is not merely a matter of detail; but what I understand you consider to be wanted is some strong authority to check and control any large sums that have to be paid?—Well, not so much what you refer to as that I should like to see some influence brought to bear which would secure greater weight being given to financial considerations by the Government of India, looking to the very peculiar conditions of Indian finance.

2215. The Chairman asked you to a certain extent to draw a parallel between the position of the Chancellor of the Exchequer and that of the Financial Member of Council, and you stated that theoretically the position of the Finance Minister was strong, but practically it was weak. I think that is what you stated?—Yes; I think generally that would express what my evidence was.

2215*a*. And that the three authorities that had to be taken into consideration were, first the Viceroy, who has a very predominating influence in the Government of India?—Certainly.

2216. Am I right in saying that it is a personal influence in the sense that the future of each member of the Council depends in a very great measure upon the goodwill of the Viceroy?—I have no doubt that has something to do with it.

2217. At the end of the five years of a member of Council's service, he may become a Lieutenant-Governor if the Viceroy likes him; or he may have to retire upon a very moderate pension if the Viceroy does not incline to appoint him as Lieutenant-Governor?—No doubt the Viceroy is in a very different position from the other members of the Council. He is a man generally of very much higher social position; probably an English statesman; he is in confidential correspondence with the authorities at home, and to a great extent the official future of the other members of Council does depend upon him, no doubt. He has power of influencing it, so that altogether his power with the Council is very great.

2218. And if he is economically inclined he can during his viceroyalty do a great deal to check expenditure?—Oh! no doubt. The Financial Department, of course, is always economical; perhaps too economical in some cases, and if the Viceroy is inclined, if he understands finance or is inclined towards economy and supports the Financial Department, no doubt the business of the country would be conducted most economically; there is no difficulty whatever in such a case.

2219. I suppose you would say that when Lord Northbrook and Lord Ripon were Viceroys there was an inclination towards economy?—I do not like to give an opinion as regards particular Viceroys. I served under Lord Northbrook and under Lord Ripon too; I would rather not.

2220. But the Viceroy being in charge of the Foreign Department, if he is satisfied that some military expedition or operation is necessary, practically, that means that he will see that the necessary funds are obtained?—Oh, yes; I should say so; if the Viceroy makes up his mind to have an expedition, I do not see how he can be stopped.

2221. So that in that case the position of the Financial Department depends practically upon the Foreign Department?—Of course, if the Government of India undertakes an expedition, it has to find the funds. The Financial Member of the Council might protest; he might dissent but he would have no power.

2222. But I think you consider that there is not much hope for a protest when a matter has once been decided upon; and that although the Financial Member may object generally to a military policy, he finds it difficult to refuse the funds when it has been decided in the Foreign Department that a military operation is

Sir D. M. Barbour, K.C.S.I.

12 Nov. 1895.

necessary?—Of course if the Council has already decided on a certain expenditure there is nothing more for the Financial Member to do. If the Viceroy decides upon an expedition and the Financial Member of Council protests against it, it would have to come before the Council, and the Financial Member of Council would have to stand or fall by the decision of the Council. When the matter comes before the Council the Viceroy would naturally possess great weight.

2223. The Viceroy, you said, was the first important power in the matter, and I think the second you referred to as analogous to the Cabinet would be the Governor-General in Council?—Yes.

2224. I think I am right in saying that in many respects the Financial Member stands alone as against the whole of the other Members of Council, in respect that he is the one to furnish the funds and the others want to spend funds?—That is the case, of course; that is necessarily the case. The different departments want money, and he has to keep some check upon them, if he can.

2225. So that, though he may be stronger in his department individually as against any particular department, he is not strong enough to resist the whole of the Council?—He cannot resist the majority.

2226. And the general feeling is that he has got to provide the funds for the necessary requirements of the others, so that he finds himself rather in antagonism with the general feeling of the Council?—Of course he must have continual controversies going on as regards particular items of expenditure; that is inevitable.

2227. And therefore, supposing the Viceroy is inclined to some military operation and the Military Member of the Council is not actively opposed to the Commander-in-Chief, there would be at once a very large majority against the Financial Member?—Oh, yes, of course.

2228. That is the Governor-General in Council. Then there comes the third point, namely, with reference to the control through Parliament or anticipated interference of Parliament, which I think the Chairman explained is one of the principal controlling powers as regards expenditure in England. You have said that you have not got any definite scheme to propose, but you think that the general control by Parliament is very valuable?—I think the general control of Parliament over Indian affairs is very valuable to prevent the Government from becoming too despotic, too bureaucratic. I think it produces a more liberal tone, the fact that the ultimate authority rests with Parliament; and that is very valuable.

2229. But the great difficulty is that Parliament has not sufficient knowledge of Indian affairs, and that its interference is rather an inconvenient interference with details than a wise well-informed general control?—I do not think I said that that actually was the case, but I said I was afraid that if Parliament interfered very much with Indian affairs it might interfere in details with very insufficient knowledge, or what seemed to me insufficient knowledge.

2230. I think that those who ask questions in the House of Commons upon Indian matters fully realise the inconvenience of the present system and would be glad if something better could be established to get a well-informed control. Would not a Standing Committee of the House of Commons for Indian Affairs which might in a mature and systematic way exercise financial control, receiving the reports of the different authorities and considering them, be a move towards making this general control you speak of effective?—Well I have not had the experience which would enable me to say what the value of such a Standing Committee of the House of Commons would be as regards Indian affairs; my prepossession would be that it would not be a useful body, but I do not know enough of Parliament to give a decided opinion.

2231. I think you have expressed an opinion—not on this occasion—but I think I am right in saying that you think a well-trained public opinion would do a great deal to support the Financial Member in any desire for reasonable economy?—I think if a well-informed public opinion could be brought to bear on Indian financial matters it would be a good thing certainly.

2232. But would not discussions in Parliament by those who had all the facts before them and were responsible in the matter, be a step towards training public opinion?—No doubt, and if members of Parliament made themselves thoroughly acquainted with Indian financial matters, and Indian financial questions were discussed in Parliament by such persons, that would be a good thing.

2233. But have you realised the extreme difficulty of any private member of Parliament becoming acquainted with these questions, unless there is some organised arrangement for having these matters discussed?—I am certainly aware that there is great difficulty in any private person, Member of Parliament or other, becoming thoroughly acquainted with Indian financial affairs; there is great difficulty.

2234. So that if you got some organisation which would train Members of Parliament to the study and understanding of Indian financial questions that would be a step in the right direction?—So far as that goes, that would be a good thing; but I thought your proposal was for a Standing Committee that would actually control Indian affairs. A Standing Committee or body of the House of Commons that would merely occupy itself with intelligently inquiring into Indian affairs, and making itself acquainted with Indian affairs would certainly do good; there is no doubt about that.

2235. I am not suggesting a committee which would have any power in itself; it would be a committee which would inform the House of Commons, report to the House of Commons generally; that was the nature of the suggestion?—I should think it would be a very good thing, especially as regards Indian affairs, if, when Parliament had to do with them it appointed a Select Committee to report from time to time upon particular things; that I think would be very good. It would be most dangerous if Parliament interfered without first taking the report of a Select Committee or of some other special body.

2236. (*Chairman.*) We are confining ourselves to financial questions?—What I would strongly urge is, that if Parliament wishes to exercise its control in greater detail, it should always appoint a Committee or a Royal Commission to enquire into the matter beforehand.

2237. (*Sir William Wedderburn*) That was what I was pointing to, namely, a Committee of the House of Commons which should specially deal with these matters, and especially the annual financial statement which would naturally be referred to them for their consideration?—I do not know enough of affairs in the House of Commons to give an opinion upon it. But my prepossession is against a Standing Committee. I quite see the advantage of having a Select Committee appointed on a particular question from time to time. If Parliament has got to deal with Indian affairs, I think it is absolutely essential that it should deal with them in that way; that is, appoint a Committee for a particular purpose, and act upon the report of that Committee.

2238-9. My present questions, of course, refer to the means of carrying out an effectual financial check and control. That is what I am trying to arrive at, because our difficulty is to obtain a well-informed and mature decision from the ultimate authority of Parliament, which it appears to me is the only power capable of exercising this control finally. At present the East India accounts are put in in the first weeks in May, are they not?—It would be about that time, I think.

2240. They are generally not dealt with until the end of the session?—Yes, that is my experience.

2241-2. And you speak with great respect of Parliament; but from your experience of Indian finance, you say that they are not very effectively dealt with when they are dealt with at the end of the session?—I should say the discussion was not of any value at all. It is the right thing that the account should come before Parliament, but I cannot see that the yearly discussions in Parliament, as a rule, on the Indian finances, are practically of any value.

2243. And in order that Parliament may do its duty by India, there should be some fresh re-organisation of the whole matter?—I said I could not suggest a new system.

2244. I am not asking for a special scheme; but is not the financial control now exercised by Parliament practically useless?—I would not say it is useless, because it is always there in reserve; but it certainly is not very efficient or prompt.

2245. Not directly useful?—No; and it is not prompt.

2246. And I think these accounts, when they come in, the East India accounts are called the Indian Budget colloquially, but it is not the Indian Budget really. The East India accounts upon which the Resolution of the House of Commons is passed are the accounts for the preceding year, that is to say, when the House of Commons dealt with the East India accounts this year, 1895, it was the accounts up to March 1894, I think?—Yes.

2247. Those were the accounts that were really dealt with, 1893-94?—That may be.

2248. With a revised estimate of 1894-95, and a prospective estimate for 1895-96?—Yes.

2249. And the only resolution passed had reference to the accounts of 1893-94. The Chairman has pointed out the very great value and importance of the check exercised by the Auditor-General through his report to the House of Commons, and that it is very valuable; but I think you are of opinion that the analogous check that has been established for India through the Comptroller and Auditor-General is of practically no value at all, because the day-to-day audit has already done whatever check is wanted of the superior officer over the inferior officer; am I right?—I should say so. That generally would be my opinion. The day-to-day audit I consider a sufficient check. I do not say it is a perfect check, but it is a good check.

2250. And that this Appropriation Audit, or annual Audit, is quite immaterial as being any check on the expenditure?—For practical purposes I did not find it of any value when I was in India, but it brings certain facts into a focus and records them, and possibly it may be of some use in the India Office. It was not of much practical value to me.

2251. For administrative purposes it may be valuable, but for check and control it is not valuable?—No, I cannot say it is of much value; I do not think it is.

2252. So that there is an immense distinction between this audit by the Auditor-General in England, which has been pronounced by high authority to be so extremely valuable, and this audit in India, which you say is practically of no value at all; and does not the cause of that difference arise from this single fact, that the audit in England is carried out by the ultimate authority, the representatives of the taxpayers, exercised over the highest executive authority, whereas this audit in India is only the audit of one executive authority by another and subordinate executive authority?—I do not go with you there. In England Parliament grants supplies and passes the estimates, and it is necessary to report to it how the expenditure has been carried out. In India the Government grants supplies to the different departments and passes the estimates, and it is necessary to report to it how the expenditure has been carried out. I do not think there is that defect in the Indian system. If you say, "Oh, but over and "above and beyond the Indian Government there is "Parliament, and it is necessary that Parliament "should know from time to time how Indian expendi-"ture has been carried on," I do not think that the way for Parliament to get that information would be the report of the Auditor General. I think it would be by appointing a committee or commission to inquire into Indian financial affairs from time to time.

2253. You mentioned that some seven or eight years ago (I think it was 1888-89) a change was made in the audit system, and that, whereas before the sanction of the Governor-General in Council was considered sufficient, the Auditor General had then to report whether the necessary sanction of the Secretary of State had been obtained?—Yes, before that date the sanction of the Secretary of State was necessary to certain classes of expenditure, but the audit officer was not required to look to that; the Financial Department looked after that.

2254. Now the Auditor-General's duty has been extended to certifying the Secretary of State's sanction?—The Audit Officer has to certify that the necessary sanction has been obtained. If the Secretary of State's sanction has not been obtained, he has to bring the matter to notice.

2255. But if the Secretary of State's sanction has been obtained that is final, and he makes no further inquiry?—That is final of course.

2256. That is final?—Well, I am not sure that an Audit Officer would pass a charge which was contrary to law,—contrary to the Act of Parliament. I am rather inclined to think if it was clearly and distinctly contrary to law he would certainly bring it to notice; I think he would.

2257. With regard to those six or seven items which I referred to at the beginning of the questions that I asked you, the Mauritius cable and various others, those were cases in which there was a difference of opinion as to the propriety, and perhaps legality, of the charge?—I do not know that there was any question as to the legality of the charge. I have no recollection of any question about the legality of the charge.

2258. But I suppose there might arise questions of legality, considering that the power of the Secretary of State is purely statutory?—I imagine there might.

2259. For example, under s. 55 of the Act of 1858, the consent of both Houses of Parliament is required for expeditions beyond the frontier of India, and there there might distinctly arise a question of legality as to whether the revenues of India could be employed upon such an expedition without that consent?—I suppose such a question might arise.

2260. And very large sums would be involved?—No doubt.

2261. Therefore the real check that is wanted is not upon the Provincial Governments or upon the Government of India perhaps, so much as upon the Secretary of State. Where these big sums are being spent out of the Indian revenues under the orders of the Secretary of State, at present there is no machinery to check him at all; is not that the case?—Well, I suppose he is ultimately responsible to Parliament.

2262. But there is no machinery for bringing these questions before Parliament, and there is no machinery in Parliament to deal with those questions?—These are points upon which I cannot give you any assistance.

(*Mr. Caine.*) You can bring them before the House on the motion of private members.

2263. (*Sir Donald Stewart.*) The Secretary of State has no power to incur expenditure without the sanction of his Council?—That is the case. The Secretary of State cannot incur expenditure without the approval of his council.

2264. (*Sir William Wedderburn.*) When I speak of the Secretary of State I mean the Secretary of State in Council. He has no financial power practically apart from it?—No, not over expenditure.

2265. There have been very large sums spent, I think, speaking roughly about one million a year, upon frontier expeditions for the last 10 years or so?—There have been large sums spent within the last 10 or 12 years.

2266. Has this question of the legality of this expenditure under section 55 of the Government of India Act been brought to the notice of the Secretary of State or of Parliament in any way that you are aware of?—I am not aware of the question having been raised; I do not think the question has ever been discussed by the Government of India. I have no recollection of the question of the legality of this expenditure being discussed. I think that it is the case that these expeditions beyond the frontier have been going on at intervals for an indefinite time. I mean to say there were expeditions very many years ago, and I never heard that the question was raised that the expenditure was illegal.

2267-8. But these are the real big expenditures that are within the control of the executive, whether the Secretary of State for India or the Viceroy and Council, apart from the heavy charges that are of a necessary kind, interest on debt, and exchange, which are not within their control. These expeditions are a sort of voluntary expenditure?—Well, I would hardly say that. In the last 10 years the amount expended on expeditions has no doubt been high, especially if you take in the expenditure on the Chitral Expedition; but it is an expenditure which is incurred once for all.

2269. But has it not been always recurring year by year for some time past?—It has been going on year by year and in rather an aggravated form in recent years; but I suppose the frontier tribes will be exhausted in time, and then it will stop.

2270. (*Mr. Caine.*) Occupation charges are going on?—If the country is occupied there are certain charges

Sir D. M. Barbour, K.C.S.I.

12 Nov. 1895.

that go on; but they are not year by year of the same magnitude as the original expenditure.

(*Mr. Caine.*) No, of course not.

2271. (*Sir William Wedderburn.*) Now with regard to the phrase you employed of the finances being fairly buoyant?—The ordinary revenues are decidedly buoyant.

2272. There has been within the last ten years a considerable addition to taxation?—There has been; oh yes, certainly.

2273. Am I right in saying about six millions?—I think it would be about that, speaking roughly.

2274. And that the increase from land revenue in the last ten years has been about four millions?—I can not say exactly what it has been without going into the figures, but the increase in the land revenue has been large. I suppose your figure includes the land revenue of Upper Burma, which is something considerable. I do not fancy it will be quite so much in future years, as the settlements are mostly over I think. However, I cannot speak positively upon the subject, but the increase of land revenue in recent years has been large.

2275. I think I am right in saying that by far the larger proportion of the increase in the land revenue is not from extended cultivation, but from enhancement in the value of land already in cultivation?—There I cannot give you any information at first hand. You had better get it from somebody else.

2276. (*Mr. Naoroji.*) Do you remember Major Baring, now Lord Cromer, having said in 1882:—"It has been "calculated that the average income per head of popu- "lation in India is not more than Rs. 27 a year; and "though I am not prepared to pledge myself to the "absolute accuracy of a calculation of this sort, it is "sufficiently accurate to justify the conclusion that "the tax-paying community is exceedingly poor." I understand that the calculation by which this result was brought about was done by yourself?—Yes, I did make a calculation of that sort.

2277. That calculation is now in the possession of the Government of India?—I imagine so.

2278. It is not in your possession?—It is not in my possession.

2279. You cannot produce it?—If I had it, I would not produce it without the permission of the Secretary of State.

2280. (*Sir William Wedderburn.*) But you can make the calculation over again?—I am afraid I could not, because I have not the materials.

2281 (*Mr. Naoroji.*) With the same data anybody else can?—With the same data. But I will explain how that calculation came about. I was engaged in making certain inquiries for the Government of India, and in the course of those inquiries I had to make use of data collected by the Famine Commission as to the produce of the different provinces; and about that time Sir Richard Temple read a paper before the Institute of Bankers in which he calculated the average income per head of the population of India, and he used the results given by the Income Tax in the two countries, and he calculated that it was Rs. 10 a head (I am speaking from recollection)—that the income of the people of India was Rs. 10 a head; and as I had then certain data at hand, I thought that I would make the calculation (the Government did not ask me to do it) and see what result I should arrive at and compare that result with Sir Richard Temple's figures. My calculation worked out 27 Rs. a head; so that there was considerable difference in the result of the two calculations. Of course if you ask me what value I attach to that calculation, for practical purposes, I can only say that I do not attach much value to it; but that result, Rs. 27 a head, is not inconsistent with what I know of the general condition of the people of India. If you will take it from me, the money incomes are extremely small; there is no question about that. Various men have calculated the money income for different countries, England, Ireland, and elsewhere; but I look with hesitation on these calculations, and I look with still more hesitation on the result of my own calculation for India, because I had not sufficient data. If anybody wants to convince himself that the income of the people of India is small—the average income per head of population—and will look first of all at the tables of wages which, I think, are published by the Indian Government and then look at the results of the Income Tax in India, he will satisfy himself that the money income of the people of India is very small indeed. I know of that being the fact: but as to the Rs. 27 a head, whether it is a little lower or a little higher than it ought to be, I certainly cannot pledge myself.

2282. (*Sir James Peile.*) Would you consider a calculation of that kind of any weight as proving the declining prosperity of the people, when set against such evidence as the enormous increase of trade and the huge import of the precious metals?—I myself have no doubt that the money income is very small. It may have increased in recent years. A friend of mine the other day told me he had looked into the matter as regards the men who had charge of his horses, of whom there were five. They were paid 3 rupees 8 annas a month; and that was in a station where there was a railway and had been a railway for some years. 3 rupees 8 annas a month would be about 4s. a month; that is a shilling a week, or about twopence a day.

2283. It does not by any means follow that people are starving because they are poor?—Not in the least. You must recollect that the cost of the necessaries of life is very much less in India than it is in England.

2284. (*Mr. Caine.*) When you talk about 27 rupees per head, do you mean actual money per head, or do you mean the produce of the district consumed by themselves?—I calculate the income in money.

2285. You would include the produce?—Yes, including everything.

2286. What they get from their bits of land, and so on?—Yes, it includes everything. I certainly would base no practical measures upon a calculation of that sort. At the same time, I have not the slightest doubt that the people of India are very poor.

2287. (*Mr. Buchanan.*) How long ago was the calculation made?—In 1881 or 1882, I think.

2288. (*Mr. Caine.*) Are they much better off now?—There you get into a very difficult question. I have not the slightest doubt that the total wealth of India is increasing year by year; at the same time the population is increasing, and how it would work out in a particular province, or how it would work out in a particular class I cannot say; it is a most difficult question. I think the general tendency is to overlook the improvement that has taken place in the condition of the population. You see great hardships; we see them in this country; people say that times are very bad, and employment scarce; but if you look back 40 or 50 years and calculate what things then were, you will find there has been a very great improvement in this country.

2289. (*Sir Donald Stewart.*) Do you mean by 27 rupees a head, for every man, woman, and child?—The average, yes.

2290. Would you consider, then, that a man with a salary of 16 rupees a month was a poor man?—A man of the lower classes with 16 rupees a month in the position of a labourer in the rural districts would be, I might almost say, rolling in wealth; extremely comfortable, that is quite four times the income of many of them.

2291. Take a man and his wife and five children?—That is the average; of course, with 16 rupees a month a labourer in the rural parts, I think would really not know what to do with his money.

2292. (*Sir Ralph Knox.*) With a family?—Recollect they live most cheaply and economically. There is no people who live so cheaply and economically, and their wants are very slight. You see, they do not want much in the way of a house; practically nothing in the way of firing; very little in the way of clothes; they are a most frugal and economical people.

(*Chairman.*) We must take care to remember that reservation which you made just now, namely that in speaking of the average income of the population as 27 rupees it does not mean that a man and his wife and five children have each of them 27 rupees?

2293. (*Mr. Naoroji.*) What I want to know is whether this calculation exists in the records of the Government of India or not?—No doubt it exists somewhere.

2294. And it can be produced by the Government of India?—I suppose if they like to produce it they can. I have no objection; I am perfectly prepared to be examined on it; but I think you will arrive at the conclusion that the income of the people of India is very small without getting that; I have no doubt about it.

2295. I have not been satisfied with this calculation of 27 rupees. I myself have made a calculation, as perhaps you are aware, and I came to the conclusion that the average income is 20 rupees. Now that made a very great difference, and I asked Major Baring to let me see the other calculation, because I know where the mistake was likely to be made. I still wish that the Commission would ask for and obtain that calculation?—I have nothing to do with the report; it is the property of the Secretary of State: and of course, as regards different men arriving at different conclusions, as I say Sir Richard Temple, who also had a great deal of information on the subject arrived at 10 rupees a head; and that shows that these calculations must be received with reserve.

2296. We will make the necessary reserve for them, but we should have the opportunity of examining them Now the next thing I want to ask is—we have heard a great deal about the weakness of Indian finance, and how difficult it is to make both ends meet, and so on, I now put down the question whether a portion of the expenditure administered and managed by both Governments—the Secretary of State and the Government of India—is incurred on behalf of Europeans?—Yes, a considerable portion.

2297. For every European employed a native is deprived of what under ordinary circumstances would have been a comfortable living for him in his own country, as is the case here?—I am not sure about that.

2298. Is not one native Indian displaced wherever an European is placed? Take, for instance, a Judge of the High Court of Calcutta. If he is an European, he displaces an Indian; a native would be there if it were not for the European?—On the other hand, if there were no Europeans in India there might be no High Court in Calcutta.

2299. I am not now entering into the question of the merits of the employment—English or native—I am only asking the economic question whether it is not a fact that the European displaces the Indian who would have got that place?—No doubt, other things being equal, if an European is employed there is a native unemployed.

2300. As to the policy and the merits of it, that we shall discuss at some other time. Now, besides that—that loss which arises through the European displacing the Indian—there is also this, that whatever the European wants in this country, or whatever pension he draws in this country, and everything that is spent in this country out of the revenues by the Secretary of State for India, is so much an annual drain from that country, is it not?—Well, it is money earned in the country and spent out of it no doubt.

2301. And in the whole arrangement of the Budget and of expenditure the Indians themselves have no voice whatever?—Of course, they have no direct and immediate voice; but there is no doubt that the Government of India does pay a certain attention to public opinion in India; every Government does.

2302. But they have no direct voice in the matter?—No direct voice as far as I can see.

2303. By the Act of 1861 (19), without the permission of the Governor-General no member can introduce any measure (which virtually amounts to exclusion) about matters affecting the public debt or public revenues or for imposing any charge on such revenues, or the discipline and maintenance of any part of Her Majesty's military or naval forces. This means that, as far as the spending of our money is concerned, the Legislative Council is simply as if it did not exist at all?—I do not think the Legislative Council as it is now constituted, has no influence, but it has not much direct influence upon expenditure.

2304. The Legislative Council is of course the primary source and the authority for expenditure. It is in the Legislative Council that the Budget of India is settled?—No, it is not passed in the Legislative Council.

2305. It is first passed by the Executive Council, and then it is legalized?—No, it is never legalized at all. It is merely read and discussed.

2306. Then it is so much stronger on my side—the Legislative Council has no voice?—It has power of discussion. The Budget is read in the Council, and they may discuss it, but they have no other power, and, if you ask me, I tell you it would be impossible to give it the power of interference.

2307. That is a different thing. I only wanted to say that the people have no voice whatever in it. All things which shall be done by the Secretary of State shall have the same force and validity as if this Act (1861) had not been passed This gives full arbitrary power to the Secretary of State to spend what money he likes from the Indian Revenue?—I should not say it was quite arbitrary, but no doubt the control of the Indian Revenues is entrusted by Parliament to the Secretary of State.

2308. Then by the Act of 1892: No member shall have power to submit or propose any resolution or to divide the Council in respect of any such financial discussion, or the answer to any question asked under the authority of this Act or the rules made under this Act. You have already answered that the Legislative Council have no power whatever?—Only the power of discussion; no power to interfere with it directly or indirectly.

2309. I do not suppose this country would submit for a single day to that system of government?—They have been accustomed to something very different.

2310. Sir Henry Fowler has said that in this country the people pay taxes for the expenditure on State purposes at the rate of 2*l.* 11*s.* 6*d.* per head per annum. In India 2*s.* 6*d.* taxes are paid. Well, when you take the revenue really, it is more than 2*s.* 6*d.*?—Possibly; it is not very much

2311. Now the whole of this 2*l.* 11*s.* 6*d.* returns to the people in this country: it comes back in expenditure to the people themselves?—I suppose the greater portion of it does.

2312. It cannot go anywhere else?—There might be some expenditure abroad.

2313. Abroad, yes; but that is very insignificant. I am talking of the ordinary expenditure. If that sum were allowed to India, the production of the wealth of the country, from which the State has to draw, would not be impaired; but on the contrary, as in this country there would be increasing prosperity, and not only greater trade for British produce, but the State would be able to raise large revenues as it does here, because the fund from which the revenue is raised would remain intact in the country?—I think you exaggerate the value of that. I do not think, if the Government raises 100,000*l.* in this country, and spends it in this country that the wealth of the country remains the same as before by any means.

2314. It does not go out of the country?—No, but the thing which was purchased with that 100,000*l.* goes out. Whatever was purchased with that 100,000*l.* goes out of it, it is consumed.

2315. But that is enjoyed by the people themselves, whatever is purchased?—I do not think if the Government raised 100,000*l.* to buy steel rails that, if they purchased them abroad, the country would have lost 100,000*l.* I think the country might be said to have lost the profit on the transaction, something like that—a small per-centage of it.

2316. (*Mr. Caine.*) And the wages?—The men who would have made those rails which sold for 100,000*l.* would, we must assume, turn their hands to something else.

2317. They might be out of work; however it is not worth while discussing?—It is not a question of losing the whole of the money—there is a loss, but it is of what you call the profit; it is a per-centage of the total.

(*Chairman.*) Are we not getting somewhat outside financial machinery in this last question. I do not want to suggest you should stop if there is any point that bears fairly upon the branch with which we are now dealing; but do not you think the question you are putting is as to what happens under a certain system of policy?

(*Mr. Naoroji.*) Yes. If I am able to go into other branches afterwards I am quite willing to stop here and ask no more questions. We shall have an opportunity of examining Sir David Barbour again on other branches.

(*Chairman.*) Of course we know that what we have to take up next is the progress of expenditure, and it will be a question then as to whether the progress of expenditure includes methods of raising money. The only point to which I draw your attention now is that we are now actually engaged upon the machinery of finance, and it struck me that your questions were getting a little bit outside that subject.

Sir D. M. Barbour, K.C.S.I.

12 Nov. 1895.

(*Mr. Naoroji.*) My question arose from this circumstance, that we had just now said two or three times something about the weakness of the finances of India, and naturally, therefore, I wanted to point out one particular weakness which is at the very bottom of the whole difficulty; and, if that can be disposed of hereafter, of course I have no objection to postpone these questions; we shall leave them without committing ourselves, of course.

(*Chairman.*) You will admit with me that we should confine ourselves now to what bears upon financial machinery.

(*Mr. Naoroji.*) I may also say that the weakness of finance may possibly not be fully discussed from the finance question being discussed without inquiry being made.

(*Chairman.*) I think I could not commit myself to say that a certain line of evidence will come hereafter absolutely within our instruction; but that would have to be considered. I think we shall agree that at the present moment this line of evidence does not bear upon the branch of enquiry we have got now before us.

(*Mr. Naoroji.*) I am quite willing to abide by your ruling.

(*Witness.*) In case there should be any misapprehension I might mention that what I referred to was the weakness of the system for the control of expenditure, and not the weakness of the finances or the inability of India to pay its way, the latter is a separate question.

(*Mr. Naoroji.*) I rather understood it was the weakness of the finances on account of the peculiar unstableness and unsteadiness of the finances. Then I will postpone that. Then, also, in the same way, the apportionment of charges is a future consideration.

(*Chairman.*) That will be a distinct subject.

(*Mr. Naoroji.*) That will be a distinct subject altogether.

2318. It was said here, I think, that the Government of India was to be considered as analogous to the House of Commons in respect of audit. Is not the independent audit to the House of Commons a distinct check on the disbursement of the Executive Departments, and the report to be made to a higher authority, namely, the House of Commons?—I am not sure that I caught the question exactly. Perhaps you would repeat it.

2319. The independent auditor here reports to the House of Commons, while the auditor in India reports to the Government of India, and it was said that the Government of India was analogous to the House of Commons. Now, is there not this difference—that the House of Commons is a body that represents and draws its authority from the people of the country, while the Government of India is only an executive body, like the departments here?—I think, when I said that the Government of India represented the House of Commons in this case, and stood in an analogous position, I meant that in the one case the House of Commons sanctioned the expenditure, and that in the other case the Government of India sanctioned the expenditure, and that so far as the sanctioning of the expenditure goes, the position was analogous. I never meant to say that the Government of India was elected by the people of India.

2320. Then the consent of the House of Commons for the expenditure does not mean that it also is the executive body which carries out the expenditure, but it is the department of the Cabinet which is the executive body?—I understand the House of Commons is not the executive body that carries out the expenditure.

2321. So the report and audit made to the House of Commons is distinctly a report to a higher authority than the executive body?—Higher than the body that administers expenditure; yes, it is.

2322. While in the case of India the audit is reported only to the executive body itself?—I do not quite agree to that. It is reported to the Government of India.

2323. To the Government of India and to the Secretary of State which are both executive bodies?—The Finance Department is hardly an executive body. It is possibly as regards some matters, but not as regards most.

2324. Would it not therefore, be an improvement that there should be, in some shape or another, as has already been suggested by Sir William Wedderburn, an independent audit, and an independent committee in Parliament which should consider Indian affairs so as to make the House of Commons familiar with the necessities of Indian affairs?—I do not think that an independent audit is necessary. I may be mistaken, but that is my opinion. If there were some means by which members of the House of Commons, or a certain number of them made themselves familiar with Indian expenditure, and could give information to the House upon the subject that would undoubtedly be a good thing; I assent to that general proposition.

2324*a*. (*Mr. Ryder.*) There is one point I should like to ask you with regard to the audit which you have called the day-to-day audit by local officers throughout India. Do they confine their examination to the question of the authority for expenditure?—They take up everything connected with it. There must be a proper voucher for the expenditure; it must be within the Budget limits, it must be sanctioned by the proper authority, and so forth—a complete audit.

2325. Do they beyond that consider it their duty to draw attention to any points affecting financial order?—They would notice any irregularity.

2326. For instance, if they noticed that a considerable amount of money had been advanced from time to time to a contractor, and had not been accounted for, and that accounting for advances had fallen much into arrear, is that a sort of thing they would report?—That would be in the Public Works Department with which I am not so familiar. But I understand that it would be within their province to say "The advances are very "large; what is the reason for this?"

2327. And again, say, if they noticed that there were arrears of revenue which had not been recovered for a long time, would they think it their duty to notice that?—That would not be so much within their province, but I think they would notice it if there was a falling off in revenue. They would not know that there were arrears of revenue. It would not come before them, but if anything of the sort did come to their notice—any falling off in the revenue—they would probably call attention to it. The question of the collection of revenue rests with the Revenue Board and the Revenue Officers.

2328. And if they noticed that there was a great accumulation of stocks, or a sudden depletion of stocks, is that a thing they would call attention to?—That would be in the Public Works Department. Yes, I think they would consider themselves bound to notice that.

2329. If they noticed that goods were being obtained by private arrangement from the contractors instead of by public advertisement?—Well, the general rule is that we do not purchase stores in India. If they saw that stores were being purchased in India which ought to be got from England—which is rather the cheaper way of getting English stores—they would certainly call attention to that.

2330. Really the purpose of my question was to find out whether they cover the same field that our own Comptroller and Auditor-General does?—I think that so far as the audit goes, they do; but as regards these rather subsidiary matters I do not know that the information comes before them in such a form as to make their interference always possible or effective. There would be some other department which would deal with that; but if they found anything wrong they would no doubt bring it to notice.

2331. (*Sir Ralph Knox.*) You said that whenever a plan was recommended or under consideration by the Council, it was open to the Financial Minister to object to it on financial grounds, to enter a protest?—A dissent. It is open to any Member of the Council to dissent on any subject or any question.

2332. Of course, making a formal protest on financial grounds is a somewhat delicate and invidious thing to do, if the Minister stands alone?—It is.

2333. And is it usual when any plan involving an increase of expenditure is under consideration, that with that plan or course recommended by the Council, the Financial Minister sends home a Financial Report explaining the exact financial effect of such a proposal in his view, and the means, either easy or difficult, of meeting that expenditure?—Well, it is usual in referring anything for sanction to the Secretary of State to put forth what the exact financial effect is—I do not think the Financial Member of Council does it. The despatch

would come from the Department and have to be signed by the Financial Member of Council.

2334. That is to say as regards the cost of the scheme?—Yes.

2335. Would the despatch at the same time point out the difficulty that might be created in reference to the finances and the revenues of India, supposing such a course should be adopted?—You see that question would only arise in case it was a very large expenditure. Recommendations come home for the sanction of the Secretary of State, where the expenditure is sometimes comparatively small, perhaps only a few thousand pounds, and you could not say such expenditure would really have a serious effect on the finances of India. If it was a very big matter, of course that question would have to be dealt with when you came to meet the expenditure.

2336. Would it be dealt with at the same time the expenditure was under consideration?—Oh, yes, certainly, if it was of sufficient magnitude to require it. If it was only a small matter it might be held with reasonable certainty that there would be an improvement of, say, Rx. 400,000 in the revenue every year, and that would be sufficient to provide for a small outlay.

2337. Would it not assist financial control if it were laid down that a report of that kind should always come home from the Financial Department with any proposal for the increase of expenditure?—It does come home; I mean to say the amount of expenditure does come home—the amount of expenditure is stated. Of course it is understood when you propose expenditure that you are in a position to meet it. If it was a large expenditure, suppose you proposed to increase the expenditure by two millions, you would certainly have to say what tax you proposed to put on, assuming such a thing to be possible.

2338. The Comptroller and Auditor-General now applies the test audit to all the expenditure?—He has officers who apply the test audit, and I think that that is a very valuable change. It was made at the time the original proposal was put forward for a separate Comptroller and Auditor-General. I think that is a good and valuable change which has worked well. It has brought the different audit officers up to the mark.

2339. And that is in the nature of an independent audit?—That is quite an independent audit.

2339*a*. Does it go into very minute details?—I fancy, so far as it goes, it goes very fully into the question of audit.

2339*b*. And, therefore, has a considerable moral effect as to the audit?—Yes, it has a very considerable moral effect of course, because the officers do not know what particular portions will be passed; and I think it is thorough as far as it goes.

2340. And that moral effect, if produced, is one of the most powerful engines for keeping things straight that you could have?—I think so; and that was part of the proposals, and I think that portion of the reform has been very valuable. I have expressed my opinion.

2341. (*Sir James Peile.*) You said the Financial Department of the Government of India was weak in practice, though strong in theory. Do you think it is weaker or stronger than any one of the other Departments?—There are times when it is stronger, but it really depends on the Viceroy for the time being.

2342. The Financial Department has the advantage of the Order that if the Finance Member differs from the rest of the Council, and the Viceroy supports him, the action is suspended, and the question has to be referred to the Secretary of State?—I think I explained that practically that Order was of no value; but at times the Financial Department is strong. It really depends on circumstances. There is not a certainty that it will be strong, but at times it is strong—that is to say, when the Viceroy inclines to economy.

2343. It entirely depends on the Viceroy agreeing or disagreeing with the Finance Member?—It does entirely depend on that.

2344. Therefore the ultimate force is the personality of the Viceroy?—Yes, but there are two forces. The tendency is ordinarily for pressure to be put on the Financial Department to incur expenditure. It is practically pressure. The other departments are always pressing to spend more money; their demands are persistent and continuous. It is uncertain whether the Viceroy will support the Financial Member of the Council or not. If he does not give him support, the Financial Department is weak; if he does give that support, the Financial Department is strong.

2345. The personality of the Viceroy is not a matter that you can regulate by system?—Not by rules. At the same time I must admit it is necessary to maintain the authority of the Viceroy in the interests of the good government of India.

2346. You said that you think it desirable that the Secretary of State's knowledge should be increased so that greater weight might be given to financial considerations?—I said that if the Secretary of State was to exercise greater control over Indian expenditure, it was very desirable that his information as to Indian financial conditions should be improved.

2347. His control is really the control of the Secretary of State in Council?—When I say the Secretary of State, I mean Secretary of State in Council.

2348. And in the Council there are men of long Indian experience to increase his knowledge?—There are.

2349. Among others, for instance, former Financial Members, such as Sir John Strachey?—Very possibly. You observe what I said was, that if he is to exercise control in greater detail, it is necessary that he should have greater information. When I said information, I did not mean that the ability or the experience of the Members of Council should be increased; I meant that they should be more in touch with the actual financial conditions of the day in India.

2350. But there is no limitation as to what the Government of India may furnish, in the way of information, to the Secretary of State, or in what he may choose to call for?—Absolutely none.

2351. As a fact, a great deal is supplied?—A great deal. What I say is I think it would be a pity that greater control should be exercised in details unless there was a greater knowledge of what I may call the current financial conditions in India. I think with all deference, perhaps, from the nature of the case, that you do not quite keep in touch with the progress of events there. Information comes in time, but I do not think it comes immediately.

2352. If the Financial Member is overruled he has full power to write, at any length he chooses, the whole of his views on which he bases his dissent?—He has; but if he is opposed to the Viceroy it is a very serious thing to overrule the Viceroy. It ought not to be done very frequently. It could not be done very frequently.

2353. Still, he sends a long dissent, and that is very probably printed, and perhaps made public?—It might be, of course; it might be made public.

2354. It is occasionally done?—Yes.

2355. A Member of Parliament may move that the papers may be printed, and then they are published in a Blue Book?—He may, and dissents may be published; or he may be told it is contrary to public policy to produce them.

2356. (*Chairman.*) You were mentioning those tables of wages which were published in India. You have given attention to this question, and therefore your criticism would be valuable upon that. Do you consider that they are carefully compiled?—I think they are fairly compiled. You must not suppose there is any very exceptional degree of accuracy in them, but they are quite sufficient for the general purpose, that is, to show that the income of the people of India is small; and further than that you cannot go safely. If you attempt to get more than that, to estimate the income exactly, you break down.

The witness withdrew.

Adjourned until to-morrow at eleven o'clock.

At the India Office.

FIFTH DAY.

Wednesday, 13th November 1895.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN), PRESIDING.

SIR WILLIAM WEDDERBURN, Bart., M.P.
FIELD MARSHAL SIR DONALD STEWART, Bart., G.C.B., G.C.S.I.
SIR E. W. HAMILTON, K.C.B.
SIR RALPH KNOX, K.C.B.
SIR JAMES PEILE, K.C.S.I.
SIR ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
MR. G. L. RYDER, C.B.
MR. T. R. BUCHANAN, M.P.
MR. DADABHAI NAOROJI.
MR. COLIN G. CAMPBELL, *Secretary.*

Sir H. Waterfield, K.C.S.I., C.B., and Mr. E. R. Cave-Browne. C.S.I.

13 Nov. 1895.

SIR HENRY WATERFIELD, K.C.S.I., C.B., recalled and further examined.

MR. EDWARD RABAN CAVE-BROWNE, C.S.I., called in and examined.

2357. (*Chairman.*) Would you, Mr. Cave-Browne, describe your position in the India Office?—(*Mr. Cave-Browne.*) I am Accountant-General in the India Office. I was appointed Accountant-General in 1893, but I have had charge of the home accounts since January 1872.

2358. Were you then for the first time appointed to the India Office?—No; I was in the service of the East India Company, and I have been in the Accountant-General's Department since 1860.

2359. Sir Henry Waterfield, we propose to take to-day the question of the financial machinery of the Home Government. Would you describe to us the services on account of which payment is made at the India Office?—(*Sir Henry Waterfield.*) The following are the services charged in the accounts as expenditure against the revenue of the year:—

Interest and management of debt, and payment of annuities in respect of purchased railways, and of interest to existing railway companies.

2360. May I ask, are you following the heads of the accounts?—They are heads given in the accounts, but I am following the order which is given in the statement in the Explanatory Memorandum, which, I think, will be rather more convenient. The next head is—

Payments on account of the civil administration of India, such as passage and outfit of officers, allowances and examination expenses of candidates for appointments in India, &c.
Postal subsidy.
Telegraph charges.
Civil Engineering College, and other expenses connected with the supply of officers for the Public Works Department.
Payments to the Admiralty for the Indian squadron, Indian defence vessels, &c.
Maintenance of lunatics sent to England, for whom the Secretary of State is responsible.
Charges for the Persian Mission and diplomatic and consular establishments in China, pensions to the families of Maharajah Duleep Singh, and of the Nawab Nazim of Bengal, &c.
Charges for the India Office, including the Store Department, and for the Auditor's office.
Payments to the War Office on account of the home charges of British troops serving or having served in India.
Payments for the troop service and transport of troops to and from India, &c.
Payments for stores of all kinds for India.
Furlough pay to officers on leave from India.
Pensions of retired officers.

Besides these, there are the following payments not charged as expenditure on the revenue of the year:—

Capital outlay on railways and irrigation works.
Discharge of debt.
Payments to railway companies from capital subscribed, and some minor payments from deposits, &c.
Payments to Her Majesty's Imperial Government on account of sums received in India.
Payments for stores chargeable in India to certain railways, and for stores and other services chargeable to local funds and Native States.
Family and miscellaneous remittances.
Payment of bills drawn by the Persian Mission in respect of advances made on Indian account; and a few miscellaneous payments to be brought to charge or recovered in India.

2361. In the Explanatory Memorandum of the Secretary of State for India on the East India accounts and payments, the account given of the home charges on page 14 is generally divided into heads corresponding to those which you have just described to us?—That is so.

2362. And we see in that account the actual expenditure, under each head of the account, for 1893-94, the revised estimate for 1894-95, and the Budget for 1895-96, showing a total of Rx. 28,855,900 as the budget estimate for 1895-96?—Yes, that figure is Rx., including exchange; it is 15,739,600*l.*, and the exchange Rx. 13,116,300. The burden of the home charges, in the budget estimate for 1895-96, is Rx. 28,855,900.

2363. You are obliged to state the question in that way, I suppose, because India pays in rupees, and where the costs are paid over here, the payment is made in sterling?—The payments are made in sterling, and the cost to the Government of India is in Rx. The burden which the Government of India have to bear includes the exchange.

2364. Is that Rx. 13,116,300 the total sum that the Indian Government has to provide in rupees for exchange?—It is the exchange on the sterling expenditure brought to charge against revenue.

2365. Yes, the exchange; not the actual extra charge of the exchange, but the actual sum drawn which Indian revenues must provide?—I think I must explain that there are two sums, either of which may be called the exchange. In order that the Government of India may pay in the year 1895-96, according to the Budget estimate, 15,739,600*l.* sterling, they will have, taking the rate which was fixed in the Budget as probable, to pay from their treasuries in India Rx. 28,855,900; but the actual burden of exchange which will be borne will depend upon the amount of bills sold during the year, which may not exactly correspond, and probably will not exactly correspond, with the sterling expenditure.

2366. I think I follow you so far, but I see that the Rx. 28,855,900 equivalent of sterling payment consists of the sterling payments with the exchange in Rx. added?—That is quite right.

2367. And is not that the addition of two sums stated in different coinages?—Entirely so.

2368. Therefore the Rx. 28,855,900 is a composite total?—Yes. (*Mr. Cave-Browne.*) No; it is strictly

rupees. This is simply a mode of showing that the sterling will cost a certain number of rupees.

2369. May I put it in this way: It is estimated that that 15,739,600*l.* sterling will be paid in London?—Yes.

2370. To meet that charge in India Rx. 28,855,900 will be required?—(*Sir Henry Waterfield.*) That is so.

2371. (*Mr. Buchanan.*) And that Rx. 13 116,300, which you put down to exchange, really is not a sum in the accounts. That is merely because you conventionally assume that the 1*l.* sterling is worth 10 rupees; you then say that is the extra sum which was due to the fall in exchange? — You are quite right; it is not really Rx., but we have no clearer way of expressing it in the accounts. It is really the amount which must be added to the sterling figure in order to obtain the Rx. which will be equivalent to that sterling figure.

2372. Is it of any value in the accounts to keep up the representation of a figure of that sort and a column of that sort?—It is the only way that you can express against each head of the charge what really has been the cost to India of that head of charge. In former days, going back before the year 1884, the accounts showed the charge for exchange under one figure at the end. It was entered as a charge for exchange, so much; but it was found more convenient that it should be known what really was the cost of the Army charges in England, or of the railway charges, or of the interest on debt, and the plan was devised of allocating to each head the figure which, added to the sterling, would represent the number of Rx. that that head of charge cost.

2373. But still it is based upon the old conventional idea that 1*l.* sterling is worth Rx.?—Oh, no; I do not think that. If you look at that column, you will see that against every head of charge there is the sterling amount. Then there is appended in the next column the amount which must be added to the sterling figure in order to obtain the Rx. which the Government of India has to pay against that head, and then you will get the total which is the real rupee charge that the Government of India has to bear for that head.

2374. (*Chairman.*) I think I understand it in this way, the charge in sterling is an actual fact?—That is so.

2375. As I understand, the endeavour of the Financial Department of the India Office is to present to the Secretary of State and to Parliament a record of actual facts. The first column shows actual facts, so much sterling is paid out?—Yes.

2376. But in order to obtain that sterling, the equivalent of which has to be derived from Indian revenues collected in rupees, you state the sum necessary to make up that sterling charge in rupees. That turns out to be Rx. 28,855,900. The difference between the sterling and the Rx. 28,855,900 represents the sum in rupees that the operations of exchange require?—That is quite right. I may add that the Home accounts laid before Parliament are entirely a sterling statement, and do not include exchange. It is only in this explanatory memorandum or the accounts of the Government of India that the rupee charge is brought in.

2377. Is not that second column, namely exchange, rather founded on the idea that Mr. Buchanan has just put forward, that 15,739,000 should represent the rupee at 2*s.*?—No; it is the sterling payment. I do not think I can admit that it is the figure entered as the rupee charge at 2*s.* a rupee; it is the sterling payment.

2378. Quite so. But when you have to add to that the Rx. 13,116,000, making up the Rx. 28,855,900, it is an endeavour to show what the cost of the exchange is?—Yes.

2379. And that cost of the exchange is based upon the idea that the normal value of the rupee is 2*s*?—No; I am quite prepared to admit that it is the same thing as if you entered the sterling in Rx. at 2*s.* the rupee, but at the same time I do not say that it is based on that. It is the difference, as your Lordship expressed it very clearly, between the sterling amount and the rupee amount, which has to be stated in Rx., in order to arrive at the cost of exchange.

2380. I think we are very near agreement upon it. I should have thought the statement would have been sufficiently complete if it had simply put the amount of sterling paid (column 1), 15,739,600*l.*, equivalent of the sterling payments in rupees (column 3), Rx. 28,855,900. You know what I may call your client's requirements better than I do, but it strikes me that the second column, Rx. 13,116,300, is a little bit of surplusage in the account?—No doubt we could leave it to members of Parliament to make the subtraction for themselves, but they would not see what was the exchange charge for any particular item, such as the railway revenue account, unless it was put down in that column.

2381. (*Mr. Buchanan.*) But is it really conveying any valuable information to members of Parliament or anybody else—is it really representing the cost of exchange to the Government of India, because it is merely subtracting? I take an item at random, and it is just such as the Chairman has said; this exchange column is merely a subtraction sum?—That is so, but it is the fact that if on railway revenue account you have to pay in England a sterling sum of 5,746,200*l.*, you will also have to add a charge for exchange of Rx. 4,788,500, in order to know what your real charge will be.

2382. But is that so? I mean, is not that playing with words? Is not the real fact this, that for this sterling charge the Government of India has got to pay so many millions of rupees, varying from year to year? Is there any value in putting down a separate column in your accounts in which you put down a series of figures which are obtained simply by subtracting the total sum from a conventional exchange of 10 rupees in the 1*l.*?—I am not prepared to say it is of any real value; it is found convenient, and it has rather arisen out of inquiries which have constantly been made, where it has been represented that the charge is only so much sterling. It has been pointed out that the real charge for the Government of India is so many Rx., because you must add that amount of exchange.

2383. (*Sir Andrew Scoble.*) Does not the exchange column just show this—the extra number of rupees that you have to pay for your sovereigns, because the rupee is no longer worth 2*s.*?—Exactly so.

2384. (*Chairman.*) And that brings us back to what I think does lurk in the minds of people both here and in India, that by a sort of what I may call a supernatural arrangement, the rupee ought to be 2*s.*, and if it is not, a special arrangement will have to be secured which will bring it up to 2*s.*?—It is undoubtedly the outcome of an arrangement made for convenience.

2385. (*Mr. Buchanan.*) The only other thing I was going to ask was this. Does it not give rather an unfair presentation to the public of the amount of loss caused to the Government of India by exchange? You can hardly fairly say that the whole of that extra sum is due to the fall in exchange, because the rupee, I suppose practically, has never been worth 2*s.*?—I should not admit that. The rupee was for many years worth about 2*s.*

2386. (*Chairman.*) I think of old times we used to reckon the rupee—except for a few years when silver was over 60*d.* an ounce—at about 1*s.* 1*d.*, was it not? and you took 2*s.* really as a convenient and rough method of reckoning the rupee in sterling?—No, it really was worth more nearly 2*s.* than any other rate. For some years it was over 1*s.* 1$\frac{1}{2}$*d.*, and it was decided that for convenience the account should be shown at 2*s.* the rupee; but, after it had fallen seriously below that rate, an alteration was made.

2387. You must be going back beyond all our memories. Some of our memories go to the time when silver bore a very high price, in the late fifties; but if we went to the beginnings of the fifties and to the forties, we should have found that it was 1*s.* 1*d.*?—You are quite right, but, after the Mutiny, it was for some years considerably over 1*s.* 1*d.*

2388 What Mr. Buchanan says would strike many people; viz., that the 2*s.* is a conventional rate?—It is.

2389. And that being so, at all events a question might arise as to whether it is quite fair to reckon the whole of the difference between sterling converted at this conventional rate of 2*s.* and the sum of rupees actually required, as loss by exchange?—Yes; but I must say we are very careful not to call it "loss by exchange" for that very reason. It is the exchange.

2390. Are the whole of the money payments mentioned in this account made through the India Office?—Yes.

2391. On what authority are payments made?—On the authority of the Secretary of State in Council given in some form or other.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. E. R. Cave-Browne, C.S.I.

13 Nov. 1895.

2392. Either by standing order, as, I suppose, in the case of an establishment, or by special order in the case of a special payment?—Yes.

2393. In what form, and by whom, is the approval of the Secretary of State in Council signified?—By a minute or draft letter or despatch marked by the Clerk of the Council as having received such approval.

2394. Can you describe the process by which that approval is obtained? I mean by that, in what form do applications or demands for payments come before the India Office, and in what form do they pass on to the Council in order to receive that approval?—On the receipt of a letter in the Registry Department, it is sent to the Department which in the ordinary course would deal with it. Usually a minute or draft letter is prepared in the Department and submitted by the head of the Department to the Under Secretary of State, who sends it to the Secretary of State indicating the Committee or Committees to which the paper should be referred. (I perhaps should say that before that step is taken, it is usual for the Secretary of the Department to refer the paper for observations to any other department that seems likely to be interested in the subject.) If the Secretary of State sees no *primâ facie* objection to the proposal, he refers it to the Committee; after approval or alteration by whom, it goes back to the Under Secretary and the Secretary of State, and is then laid before Council for discussion at the next meeting. In the less important matters involving small expenditure, some of these stages are omitted; and the approval is signified by the Clerk of the Council after the paper has been laid on the table for a week without comment.

2395. Then, in fact, claims for payment, we will say, go twice before the Secretary of State?—If they are claims for payment in ordinary course, they would very likely be sent by the Under Secretary direct to the Council to lie there for a week, without troubling the Secretary of State in the matter; but if it is a point that requires special decision, it would go twice before the Secretary of State, before and after reference to the Committee charged with it.

2396. Would you describe to us the branches into which the India Office is divided?—The Correspondence Department includes six departments: the Finance, Military, Judicial and Public, Revenue and Statistics, Public Works, including Railways, and the Political or Foreign, which includes the Secret Department.

2397. The Public Department, I presume, includes charges for civil administration?—It includes administrative charges of a miscellaneous character which do not come under one of the other branches distinctly; but proposals for increase of expenditure generally come from India in the Finance Department, and the question whether they are dealt with in the Finance Department or in one of the other departments depends very much on the character of the reference. If it is a mere question of a slight increase, it would probably be dealt with in the Financial Department, after reference to the Judicial, or the Public Works, or whatever department was concerned. If it was a reorganisation of a whole system, it would be transferred at once to that Department.

2398. But in order to understand clearly the division of business, let me take such a question as an education question, which, as I think you explained to us before, in India falls under the Government of India in the Home Department?—Yes.

2399. What branch would deal with that? — The Judicial and Public Department.

2400. Then I suppose that the department of the India Office which is charged with the Home financial business, and with the keeping of Home accounts, is the Finance Department?—That is so. The business is divided between the Financial and the Accountant-General's Department. The Accountant-General's Department deals with the compilation of the estimates and accounts, the management of the cash balance, the computation and issue of furlough pay and pensions, the examination of all claims, and the payment of all sums in this country on account of India.

2401. Then the Accountant-General's branch is not included under that general head, the Correspondence Department?—No, it is an independent department.

2402. And it is a branch independent of the financial branch?—Yes.

2403. Is any other branch besides the Accountant-General's branch outside that division which you have described to us? — The Director-General of Stores' Department. There are other departments, but not dealing with correspondence. There are the Registrar and Superintendent of Records—correspondence about records would be in his department—and the Funds Department; and then there are the Legal Adviser, and various miscellaneous officers; but I have mentioned the chief departments.

2404. They are a part of administrative machinery which, of course, is always attached to a great office, but which does not fall into the main divisions of business?—Quite so.

2405. Is there a Committee of Council on Finance, under whom the Financial Secretary is the chief officer?—Yes.

2406. Does that Committee of Finance meet on specified days? — Yes, always once a week, and occasionally a special meeting of the Committee is summoned.

2407. And does all financial business pass through it to the Council? — Through that Committee of Council, if referred to it by the Secretary of State; in ordinary course it would always be so referred.

2408. What is the strength of the department of the Financial Secretary?—One secretary, receiving 1,200*l.*, with, at present, a personal allowance of 200*l.*; one assistant, 800*l.* to 1,000*l.*; one senior clerk, 600*l.* to 800*l.*; one redundant senior clerk, 500*l.* to 700*l.*; one junior clerk, 200*l.* to 600*l.*; one clerk for examination of Army non-effective accounts, 400*l.*; seven second-class clerks, 70*l.* to 350*l.*, making 13 in all.

2409. You mentioned one clerk for examination of accounts. From what you said before, I would rather have anticipated that the examination of accounts would lie with the Accountant General?—It is a very special arrangement; it is the Army non-effective accounts, and the examination is not such as is ordinarily conducted in the Accounts Department. It involves a great deal of reference to orders connected with the retirement of officers.

2410. It is a convenient arrangement?—It is a convenient arrangement that it should be in my department.

2411. Does that give the whole of the clerical staff?—The whole of the staff which is under the Financial Secretary. The copying of the despatches, and so on, is done in the Registry Department.

2412. You have in the India Office, have you not, a division of establishment which corresponds to the Upper Division and the Second Division of the Civil Service?—Yes.

2413. Is your department manned to any extent by the Second Division?—Seven out of the 13 are second-class clerks.

2414. And there is one officer who is redundant, when he retires will the strength of the Upper Division be reduced by that?—It will be so. He will probably be replaced by a second-class clerk; at any rate by one of lower standing than he is himself.

2415. Then I conclude, from what you have stated before, that the Accountant General's branch is entirely independent of the Financial Secretary's branch; will you give us the strength of that department?—The Accountant General's Department comprises—

1 Accountant General, 1,200*l.*
1 Deputy Accountant General, 800*l.* to 1,000*l.*
5 Senior Clerks, 500*l.* to 800*l.*
8 Junior Clerks, 150*l.* to 450*l.*
31 Second Class Clerks, 70*l.* to 350*l.*
1 Keeper of the Records, 120*l.* to 150*l.*

making 47 in all.

2416. You have alluded to the duties of the Accountant General, but perhaps Mr. Cave Browne will give us somewhat more at length what the duties of his department are?—(*Mr. Cave-Browne.*) I have entire charge of the Secretary of State's cash balance, a portion of which, under a system that we inherited from the East India Company, is temporarily invested; I have to watch from time to time the payments required to be made, and the amounts that can be spared, which the stockbroker lends out temporarily. All the home accounts and the estimates are prepared in my department. One branch of my department is confined to the payment of furlough pay, pensions,

and salaries, and all such allowances as are paid either under regulations or under special sanctions by the Secretary of State. All claims for stores are submitted to me for examination, having been previously certified as to the delivery of the stores. I have to satisfy myself that all claims are in order before they are passed for payment. Then there are payments to various railway companies; in fact, all the payments that appear in the Home Accounts are made by me and superintended and examined in my department.

2417. In fact, those payments which you have described—furlough and the like, non-effective—added to the railway payments and the debt payments would make up between eleven and twelve millions out of the fifteen and three-quarter millions which you pay?—I pay the whole.

2418. Yes, quite so, but I am alluding to those items?—The interest on the debt?

2419. I am taking out those items which really are the main and the principal items of the payments that you make?—Yes.

2420. The furlough and non-effective payments are very large?—Yes. There are the payments to the Imperial Government for the effective and non-effective Army charges. Those are all paid through my department, as well as those on account of the troop service.

2421. I think that anybody who is cognisant with that kind of payment is aware that non-effective payments are usually very heavy in their details?—Oh, yes.

2422. And that was in my mind when you were giving the strength of the Department; it is a large department?—Yes.

2423. It becomes quite intelligible when one sees what a very large amount of that kind of payment, such as non-effective payments, is concerned?—Yes.

2424. That concludes your description?—Yes. Of course there is all the account keeping.

2425. You say that the cash balance is in your charge. I will now ask you a question as to investments. Are the amount you can invest, and the method of investment a matter of consultation between yourself and the Financial Secretary and through him with the Committee of Council?—No; that is all done, under the approval of the Secretary of State in Council, of course; but each transaction I decide myself.

2426. There are general regulations under which you exercise a discretion?—Exactly so; what descriptions of security should be taken is settled; but each day I am in constant communication with the stock-broker, and tell him what he can lend and when I shall require loans to be repaid, and so on. (*Sir Henry Waterfield.*) I may, perhaps, add that a weekly report is made to the Finance Committee of the transactions, and we are in personal communication with the chairman of the Committee from time to time; but it is left in the Accountant General's hands to deal at the moment with any application that comes up, unless it is of a very exceptional character.

2427. I see that in the last Home accounts the revenue which you realised under that heading appears to be about 10,000*l.* a year?—That is an unusually small amount.

2428. The very first item?—Yes. The cash balance was low, owing to the sale of bills being restricted, and I think also that the rate of interest obtainable was very low in that year.

2429.—I am afraid it is lower this year?—It is so.

2430. On the other hand, do you often have to borrow to keep up the cash balance?—(*Mr. Cave Browne.*) Oh, no.

2431. Not here?—Occasionally we borrow from the Bank of England; but, as a rule, we accumulate a balance sufficient to meet the approaching disbursements.

2432. Here you follow the same principle as is adopted by the Indian Government, viz., that you work upon a balance sufficient to meet the demands upon you?—Yes, just so; as a rule.

2433. Is that a matter that has been considered at the India Office, whether the maintenance of a large balance is better than the maintenance of a moderate balance with occasional borrowings?—(*Sir Henry Waterfield.*) We have occasionally been obliged to obtain assistance from the Bank of England, but it is not a satisfactory plan for the Secretary of State to be in the hands of the Bank; he has not the same position which the British Government have with regard to the Bank, and he might have to pay somewhat heavier charges than the Treasury would under similar circumstances. (*Mr. Cave-Browne.*) Besides, we always have to bear in mind the uncertainty that attends the sale of bills; we have to sell our bills when we can, and, therefore, it is desirable that we should not be in arrear of our requirements,

2434. I suppose your debt payments fall due at the beginning of the quarter, do they not?—Yes.

2435. Would you not find it convenient to borrow any sum that was required beyond a moderate balance in order to meet those payments, with an arrangement that you would pay off that debt from day to day as your revenue comes in?—(*Sir Henry Waterfield.*) I think that, for the reason Mr. Cave Browne gave, it would be a very undesirable plan. We might find, if we did not sell the bills when there was a market demand, that we had borrowed from the Bank, and were unable to repay them.

2436. And your revenue here does not come in in the same form as the Imperial Revenue does, day by day and week by week, by taxes; you derive it by the sale of bills?—By the sale of bills.

2437. Your other revenue, I suppose, is very small?—A mere nothing

2438. I am asking these questions really with the view of understanding whether the question has been maturely considered, and whether it is a definite judgment founded upon your peculiar circumstances?—Yes, it is the decision of the Secretary of State in Council, come to from time to time when the subject has been considered.

2439. You have a special arrangement, have you not, under which you invest your balance temporarily?—It is usual to keep a balance of half a million always at the Bank of England, but it may be necessary to keep a much larger one; for instance, as you were saying, at the beginning of the quarter, when the dividends are due, we might for a day or two have a balance of 2,000,000*l.*

2440. But you have a special arrangement, have you not, under which you lend surplus balances?—(*Mr. Cave-Browne.*) Yes.

2441. It is not necessary for you to invest in Treasury Bills unless you please?—We lend upon the security of Treasury Bills, but the question has been considered, more than once, whether we should purchase Treasury Bills, and it has been determined that it was not suitable for us to do so.

2442. I thought you had an arrangement under which you lent through brokers, or through the Bank of England dealing with bill brokers, for short periods and with power to recall in short periods, the surplus balance you hold?—That is so; through a broker.

2443. Then I suppose the Committee of Finance, assisted by the Financial Secretary, constitute the financial advisers to the Secretary of State?—(*Sir Henry Waterfield.*) Yes, with the assistance of the Accountant General.

2444. Your mentioning the fact that all claims for expenditure go before the Secretary of State implies that all measures or proposals increasing or tending to increase the public expenditure go before him, and obtain his sanction?—Yes; the extent to which the Secretary of State personally looks into such papers depends very much upon himself. In certain cases the Secretary of State has desired not to be troubled with small matters. Other Secretaries of State have insisted upon every paper that was going to Council being submitted to them beforehand.

2445. That, of course, is the method in which the Secretary of State chooses to do business?—Quite so.

2446. The tradition of the office is that every measure involving expenditure must go before the Secretary of State, and therefore he must see every proposal involving increase of expenditure?—That is so; no paper can in theory go to the Council without first passing through the hands of the Secretary of State, who may delegate to the Under-Secretary the power to pass him by if he pleases.

2447. Does the Finance Department of the India Office, besides controlling and directing the expenditure at home, exercise any supervision on behalf of, or for the

Sir H. Waterfield, K.C.S.I., C.B., and Mr. E. R. Cave-Browne, C.S.I.

13 Nov. 1895.

Secretary of State, over expenditure in India?—Speaking generally, proposals for expenditure in India, which require the sanction of the Secretary of State in Council, must come to the Financial Department. There are, however, exceptions; the supply of stores, for instance, is supervised by the Director-General of Stores and the Stores Committee, not by the Financial Department.

2448. But we may look upon the Finance Department as the department that criticises for the Secretary of State proposals from the Indian Government involving increase of expenditure?—Yes.

2449. In what form and by whom are the Budget returns, the returns of income and expenditure, and financial returns of that character received from India, examined and criticised at the India Office?—The financial statement, with the accompanying returns, is forwarded by the Government of India, with an explanatory despatch, which is examined carefully in the Financial Department.

2450. And I suppose the same course obtains with other financial information which the Government of India send?—Certainly.

2451. Is that course followed with regard to the Comptroller and Auditor General's Appropriation Account?—Yes, it is. The Comptroller and Auditor General's Report is forwarded by the Government of India, and a copy of the accounts is at the same time sent; and a despatch is always written for the Secretary of State's approval, carefully reviewing any increase of expenditure that has appeared in the accounts as compared with either the previous year or the estimates for the year.

2452. And that implies that any remarks that the Comptroller and Auditor-General makes in his report which accompanies his audited account, receive the attention of the Finance Department, and through the Finance Department would be brought before the Secretary of State?—Certainly.

2453. And any despatch conveying the opinion or decision of the Secretary of State upon those points would be drafted in the Finance Department, I suppose?—It would.

2454. What is the form of communication to the Finance Committee, and through the Finance Committee to the Council. Do the remarks of the Financial Department take the shape of reports to the Finance Committee and to the Council, or minutes upon the papers?—In the case of the review of the Budget, a despatch is drafted in which the main points are summarised and criticisms passed on any matters that appear to call for comment. This is laid before the authorities in the manner that I have described, and closely considered in the Finance Committee. If it were a matter of more exceptional moment, a minute would probably be laid before the Secretary of State and the Committee, before the draft of a despatch was prepared.

2455. Are currency despatches and questions of that character examined and reports upon them prepared for the Secretary of State in Council, and draft replies drawn up in the Finance Department?—Yes.

2456. That, I suppose, of late years has been a very heavy and a very important part of the business of the Finance Department?—There have been some very important despatches on the subject.

2457. (*Mr. Buchanan.*) Do you mean that when a proposal from the Government of India which involves increase of expenditure comes, it comes first to the Financial Department here, and then the Finance Department proceed to draft a despatch in reply to the Government of India, which you then send on?—Yes, it is a matter for my discretion whether I shall draft a despatch without instructions. I may perhaps verbally ask the Under Secretary of State, or the Secretary of State himself, what he would wish done; but the more common course is for me to put my own opinions forward in the shape of a minute arguing the subject, and very possibly a despatch is drafted in the sense that I would suggest.

2458. What is the next stage? Where does it go after you have prepared this despatch?—It goes from the Finance Department to the Under Secretary of State, from him to the Secretary of State, and from him to the Committee.

2459. And from the Committee to the Council?—Perhaps, as is frequently the case, more than one Committee would deal with the subject.

2460. And then does it eventually go before the Council?—Then it goes back to the Under Secretary of State, who, if necessary, will send it again to the Secretary of State; or he may, if the Secretary of State has delegated to him the authority, send it straight to the Council; but in theory, and frequently in practice, it is seen by the Secretary of State both before it goes to the Committee which deals with it, and again before it goes to the Council.

2461. (*Sir Ralph Knox.*) Would that be the course in the case of increased military expenditure?—Certainly it would. The only difference from what I have described is that, if it were a question dealing rather with the army organisation, it very probably might be drafted in the Military Department after reference to the Financial Department, and put before the Secretary of State by the Military Secretary. Then it would go to the Military Committee, and from that to the Finance Committee, then again to the Under Secretary of State and Secretary of State, and finally to the Council.

2462. (*Sir James Peile.*) And the Department's draft may be amended by the Committee, may it not?—It may be amended by the Committees, and frequently is. If it was at all an important subject, probably the Committees would make material amendments.

2463. And it comes before the Council as amended by the Committee?—And quite possibly again to the Secretary of State.

2464. The Departments' draft is merely proposed for adoption?—That is so.

2465. (*Chairman.*) The Council meets once a week?—Yes, always; occasionally it is summoned specially.

2466. And in case a reference is necessary from the India Office to an Imperial Department, say the War Office, at what stage is that made? We will take a case where a reference is made for the opinion of the War Office on a question submitted by India. At what stage of the proceedings would that be made?—If the matter was one rather of departmental inquiry, the Military Secretary might send it on to the War Office at once, acting for the Under Secretary of State in that case. But, if it was a matter that involved an important alteration, the draft letter to the War Office would go before the Secretary of State and the Committee and Council in the way I have described.

2467. In fact, you have what is a very well-known distinction in the public service, namely, that a simple reference to a department, asking, "What is your opinion?" is constantly sent on on the authority of what I may call a subordinate officer?—Of the Secretary of the Department.

2468. Of the head of a department; but, if it involves an expression of opinion by the department making the reference, then it goes through the ordinary process?—It does so.

2469. By what department of the India Office would questions affecting revenue and taxation be examined or reported upon?—Correspondence regarding taxation is usually conducted in the Revenue Department, but the question of imposing or remitting taxation would very probably be first considered in the Financial Department.

2470. Therefore take such a case as that of the imposition of the cotton duties, that would be considered by both departments, would it?—Yes. The recent imposition of those duties formed part of the proposals for the Budget, and was considered in the Financial Department, but the precise method of taxation to be adopted was determined in correspondence in the Revenue Department. In practice the secretaries of the two departments would almost always be consulted by the Secretary of State. I do not know whether I have made my meaning quite clear. The question whether taxation involving a million and a half of money was necessary, formed part of the Budget proposals, and had to be considered in the Finance Department. The question whether, if taxation were to be imposed on cotton goods, it should be on all counts above twenties or twenty-fours, was a matter of detail for the Revenue Department, although a very important detail.

2471. Quite so; but would the opinion of the Finance Department be taken on the question of a form of taxation, such as whether the imposition of the cotton duties is a desirable form of taxation?—Yes, that was taken in the Finance Department.

2472. And in discussions, before the Budget came on, in which the Indian Government alluded to or suggested change of taxation, would that be considered in the first instance by the Revenue Department, and in conference with the Finance Department?—It would depend very much upon what the proposal was. The proposal that some taxation should be put on, and that that taxation should involve a certain amount of money, would certainly be taken in the Finance Department; but if it was a proposal for some definite charge, such, for instance, as the taxation of cotton goods, it would be considered in both departments. I am not quite certain which would take it first, but the Secretary of State would consult the two departments and put it before the two committees.

2473. The point I want to come to is whether the Finance Department would not only express an opinion that taxation was necessary, which is, naturally, part of its duties in connection with the Budget, but would also have an opportunity of expressing an opinion as to the form that that taxation should take?—Yes, as a matter of fact, the case to which you are referring was, to a great extent, conducted in confidential correspondence between Sir James Westland and myself.

2474. I understand from what you have said that important proposals on the subject of taxation and of currency, would go to the Secretary of State in the ordinary course before they went to the Council?—Oh, certainly.

2475. They would pass from you to the Under Secretary, from the Under Secretary to the Secretary of State, and from the Secretary of State to the Committee of Council?—Yes, I have no power to send any paper to the Council; I can only send it to the Under Secretary and the Secretary of State.

2476. Therefore, not only is the Secretary of State made aware of what the circumstances of the Indian Government are, and of what the intentions or suggestions of the Viceroy in Council are, by his own private correspondence with the Viceroy, but every important paper he sees at a very early stage, and practically before it has had more than the consideration of the Department charged with that branch of business?—Yes.

2477-8. Reverting now to the home expenditure, I should like to run through the headings with you, in order to give you an opportunity of giving some explanations on any heads on which you think we ought to have some further explanation. First of all, are there any general regulations under which payments are made here? In describing the Indian expenditure, you have shown us that almost every class of expenditure in India is regulated by code. I want to know whether that system is extended to the India Office, and whether the method and system of payment is regulated by code?—No, we have no code of orders in the India Office. Copies of minutes bearing on payments are kept in the Finance and in the Accounts Departments, and action is taken in accordance with them.

2479. I think it may be convenient, in running through these heads of account, to follow the statement which you gave us early in your evidence in preference to taking the Home Accounts; but, perhaps, wherever necessary, you will refer to the Home Accounts, so that we may see where the items are given in greater detail. And, first of all, you mentioned the interest and management of debt, payment of annuities, interest on purchased railways and interest to existing railway companies; would you tell us under what regulations those are paid? For instance, the quarterly or half-yearly charge for debt?—Every loan is effected on terms and conditions authorised by the Secretary of State in Council, and these include the payment of interest at the rate or rates and dates prescribed. The claim of the Bank of England or of the Bank of Ireland, or of the railway company, as the case may be, for the payment of interest, is closely examined in respect of the amount of principal on which interest is claimed, the rate of interest, the period for which it is payable, and the calculation involved.

2480. And where the claim is found to be entirely in accordance with the authorities given by the Secretary of State, does the Accountant General then pay without reference to a higher authority?—Yes.

2481. And the same course, of course, is pursued in the case of management of debt?—Yes.

2482. You then pass on to the payments on account of the civil administration in India, such as passage and outfit of officers, allowances and examination expenses of candidates for appointments in India. And, first of all, before you enter upon that subject, would you give us some information upon the following point: I think I am right in saying that the establishment of the Secretary of State in England is regulated by Order in Council, is it not?—Yes.

2483. Has the Secretary of State any power temporarily to add to that establishment, or must an amending Order in Council be obtained in order to make payments to new officers or additional payments to officers legal?—He cannot add to the establishment; he can make temporary appointments, but he cannot add to the establishment without an Order in Council, though, after the Secretary of State in Council's sanction has been given, some little time may elapse before the Queen's approval in Council can be obtained.

2484. The basis of all financial business is want of confidence; and we will suppose that the Secretary of State increases his establishment and does not care to get an Order in Council; should you consider it the duty of the auditor to report after a time that this expenditure was going on without being embodied in an Order in Council?—Certainly he would report it to Parliament, or, more accurately, he would report it to the Secretary of State, and his report would go to Parliament.

2485. Is there any other class of payment which the Secretary of State makes which is regulated by Order in Council?—I think not.

2486. For instance, I see that the contingencies of the office are very large. The Secretary of State has complete authority with regard to that?—Yes.

2487. And those payments on account of civil administration, passage and outfit of officers, allowances, examinations, scientific inquiries—every charge of that kind is completely at the discretion of the Secretary of State?—In a few cases it is regulated by Act of Parliament, but I do not think there are any cases governed by an Order in Council.

2488. Orders in Council are confined to the establishment?—Yes, I believe so.

2489. And outside that the Secretary of State has full power?—Yes.

2490. What is the course followed with regard to proposals for increase of expenditure in England itself? How do applications for an increase of expenditure, or for the incurring of a new class of expenditure arise, and how are those applications or proposals considered?—They originate from the necessity arising for some service which has not been foreseen, and for which there is, consequently, no authority under regulation. The case is submitted in a minute to the Secretary of State in Council, who authorises the expenditure. The claims, when preferred, are examined, like others, to see that they have been duly sanctioned.

2490*a*. Such a proposal or application would originate in the department of the India Office charged with the business to which the new expenditure applies?—Yes, in almost every case it would arise on some letter addressed to the office.

2491. And, in that case, does the proposal pass from the Department directly to the Secretary of State, or would it go through the Finance Department first?—The rule is, that any letter or despatch which involves expenditure shall be referred to the Finance Department for observations, before going to the Secretary of State, but I do not think that that is quite invariably carried out. But, after being seen by the Secretary of State, it would, if it involved expenditure, go to the Finance Committee, and in that way the Finance Department would become cognizant of it.

2492. But of course there would very often be cases in which a proposal to incur a new service, to appoint a new officer, to incur a new class of expenditure, originates within the Department itself; in which case, I suppose, it would originate in a minute of the head of the Department. In that case, would that minute come direct to the Secretary of State, or would it pass through the Finance Department before going there?—If it was an addition to the establishment, it would be dealt with by the Under Secretary, who would refer it to the Secretary of State, and then it would come to

Sir H. Waterfield, K.C.S.I., C.B., and Mr. E. R. Cave-Browne, C.S.I.

13 Nov. 1895.

the Finance Committee; but the Finance Department would not necessarily have seen it in the first instance. But if it arose—and unless it was a question of addition to the establishment, it almost certainly would arise—from some letter addressed from outside, whether from the Government of India, or some other department or individual in England, it probably first would be referred to the Finance Department for consideration.

2493. (*Mr. Buchanan.*) And then go though all the stages which you have previously described?—The stages which I have described are those which are formally laid down, and which are adopted in all important matters; but as I said, it depends very much on the Secretary of State personally to what extent he is troubled with details.

2494. When a new charge is put on the revenues of India, which is originated at home, at what stage is the Government of India first consulted?—It is a very rare thing for a new charge to be put on the revenues of India originating at home. Such a thing might, however, happen, and in that case the Government of India would most likely be consulted by a despatch before it had been adopted. But in a case of urgency, the charge would be borne here, and the Government of India would be informed, if it was a matter which concerned them. Such questions as the Chairman was putting to me, relating to the increase of establishment in this Office, would not be communicated to the Government of India.

2495. No; but the more important ones. We know that certain charges have been put on the revenues of India originating at home?—Could you give me an illustration of what you have in your mind?

2496. Well, I was thinking of what was alluded to yesterday, about the aid to the Mauritius and Zanzibar cable?—The Mauritius and Zanzibar cable was laid at the request of the Government of India; the proposal originated in India.

2497. (*Chairman.*) Perhaps, if we turn to the Home Accounts, we could pick out some instances of what Mr. Buchanan means. I take this, page 3: "Payments "under postal arrangements to the Lords of Her "Majesty's Treasury, 61,475*l.*;" would not that be an arrangement made between the India Office and the Post Office?—Yes; but not without consulting the Government of India.

2498. But it would originate here, would it not?—When the time came for the revision of the contract with the Peninsular and Oriental Company, the Treasury, or the General Post Office through the Treasury, communicate their views to the Secretary of State, who informs the Government of India, and calls for any observations which they have to make on the arrangements that are proposed. The actual division of cost might be settled here between the departments without the Government of India having been previously informed, because it depends very much on the final arrangements made between the Treasury and the Company at the last moment. But the Government of India would have been consulted beforehand, and would be informed of the result afterwards.

2499. I can understand that in that case a reference would be made to the Government of India. But supposing, to take purely Home Accounts, the Government here were to think fit to have a special train to bring up the Indian mails, involving, perhaps, several thousand pounds a year—I suppose the Government here would settle that without reference to the Government of India?—The question of transit of the mails across the Continent was not settled without reference to the Government of India.

2500. It was part of the postal service?—Yes.

2501. But still, there might be cases such as I have described, in which the Secretary of State would settle without reference to India?—It is possible; particularly if it was a very small amount. But care is, as a rule, taken that a charge shall not be put on the revenues of India without acquainting the Government of India with it, and, if possible, obtaining their opinion beforehand.

2502. Take a very ancient charge, the Sub-marine Indian Telegraph. If I remember aright, in the very infancy of sub-marine telegraphy, and immediately after the Mutiny, it was thought necessary to adopt the very earliest means of establishing telegraphic communication with India. It was so early in the day of telegraphs that the cable immediately broke down. The charge which had been incurred, which was a guarantee, I think, was turned into an annuity for 50 years, and eventually formed part of the debt of India to England, being divided between the two countries. I suppose any cases of that kind, converting a liability into an annuity of 50 years, would be made in concert with the Government of India?—It was made by Parliament, and I am not prepared to say that Parliament does not impose charges on India, sometimes, without the Government of India being consulted.

2503. When you say it was made by Parliament, it was made by Parliament on the initiative of the India Office, by Bill?—I think not on the initiative of the India Office, was it?

2504. Well, on the initiative of the Government?—Yes, on the initiative of the Government.

2505. But in a case of that kind, would the Indian Government be consulted?—Now-a-days I make no doubt they would be consulted, because it would be possible to do so by telegraph. It was not possible in those days, and therefore the Act may have been passed without consultation with them. It was in 1861, and I am not able to say, without reference, whether they were informed beforehand. I rather think that a guarantee had been previously given to the company, and that the annuity was granted in substitution for that.

2506. That was so?—Therefore, it was not imposing a fresh charge on India, I think.

2507–8. My recollection is that the Indian Government and the home Government were alike alive to the necessity of speedy communication?—Yes. What I mean is that I think the Government of India were responsible to the company for a dividend of 4½ per cent. jointly with the Treasury. The Act, which was passed in 1861, declared that the guarantee had not been given conditionally on the telegraph being in working order, and the further Act of 1862, after the line had ceased to transmit messages, transferred the property to a new company, and the guarantee of the old company was then converted into an annuity of 36,000*l.* for 46 years. The result was, therefore, I think, that the charge, although perpetuated without the service being rendered, was a reduction of that for which the Government of India were already responsible.

2509. Well, that was the settlement of it?—It was settled in that way.

2510. Now, I will take such an instance as this. It is a small charge at page 7. "Allowance to an officer in "attendance on His Highness the Gaikwar of Baroda "during his visit to England." That would be settled by the Secretary of State without reference to the Government of India?—The Government of India deputed the officer to attend on the Gaikwar of Baroda. I think probably the exact payment to be made to him while he was at home was left to the Secretary of State's discretion, but he was sent by the Government of India especially to attend on the Gaikwar of Baroda.

2511. Therefore that would not be an instance in which the Government here, small as the charge is, would be acting without the knowledge of the Government of India?—No.

2512. Well, now take such cases as the mission to the Court of Persia; I see 7,000*l.*?—Yes

2513. Is that the share of the diplomatic establishment at the Court of Persia?—It is the extent to which the Government of India bears the cost now.

2514. As you remember, that question, with others, was a long time under discussion between the India Office and the Treasury?—It was.

2515. Ending in a reference to the Prime Minister?—Yes.

2516. Would the decision then arrived at—the Secretary of State agreeing with the decision made by the Prime Minister—would that have gone to India *before* being finally confirmed?—There was frequent correspondence with the Government of India on the subject. I think that the final meeting of the committee of the Cabinet on the subject decided it without a fresh reference to the Government of India.

2517. But it was a settlement, and presumably a reasonable settlement, of a question of which the Government of India was fully seised, and in which they had agreed that some charge would be undertaken by them?—Yes, and it was a reduction of the charge

they were paying. In 1880 the payment had been reduced to 10,000*l.*, and in 1891, when the committee of the Cabinet met, it was reduced to 7,000*l.*

2518. Is not that what generally happens when you confer with the Treasury?—Sometimes we are able to relieve the revenues of India.

2519. I will just read other heads; but I think you have described generally the process by which expenditure is incurred, and, therefore, unless there is something that particularly calls for attention, I do not know that I need delay you over them. You mention in this memorandum, among the heads of Payment of the Postal Subsidy, Telegraph Charges, Civil Engineering College, and other expenses connected with the supply of officers to the Public Works Department; that is the establishment at Cooper's Hill?—Yes.

2520. Now, I suppose expenditure connected with that service is made with the knowledge of the Indian Government?—The College was set up originally without the knowledge of the Government of India, but they were at once informed of the plan. The budget for the College each year is not referred to them; it is decided by the Secretary of State in Council.

2521. And any increase of expenditure which he may think necessary is granted without reference to the Government of India?—Yes, certainly; any alterations of building, for instance.

2522. Payments to the Admiralty for the Indian squadron, Indian defence vessels, &c. That, I think we know, has been the subject of full communication with India?—That has been very fully referred to the Government of India.

2523. "Maintenance of lunatics sent to England "from India, for whom the Secretary of State is "responsible." "Charges for the Persian mission" and "Diplomatic and consular establishments in "China," "Pensions to the families of Maharajah "Duleep Singh and the Nawab Nazim of Bengal," &c. "Charges for the India Office, including the "Store Department, and for the Auditor's Office." This is the place where, I think, we should ask any questions about the Store Department. Would you explain to us the form in which demands for stores come to the Home Government, and the method followed for procuring them? And, first of all, I understand that the Store Department is a very great service?—Very large.

2524. A very large part of the stores required for public works and, of course, for military purposes in India, are paid for in England?—Yes.

2525. And obtained in England?—A very considerable proportion of them.

2526. Would you tell us about the stores, then?—Orders for stores originate in India except on rare occasions. They are occasionally ordered on the requisition of an officer deputed from India for a special service.

2527. Therefore the Secretary of State does not initiate the purchase of stores?—No. The general rule is that the Director-General buys the stores. But, with reference to ordnance stores, some are manufactured by the War Department specially in compliance with Indian orders; others are procured from the War Department stock; and others are obtained by means of contracts entered into by the War Department on behalf of the India Office. Stores for India are procured on requisitions received from the several Governments in India, the indents for which are submitted by the Director-General of Stores for the sanction of the Secretary of State in Council. This sanction constitutes the authority for the requisite payments in respect of them. Contracts for the supply of the stores are obtained by the Director-General of Stores, such contracts being approved by the Chairman of the Stores Committee of the Council. A copy of the contract so approved, certified by the Director-General of Stores, is furnished to the Accountant-General for his guidance. The claims of the contractors for payment are prepared in duplicate, and received in the first instance by the Director-General of Stores, who transmits them to the Accountant-General's Department with his certificate on the claim that the stores therein enumerated have been inspected by the officers of his department, that the quantities are correct, that they are in every respect fit for the service of the Indian Government, and either that they have been taken into his charge preparatory to being shipped, or have been shipped per vessel named, to a port in India specified. In the Accountant-General's Department the rates and calculations are examined, and the quantities and the sums charged are recorded on the copy of the contract, care being taken that the aggregate of the claims passed for payment in respect of a contract correspond therewith. In all cases the indents from India have received the sanction of the Secretary of State in Council; and the claims for payment are closely examined in every respect possible. Tenders for the freight of stores to India, prior to their acceptance by the Director-General of Stores, receive the approval of the Chairman of the Stores Committee. The accepted tenders are recorded in the Accountant-General's Department. The claims for payment, as in the case of those for stores, are prepared in duplicate, and are received in the first instance by the Director-General of Stores, who transmits them to the Accountant-General's Department with his certificate that stores of the weights and measurements specified in the claim have been shipped. The rates charged are compared in that Department with the record of the freight tender or contract, and the calculations are examined prior to payment. Four-fifths of the total amount of a freight claim is paid in this country (claims of less than 50*l.* being, however, paid in full); the remaining one-fifth is payable in India, excepting in the case of a few outlying ports, when the balance is paid in England on receipt of the out-turn certificate. The duplicate of each store and freight claim, corrected if need be, is returned to the Director-General of Stores to form the basis of an invoice to be transmitted by him to India. Statements are transmitted to India monthly, reconciling the sums paid for stores and freight with the invoices despatched to India.

2528. This is a heavy charge, and I suppose the Director-General of Stores has a large department?—It is a very important part of the office.

2529. Could you tell us what the strength of his department is?—The Store Department at the India Office comprises—one director-general, 1,200*l.*; one deputy director-general, 800*l.* to 1,000*l.*; seven senior clerks, 500*l.* to 800*l.*; three junior clerks, 150*l.* to 500*l.* (in future to 450*l.*); 12 second-class clerks, 70*l.* to 350*l.*; one surveyor of shipping, 600*l.*, making 25.

2530. Twenty-five in all?—Twenty-five in this part of the building—in the Director-General's branch. Besides that there are at the Store Depôt—one superintendent, 800*l.*; one assistant superintendent, 700*l.*; nine supervisors, 250*l.* to 500*l.*; 15 second-class clerks, 70*l.* to 350*l.*; 27 examiners and assistant examiners, 150*l.* to 350*l.*; seven miscellaneous officers, 50*l.* to 300*l.*, making a total of 60, or, with the staff in this office, 85.

2531. Do you happen to know what the cost is?—The cost of the officers whom I have read was, in 1893–4, 25,388*l.* But that does not include the cost of labourers and artificers, of whom there is a very large number altogether. The cost of the Store Department in the year 1893–4, including inspection, ground rent, rates and taxes, &c., was 53,488*l.*, of which 3,477*l.* was paid for the Stamp Branch employed at Somerset House.

2532. Your stamps are procured in concert with the Inland Revenue Department?—Yes; the Inland Revenue Department procure them for us, having a small staff for the purpose, the cost of which we pay.

2533. It is a part of their staff?—It is a part of their staff. They took over those who were employed at the Store Depôt.

2534. (*Sir Ralph Knox.*) Have you a summary of the cost of the stores which pass through the hands of the Store Department, of all kinds?

2535–7. (*Chairman.*) I was just going to take you through the items of the stores. I see that the stores which you expected to buy, in the year 1895–6 amounted in round figures to may we say a million?—A little more than a million. I think it is 1,057,000*l.*

2538. Of that 705,000*l.* is for military stores. Would those military stores be obtained through the War Office, and with the assistance of the War Office staff?—A large part would, but not the whole. The clothing for the Native Army, for instance, is bought by the Director-General of Stores himself.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. E. R. Cave-Browne, C.S.I.

13 Nov. 1895.

2539. Are there any other stores that the Director-General buys himself?—Yes; the miscellaneous stores for the Military Department. It is those of special and particular patterns, which are required for the European troops, and the Ordnance Stores, for which application is generally made to the War Office.

2540. Therefore, I suppose that a very considerable portion of this 700,000*l.* is not bought by the sole action of the Director-General?—Not by his sole action.

2541. Do you make any payment to the War Office for their assistance?—There is an imprest given to the War Office—a standing imprest of 150,000*l.* on account of the orders from the Ordnance Department.

2542. But do you pay the War Office anything for their assistance?—There is a per-centage—5 per cent. is charged.

2543. Then, I see that the civil and public works stores amount to 184,600*l.*?—Yes.

2544. That figure does not, I suppose, include all the stores required by the Public Works Department; for instance, railway stores would not be included there?—No, these are only such stores as are charged on the revenues of the year; not those for railway construction. The great charge for railway materials would be included in the table at page 15—capital outlay on construction of railways.

2545. The 184,600*l.* would include all stores which in England would be charged to revenue as coming under the head of maintenance and upkeep, not on capital expenditure?—That table relates to stores for the State railways; not for the companies' railways.

2546. I thought I saw somewhere that stores were obtained through the India Office for the guaranteed railways?—Payments for them are made from the India Office; but this statement to which your Lordship is referring, at page 14, is one of the expenditure charged on the revenue of the year, and therefore it does not include stores obtained by the companies. The companies obtain their own stores, but the payments are made from this office, which is, I think, what you refer to.

2547. Yes, that is what I was referring to. The company obtain their stores, but the payment is made through you, and, therefore, so far, thrown and added to that amount for which you have to incur the inconvenience of the fluctuations of exchange?—Yes; but we have probably received the money already from the company in sterling in some previous year; they deposited with us funds from which they draw as occasion requires.

2548. Then, besides that, the expenditure under those two headings approaches very nearly to 900,000*l.*?—Yes.

2549. And that leaves only about 150,000*l.* for other services?—Yes. The stores for special defence works, 46,000*l.*, would also probably be obtained from the War Office.

2550. Therefore the amount of stores bought actually by the Director-General of Stores is not very large?—(*Mr. Cave-Browne.*) It is very large. We have no statement before us here which shows only what is bought by the Director-General of Stores. That statement includes the War Office stores. But then there is the purchase of State railway stores, which is a very large business. I have here a statement for 1894-5, and the amount of the stores purchased was 1,768,000*l.*

2551. That is entirely done by the Director-General?—No; you have to deduct from that probably 350,000*l.* roughly, which might be obtained through the War Office

2552-3. You are speaking of the railway stores?—No. I am speaking of the total of stores altogether when I say that.

2554. That is to say, 700,000*l.* worth of stores, which would be obtained for railways is charged to capital, and a million we have seen already charged to revenue?—Roughly.

2555-7. (*Sir Andrew Scoble.*) Can you give us a statement showing the amount of stores that are bought through the direct agency of the Director-General of Stores for the last two or three years?—Certainly. The following table shows the payments for stores obtained by the direct agency of the Director-General of Stores, and by other agency, during the last three years:—

Year.	Direct Agency of Director-General of Stores.	War Office.	Admiralty.	Bank of England (Currency Notes).	Taken to India by Troops.	Total.
1892-93	1,968,420	581,897	10,041	18,765	76,688	2,656,211
1893-94	1,613,670	518,876	9,568	23,956	77,680	2,245,750
1894-95	1,695,624	357,013	8,912	25,903	48,415	2,045,867

2558. (*Chairman.*) After that we come to furlough pay, and pay to officers on leave. I suppose you would include in that heading superannuations?—(*Sir Henry Waterfield.*) No; that comes under non-effective charges—the last entry on the table.

2559. And then there are the payments to the War Office, and payment of troops, and payment of transport; those are all made in accordance with regulation, I suppose, and in communication with India?—Yes. But the payments vary from time to time. They are not paid, as a mere matter of form, under regulation; in each case the sanction of the Secretary of State in Council has to be obtained.

2560. (*Sir Ralph Knox.*) Is the expenditure for stores included in the Indian Budget or in the Home Budget?—Payments in this country are included in the home accounts.

2561. (*Mr. Buchanan.*) Do you mean that I shall find them scattered through this return—the Home Accounts?—Yes.

2562. Is that the only published account of the money spent on stores that is submitted to Parliament or available here?—There is a summary in the explanatory memorandum on page 14. (*Mr. Cave-Browne.*) You will find one in the Finance and Revenue Accounts. (*Sir Henry Waterfield.*) You will find it in the Indian accounts. The Chairman referred to the Budget, and we have not such a statement in the Budget laid before Parliament, but in the accounts there is a charge shown under each head. (*Mr. Cave-Browne pointed out the document.*) (*Sir Henry Waterfield.*) You will find the summary in the Finance and Revenue Accounts for the past year.

2563. (*Chairman.*) That is not presented to Parliament?—Oh, yes; it is laid on the table of the House.

2564. Then besides that, we come to Non-Effective payments. Those, of course, are under strict regulation?—They are under the published regulations. The payments to the War Office are dealt with under a system which your Lordship knows. I do not know whether you would wish me to explain it? The payments to Indian Officers are dealt with under the orders which have been published in India from time to time.

2565. Perhaps you will just briefly describe the payments for the non-effective of the Army?—The War Office pays the full charge for the British soldiers who come on the non-effective list. Every year a statement is rendered by them and checked at this office of the service which each officer or soldier admitted to pension within the year has rendered in India on the Indian establishment and elsewhere, and a calculation is made of the amount due in respect of his Indian service, and the Indian Government is charged with it. The practice which has been adopted for some few years now, for convenience, is that, instead of the Indian Government attempting to follow the course of each pensioner's life, involving the production of certificates from time to time, the India Office should pay year by year the value of the annuity that is due to the pensioner; the amount due is spread over the man's probable expectation of life; and we pay every year according to that table.

2566. I do not think we need enter further into that question now, because clearly that is one of the questions that comes up upon the "apportionment" part of our inquiry, and I only asked you to give a brief description of it, because of its forming part of the summary which you have given us?—I have explained it more fully in the papers which have been communicated to the Commission.

2567. (*Sir Ralph Knox.*) It is a very simple arrangement for the India Office, is it not?—It is very simple; it obviates a great deal of trouble in the way of ascertaining whether the pensioners are still living or not, while it is actuarially perfectly fair.

2568. (*Chairman.*) Next we come to a number of payments not charged on the revenues of the year. For instance, Capital Outlay on Railways and Irrigation Works; what charges are defrayed by the Home Government on that account?—Almost the whole of that charge is for stores on the requisition of the Government of India, for the construction of railways and canals.

2569. Of course, various questions arise on this method of acquiring stores, but they do not fall under our present inquiry?—No; and probably the Director-General of Stores would be a better officer to give you information.

2570. Well, then discharge of debt; that, of course, is an ordinary service. At certain times debt falls due; I suppose you have not very often a question of paying a debt which has not fallen due, which you have merely the power of paying?—On certain occasions an opportunity has been taken to discharge bonds or convert stock before the time when the debt fell due.

2571. You have made some very important conversions?—Yes.

2572. In a case of that kind do you correspond with the Government of India before you do it?—No. I think that the conversion of the sterling debt was decided without reference to the Government of India.

2573. It resulted in a considerable economy, did it not?—In a very large saving.

2574. Then come payments to railway companies and capital subscribed; what are those?—The contracts under which payments are made to the several Indian railway companies have been approved by and executed under the authority of the Secretary of State in Council. The examination of claims for guaranteed interest has been explained under the head of interest on debt. The claims for payment of the annuities, by means of which several of the Indian railways have been purchased by the Secretary of State in Council, undergo a similar examination. Indents for stores are received from India by the railway companies, and after the indents have been referred to the company's consulting engineer, tenders for the supply of the stores are invited and considered by the Boards, at which the Government Director is present. A list of the accepted tenders is entered on the Board minutes, the approval of the Government Director being specially requested where the tender exceeds the Indian estimate. Tenders for freight are invited when stores are ready for shipment, and the contracts are duly entered on the minutes, which also contain sanction to the rates of marine insurance on such stores. The Board minutes are forwarded to this office, and, after they have been initialled by the Government Director and the members of the Public Works Committee of the Council, they are forwarded to the Accountant-General's department where a register is kept of the contracts for stores, freight, &c. When the contractors deliver the stores and present their claims, these claims, accompanied by the consulting engineer's certificate that the goods have been delivered in proper condition and quantities, are submitted to this office for payment, and care is taken that the quantities and prices accord with the amounts sanctioned by the Board minutes. Claims for freight and insurance are presented in a similar way, and, by means of the bills of lading which accompany the freight claims, it is ascertained that the stores supplied have been duly shipped. All bills for sotres, freight, &c., contain full details, which are examined and checked. In a subsequent examination of the companies' books and accounts by officers of the Accountant-General's department, it is ascertained that the amounts issued by this office to the companies have been paid over to the contractors and their receipts obtained; and out-turn certificates received from India afford evidence that the stores purchased have duly reached their destination. Claims for inspection of stores, and bills for stamps, stationery, and other requisites, are periodically presented to this office and paid after examination. Payments on account of furlough pay, sick pay, and family allotments, are made in accordance with the Board minutes and regulations approved from time to time by the Secretary of State in Council. The salaries of directors and consulting engineers and the cost of office establishments are fixed by the Secretary of State in Council, and any alterations require his sanction. Thus, all payments to the railway companies are made upon general or specific authorities of the Secretary of State in Council, and the proceedings of the companies are supervised at all stages so as to prevent irregularities. Any disputes upon questions of principle arising out of the terms of arrangement are submitted for the decision for the Secretary of State in Council.

2575. Then practically the India Office makes all the payments for these railway companies. We are now talking of the guaranteed railway companies?—Yes. (*Mr. Cave-Browne.*) We either pay the money to the railway companies, or place it to their account at their bankers; they pay all the details; but they have to submit to us all the claims received from their contractors, and so on.

2576. The object of that being that you may satisfy yourselves of the amount they have received before you pay any sum on account of the guaranteed interest?—Their capital is paid over to us, and the expenditure is supervised at this office in this manner. (*Sir Henry Waterfield.*) In the case of a guaranteed company, the capital is always paid to the credit of the Secretary of State in Council.

2577. Is there any particular object in the stores being obtained for these railways by the Director General. Why should not the railroad be left to get its own stores?—(*Mr. Cave-Browne.*) Oh, the Director General of Stores does not obtain any of the stores for the railway companies' railways. The Director General simply procures railway stores for the State railways.

2578-9. And here you only pay for State railway stores?—In detail. We pay to the railway companies the cost of their stores in lump sums to disburse.

(*Sir Henry Waterfield.*) If your Lordship will refer to the Home Accounts, on page 23, you will see that there are among the charges which are entered in the Remittance Account, East Indian Railway Company, advances for purchase of stores, &c. 254,720*l.*, South Indian Railway Company, advances for purchase of stores, &c. 82,692*l.*, Bengal and North Western Railway Company, advances for purchase of stores, &c. 8,359*l.* Those are three railway companies to whom the Secretary of State makes advances for the purchase of stores, because the first two are working, on the part of the Government, State railways which have been purchased by the Government at different times, and the Bengal and North Western Railway Company is working the Tirhoot Railway which was constructed by the State.

2580. "Payments for stores chargeable to provincial local funds and to Native States," what are they?—Stores chargeable to provincial and local funds and to Native States, 213,109*l.* Those are stores demanded by the Government of India for railways in Native States and for works which are under the charge of municipal bodies and port trusts.

2581. "Payments to Her Majesty's Government on account of sums received in India"?—They are mainly postal and money order transactions, 114,941*l.*

2582. Are they sums levied in India on account of the Imperial Post Office here?—Yes, sums payable here on account of receipts in India.

2583. Then "Family and miscellaneous remittances"?—Those are payments made chiefly through the War Office on behalf of regiments in India, principally for soldiers, but there are also some officers' remittances among them.

2584. That, I think, about completes the list of payments made by the India Office here?—I think your Lordship has referred to the important headings.

2585. In conclusion, I should like to ask you by whom, and at what period of the year, is the estimate of the whole expenditure drawn up?—The estimates are compiled by the Accountant-General, after communicating with the various departments in which expenditure is likely to occur. He brings them together in the course of November, and prepares for consideration remarks in this form.

2586. This is the estimate, is it?—This is a specimen of the estimates which are prepared. They include a revised estimate of the current year, the preliminary estimate for the coming year, and two papers of comparisons of the revised estimate with the Budget for the

Sir H. Waterfield, K.C.S.I., C.B., and Mr. E. R. Cave-Browne, C.S.I.

13 Nov. 1895.

current year, and of the preliminary estimate with the Budget estimate for the previous year. (*Copy of estimates exhibited.*)

2587. I see you follow the Indian system, and have a revised estimate here?—Yes; those papers, which include remarks prepared by the Accountant-General and myself in explanation of any alterations that have occurred, are sent out in a despatch by the Secretary of State, at the beginning of January; and in that despatch, it is the practice to state what is the amount of the sterling payments that are expected to fall due, and the mode in which those payments will be met. About six weeks afterwards, the Government of India, when they are preparing their Budget, and are in possession of those papers, telegraph to know whether any alterations are needed. A careful revision is then made of all the figures, and a telegram is sent out early in March, which makes any needful corrections of the figures that are in those papers. That enables the Government of India to compile into their financial statement all the figures which relate to the Home expenditure.

2588. And the Government of India is given ample time to criticise or remonstrate against charges which may occur in the Home estimate as sent out to them?—They have time to do so. In practice they would probably not at that time of the year make a remonstrance against anything, except on the great points, on the amount of bills to be drawn and the amount to be met by borrowing. On these two points it is very common to have telegraphic communication before the Financial Statement is published.

2589. In what form would the Indian Government remonstrate, if it thought necessary, against a charge under, we will say, some agreement between the Secretary of State and the Home Government, if they did not approve of the bargain that had been made? Would that remonstrance come on the estimates?—It would come in the shape of a despatch from the Government of India, after a consideration of the papers which had been laid before them; but it would probably not be made in direct connexion with the estimates, because it would require more mature consideration.

2590. Quite so. In fact, the criticism and remonstrance of the Indian Government upon any charges undertaken by the India Office and charged to Indian Revenues, would take place upon a specific question being raised before them rather than upon the Budget?—Yes.

2591. But, at the same time, they have ample time for remonstrance if they think it necessary before the Budget is brought out in India?—Yes, if those papers contain sufficient information to enable them to form an opinion upon the point. But the probability is, that there would be nothing in those Estimates increasing the charge in any material degree, which had not already been communicated to the Government of India.

2592. Of course, some questions may arise hereafter, which concern the India Office here, as to the method of providing money. But I think that falls rather into the branch of progress of expenditure than into that of machinery; therefore, I do not propose to ask any questions upon that point now?—Yes.

2593. (*Mr. Buchanan.*) With regard to the last questions of the Chairman, would it be possible for either a new or an increased charge to be put on the revenues of India, and communicated to the Government of India for the first time in this January Despatch, which transmits the Budget?—If the circumstances had very lately arisen which made it necessary, in the opinion of the Secretary of State, to impose a new charge in the coming year, no doubt the amount would be included in the Estimates; and there might not have been time for a formal despatch, discussing the subject with the Government of India, to have gone out. But I do not think that could arise to any very great extent. It would be only in the case of small charges that any such amount would, as I may say, be sprung upon the Government of India.

2594. So far as your knowledge and experience goes, is it only in small matters that such a case has arisen?—I think so.

2595. With regard to the question which we were discussing a short time ago, about the entries of stores, would it not be possible in the Home Accounts, which are presented to Parliament, to have a summary of the amount that is expended by the Home Government upon stores? Of course, although the Finance and Revenue Accounts are laid upon the table, you are aware that they are not circulated?—I think there would be no difficulty. As the Commission has suggested it, we will see whether such a statement as that which is made in the estimates can be added to the Home Accounts.

2596. There was another point which I think would be of great importance. You were explaining to us at the beginning of the Chairman's examination, the constitution and division of work in the India Office. To those of us who are ignorant in these matters, I do not think the statement as here submitted is very intelligible, because all the important departments are crowded together under the head Correspondence Department?—Yes, that is the term which was used when the two offices of the East India Company and the Board of Control were amalgamated in 1858; all those departments were ranged under one large heading of the Correspondence Department, and that is the form which is adopted in the establishment as approved by the Queen in Council; it would make the statement very much longer if all the clerks there were divided into special separate departments, but there is no difficulty in doing it.

2597. What struck me, when I was listening to your evidence earlier and comparing it with this paper, was that there are much greater details given in it with regard to the smaller departments in the India Office, than with regard to the larger and more important ones?—It is a report of the establishment as approved by the Queen in Council. I will consult the Under Secretary whether we should give any more detail, if you please.

2598. I think it might be indicated under Correspondence Department, that that includes the large departments, such as the Financial?—There will be no difficulty at all in expressing what the Correspondence Departments are. That is merely to give the six names; that can easily be done.

2599. (*Sir William Wedderburn.*) I should like to clear up that point about the way that exchange is shown. I understand that the object of having the separate column of exchange is not so much to fix such and such a definite sum, as for the purpose of comparison between different headings of expenditure, and different years of the expenditure?—I would rather say between the same head of expenditure in different years.

2600. Yes, but also, I suppose, to see where the exchange falls—under which different headings the exchange falls from year to year?—It has that advantage.

2601. It would be practically impossible to try to follow the actual exchange, because it changes almost from day to day one may say. You are forced, for the purpose of convenience, to take some standard—some fixed standard?—Yes. The amount which is entered as exchange is calculated on the average rate at which the bills have been sold during the year, or which are estimated to be sold, in the case of the budget.

2602. Yes, but what I rather meant was this: I understand that it is rather to keep some sort of comparison between the accounts; the accounts rendered to Parliament are sterling accounts?—They are sterling payments.

2603. And it is to keep before the eye some sort of relative idea between pounds sterling and Rx.?—It is to show the additional charge which is borne by the Government of India in consequence of its having to make these payments in sterling.

2604. But is it not also for the purpose of showing the comparison between pounds sterling and Rx.?—It has that advantage, but it is not adopted for that purpose.

2605. You will observe that it is necessary to incorporate into the Indian account, the sterling expenditure. The Indian accounts being rendered in Rx. some figure must be added to show what that sterling expenditure is as represented in Rx. That is the column of exchange. Taking the figures from the printed statement of the exchanges, supposing we take two periods of 10 years. Roughly, in 1874 we may say that exchange was 1*s.* 10*d.*; in 1884, 1*s.* 7*d.*; in 1894, 1*s.* 1*d.* Well, if a charge was incurred in 1874, there would be by 1884 a fall of 3*d.* in the rupee?—Yes.

2606. How would that 3*d.* be shown?—The statement does not show that. It does not show the

additional charge arising during any particular period; you must obtain that by subtracting the exchange as shown in the year 1874 from the exchange as shown in the year 1884. You would have to work out the sum. For instance, a payment of 5,000*l.* a year may have represented in 1884 Rx. 7,000, the addition being Rx. 2,000; and in 1894 it may have represented Rx. 9,000, the addition being Rx. 4,000. You must then deduct Rx. 2,000 from Rx. 4,000, and you find that the increased cost of exchange in the 10 years is Rx. 2,000 on that sum.

2607. Then, if a sterling charge is incurred in 1884 the charge would be accompanied by the 3*d.* of deterioration, so to say, since 1874?—Yes.

2608. And then, if that same charge continued to 1894, it would be burdened with 9*d.*?—It would.

2609. One may make a distinction between that 3*d.* and that 6*d.*, that the 3*d.* may be said to have been incurred with eyes open, but the 6*d.* is automatic or followed involuntarily upon the original expenditure?—Yes; it is possible so to divide it. In the year 1884, taking the hypothetical figures which I have given, it was known that the payment of 5,000*l.* meant the payment of Rx. 7,000; that, without any alteration of the sterling, payment may have automatically become 10 years afterwards Rx. 9,000; and therefore, you may say that the fall in exchange in those 10 years has added Rx. 2,000 to the amount which it was known would have to be paid in 1884. But, at the same time, in 1884 there was the possibility that exchange might have risen. It was not a fixed charge of Rx. 7,000 that was incurred, so that it is difficult to say exactly what was undertaken at that time, and how much has automatically arisen since.

2610. Quite so, and to correct the column about exchange at any particular time, one must make a calculation upon the actual condition of exchange on that date, I suppose?—To arrive at the calculation which you are trying to bring out, you must make that calculation, but it is not a correction of the charge for exchange. It was an actual fact in 1884, and is again recorded in 1894 accurately.

2611. (*Chairman.*) May I ask a further question in passing. As I understand, Sir Henry, taking that account at page 14, the expenditure in sterling for 1893–94 was 15,633,361*l.* The Rx. in the third column, was 25,792,938. Each of these expresses a fact, does it not?—Yes.

2612. You paid 15,633,361*l.* in England, and Rx. 25,792,938 was the exact sum required for that purpose in India?—At the average rate of exchange for the year.

2613. That is what I want, "at the average rate," because that is a calculation; it is not a fact?—It is impossible to say what the payments which are going on from day to day have cost throughout the year, except by taking the average. The bills are sold weekly, but they are not sold to meet a specific charge as it has arisen, but generally to replenish the balance of the Secretary of State.

2614. But in the end you must know that a certain number of rupees have gone out?—In the end you know that the 15,633,361*l.* sterling cost you Rx. 25,792,938.

2615. But it is a fact that they did cost you that sum in rupees?—They did cost that amount, calculating at the average rate, which is known.

2616. But it does not necessarily follow that the calculation of the average rate would exactly correspond with the actual?—I think I see your point. The payment of the 15,000,000*l.* does not comprise all the payments which the Secretary of State made. He drew bills for other sums, which I have mentioned as being outside the revenue account, and the average rate of bills is calculated on the total amount, not only on the amount needed for the 15,000,000*l.*

2617. An average is, of course, correct in the main, but how is it arrived at in this case? Do you say "I know that Rx. 25,792,938 was paid in India, I know "that my charge here was 15,633,361*l.* sterling. To "what average does that work out?" That would be absolutely correct of course?—Yes.

2618. But if you begin by calculating the average rate of exchange during the year, and then saying "I "know I paid 15,633,361*l.*, what number of rupees will "that represent?" it does not necessarily follow, does it, that the actual number of rupees paid out will correspond with the rate so arrived at?—No; it does not necessarily follow that it is quite so. What is known is that the Secretary of State sold bills, we will say, for Rx. 30,000,000, and that he thereby received 18,000,000*l.* sterling, and the average rate was so much. He then says, "Now I have to pay 15,000,000*l.* which "I have charged on the Revenue, and at the same "average I paid Rx. 25,000,000.

2619. It is practically correct, but it is not the actual fact?—It is a calculation.

2620. It is very closely approximate?—It is a calculation made on actual facts.

2620*a.* (*Mr. Naoroji.*) I want just to understand that a little more clearly. We will take just one year 1889–90, and the average rate is put down at 1*s.* 4·566*d.* Is that average taken by simply adding up the rates of all the 52 weeks and dividing by 52, or is it the average after taking into account the amount actually sold?—It is the average obtained by taking the total amount of bills sold throughout the year, and dividing that by the sterling amount received in respect of those bills.

2621. (*Chairman.*) In continuation of the answers you gave us about the military stores, I think I gathered from you that a considerable portion of the military stores is obtained through the War Office, but a certain portion is obtained direct from the Director-General of Stores, and you noted especially, I think, the clothing obtained for Native troops. At page 14 of this explanatory memorandum the stores procured through the War Office are not given in detail, but in your Budget they are given in detail, and I think if you look at that it will enable us to dissect the different accounts. Perhaps you would read them out, beginning with the clothing, clothing for English troops?—In the Estimate for 1894–95 framed in January 1894, the European clothing was taken at 204,500*l.*

2622. That would be obtained from the War Office?—That would be obtained from Pimlico.

2623. Then next comes the clothing for Native troops?—The clothing for Native troops, 34,450*l.*

2624. And that would be obtained by the Director-General?—Yes.

2625. Now, would you go on?—Ordnance and miscellaneous, 305,700*l.*

2626. As far as that is Ordnance, that would be obtained through the War Office, would it not?—The bulk of it would, I think; it is possible that we should obtain some of our ordnance stores by purchase by the Director-General. Medical, 25,400*l.*; that, I think, would be entirely done by the Director-General. Commissariat, 21,160*l.* That, I think, would be entirely done by the Director-General.

2627. Then there are Special Works, are there not?—And the Special Defence Works, 38,800*l.*, would probably be from the War Office.

2628. Therefore, when we come to dissect by that means the military stores obtained through the War Office, and the military stores obtained through the Director-General, it points to the result that a very large portion is obtained through the War Office?—A large portion.

2629. Probably out of 700,000*l.*, or 800,000*l.* worth of stores, 600,000*l* worth were got through the War Office?—I am afraid I cannot assent to that figure without an examination. I do not know what the proportion is.

2630. (*Sir Donald Stewart.*) I think it is almost entirely ordnance stores that are obtained from the War Office?—Mainly ordnance stores and European clothing.

2631. (*Chairman.*) That would carry you up at once to 600,000*l.*?—It may; I would rather look into the matter. Perhaps the Commission would allow me to put in the accurate figure if I can. In 1894–95, I find, the payments to the War Office amounted to 357,013*l.*, and the military stores purchased by the Director-General to 255,982*l.*

2631. (*Sir Ralph Knox.*) As regards the amount which is included in the Budget for stores furnished by you to the Indian Government, you have previously received a demand from the Indian Government, for the stores that they will require to be sent out, have you not?—Yes. They are all obtained on indents from India.

Sir H. Waterfield, K.C.S.I., C.B., and Mr. E. R. Cave-Browne, C.S.I.

13 Nov. 1895.

2633. Then, on receiving a demand for stores you make the best estimate you can of the cost?—Yes.

2634. Either in communication with the War Office or under your terms of contract, and so on?—Yes.

2635. Then you include that figure in the statement which is rendered to the Indian Government which they include in their Budget?—Yes.

2636. After you have made an estimate of stores in that way practically on their demand, when they have received the figures in India, do they frequently demur or modify their demands?—Yes. It is not uncommon for them, if they find that the estimate which has been sent out is more than they are prepared to pay for in their military budget, to postpone some part of the demand, by telegraph, to a future year.

2637. Then the demand that you receive earlier in the autumn is not a final demand for stores upon which you could act or give orders?—Action is taken; and, if at a later date the Government of India correct it, the correction is made, if practicable. It may sometimes be that the correction comes too late to be adopted.

2638. (*Chairman.*) Before you go away, Sir Henry, I should like to ask you whether you have an explanation to offer with regard to the point that Mr. Naoroji raised,* namely, the saving that might accrue from the employment of Natives instead of Europeans in certain circumstances?—I was asked what proportion of the 60 lakhs of rupees which (according to page 48 of the Correspondence on Financial Control) was in 1889 paid to officers of the Account and Audit Department, was drawn by Europeans, with the view of seeing to what extent it might be possible to effect a saving by the substitution of Native agency. We have been able, in some measure, to make an estimate as regards the Civil Department and Post Office, which, according to the estimates, now cost 26½ lakhs. The portion of this sum paid to non-domiciled Europeans, including Exchange Compensation Allowance, is about 3½ lakhs, of which a considerable part is personal to the existing officers, and will, in any case, be reduced as vacancies occur. On the salaries now paid the saving by the employment of native agency would be about 1½ lakhs, if it could be assumed that the officers to be employed in the higher offices could be paid at a rate less by one-third than the present scale. I am unable to say how far a proportionate calculation can be properly applied to the Military and Public Works Departments; but, if it be adopted, the total saving on the 60 lakhs would be about 4 lakhs. It is, however, to be remembered that a lower scale of pay has already been applied to the larger number of those in the Account Department, and that it is not probable that the two-thirds rule could be enforced on this scale.

2639. (*Mr. Naoroji.*) There is some misunderstanding about what I mean. I just took the Europeans and their salaries, and said that if Natives were appointed in their place to rise to higher salaries of Rs. 500 and upwards, they could be appointed, or should be appointed in justice to the taxpayer at two-thirds the salary. Well, wherever such an appointment is made, there will be a saving of one-third, that is what I mean. I do not know how it has worked out, and of course I cannot say anything more about it than that there is some misunderstanding about what I said. Taking say the whole Civil Service by itself, the Uncovenanted Civil Service and all the higher pay officials, if any number of European officials were displaced by Indians and these Indians were paid only two-thirds of their salary, the saving therefore would be one-third of those salaries?—Your question referred to the Account Department.

2640. That particular department, yes. I took in that particular department, and the European portion of it?—The two-thirds scale of salary to which you refer has been adopted in regard to the Natives in the Covenanted Civil Service.

2641. In the Statutory Service?—In the Statutory Service, I should say. The exact two-thirds has not been adopted in fixing the scale of pay for the Provincial Service, but approximately it is so. The salaries for the Provincial Service are fixed at a scale which is about two-thirds of that which is paid to the Imperial Service. My point is that that provincial scale has already been applied largely in the Account department, that the Europeans who are employed there, and the Natives, draw the same scale of pay, and therefore that no reduction can be anticipated by substituting Native for European agency. That remark does not refer to the few European officers at the head of the department, who undoubtedly are drawing more than Natives would in their places; and to that extent I have allowed for a possible reduction, although I do not think it would be effected in practice.

2641*a*. (*Mr. Naoroji.*) Well, I will not go further at present, because I say that there is some misunderstanding. I am only talking of those Europeans who are paid on the European scale of salaries?—Yes.

2642. And if Indians were placed in their places, they would receive so much less?—Yes.

2643–4. That is only one element of saving, where the European is paid at the European scale of salary, while an Indian substituted for him would receive two-thirds. That is all I mean?—I see your point; but you must not suppose that on the 60 lakhs in the Accounts Departments, anything like one-third could be reduced by the substitution of Native agency for Europeans.

2645. I do not say that it could be reduced. I only wanted to direct attention to the rule of the Secretary of State, to show that if the rule is enforced in all the higher departments, there will be so much saving?—Yes.

2646. Have you made a calculation regarding what you stated just now, giving the details of how you worked it out, or only the statement?—I have only given the calculation, for what it is worth. If you wish to have it accurately, we must refer to the Government of India.

2647. I mean this particular statement that you made just now, in which you calculated that the difference would be only so much?—Yes, I have not put in the details.

2648. Perhaps you can supply me with the details by which you made this out?—If Mr. Naoroji would allow me, without troubling the Commission—it is a very imperfect calculation—I will show him how I arrived at my figures.

2649. That is all. I do not want to trouble the Commission with all these details. That is all I mean?—I will do that.

The witnesses withdrew.

Mr. W. Godsell.

MR. WILLIAM GODSELL called in and examined.

2650. (*Chairman.*) What position do you hold at the India Office?—I am Auditor of the accounts of the Secretary of State for India in Council, under the 52nd section of the Act 21 & 22 Vict. cap. 106.

2651. How long have you held that post?—Since last January.

2652. Would you read the section of the Act under which you were appointed?—"It shall be lawful for "Her Majesty, by Warrant under Her Royal Sign "Manual, countersigned by the Chancellor of the "Exchequer, to appoint, from time to time, a fit person "to be Auditor of the accounts of the Secretary of "State in Council, and to authorize such Auditor to "appoint and remove from time to time such assistants "as may be specified in such warrant; and every such "Auditor shall hold office during good behaviour; and "there shall be paid to such Auditor and assistants out "of the revenues of *India* such respective salaries as "Her Majesty, by warrant as aforesaid, countersigned "as aforesaid, may direct; and such Auditor shall "examine and audit the accounts of the receipt, "expenditure, and disposal in *Great Britain* of all "monies, stores, and property applicable for the "purposes of this Act; and the Secretary of State in "Council shall, by the officers and servants of the "establishment, produce and lay before such Auditor, "from time to time, all such accounts, accompanied "by proper vouchers for the support of the same, and "shall submit to his inspection all books, papers and "writings having relation thereto; and such Auditor "shall have power to examine all such officers and "servants in *Great Britain* of the establishment as he

* *See* Q. 1017-8.

" may see fit in relation to such accounts, and the re-
" ceipt, expenditure, or disposal of such monies, stores,
" and property, and for that purpose, by writing under
" his hand, to summon before him any such officer or
" servant; and such Auditor shall report from time to
" time to the Secretary of State in Council his approval
" or disapproval of such accounts, with such remarks
" and observations in relation thereto as he may think
" fit, specially noting any case, if such there shall be, in
" which it shall appear to him that any money
" arising out of the revenues of *India* has been appro-
" priated to other purposes than those of the
" Government of *India*, to which alone they are
" declared to be applicable; and shall specify in detail
" in his Reports all sums of money, stores, and pro-
" perty which ought to be accounted for, and are not
" brought into account, or have not been appropriated,
" in conformity with the provisions of this Act, or have
" been expended or disposed of without due authority,
" and shall also specify any defects, inaccuracies, or
" irregularities which may appear in such accounts,
" or in the authorities, vouchers, or documents having
" relation thereto; and all such Reports shall be laid
" before both Houses of Parliament by such Auditor,
" together with the accounts of the year to which the
" same may relate."

2653. That is rather an unusual provision, is it not, in Indian appointments; that is to say, the Warrant is countersigned by the Chancellor of the Exchequer, not by the Secretary of State?—The Secretary of State nominates; the Chancellor of the Exchequer, I believe, has the right of veto. That was, as I understand, the arrangement that was entered into a few years ago.

2654. There was a question, was there not, between the Chancellor of the Exchequer and the Secretary of State, as to the meaning of this provision?—There was.

2655. And that was the arrangement finally arrived at?—Yes.

2656. But the object of that provision is to establish the independence of the Indian Auditor?—Quite so.

2657. I mean his independence *quo ad* his relation to the Secretary of State. The Queen's Sign Manual is countersigned by the Chancellor of the Exchequer, and the officer so appointed holds office during good behaviour?—Yes, With regard to myself I might say that in consideration of the new Treasury regulations with regard to limit of age, I have accepted the condition of retirement at the age of 65, but that does not interfere with my independence.

2658. Would you describe the duties of your office?—The system of audit in operation may be considered under three heads: (1) The correctness of the items (receipts and payments) in detail; (2) the appropriation of those items to their respective heads of account; and (3) the correct appropriation of the expenditure as against the revenues of India, provided for in the 52nd section of the Act 21 & 22 Vict. cap. 106. The receipts and payments are recorded by the Accountant-General in a series of registers, the totals of which are carried into a monthly cash account, which is submitted for audit. By a system of carrying forward, these cash accounts not only show the transactions of the month, but also the aggregate transactions of the financial year to the close of each month. I have brought one account which I can lay before you. That is the account for the month of June last (*exhibiting account*).

2659. That is the account which is brought before you?—That is submitted to me for audit. I merely submit it to you to show the form.

2660. Quite so?—The correctness of the Accountant-General's register is first verified by a comparison of the entries with the vouchers in support thereof, and after making the necessary additions, &c. the totals are compared with the cash account. The vouchers are then examined in detail as to authority and accuracy, and any objections taken to them are submitted as queries to the Accountant-General, who either replies to them himself or furnishes the reply of a departmental officer concerned in the transaction. If the reply is satisfactory, the item is passed; if not, a further query is made, and eventually the item is surcharged or disallowed (as the case may be) if the explanation is still unsatisfactory. Many of such surcharges and disallowances are adjusted within the period of the financial year, and only those items which remain unadjusted are mentioned in the Auditor's Report to the Secretary of State in Council for submission to Parliament. The authority of the Secretary of State in Council is usually accepted, but occasional items have been reported when, although so authorized, the provisions of the Act do not appear to have been complied with. A similar course is pursued in respect of stores and other property of the Secretary of State, the Director-General and others being substituted for the Accountant-General. The foregoing applies to the Post-Audit duties of the Department, as considered under the three heads above referred to; but it has been found both convenient and to the financial advantage of India that the Auditor's duties should not be strictly limited to a Post-audit. There are many cases in which Receipts and Payments are to some extent pre-audited, either (*a*) because the vouchers and papers in support of an account have to be sent away (this is chiefly in regard to claims on the Imperial Government by the Government of India), or (*b*.) because the opinion of the Auditor is desired by the India Office Department concerned before admitting a claim, on the ground that prevention is better than cure. It has further been a traditional practice to refer many questions of principle, contracts about to be made, arrangements with other Government Departments, &c., to the Auditor, as focussing in some sort information derived from the papers of all the various Departments, and because such matters frequently involve the question of the due appropriation of Indian Revenues in conformity with the provisions of the Act.

2661. What staff have you?—My staff consists of 18 officers and clerks.

2662. And I think I gathered that the cost is from 6,000*l.* to 7,000*l.* a year?—About; it is so stated in the last return to Parliament.

2663. What return are you quoting from, the Home Accounts?—Yes, page 5, of the Home Accounts for 1893-4, presented on the 3rd May this year, 6,723*l.* 12*s.* 0*d*; the cost was slightly reduced, I think, in the subsequent year.

2664. The section of the Act which you have read, under which you hold your appointment, directs you to make a report on the accounts of the year, when they are laid before you, and to present that report to the Secretary of State; and it orders further that all such reports shall be laid before both Houses of Parliament?—Yes.

2665-6. I have before me your report for the year 1993-4, and I notice that the form of that report corresponds generally with the form of the report which the Comptroller and Auditor-General here makes upon the Imperial accounts?—I have really followed the form which was introduced by the late Auditor, who came from Somerset House.

2667. In this particular account there is no irregularity that would require any particular notice, but as a sample of the manner in which you have discharged the duty, I will take paragraph 15, relating to the subsidy for manning and maintaining Indian Government vessels:—"The amount of the annual subsidy " is 59,600*l.*, the balance of 1,408*l.* being an adjustment " in respect of the year 1892-3. Evidence asked for by " my predecessor of the fulfilment of the conditions " upon which the subsidy is payable not having been " furnished, I am unable to certify the correctness of " this item"?—Yes.

2668. That is a fair sample of the manner in which you note any irregularity, and call attention to it?—It is the first time I think that such an item has been reported in that way, and my difficulty will be how to deal with it next year. I might be guided perhaps by the Commission on such a point.

2669. Well, in this case there is a difference between yourself and the India Office?—Yes, quite so.

2670. The India Office demur—do I gather that—to supplying you with information?—To supplying information.

2671. How do you interpret the powers given to you by the Act? This section, as I read it, does not directly give you the power of disallowance. It refers to a power of disallowance, but I do not see that it gives it you: "Such auditor shall report from time to time to " the Secretary of State in Council his approval or " disapproval"?—Yes.

2672. That wording hardly carries, in my mind, the absolute power of disallowance?—No; we have adopted this plan in the case of direct short recoveries or overpayments; we have surcharged or disallowed

Mr. W. Godsell.

13 Nov. 1895.

them respectively. Mr. Cocks inaugurated this plan, and, I think, with some success.

2673. In cases where there is difference between yourself and the India Office the question would arise immediately as to your powers?—Yes.

2674. There can be no question of the power to report your disapproval, but that does not, I think, necessarily carry a power of disallowance. Your powers, to my mind, derived from this Act, more resemble the powers of the Comptroller and Auditor-General here. The Comptroller and Auditor-General has no power of disallowance; he reports to the House of Commons; and that looks to me like the form in which this report is drawn?—Yes.

2675. But in this case you report the disapproval to the Secretary of State?—Yes.

2676. And therefore it would lie with the Secretary of State, in a case in which his own office was concerned, to press the charge to which you objected or not?—I suppose that is so.

2677. No remedy is provided?—Not at present.

2678. And then the report is presented to the House of Commons; there is no procedure by which the House of Commons could take notice of such an omission on the part of the Secretary of State?—No.

2679-80. Therefore that audit, though it approaches very closely in its efficiency to the audit of the Comptroller and Auditor-General, wants that final sanction which secures, in the case of the Imperial Government, that the officer committing an irregularity shall be brought actually to book?—It appears to me that that is just the one lack, and that if there were such a power of reference, as in the case of the Comptroller and Auditor-General, to a committee of the House of Commons, or perhaps to a committee of both Houses of Parliament (the Auditor's report in accordance with the Act is presented to both Houses), it would, I think, tend to support the independence of the Auditor, it would give finality to his report, and it would also strengthen the hands of the Secretary of State in his dealings with other public departments.

2681. Do I understand you that this instance, paragraph 15, page 25, to which I have called your attention, is the first instance which you know of, since the Auditor has been appointed, in which there has been any difference between himself and the office of the Secretary of State as to the manner in which required information should be supplied?—It is the first instance in which the Auditor has reported in the face of a Council minute definitely sanctioning or passing a payment after it has been questioned by the auditor.

2682. Therefore, so far it is a good instance by which to test the word you used now, the finality of the audit?—Yes, I have here a report by Sir Charles Jackson on the account of 1872-73 in which he drew attention——

2683. Was Sir Charles Jackson the predecessor of Mr. Cocks?—Yes, the predecessor of Mr. Cocks. He took exception to the payment for the Consular establishments in China.

2684. Would you read the form of his objection?—I am afraid it is rather too long to read.

2685. Never mind, tell us the substance of his objection?—The amount in this particular year was 19,655*l.* 18*s.* 11*d.*

2686. And what were the grounds of his objection?—He considered that India was not chargeable, on principle, with so large a sum. The result was that the matter was taken into consideration by the Secretary of State in Council; and the sum of 12,500*l.*, I think you will find, is the amount now paid on that account. Such was really the result of this report of Sir Charles Jackson, although no action was avowedly taken upon the report.

2687. I suppose he reported under the powers given to him: "Each auditor shall examine and audit the "account of the receipt, expenditure, and disposal in "Great Britain of all monies, stores and property "applicable for the purposes of this Act"?—Just so.

2688. That is rather a wide interpretation of the power is it not? As I understand, that criticism is rather a criticism of policy than of irregularity of account. He did not dispute the power of the Secretary of State to charge this amount, did he? Does not the conclusion of his remark sum up what he objects to?—Yes: the statement in the certificate runs thus, "That the payment referred to in the charge printed "in italics, being the second charge under the head of "Political Agencies and other Foreign Services on "page 7, and amounting to 19,655*l.* 18*s.* 11*d.*, for Her "Majesty's establishments in China, although in "accordance with previous payments, does not appear "to me, for the reasons contained in my separate "report annexed, to have been appropriated in con-"formity with the said Act, clauses 2 and 52." That is, I think, the only report of the kind which has been so definite.

2689. "And all the territorial and other revenues of "or arising in India, and all tributes and other "payments in respect of any territories which would "have been receivable by or in the name of the said "Company if this Act had not been passed, shall be "received for and in the name of Her Majesty, and "shall be applied and disposed of for the purposes of "the Government of India alone, subject to the "provisions of this Act." That is clause 2. Then you would consider it a part of your duty to report if in any respect the Secretary of State exceeded his powers?—That appears to have been the view taken by Sir Charles Jackson, who had been a Judge of the High Court in India.

2690. I understand that you, in the case of minor charges, actually disallow, and that the India Office then enforce the disallowance?—Yes, as a rule. Occasionally the amount is written off under the authority of the Secretary of State in Council.

2691. You have reported this disallowance, and the Secretary of State passes the amount?—Yes, that is so.

2692. Of course, very often the Auditor reports a charge for disallowance because the payment is irregular, but he does not at all mean by that that the amount ought to be disallowed against the accountant?—No. There is a case in point in this particular report, on the following page under Clause 28: "An erroneous "payment of 250*l.* 14*s.* 3*d.* included in this amount must "be disallowed." It was a pension granted erroneously, contrary to the regulations, and about 102*l.* has been recovered from the widow to whom it was paid, and the remainder, being irrecoverable, was written off by the Secretary of State.

2693. Therefore, as far as the practice goes, you report the disallowance, and the Secretary of State exercises his judgment, and either removes the disallowance or enforces it?—Yes; and the amount so disallowed would in the next year be reported as disposed of to clear the account.

2694. Yes. But now, coming to that case in which information has not been given you to enable you to notify it, I suppose it is too early to ask what course you will pursue in case the same circumstances occur next year? The difficulty has not yet arisen, and perhaps it is not a fair question to put. I will therefore not put it if you have no precedent?—I have no precedent; that has certainly to be considered.

2695. Does the Secretary of State take any action upon your report? Is any minute or letter written dealing with the different points which you have raised?—The report is laid before the Secretary of State in Council with a statement showing, in regard to each point of my report, what action, if any, has been taken.

2696. Is that minute not laid before Parliament?—The minute is communicated to me, but it is not laid before Parliament.

2697. That would be a matter for consideration, whether the minute which the Secretary of State passes upon the report, should not be added?—I think it might.

2698. Following the case of the Imperial Government, possibly you are aware that the Treasury always draws a minute which is laid before the Public Accounts Committee, recounting its action upon every item to which the Comptroller and Auditor-General has called attention, and upon which the Committee has expressed an opinion. Therefore, the Committee in the following session has its attention directly called to those points upon which the Treasury has not given effect to its suggestions or recommendations?—I have seen such a minute.

2699. But nothing is laid before Parliament showing the action of the Secretary of State upon your report?—Nothing.

2700. (*Mr. Buchanan.*) This report of yours is sent to the Secretary of State, and by him laid before Council, and a minute passed upon it?—It is presented to Parliament before it is really laid before Council.

2701. And there the procedure ends?—My report has to be laid before Parliament "within the first fourteen "days during which Parliament may be sitting next "after the first day of May in every year," and it is usually dated only a few days before presentation.

2702. I see in this report there is another case in which you say you are unable to certify the correctness of certain amounts; paragraph No. 22?—That is so.

2702*a*. Has anything been done?—Nothing has been done yet on that report.

2703. (*Sir William Wedderburn.*) The warrant of your appointment is under Her Majesty's Sign Manual, countersigned by the Chancellor of the Exchequer?—Yes.

2704. Can you give the Commission a copy, or show the original?—I can show the original. I will send for it, if you please.

2705. I should like to see the form. (*Witness exhibited the Royal Warrant for his appointment.*) Under Section 52 it is part of your duty "to examine and audit the "accounts of the receipt, expenditure and disposal in "Great Britain, of all monies, stores, and property "applicable for the purposes of this Act"?—Yes.

2706. "The purposes of this Act" is also used in Section 2, at the end?—Yes.

2707. I should like to ask you whether you consider that those words "the purposes of this Act" include anything beyond the internal administration of India?—Stores and property in this country.

2708-9. I wanted to understand how far those words were supposed to extend? "For the purposes of this Act" would apply generally to the Government of India, I imagine—the internal Government of India?—The Government in India, do you mean, as well as the Government by the Secretary of State?

2710. I mean, do you consider that this restricted the expenditure to purposes connected with the internal administration of India in matters outside India?—Yes; Indian stores, property of the Secretary of State. I have no control over any other property excepting that which is vested in the Secretary of State in Council.

2711. (*Chairman.*) The words of the section are, "The "accounts of the receipt, expenditure, and disposal in "Great Britain"?—Quite so.

2712. It confines your powers to the action of the Indian Government in Great Britain?—In Great Britain—Yes.

2713. (*Sir William Wedderburn.*) Yes, but those stores are applicable "for the purposes of this Act." I wanted to understand what "the purposes of this Act" were; whether you considered they were purposes confined to the use of the internal Administration of India; and if not, what other purposes could it be supposed to be?—The stores upon which I have to report are, speaking generally, those which are purchased by the Director-General of Stores, and shipped to India for the purposes of the Government of India. There are, however, books, maps, and other property in England the purchase and disposal of which come under my examination.

2714. They are for the most part indented for by the Government of India?—That is so.

2715. What I would like to know is how you ascertain whether a home charge arising out of transactions in India is expenditure "for the purposes of the Act"?—I should accept an indent from India as being an indent for stores required for the Government of India.

2716. You have no means of testing whether those stores are to be used "for the purposes of the Act"?—No.

2717. (*Chairman.*) You see what becomes of them; that they are sent out to India?—We trace them to their arrival in India.

2718. (*Sir William Wedderburn.*) Then under the section you are entitled to receive from the Secretary of State accounts accompanied by proper vouchers with all books, papers, and writings having relation thereto?—Yes.

2719. Have you experienced any difficulty in obtaining all those vouchers and papers that you require?—No. I think I may say no to that; my relations with the Heads of departments in the India Office are friendly, and I have really no difficulty.

2720. Then you have power to summon witnesses?—I have.

2721. Can you give me the name of witnesses who have been summoned by you or your predecessor?—No—no one has been summoned. Our examination is done chiefly by correspondence, and we have had no difficulty in obtaining information in reply to queries excepting on one occasion, and that we settled verbally.

2722. Can the Secretary of State be included among the witnesses?—I am not quite sure.

2723. "All officers and servants in Great Britain"?—Yes, I do not think that the Secretary of State is included.

2724. (*Chairman.*) "The Secretary of State in "Council shall by the officers and servants of the "establishment"—that distinguishes the officers and servants of the establishments from the Secretary of State, does it not?—Yes, I think so, "to examine all "officers and servants in Great Britain"; they represent the Secretary of State I imagine.

2725. (*Sir William Wedderburn.*) Can you produce specimens of reports of approval and disapproval. "Such auditor shall report from time to time to the "Secretary of State in Council his approval or dis-"approval of such accounts with such remarks and "observations." Are such reports of approval or disapproval apart from this report which has been placed before Parliament?—No, this is a summing up of the year's transactions and the Auditor's report on the transactions.

2726. Then there are no reports of approval and disapproval?—Well, they would be scarcely termed reports in the sense of the word in the clause. We write reports on different subjects at the request of the Secretary of State, as stated in my leading evidence.

2727. Can you give instances in which you or your predecessors have reported cases of money out of the revenues of India being appropriated to other purposes than those of the Government of India?—The one that I referred to as reported on by Sir Charles Jackson.

2728. That is a long time ago?—That is so; I have no recollection of any other case.

2729. Under Section 55 of the Act the consent of both Houses of Parliament is required for expenditure on military operations beyond the external frontier of India. How do you ascertain that due authority has been obtained for expenditure arising out of those operations incurred in Great Britain?—I do not think that expenditure would come under my cognizance at all; it would be incurred in India.

2730. But you would provide the stores?—But the stores would be provided for the purposes of the Government of India. As to their disposal by the Government of India, over that I have no control.

2731. Have you no cognizance, for example, if a war beyond the frontier is going on? If stores are sent with reference to that war, do you have no cognizance of the purposes for which those stores are to be used?—I might perhaps have such cognizance, but it would, I think, be beyond my functions to question the disposal of stores by the Government of India.

2732. (*Chairman.*) It would not be the disposal of the stores in Great Britain?—No.

2733. (*Sir William Wedderburn.*) But would there not be reason to think that under Section 55 those stores were not going to be used "for the purposes of this Act"?—That would hardly justify me in making a report on the subject.

2734. Then do you not consider that you have any duties under Section 55 to decide whether the consent of both Houses of Parliament has been obtained for such expenditure?—I have no powers under that clause.

2735. Except so far as the question arises whether the expenditure is "for the purposes of the Act"; that is to say, for Indian purposes?—For Indian purposes.

2736. (*Chairman.*) I suppose if you found Indian stores being applied for the use of the War Office here, you

Mr. W. Godsell.

13 Nov. 1895.

would consider that would not be a disposal according to the Act in Great Britain, and you would report that probably—I am putting, of course, an impossible case?—I can give you an actual case in which a large gun was ordered for the Government of India from Woolwich, which was snbsequently transferred to one of Her Majesty's ships, and the Government of India was repaid for it, or rather the advances made in respect of it were repaid, and another gun substituted; but I should not consider it necessary to report such a transaction.

2737. (*Sir William Wedderburn.*) But if stores were being sent to Persia or Egypt or Abyssinia from your stores under the control of the India Office, would not that be a case where it would be necessary to check the use of the stores?—Yes, if they had been paid for by the Secretary of State in Council; but we see that such stores are shipped to and delivered in India, or that the Secretary of State recovers their value. I have a query in point. It is a small item, but it will illustrate the particular point. It is a payment to the Birmingham Small Arms and Metal Company on a contract made by the War Office on behalf of India. The total number of cartridges supplied and paid for was 4,870,166, whereas the total shipments amounted to only 4 869,680, showing a short shipment of 486. Information was requested how this discrepancy had arisen, and how it would be adjusted. The Director-General of Stores made the following reply:—"I regret to find that the "case is as stated by the auditor. The 486 cartridges "in question whilst at Woolwich were damaged. "Steps are being taken by the War Office to credit "their value to India." That is, of course a very small item, but it illustrates what we should do in the case of stores not being shipped to India that were paid for by India.

2738. Can you point out in the accounts items of expenditure incurred in Great Britain arising out of the Chitral Expedition?—No.

2739. You have no means of knowing what is done with those stores, or of exercising any control over their use?—No.

2740. Then it does not come within your province to consider whether, for example, Chitral is within British India, and whether money expended there is money expended "for the purposes of this Act"?—That I say will be dealt with by the authorities in India; It is not expended by the authorities in Great Britain.

2741. I ask these questions because I believe that very great importance was attached to the institution of your office when the Act of 1858 was passed. As you are aware, there was careful inquiry on each occasion before the renewal of the Company's Charter; and I think the object of this appointment was in great measure to exercise that check over financial expenditure which was exercised by those enquiries. I ask these questions, therefore, to ascertain whether, supposing the stores to be obtained here and not used for the purposes of India, "for the purposes of this Act," you have any means, if the matter is brought to your notice, of preventing wrong application of those stores or of funds in any way beyond the proper purposes of India. That is the object of my question?—I have no knowledge whatever of the disposal of stores in India.

2742. You would not consider it necessary to make any inquiry as to whether those stores were being used for, as you might consider, a wrong purpose?—No, I think not.

2743. (*Chairman.*) You could not go, under the provisions of that clause, beyond the question of the disposal in Great Britain, could you?—I think not.

2744. (*Sir William Wedderburn.*) In carrying out your audit you decide whether there is any legal or technical objection to any particular item of expenditure?—Yes.

2745. Would you also consider whether the expenditure on a particular item was necessary and reasonable, and judicious?—Yes, in some instances. Here is another query to the Store Department. This is a claim from Messrs. Baron Harvey & Co. for drugs. "There is in "this claim an item of 38 lbs. of Oleum anisi, at 9*s.* 3*d.* "per lb.—17*l.* 11*s.* 6*d.*, and bottles 4*s.* 9*d.*, together "17*l.* 16*s.* 3*d.*, to meet a demand in the 1894 Annual "Bengal Medical Indent, Eastern Circle. But this "demand seems already to have been met by the supply "of a similar quantity at 7*s.* 3*d.* per lb. on voucher 3064 "October 1894 attached. As the second supply appears "to be in excess of the Indian demand, it is requested "that the sanction of the Secretary of State in Council "may be obtained for the expenditure of 17*l.* 16*s.* 3*d.*" This is the reply. "The annexed Council Minute, dated "12th July 1895, sanctions the expenditure of "17*l.* 16*s.* 3*d.* for the duplicate supply."

2746. (*Chairman.*) But that is a question of the double supply, not of the reasonableness of the supply. Sir William Wedderburn asked you whether you would look into the reasonableness of it. But I think the way the auditor looks at it is whether the expenditure is duly vouched and incurred under proper authority. It hardly falls to him to consider the reasonableness of it. The instance you give there is a most proper instance for an auditor to call attention to, viz., a double supply; he only asks the authority of the Secretary of State for this second supply. That is a different question from that whether it was reasonable Would you, as an auditor, think it part of your duty to inquire whether a certain set of coats are made of a reasonable kind of cloth, or in fact any other instance you might pick out?—Not as regards the post-audit system. As, however, we have papers and documents coming to us from all departments of the India Office, we are sometimes able to raise questions of the character referred to, which, as I have already explained, do not come within the limits of post-audit. I will give an instance: Some years ago at least four different departments were making passage allowances to officers proceeding to India, at different rates for similar grades. With this information before us, we raised the question as to whether it would not be desirable that the passage allowances should be reconsidered with a view to the rates being assimilated in all departments. That report was taken into consideration and adopted, and the rates are now quite different to what they used to be.

2747. (*Sir William Wedderburn.*) I would give an example to test what I was saying about this Chitral business. Would you consider that payments for telegrams when sent to places beyond the external frontier, with regard to affairs beyond the frontier and paid for here, were expenditure for the purposes of the Act?—It was decided a few years ago when Lord Salisbury was here, that the Auditor was not to see the telegrams, as they were more or less of a confidential nature. The private secretary to the Permanent Under Secretary of State certifies that the account for telegrams is correct, and we have to accept that certificate. We are, therefore, not acquainted with the contents of the telegrams.

2748. Yes, but you would know where they were sent to, perhaps?—They would be sent probably to Simla, or to Calcutta, as the case may be.

2749. (*Chairman.*) You would not be aware whether the telegrams were sent outside the frontier?—No, we should not be aware.

2750. (*Mr. Ryder.*) I have been very much struck Mr. Godsell, by one power of criticism which seems to belong to you. Apparently if you met with a payment in this country which is on account of some service outside India, it is open to you to consider and form your own judgment whether that service properly belongs to the Government of India, and whether therefore, the payment is one which you ought to pass without comment or not. Take an instance. You might find that here in England, a payment was being made to the Admiralty for the services of ships in Indian waters. It would be open to you to consider, first, whether the services of those ships were properly Indian services; then, further, whether the value attached to those services was a correct one or not; and, even though the value put upon them had been settled by the Secretary of State for India in Council and by the Government here in England, the British Cabinet, you would nevertheless form your own opinion of the value, and say that instead of 100,000*l.* only 80,000*l.* was the value, and you might attach a report in that sense to the Home Accounts, and have it sent to Parliament. Is not that so?—I think that may be so.

2751. It is entirely a matter of discretion with you?—Yes.

2752. However important the question, however much it involves a policy, you are perfectly at liberty to form your own judgment upon it, and to express a judgment in a report which has to be laid before Parliament. Is not that so? For instance, under paragraph 22 of this report you will observe that the soldiers in India are paid for at the rate of 7*l.* 10*s.* per head?—Yes, I should say that is so. If I could have

discovered that that 7*l.* 10*s.* was clearly an unreasonable rate, I think I might have reported that to Parliament.

2753. Although it might have been agreed to by all the highest authorities of India and England?—Yes, there might be some difficulty; it would require to be very carefully put.

2754. I only wish to bring out the very extraordinary power which you seem to possess; I do not know any precise parallel to it?—I may mention that some few years ago many questions were raised on the payments for ships in Indian waters. The Auditor disputed the right of the Admiralty to include the two ships which were employed on slave duty in the Red Sea as part of the six ships for which 70,000*l.* a year was paid.

2755. That would be a matter of detail, which naturally would belong to the Auditor, no doubt. You would say "A certain agreement has been made, and I "think that the particular payment is outside that "agreement." But your powers go far beyond that; it would be open to you to say, "Notwithstanding that "agreement, it was a wrong thing that India should "be charged with any payment at all for ships on the "high seas," if you thought so?—Yes.

2756. That seems to me a very remarkable power indeed?—But, in that case, the agreement, in all probability, would be laid before Parliament, and, therefore, it would be unnecessary to report it.

2757. Would it be enough to have a simple reference to it in the estimate presented to the House of Commons? would you think that that implied the sanction of both Houses of Parliament so as to come within the terms of the Act under which you act yourself?—The accounts of the Secretary of State in Council in which such items paid under agreement are distinctly shown, are, in fact, laid before both Houses of Parliament.

2758. You would not require any formal record of the approval of both Houses of Parliament of the agreement?—No, I think not.

2759. You think it would be enough to have a reference to it, in a footnote of an estimate?—I think so, if that estimate had been approved by Parliament, as taken in connexion with a proper description of the item in the accounts of the Secretary of State in Council presented to Parliament.

2760–1. (*Sir Ralph Knox.*) These accounts that you examine and report upon have undergone a previous examination, have they not, in the India Office?—By the Accountant-General. They are examined by him before they are paid.

2762. But, for instance, here is a case of the Royal Engineering College: do not the accounts that are sent in from there undergo any examination in the Accountant-General's Department?—Yes, but it would be before they are brought into the cash account submitted to me for audit.

2763. But here I find that you have called for several small amounts (11*l.* 9*s.* 11*d.* and 9*l.* 1*s.* 5*d.*, due for the sale of provisions, &c., and garden produce respectively) not having been received, to be surcharged. Does that show that the non-receipt has not been noticed by a previous examiner?—They were items which should have been recovered; one item had been outstanding for several months. Three months are allowed for such recoveries to be made, *e.g.*, any outstanding amounts recoverable in the month of December would be surcharged at the close of the financial year.

2764. These claims had not been written off in the books of the College; they were still liabilities which they contemplated realising?—Yes, that is so.

2765–6. But you thought they had not done so in time?—Yes. Probably these amounts will be recovered, as in former years: some amounts do lapse, but we take this particular form of dealing with such items.

2767. I see you have recovered on an item of 10,055*l.* 4*s.* 8*d.* the sum of 2*s.* for army non-effective. What was the nature of that; was it a computation that was wrong?—I am not quite sure that I can give you that information off-hand. In all probability it would be a computation. The 2*s.* is a trifling amount, but we endeavour to be consistent.

2768. Do all the amounts in every detail undergo an examination by your department?—Yes, with a few exceptions.

2768A. It is not a test examination in any way: it is a complete examination?—There are a few accounts which are tested.

2769. Do they involve large sums of money?—The Indo-European Telegraph accounts, for instance, are tested, and it was reported by the late Auditor, in a previous report, that it was his intention to do so. This was not disputed, and that plan has been adopted.

2770. I see in regard to this subsidy to the Admiralty, as to which you raised a large question, you say, "Evidence asked for by my predecessor of the fulfil-"ment of the conditions upon which the subsidy is "payable, not having been furnished, I am unable to "certify the correctness of this item." What evidence did you expect to receive about it?—The conditions require the supply of a certain number of men, and we had no evidence that those men were on the station.

2771. It distinctly requires a certain number of men?—There are certain complements of men required for the harbour defences of India, and we have had no information that those complements have been maintained.

2772. Would the certificate of the Secretary of State that the ships had been manned and maintained be sufficient?—I think not. The Secretary of State would hardly know whether they had or not. That was the nature of the query, and the query has not been satisfied—there has been no satisfactory reply.

2773. (*Sir Donald Stewart.*) You are not aware that that matter has been finally settled between the Secretary of State and the Admiralty?—That would be subsequent to the date of my report.

2774. (*Sir Ralph Knox.*) I see there is a contribution towards the expenses of Her Majesty's ships, employed in the Indian Seas, as to which an advance has been made, and which appears also to take the form of a subsidy. Do you require evidence of the service having been executed in that case?—That subsidy has only recently been fixed. The adjustment of the advances comes in a subsequent account.

2775. And is that for a definite service?—That is for a definite service of ships.

2776. As to the number of ships, and so forth?—Yes.

2777. Then would you require similar evidence in order to pass that charge to show that the service has been performed?—As in the case of the former subsidy of 70,000*l.* a year, I should require evidence that the ships were on the station in accordance with the agreement.

2778. What evidence of that was given you?—A quarterly statement by the Admiral on the station.

2779. That certain ships were in those seas?—Yes.

2780. (*Sir Andrew Scoble.*) I just want to ask you one or two questions with reference to the answers you gave to Mr. Ryder just now, with respect to these two paragraphs, 15 and 22. Do you consider yourself entitled to question the propriety of the amount of the annual subsidy to the Admiralty for those Indian Government Defence vessels, or do you consider yourself only entitled to require sufficient vouchers that that money has been earned?—I should consider myself entitled to report that the amount has been paid under a certain agreement which has been entered into between the Secretary of State in Council and the Admiralty, amounting to so much. With that I should leave the matter in the hands of Parliament and of the Secretary of State.

2781. Then your objection under paragraph 15 is simply that you have not got sufficient vouchers to satisfy you that that money has been earned. Is not that so?—That is so.

2782. Well then, in the same manner, with regard to paragraph 22, you would not feel entitled to question the capitation rate of 7*l.* 10*s.* 0*d.* per man, would you?—No. I described the item in my report, you will observe, "Capitation rate of 7*l.* 10*s.* 0*d.* on each man borne on the establishment."

2783. Then, here again you only want to ascertain whether that capitation grant has been earned, and you have not been satisfied with the vouchers tendered you that it has been earned?—Quite so, as to the numbers of men.

2783*a*. With regard to these two items, you do not go into the policy of the contract between the India Office and another Department. You simply object that you have not had sufficient vouchers to satisfy you that in these two items they were earned under those two contracts?—Yes, that is so; but, in describing the

Mr. W. Godsell.

13 Nov. 1895.

items, the nature of the transactions was also brought to the notice of Parliament.

2784. And that is the limit of your duty, is it not?—That really depends upon the interpretation of the Act.

2785. Well, do you consider that the limit of your duty or do you consider you ought to go further?—I should consider it the limit of my duty to report the nature of the transactions to the Houses of Parliament, and leave them to raise any question upon it.

2786. But do you consider yourself entitled to go behind these contracts, and to question whether or not they are reasonable?—As a matter of fact we have not examined them.

2787. I do not want to have matters of fact, I want to know what your conception of your duty is?—If I thought the amount was excessive, I think it would be possible to raise the question.

2788. If you thought the India Office was paying too large a price for the service, would you consider it your duty to raise that question in your report?—If it were such that it might be considered as a contribution to the Admiralty or to the War Office, as the case may be; in that sense I might report it.

2789. That is, if you thought the India Office had made a bad bargain with any other Department, you would consider it part of your duty to call attention to that in your report?—It would really depend. It is difficult to give a direct yes or no to that.

2790. But I thought you rather intimated to Mr. Ryder that you would consider it your duty; and I wanted to know whether, on reflection, you did really hold that view?—Certainly, I should be guided by circumstances.

2791. Well, would the circumstance that you considered it a bad bargain lead you to report it?—May I give you another illustration?

2792. No, I would rather you would answer the question?—Well, I will say yes, if I may illustrate it.

2793. (*Chairman.*) You give your answer to Sir Andrew Scoble upon the authority of this sentence in the clause, I suppose, that you are to "report from "time to time to the Secretary of State in Council "his approval or disapproval of such accounts, with "such remarks and observations in relation thereto as "he may think fit"?—Just so. I should not consider myself entitled to enter into questions of policy or administration as such; but only if, in my judgment, they clearly involved an appropriation of Indian revenues otherwise than for the purposes of the Act.

2794. You consider that as leaving you a considerable discretion in making your remarks?—Quite so.

2795. Or, otherwise, if you had to define the duties of an Auditor, may I ask whether you would go beyond this, that the duties of an Auditor are to see that the payments are properly vouched and are properly authorised?—Yes.

2795*a*. Would you go so far in defining the duties of an Auditor, as to say that it was his business to enter upon the consideration as to whether expenditure is judicious or not?—No, I should not.

2796. (*Sir William Wedderburn.*) With regard to telegrams, I see that there is an item in the Home Accounts, page 5, of 6,784*l.* 6*s.* 3*d.* for telegrams to India. Have you any knowledge as to where those telegrams have been sent, or to whom they have been sent. They are classed under the head of Telegrams to India?—The claim would be in a kind of tabulated form from such and such a place to such and such a place, or giving names possibly to whom the telegrams may be sent.

2797. I understand you have no means of knowing whether those telegrams are strictly on account of the purposes of the Government of India?—No, they are certified by the Private Secretary that they are so, and we accept his certificate.

2798. But is not that rather deputing your judgment to somebody else?—I think not. We are obliged to accept the certificates of responsible officers.

2799. I think this Act of Parliament seems to give you a power of insisting on any form of voucher or evidence that you think is right in order to make up your mind?—Well, if we went behind every certificate we should want double the staff, we should have to do the work over again, the work which has been examined by responsible officers, and certified to be correct.

2800. As I understand, whether or not this 6,784*l.* 6*s.* 3*d.* has been properly expended depends upon the certificate. You have not satisfied yourself in regard to that, but you depend upon the certificate of some other officer?—We had a claim by the company—the Indo-European or Eastern Telegraph Company, as the case may be—for the particular telegrams given in a certain claim in detail, which detail is certified to be correct by the officer responsible.

2801. (*Sir Donald Stewart.*) Certified monthly bills for telegrams giving details of the words are submitted?—Yes, but what we do not see is the copies of the telegrams.

2802. (*Sir William Wedderburn.*) There is no means of knowing whether or not they have really been sent "for the purposes of the Act"?—No, I cannot answer for that.

The witness withdrew.

Adjourned till Friday, at 11 a.m.

At the India Office.

SIXTH DAY.

Friday, 15th November 1895.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

SIR WILLIAM WEDDERBURN, Bart., M.P.
SIR RALPH KNOX, K.C.B.
SIR JAMES PEILE, K.C.S.I.
SIR ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
MR. G. L. RYDER, C.B.
MR. T. R. BUCHANAN, M.P.
MR. W. S. CAINE.
MR. DADABHAI NAOROJI.
MR. COLIN G. CAMPBELL, *Secretary.*

Mr. S. Jacob, C.S.I.

15 Nov. 1895.

Mr. STEPHEN JACOB, C.S.I., recalled and further examined.

2803. (*Chairman.*) I think there were one or two points on which you thought the evidence you had given, wanted supplementing in some respects; they refer, I think, to the Questions 432*a*, 446, and 165?—Yes, I think so, and 176.

2804. Or, rather, I think it is Questions 176, 165, and 102?—Yes, those are they.

2805. Perhaps you will state the supplemental evidence which you wish to give,?—In Question 176 I was asked whether the establishment of Reserve

Treasuries was a matter which had been fully considered, and was the result of what might be called a matured policy. In connexion with this, the Commission might like to have their attention drawn to the despatch of the Government of India, No. 256, of the 30th June 1874, which recommended the adoption of this policy. I have the despatch here. They submitted it in connexion with a Bill for the Regulation of the Presidency Banks; the Presidency Banks Act was to be amended, and——

2806. That despatch has been published?—Yes, it has been published as an Appendix to the Financial Statement for the year 1889–90.

2807. (*Sir Andrew Scoble.*) Is it one of the papers we have before us?—No, it has not been printed for the Commission.

2808. (*Chairman.*) But it is available to us?—Yes.

2809. Perhaps you will continue?—The Government of India said: "We have been much impressed with "the consideration that the effect of the existing "agreements with the banks, which compels us to "place all the cash balances belonging to Government "in their hands, leads to consequences which may be "very inconvenient, if not worse, both to Government "and to trade. The only use of these balances to "Government is, that they may be made available the "moment the public service requires them. We have "had no difficulty in regard to the balances in the "hands of the Banks of Bengal and Madras: the Bank "of Bombay, however, protested against meeting drafts "upon it, and on the urgent representations of the "Governor of Bombay, we were obliged, on the 29th "January, to allow a month's time before drawing. "The Bank of Bombay, accustomed to high govern-"ment balances and relying on the maintenance of "those balances, had so employed them that they "were practically locked up; for, had we insisted on "withdrawing them more suddenly, we should have "done so in the face of a warning that we should "produce a commercial crisis, and therefore, for a time "the Government balances at Bombay were useless for "the purposes of the Government." They go on to say that they doubt whether there is any real advantage to trade from the large Government balances; and then from paragraph 9, again, they say:—"Had the Govern-"ment funds in the hands of the banks in January "last been limited to a fair working balance, and had "we had a reserve in our own hands, we think it may "be assumed that the market rise in the rates of "discount which has occurred would not have taken "place, and our business would have been transacted "without disturbing trade operations. The resources "of a large money market are not open to us, and we "do not think it would be safe to trust to being able "to raise funds readily and immediately in India. "The amount (350,000*l.*) that we wanted in January "out of our balance of about a million with the Bank "of Bombay, and the demand for which brought down "the remonstance that we should place in jeopardy "the trade of Bombay, cannot be considered as large. "Calcutta may have larger resources, but we cannot "suppose that even here the supplies immediately "available are really considerable. We are of "opinion that a Government subject to the contin-"gencies to which the Government of India is "exposed ought not to be without a reserve, and "that this reserve should be in its own hands. "This object might be attained by dissolving our "connexion with the banks and re-establishing our "treasuries. We are unwilling to take this course "unless forced to do so; the banks are useful institu-"tions, and the Bank of Bengal especially has upon "several occasions been of great assistance to the "Government. We should prefer, as an alternative "plan, to make a change in the agreements with the "banks, so that, instead of giving them the right to "hold all the Government balances, the stipulation "may be confined to engaging to pay them interest "when our balances are reduced below certain amounts. "If it be necessary to go further than this, we might "stipulate that the banks should have the use of our "balances up to certain limits, after which we should "be unfettered as to their employment." Then they conclude, in paragraph 14: "The amount to be kept in "reserve need not, in our opinion, be very large, as the "main difficulty is one only of time. The sense of "security which we should derive from the possession "of a reserve of two millions immediately available "for any emergency would, in our judgment, amply "repay the charge for interest on that amount."

2810. Therefore the position was that the Government, having a balance of 1,000,000 at the Treasury in Bombay, were practically interdicted from the use of it?—Yes, that was the case.

2811. The draft proposed to be made was only 350,000 out of 1,000,000?—Yes.

2812. And the Government was reduced to the position of being expected to keep a certain amount of money idle in the Bank of Bombay in order to be a convenience to trade?—Or to give them very considerable notice of any withdrawal.

2813. Do the Banks now pay interest on the balance?—No; we allow a certain minimum balance always to remain in the various banks; the amount varies with each bank.

2814. Do you happen to know what it is in the Bank of Bombay?—I think it is 20 lakhs in the Bank of Bombay, and I know it is 30 lakhs in the Bank of Bengal.

2815. What is that in tens of rupees?—300,000 Rx.

2816. What you may call a balance of 300,000*l.*?—Yes, very roughly.

2817. Was that measure carried out?—Yes.

2818. And what is the bargain now, do you happen to know?—That is the bargain now, that we keep with them a certain minimum.

2819. And in the case of the Bank of Bombay?—Yes, if our balance falls below that minimum we pay them interest on the difference between the minimum and the actual balance.

2820. But is it well understood that you may draw up to that minimum at any time?—Yes, we may draw up to that minimum without any charge at all, or notice.

2821–2. The Government are still, of course, liable, even in that case, to remonstrance, namely, that by drawing to the minimum permitted they may create a panic?—Yes, there was some such remonstrance in 1888, when I was in Bombay as Accountant-General. The question of the assistance to be rendered to trade through the Government balances was, I may add, discussed in the Financial Statement of 1889–90 by Sir David Barbour.

2823. Did Sir David Barbour make any remarks, to which you would like to call attention, in his Financial Statement upon this question?—He stated then that questions had been raised as to whether Government ought not to lend a larger amount of its balances to the commercial public, and as to whether it keeps too high a cash balance, and he refers to these questions in detail in the financial statement of 1889–90.

2824. Did he point to any conclusion of his own?—Yes. He said, in concluding his remarks on that point: "It has been urged that Government could "relieve the market by lending out the balance of "the Reserve Treasuries on favourable terms to the "banks; but, if this course were followed, the same "difficulties that arose when the Presidency Banks "held the whole of the surplus balances would again "occur. Trade would become accustomed to rely on "the resources furnished by the Government, and at a "time of pressure the withholding of the assistance "usually given by Government might have a very "serious effect." That appears to have been his conclusion.

2825. Therefore, you may say that his conclusion was against leaving balances at the bank, except under a very strict understanding as to the right of the Government to use them?—Yes. I may explain in connexion with this point that we do, in fact, sometimes lend money to the Presidency Banks at interest. There was also a memorandum written by the Hon. Mr. Westland, now Sir James Westland, with reference to the amount of our balances.

2826. I think the Commission would like to be referred to that?—It is rather lengthy, but the purport of it is that 8 crores was at that time—this memorandum was written on the 20th November 1888—absolutely the theoretical minimum upon which we could work.

2827. That is distributed through all the Treasuries?—Distributed through all the Treasuries; and he considered that practically we could not go much below 10 crores as a minimum; that is to say, that if we were reduced to 8 crores, a considerable movement of funds backwards and forwards would be involved, which would result in very great inconvenience and

Mr. S. Jacob, C.S.I.

15 Nov. 1895.

expense. One argument that he put forward for having such a balance, was that the amount was distributed over so many Treasuries—he says 200 treasuries and 800 sub-treasuries, but as a matter of fact the number of treasuries is 266, so that there are over 1,000 treasuries, over which the balance has to be distributed.

2828-9. Do you know how much of that 8 crores would represent the normal balance in the three banks you have mentioned—Bengal, Bombay, and Madras?—The ordinary balances would be from about 150 lakhs to 200 lakhs, that is, from 1,500,000 to 2,000,000 Rx., in the head offices of the three Presidency Banks, not including the balances held by their branches.

2830. And if you include the balances in their branches, would that make a very great difference?—Well, the branches sometimes hold very considerable amounts. Another of his reasons was that the revenue is to a large extent received in the sub-treasuries, and sometimes for a month or so after it has come in, it is really hardly available for expenditure; it takes some time to collect it at the Central Treasuries where our special liabilities occur.

2831. You mentioned just now, as a reason, I think, given by Sir James Westland, for keeping a large balance, the expenditure that would be incurred in moving coin from one district Treasury to another if a sufficient balance was not maintained at each Treasury. We gather from Sir David Barbour that there are throughout India considerable means of providing cash at the district Treasuries, inasmuch as there are a large number of native bankers to whom the Government Treasury could sell Bills?—Yes, the sale of Bills on our Treasuries has developed very much in the last 10 years. In 1893-94 the amount that we received as premium on Bills exceeded the whole cost of the transfer of funds from one district treasury to another. We realised during that year Rx. 32,106 as premium on Bills, and the whole cost of removing money from district to district was Rx. 22,805.

2832. Therefore, so far from the charge of moving specie being a charge on the taxpayer, the movement of funds is a source of profit?—At present it is. Ten years ago, in 1883-84, the premium amounted to only Rx. 15,000, and the remittance charges were about the same as at present. Then there was a net charge for remittance.

2833. That seems a very large premium. As a rule can the bills sold at a district treasury by the treasury officer be sold at a premium?—Generally; we do sometimes grant a transfer without any charge.

2834. But, as a rule, it is an easy method for the native bankers to transfer their funds, as well as for Government?—Yes, we charge a very low rate of premium; as a rule, four annas for a hundred rupees is the outside. Very often we only charge one anna for a hundred rupees.

2835. Then in what cases have you actually to send money?—Simply in the cases of outlying treasuries where there is no commercial demand. Our opium treasuries also have to be kept in funds by remittances of actual cash; they are large spending treasuries, and issue a great deal more money than they receive in the shape of revenue.

2836. Do you happen to know what the sum total of cash actually sent amounts to?—No. I could not say off-hand.

2837. I suppose you could calculate it roughly. If the premium that you charge on bills is an average one, you could give somewhat near the amount?—I could calculate the amount that we remit by bills pretty closely, but not the actual amount that we remit in cash.

2838. (*Sir William Wedderburn.*) The Hoondee system is very well known in India, and has been in practical working for very long periods, so that it is very familiar to the people, I think?—Yes, and the practice of remitting by means of drafts on our Treasuries is becoming much more familiar. I have drawn up a statement exhibiting the progress for the last ten years, and it shows that during the last three years we have made a profit on the premium; that is to say, that the premium has exceeded the expense of the actual remittance of cash.

2839. (*Chairman.*) The greater use of the system both by district treasuries and by the native bankers has resulted in an economy to the Government?—Yes. The European Banks also make large use of the system.

2840. Then, I think, you wish to call attention to Question 165 on the subject of the movement of funds?—That has been now done by the questions that have just been put.

2841. The two questions run into each other?—Yes.

2842. Then you mentioned Question 102?—Yes. In that question Sir Henry Waterfield was asked as to the connexion of the Comptroller-General with the Financial Member, and stated in reply that the Financial Member constantly takes the advice of the Comptroller-General. I was allowed to see Sir David Barbour's evidence, and I thought that the statement might, perhaps, seem at variance with Sir David Barbour's replies to Questions 2141 to 2144, in which he stated that the Comptroller-General communicated with the Finance Member only through the Financial Secretary. I thought I might, perhaps, be allowed to explain that the advice given by the Comptroller-General to the Financial Member directly is unofficial or verbal. All official communication between the Government of India and the Comptroller-General is carried on through the Financial Secretary.

2843. Quite so, and I will only ask you upon that, have you often these verbal communications with the Financial Member of Council?—I have had them very frequently with Sir James Westland, the present Financial Member.

2843*a*. It comes to this: the Comptroller-General is a high financial officer, whose office is, at all events, neighbouring to the Treasury. He is therefore constantly available, and if the Financial Member desires to obtain information he naturally goes to the officer who can most readily give it him?—Yes.

2844. The Comptroller-General has first of all a complete knowledge of the accounts; he is the first person who receives information from the district treasuries; therefore I suppose it must constantly be a matter of convenience for the Financial Member of Council to see him and ask him questions?—Yes, he does constantly send for him.

2844*a*. What is the next point on which you desire to supplement your evidence?—With reference to Questions 432A and 446, I was asked about the monthly accounts and statements submitted to the Government of India by the Comptroller-General for the information of the Financial Member. One important statement was not mentioned, namely, the Resource Estimate, which is compiled at the close of each month (about the 23rd) and estimates for the current month and the next two months the probable financial results, as far as can be gathered from the latest facts then available. This estimate not only enables the Comptroller-General and the Government of India to forecast the general financial position at the end of each month, about two months beforehand, but also furnishes the Comptroller-General with the means for deciding whether each province, as a whole, is properly supplied with funds or requires assistance.

2845. It is an estimate to guide the Comptroller-General in supplying funds, based upon the latest information within his reach?—Yes.

2846. Is there anything else?—Yes. In Question 510 and in some other questions the point of the inquiries made was whether a monthly report of irregularities was submitted by the Audit Officer to any superior officer and to the Government of India. The answers given indicated that no such monthly report is submitted; and it was explained that the reason for this is that the auditing officers have powers of disallowance, and that the necessary action for recovery, &c. is taken by them at once. The Commission may, however, consider it relevant to this point to learn that annual reports are submitted, showing in detail any long outstanding objections, and explaining why such objections have not been removed. The Comptroller-General reviews these, and submits them to the Government of India, who are thus kept informed of the fact that audit objections are promptly disposed of.

2847. (*Mr. Buchanan.*) Is that in your annual report?—Not in the Appropriation Report, in a separate report.

2848. Is that a published report?—It is not published, no.

2849. (*Chairman.*) Could you show us one of those reports?—I have not got one here. I could get one from India.

2850. Without much trouble?—Yes.

2851. I think, perhaps, it would be well if you could get us a sample of them, and I daresay Sir Henry Waterfield would give it us in when we meet again?—Yes.

2852. (*Sir Ralph Knox.*) Does that apply to objections raised by the different Accountants-General?—Yes.

2853. They report to you certain objections that they have made, and that have not been cleared up?—Yes, beyond a certain period—within a certain period.

2854. (*Chairman.*) The questions we have put to you, Mr. Jacob, only touch this point—that no report is made of irregularities which have been condoned by subordinate audit officers?—No, no report of them is made.

2855. Because, of course, there may have been important irregularities which have been amended, or there may be questions in which the subordinate officer has used a discretion in condoning which might be open to exception; and, as I gather, the Comptroller-General does not have any opportunity of forming an opinion upon such action of his subordinate audit officers?—No report is made of objections which have been removed, but the subordinate audit officer is not allowed any discretion. He cannot condone. He may admit that the rules have been observed on farther explanation, but if it is admitted that the rules have not been observed (except in very petty cases—as I think Sir David Barbour explained—amounts of 2 or 3 rupees) he is bound to require a report to be made to the authority whose sanction is needed.

2856. My point is, that where there is a power of disallowance, the subordinate audit officer may wrongly interpret the regulations under which he acts, and he may consider that the rule covers what is in reality an irregularity. It struck me that the superior audit officer ought to have some opportunity, if possible, of learning how his subordinate officers exercise that discretion of interpretation?—There is no such opportunity in the civil department.

2857. It may be difficult to devise a means of obtaining such information for the Comptroller-General, but still I think that the Comptroller-General should, if possible, have some idea of how his subordinate officers interpret the rules?—He does get an idea, through the cases which come up.

2858. (*Sir James Peile.*) And through the test audit also?—Yes.

2859. (*Chairman.*) And is a test audit used for that purpose? Would the Comptroller and Auditor-General's officer, who conducts the test audit, report to him if he thought the subordinate audit officer put a lax interpretation upon the regulations?—If he thought the interpretation was wrong, he certainly would report it, or even if it were doubtful.

Mr. S. Jacob C.S.I.
13 Nov 1895.

2860. Then, practically, the answer would be that in order to know how these subordinate officers do their work, you trust to your test examination?—Yes, practically.

2861. (*Sir Ralph Knox.*) Do the military accountants report to you in a similar way?—No, they do not report to me. I think they report to the military Accountant-General.

2862. (*Chairman.*) Is that all?—I would just wish to mention that I have written to India for samples of the test audit reports. I mentioned in my evidence that I had not got them here, but I have written for copies of them, and they will be submitted to the Commission at some suitable opportunity.

2863–5. Could you get also, at the same time, a few copies of your last Appropriation Report for 1893–4? Mr. Buchanan mentions to me that they are rather scarce?—Yes. I have also written and asked Mr. Cox, who is acting for me, whether he can, without any great difficulty, obtain any statement of the cost of the treasuries as to which I was questioned. We have not been able to make out any estimate in this country. The details are not available, but I have asked him to make them out, if he can do so.*

2866. (*Mr. Buchanan.*) May I ask a general question, I do not know whether you can answer it or not. Have you looked at the reports presented by the Comptroller and Auditor-General of England on the accounts?—I have.

2867. Would you say, as your conclusion therefrom, that the system you have in India adequately reports to the Government of India similar cases of irregularity?—I think it results in the irregularities being reported, not in the same shape or form, but they come up one by one.

2868. You do not think that there are many that escape notice?—I should say not, from the experience of my test audit. We have had this test audit system in force now for 13 or 14 years, and very few cases of irregularity, comparatively, have been discovered in them.

2869. (*Chairman.*) You apply your test audit also to military accounts, do you not?—Yes, to military and public works accounts.

The witness withdrew.

Sir AUCKLAND COLVIN, K.C.S.I., &c. &c. called in and examined.

Sir A. Colvin, K.C.S.I., &c.

2870. (*Chairman.*) You held the position of Finance Member of Council in India, did you not?—Yes.

2871. During what years?—From October 1883 to August 1887.

2872. That was under Lord Ripon and Lord Dufferin?—Yes.

2873. Would you tell us what other positions you held in India?—Do you wish to know only the principal positions?

2874. Perhaps you would tell us when your employment in India began, and, generally speaking, what posts you held; of course the higher posts are the most important?—I was in India from the beginning of the year 1858 to the end of 1892, with an interval of about five years, during which I was absent in Egypt. During that term I held the posts of Settlement Officer for many years, Secretary to the Board of Revenue in the North-West Provinces, Magistrate and Collector, Secretary to the North-West Government, and Financial Member of the Viceroy's Council.

2875. And after that?—After that, Lieutenant-Governor of the North-West Provinces and Chief Commissioner of Oudh.

2876. Therefore in the earlier times of your service in India, you had considerable administrative experience of the manner in which the revenue was collected?—Yes.

2877. Would you have experience of revenue questions in most of those appointments you held, or would you not have had the same cognizance of them in the later and higher appointments, until you became Financial Member of Council?—Of revenue questions I should have been mostly cognisant as Settlement Officer and Collector, and as Secretary to the Board of Revenue.

2878. Where were you Secretary to the Board of Revenue?—In the North-West Provinces.

2878*a*. And the Board of Revenue there superintended the collection of what revenues?—The Land Revenue, Excise, Stamps, Local Rates, Provincial Rates.

2879. In fact those revenues which, we have learned, were handed over under Lord Mayo's and his successors' decentralization schemes more completely than previously to the Provincial Governments?—*Inter alia*, those revenues. The Land Revenue is not handed over to the provincial Government; the Land Revenue goes mainly to the Imperial Government.

2880. It is levied on behalf of the Imperial Government, but it is collected by the Provincial Governments?—Collected by them, yes.

2881. I think you have had the opportunity of looking through the evidence both of Sir Henry Waterfield and Mr. Jacob in the first instance, and then of Sir David Barbour?—Yes.

2881*a*. I think it would be most convenient if in the main, in the questions I put to you, I follow the line adopted with Sir David Barbour. We are anxious to get your view as Financial Member of Council, upon the same points and the same kind of information that we have obtained from Sir David. And, first of all, I should like to ask your view as to the position of the Financial Member of Council. Do you consider from your knowledge of the position of the Finance

* *See* Appendix 4.

Sir A. Colvin, K.C.S.I., &c.

15 Nov. 1895.

Minister in India, that, generally, the powers of the Financial Member of Council correspond to those of the Chancellor of the Exchequer in England?—I have no personal acquaintance with the functions of the Chancellor of the Exchequer, but from what I have gathered from the evidence given before you by Sir Henry Waterfield, Mr. Jacob, and Sir David Barbour, and the explanations that your Lordship offered, I should imagine that, theoretically, they correspond very closely.

2882. One distinctive power of the Chancellor of the Exchequer in England is the control which is put into the hands of the Treasury—of course you will understand that the Chancellor of the Exchequer is the virtual and active head of the Treasury—and that control is summed up in the statement that his assent, the assent of the Treasury, is required to every measure of the Government increasing or tending to increase public expenditure directly or indirectly. The power is almost as wide as you can describe it, and it extends to every measure, except in so far as any powers of independent action may have been delegated to a department. His assent is necessary to the addition of every clerk to an establishment, and, when it comes to such small questions as that, you will see that it covers every kind of increase of expenditure. Would you say that your power as Financial Member of Council was equivalent to that?—You speak of sanctioning expenditure.

2883. Yes, of sanctioning expenditure?—Yes; I should say it was.

2884. And had you security that every such measure was really brought to your notice?—Every fresh measure?

2885. Yes?—Yes; so far as it was necessary that my sanction should be given to it. It was not necessary, for instance, that every item of provincial expenditure should be sanctioned. That would not be brought to my notice so long as it was within the power of the Provincial Government.

2886. In such cases the Central Government had delegated a certain discretion to Provincial Governments, and therefore the Provincial Government was the judge?—Yes.

2887. In fact the Provincial Governments, after a manner, contracted to conduct certain services, and, so long as they did not exceed the sums allotted to them for those services, they had a considerable discretion within that sum?—Yes.

2888. But we had better deal with that point when we come to provincial expenditure. I may ask you, however, whether a very considerable power was not reserved to the Central or Imperial Government even in provincial expenditure? The Provincial Government could not increase salaries except by very small sums?—No.

2889. They could not incur new expenditure except within very narrow limits, so far, at least, as the rules went?—No.

2890. Then, I suppose, in those cases where they wanted to go beyond those limits they would come to the Central Government?—Yes; there was a fixed limit, I think, of 250 rupees increase of salary, and 50,000 rupees for public works projects. Anything exceeding 50,000 rupees would have to go to the Imperial Government.

2891. What was the security of the Financial Member that his assent would really be asked to such measures? With regard to increasing expenditure, the Comptroller and Auditor-General in England reports to Parliament, to the House of Commons, every case in which an increase in expenditure has been incurred, which has not received the assent of the Treasury. Therefore, since the passing of the Exchequer and Audit Act, in 1866, a great defect in financial administration has been removed, and now the Chancellor of the Exchequer has perfect assurance, or as perfect assurance as any regulations can supply, that no department has transgressed that rule. Has the Finance Minister in India any similar guarantee that the general rule of the service is observed in every case?—He has a system of audit of which the Accountants-General and Comptroller-General are the principal officers, whose duty it is to check all items of expenditure shortly after they have been incurred, and to bring to the notice of the officers concerned expenditure which has been incurred without due sanction.

2892. And you consider that that was a complete guarantee to you that the regulations of the service in that respect were being observed?—I think so; from my experience of that check during all the years of my service both as an executive officer and as Financial Member, I should say, in both capacities, it was quite sufficient.

2893. Then, so far as the power of control is exercised in detail in the manner described, you would consider the control of the two Treasuries over expenditure—I am comparing the English and the Indian Treasuries—to be equal?—As far as I can compare a system with which I am familiar with a system with which I am not familiar, I should imagine from the description which your Lordship has given of the English system that the control was probably equal. I may mention here a point which I do not see brought out in the evidence hitherto given. Among other means of checking expenditure which has been irregularly incurred, and a means which is possessed by every successive stage of official in the Government, is the practice of recording proceedings which are submitted by each department to the department above it. For instance, the Government of India sees the proceedings of each Provincial Government in all its branches, those proceedings embracing the correspondence of that Government in each branch. The correspondence on any important subject is recorded at length; in less important subjects merely a summary is given; but the attention of the Government would be at once drawn, and is drawn, in that way to an expenditure which would appear *primâ facie* to require explanation.

2894. Do I understand that these reports are in the nature of summaries of the action of a sub-department, which are handed on to the superior department?—That is so. Collectors' proceedings, for instance, would go before the Board of Revenue; Board of Revenue proceedings would go before the Provincial Government; Provincial Government proceedings would go before the Imperial Government; and I think all the Provincial Governments and Government of India's proceedings come here to the Secretary of State.

2895. Would the Finance Department be seised of these summaries of administration of the other departments? For instance, would you, as Financial Member of Council, have the reports of the Home Department before you?—No, as Financial Member of Council, I should not be seised of a matter submitted in the proceedings of the Home Department, unless the Home Member thought it had a financial bearing, which ought to be brought to my notice.

2896. So far I have been asking about the power of the Financial Member of Council over the expenditure of other departments; but of course there is another side to the question, namely, the check upon the Financial Member himself. Here the check upon the Chancellor of the Exchequer is, first of all, in the case of a difference of opinion between himself and a colleague, a reference to the Prime Minister. In more important cases there is a reference to the Cabinet; and, lastly, there is Parliament behind the Cabinet. Of course that involves the knowledge on the part of the Minister and of the Cabinet that probably a vote will be wanted, in which case the immediate and active criticism of Parliament will take place; and therefore there is a considerable check in what I may call anticipation of the action of Parliament. Now, when we come to India, I think I have gathered from the evidence already given to us that over the Finance Minister is, first of all, the Viceroy personally, that is to say, that the communication between the Viceroy and the heads of departments is really tantamount to that check which here exists in a reference to the Prime Minister from the Chancellor of the Exchequer. Then comes the Viceroy in Council, who, I presume, would correspond generally to the Cabinet here. Then comes the Secretary of State, and finally Parliament; but any anticipation of the action of Parliament is very weak in the case of India, as compared with what it is here. Would that describe generally the checks upon the Finance Minister?—I think so. I should say also that the anticipation of the action of Parliament would be stronger in the case of the officials who are nearest to the immediate sphere of Parliamentary action.

2897. That is to say, more powerful on the Secretary of State than on the Viceroy?—And on the Viceroy than on a member of his Council.

2898. But still it is true that though Parliament may, and often does, take up an Indian question, there is no necessity that it should do so. The action of the Indian Government will not, it may fairly be anticipated, in most cases call for the attention of Parliament; whereas here the knowledge that a vote has to be submitted to the House of Commons makes the criticism of Parliament inevitable. There is a very different result in these two cases, is there not?—Yes.

2899. May I ask you the general question, whether you would wish to strengthen the powers of the Finance Minister?—I should wish it, so far as it were possible.

2900. Is there any direction in which you think they might be strengthened?—Yes, I think they might be strengthened advantageously in so far as concerns the steps which precede sanction to expenditure; the deliberations, I would say, which precede such sanction.

2901. And that leads me to the important question of those deliberations which must precede the mere administrative action of the department. By the administrative action of the department, I mean the first absolutely official record of a measure leading to increase of expenditure which necessarily follows the adoption of a policy; and that policy must have been the subject of previous deliberations. Do you consider that the Finance Minister has an assurance that, when those deliberations take place, he will have ample opportunity of making known to the Viceroy and to the Council what the probable effect on the finance of the year will be, and how far the finance of the year will be able to stand the strain of any extra expenditure?—So far as when a policy is formed, its final results can be definitely foreseen, he has an opportunity. But a policy is very often like a child, it grows; you cannot tell what its features will be in a state of further development; or, if you can, it may not be more especially within the Financial Member's opportunities to see. In that case, I think that he has not always got the means of forecasting the expenditure, and that he is not always in so good a position as some of his colleagues to make an estimate of what the ultimate financial aspect may prove to be.

2902. That is to say, he has not the detailed knowledge that enables him to forecast the effect of an administrative measure?—Yes. He does not see behind the mind of those who are more immediately concerned with the birth and growth of that policy.

2903. That is a defect that must attend every financial system, must it not? The Finance Minister, simply charged with the conduct of the financial administration, cannot have that detailed knowledge of the effects of measures which his colleague at the head of the department concerned has?—Yes.

2904. Let me take an instance from this country. The Minister for Education is constantly revising the Code, and in his reforms he may propose measures which have a contingent result in increasing expenditure. It is difficult to say how it will act, under what circumstances the power of earning an extra grant will be exercised; and in such cases as that, the Finance Minister is in a worse position than the Minister at the head of the Department, in forecasting what the effect of a measure may be. I think that is a defect that is inseparable from financial administration. No Finance Minister can have universal knowledge. Does your criticism of the Indian system go beyond that, or do you think that the Indian Finance Minister is in a peculiar way worse off than Finance Ministers in other countries?—I am not aware whether in a case of that kind in England the Chancellor of the Exchequer would have ample opportunities of discussing the educational policy before it was finally adopted, and whether he would be aware of all the considerations which prompted it, and, generally, of the developments which it was likely to take.

2905. The Chancellor of the Exchequer is a member of the Committee of Council on Education. He is always summoned to the deliberations of that Council; and by that means it is supposed that he gets the internal knowledge of what is being proposed; but I think it has often been found, both by himself, and by his officers, that that information is not sufficient; he is not really posted up. That will, however, do as a sample of what I mean by the inherent defect in finance administration, that the Chancellor of the Exchequer or the Finance Minister cannot have universal knowledge?—No. The illustration which your Lordship gives, I think would place the Chancellor of the Exchequer in England favourably with regard to the Finance Member of India. Presumably in such a case he would be in a better position to judge what financial effect would follow upon a scheme of Education, than a Finance Minister of India would be to judge of what would follow upon a foreign policy.

2906. Then there is another difference in India. Sir David Barbour put it to us that in India you are dealing not with a country, but with a continent?—In India, no doubt, the element of the unknown is larger than, I should think, it would be even in public affairs in Europe.

2907. But upon the general point, do you think that there is any defect at present in the system under which the opportunity is given to the Indian Finance Minister to impress upon his colleagues what the result of incurring extraordinary expenditure would be?—I did not quite catch the precise form in which you put that question.

2908. Would you say that there is any defect in the arrangements under which the Finance Minister in India has the opportunity of impressing upon the Viceroy, and upon his colleagues, the effect on finance of extraordinary expenditure? For instance, would you feel assured that in the adoption of any policy, the Viceroy and the Council would be fully informed that such and such measures would probably entail—that most grave consideration in India—increase of taxation?—I think, with the reservation I made just now, that the Financial Minister has ample opportunities of impressing on his colleagues his view of the probable bearing on finance of any policy that is put before them.

2909. Sir David Barbour made a criticism, which I think all officers connected with financial departments must allow as a criticism of general application, namely, that sufficient attention is not given by the departments in India to the financial question. They hardly appreciate the gravity of it, and do not forecast what the financial effect of the measures on which they are bent may be. That, of course, is a defect common to all governments. The heads of different departments very seldom take a general view of the effect of their administration. They are anxious to carry out measures which they think important, either to the empire or to the results of their administration, leaving it to the Finance Minister to find the ways and means, and without sufficiently considering the dangers, especially in a country like India, that imprudent expenditure may entail upon the government. That is Sir David Barbour's view. Should you agree with Sir David Barbour upon that point?—Yes.

2910. That, as a rule, the Finance Minister does not get sufficient support from his colleagues, owing to imperfect information on their part as to the results of the measures which they bring forward?—One of my late colleagues is present, and, therefore, I must speak with caution. When I say that the Financial Member does not get sufficient support, I would wish to be understood to say that he does not get that support which he thinks would be sufficient for him. I would not be understood to say that he does not receive the support which, in the opinion of others, is due to him.

2911. Quite so. The point of Sir David Barbour's criticism, I think, might be put thus: that in a country like India, where deficits are more dangerous than they would be here, where new taxation is more difficult than it would be here, the Government, as a whole, does not give sufficient attention to what may be the financial results of measures which they adopt?—I agree entirely in that; and I would add to that, that in a country where the taxpayer is an alien, and is not able to make his voice directly heard, the need of giving close attention to economy in administration is greater than it would otherwise be.

2912. I suppose that the Military Department is a most important department in India, is it not? that is to say, that the greatest difficulty to Indian finance is that which results, or may result, from military expenditure?—That from the point of view of finance the military department is the most disturbing? Yes.

2913. Of course, I am not now entering upon any question of policy?—No, I quite understand.

Sir A. Colvin, K.C.S.I., &c.

15 Nov. 1895.

2914. With regard merely to the question of the relation of the Finance Minister to the departments in the control of their expenditure, would you apply what you have been saying as fully to the expenditure of the Military Department as you would to other departments?—As to the complete control of the sanction of expenditure?

2915. To the sanction, quite so?—No, because the control—the sanction of expenditure in the Military Department is carried out by the heads of that department. The Financial Member's control is exercised through his Military colleague in Council.

2916. But in the Military Department it is exactly the same, I suppose, as in the other departments? Increase of establishment cannot take place without his sanction?—No.

2917. Any increase of expenditure outside that which has already received direct sanction cannot be incurred without the knowledge of the Finance Minister?—No.

2918. And if any question arises affecting the safety of the Empire, which would be discussed first of all by the Viceroy with his military advisers, would you feel assured that you would be called in early enough in those deliberations to be able fully to impress upon the Viceroy and his Council what the effect of such military expenditure would be upon your finance?—Yes. I should be quite sure of that.

2919. Of course, one very disturbing element in Indian finance is the constant frontier troubles, small expeditions which with a nearly balanced budget may just have the effect of creating a deficit. In those cases would you know early enough to be able to warn the Viceroy?—Small expeditions, like small boils, are indicative of some disturbance in general health; you would learn its necessity when the expedition was about to take place, but, very probably, you would not know, while matters were growing up to the complication which formed the necessity for the expedition.

2920. I mention them because they form rather a peculiar danger to Indian finance, do they not? Expeditions like the Ashanti Expedition are rare in England; in India they are a constantly present danger, are they not? You have one every year?—There we should enter upon questions of policy. I should say not so much that they are inherent in the Indian system as that they have become more frequent of late in consequence of the adoption of a certain policy.

2921-2. But without entering upon that policy, and looking at facts, you have a constantly present disturbing element from which, to a very great extent, we here in England are free?—Since 1885 we have had it constantly present.

2923. I will not enter upon the question of policy; but you mention 1885. Of course it is very important in inquiring whether the financial system is thoroughly satisfactory, to know whether the tendency of authorities is towards the maintaining and strengthening the financial element in government, or whether it is rather towards weakening it. Now we have gathered, in the first place, from Sir David Barbour, that the economy of the Government very much depends upon the Viceroy personally. The Viceroy is very powerful, and if he is economical, the Government is economical; if he is liberal—I think Sir David Barbour used the word "liberal"—in his views, the Government is not so economical. Would you agree with that?—Yes. I do not think I should say that the Government, as a whole, necessarily followed the personal inclinations of the Viceroy—his personal view of policy; but the influence of the Viceroy makes itself necessarily very greatly felt in all questions that concern the administration of which he is the head.

2924. But, apart from that, with the development of the Empire, with the progress of finance, is the tendency of government, do you think, to weaken or to strengthen the controlling power of the Finance Minister?—I think that since the events of 1885 and the establishment of the Russian power in Central Asia, the balance of influence between the Financial Member of Council and the other members of Council—more especially, I should say, the Military Members—chiefly the Military Members—has been radically disturbed by the very great preponderance given to military considerations in consequence of the apprehensions raised in the minds of British officials in India.

2925. Putting entirely outside the question of policy?—Absolutely outside the question of policy.

2926. Assuming that policy to be correct, the result is a weakening of the financial power?—Necessarily. May I, perhaps, add, that any one whose experience of the post of Finance Minister dated before 1885, would, I think, scarcely be in a position to understand how great the disturbance has been in the balance in Finance, if I may say so.

2927. Have you ever considered whether there is any means by which the disturbance of that balance might be redressed, and greater power might be assured to the Finance Minister?—I have considered the matter very often. I cannot say that I have arrived at any conclusion that I should be willing to lay before the Commissioners as in any way likely to be useful.

2928. Well, the conclusion we must come to is that, in this case, the weakening of the Finance Minister must be the result of military policy? It may be a perfectly necessary military policy, but that must be the result?—I think so.

2929. But outside the Military Department, is not the tendency of modern times to make the demands for expenditure on almost every head of administration very much larger than they used to be? The consequence is, I suppose, that every Finance Minister has much greater difficulty in restraining his colleagues and keeping them within bounds on the ground that, however excellent the measures proposed may be in themselves, they will, if they are all persisted in, lead to a deficit, and be followed by a demand for increased taxation. I should say that is a permanent feature in modern government; but, in a country like India that is a peculiar danger, is it not, because of the difficulty of increasing taxation? Do you think, in that respect, that the control of the Finance Minister in India has been, as our experience is here, weakening?—The only other great department which is directly administered by the Council of the Governor-General of India, and represented in the Council, is the Public Works Department. In that department I should say that the same difficulty makes itself felt—the difficulty alluded to by your Lordship. But the internal administration of India, as a rule, is carried on by the Provincial Governments. They are only indirectly represented by the Home Member, who is not immediately charged with provincial administration, though he is charged with provincial interests; and the pressure, therefore, which is put upon the Financial Member only, in their case, recurs once in five years. I mean on the occasion of re-arranging with them the terms of their financial contract for the ensuing five years.

2930. Within that time they have more or less a free hand, and may commit themselves and the Government generally to an expenditure which may hereafter be a source of danger to the general financial system?—No. I do not think they could commit themselves to any scheme of expenditure which would endanger the finances of the Government of India, because any such scheme would have been discussed with the Home Member. If it had a financial bearing, it would have come before the Financial Member of Council, and he would have had ample opportunities of coming to an understanding with his Home colleague as to how far such a scheme was likely to be dangerous, and would be able, if thought necessary, to check it.

2931. Then I should rather take it that you have not felt in India so much as we have felt here, demands like those of the Education Department here; the improvement of local administration, the improvement in the administration of justice, these are constantly growing charges with us; and I should have thought it probable that the same kind of demand would have arisen in India, contributing to that weakness of the Finance Department of which you have been speaking?—The country being administered by distinct Governments, each of which has varying needs, and each of which is in a different stage of development, as a rule no one point is put before the Government of India calling for common improvement or expenditure in all the various Governments, unless it happens to be a point which the Government of India takes up on its own initiative—such, for instance, as a scheme for the reform of the police administration, which was taken up a few years ago, and emanated from the Government of India. It is only in that case that there would be a general pressure all over the country. But then in such a case the Provincial Government would have to find all or most of the funds for the required improvement. If the Government of India

insisted upon the improvement being carried out, and provincial funds did not in any case fully admit of it, the Government of India would probably aid.

2932. We have had a good deal of evidence on the power of dissent which the Finance Member of Council has, and Sir Henry Waterfield placed before us a return of a number of instances in which such dissents had been recorded. Sir Henry did not, I think, give us to understand that this was an exhaustive list, and Sir David Barbour pointed out one or two instances within his knowledge which had been omitted. Do you happen to have looked through the instances which Sir Henry Waterfield gave?—Yes, I saw them.

2933. Do you think it approaches to being an exhaustive list, or do any cases occur to you that are not mentioned there?—Well, I can only speak of my own cases, and I have not many besides the instances he mentioned. There were, I think, three or four other dissents. But I may say that in one or two cases they were not recorded as separate dissents, because the Council was divided by the Financial Member, some of the members agreeing with him, some disagreeing with him, and the views of the contending sections were respectively stated in the body of the despatch itself. There are two cases of dissents—where a colleague dissents from the majority of the members; or perhaps from one or more, where they may be equally divided or unequally, as the case may be, where some agree with him or some differ from him, in that case usually the despatch itself indicates the difference of opinion, and the grounds of it.

2934. But the dissentient members have always the power of putting their views in the shape of a formal dissent, have they not?—Always.

2935. Now, may I ask, bearing in mind that tendency rather to the weakening than to the strengthening of the power of the Finance Minister, does the Finance Minister lean much on the Secretary of State, as likely to support him, if possible,—that is to say, does he look upon the Secretary of State as rather an economical element in the Government of India, on whom, therefore, he would lean as far as possible?—He did in my time.

2936. The idea would be that the influence of the India Office would be rather in the economical than in the contrary direction?—In all regards, excepting possibly the question of the development of railways.

2937. That being the case, do you think that the Finance Minister has satisfactory and ample means of making known to the Secretary of State the reasons which make him apprehensive about the financial results of proposed measures?—I think he has.

2938. (*Mr. Buchanan.*) What are they?—The record of dissent embodying his views completely in a minute, which would be communicated in due course to the Secretary of State through the Viceroy in Council.

2939. That is a very formal kind of procedure, which he does not very often adopt, as I gather?—He has no other that I know of. He does not correspond with the Secretary of State otherwise than formally and officially.

2940. And you think that is adequate?—I think that where he had the support of the Viceroy it would be adequate; and that where he had not such support, neither that nor anything else would be adequate.

2941. (*Chairman.*) Supposing that the Finance Minister does not think it necessary to put on record a formal dissent, but is satisfied with the fact of his difference of opinion being recorded in a despatch. In that case the despatch represents rather the views of the Government of India; and the Viceroy, if he is taking a contrary view to the Finance Minister, may not really appreciate the reasons which actuate the Finance Minister in his opposition. In that case, the Viceroy, or his officer who drafts the despatch, would not probably be a very complete interpreter of the views of the Finance Minister. Then, again, we all know that the Viceroy is in constant correspondence with the Secretary of State, and, that being the case, the Secretary of State gets all his unofficial information from the Viceroy; but if the Viceroy has leaned to one party—he must take one side or the other—if his decision is against the Finance Minister, then the Finance Minister would hardly feel assured, would he, that the man who had decided against him is the best interpreter of the reasons which actuated him in his opposition?—The paragraphs embodying the Finance Member's views in a despatch of that kind would probably be drafted by the Finance Minister himself, and therefore he would have ample assurance that they expressed his views.

2942. Now take the source from which the Secretary of State gets all his unofficial confidential information?—With regard to that, of course it would be impossible for the Financial Member to have any cognizance, in any form, of the expression given to his views; but he would trust to the Viceroy, as a colleague, to give a fair and ample expression; and I have not the least doubt that he would be right in so trusting.

2943. But do you think it possible that the Finance Minister should have the right himself to communicate his views to the Secretary of State?—No; not unless such communication passed through the Viceroy's hands. I think there would be no objection to his communicating his views to the Secretary of State informally, provided that his letter went open through the Viceroy; certainly not otherwise.

2944. I think all officials, wherever they are employed, would fully agree with you that every communication of that kind passing to the highest authority should pass through the hands of the intermediate superior authority?—Yes.

2945. But still, subject to that provision, it would be a guarantee, would it not, to the Finance Minister that his views were thoroughly and completely made known to the Secretary of State?—The Financial Member in that case would probably only repeat what he had already said in the paragraph or the dissent embodying his official views. There might possibly be some consideration that he might not wish to put on the official record that he would like to bring before the Secretary of State; that would be the only advantage, I think.

2946. If the Secretary of State—as I think was Sir David Barbour's view—is an economical element in the Government of India, would it not be desirable that the Finance Minister should be able to communicate to the Secretary of State his views from time to time on the state of Finance in India? Such information would be very valuable coming at first hand from the man responsible for finance, thereby enabling the Secretary of State to form a judgment as to the financial dangers which really attend a policy?—Well, when we speak of the Secretary of State, I think it is necessary to bear in mind that he is the Secretary of State in Council; he has Members of Council, whose advice, I believe, he is constrained to take and to follow in financial matters; and it is always open to the Financial Member of Council to communicate with one or other of the Secretary of State's Council his views privately, I think.

2947. Oh, he can?—Certainly he can.

2947*a*. I mean that is an understood method?—Oh, quite; and, I think, is regarded as unobjectionable, and as having many advantages.

2948. Of course the other plan has advantages?—In such case he would, of course, be aware that the member, to whom he was writing, might put his letter before the Secretary of State.

2949. That method has not quite the advantages of the method that we were first talking of, inasmuch as the Viceroy, in that case, is not aware of what is being written?—No; not directly aware. The Viceroy is aware that his members are in correspondence with members of the Secretary of State's Council on various subjects, but he does not see their letters.

2950. Would it not be better altogether that the communication should pass through the Viceroy?—I think to pass it through the Viceroy to the Secretary of State would involve the Viceroy in a great deal of trouble; he would probably consider it his duty to comment upon it: he might object to expressions in the letter, which might lead to friction, to avoidable friction, between him and the Member.

2951. Then there is the case in which the Viceroy and Finance Member of Council agree, and the Council overrules them; has not the Viceroy, in that case, a power of suspending the execution of the decision of the Council, until the Secretary of State has decided?—He had not in my time; he has now. It was proposed in my time. It was opposed very much by the rest of the Council, and when I gave up the office it had not yet been passed. It was the first indication, I think, of the recognition by the Secretary

Sir A. Colvin, K.C.S.I., &c.

15 Nov. 1895.

of State in Council of the altered position of the Financial Member of Council after 1885. It was proposed in 1886, and it seemed to me to indicate a sense that the Financial Member's position required strengthening in a degree which it had not, up to that time, required.

2952–3. I think we learned from Sir David Barbour that the Viceroy has the power of overruling his Council if he thinks the safety of the Empire is involved; he quoted the Act of Parliament?—I believe so.

2954. I put one general question to Sir David Barbour, which I do not know whether you would like me to ask you, namely, whether there are any other points connected with the control of the Finance Minister which you think defective, and which you think might be amended?—In his powers of controlling the sanction expenditure?

2955–6. No; I mean in his general powers?—No; I do not think so, given the present constitution of the Government of India.

2957. What I should gather from Sir David Barbour and yourself is, that the tendency of the Government of India at present is rather towards weakening the position of the Finance Minister than strengthening it; and nothing occurs to you by which you think that the position of the Finance Minister might be strengthened?—I think the tendency is to weaken it for the reason that I have given in answer to a former part of your Lordship's questions. I think, again, that with all its advantages, the decentralising scheme has weakened the Financial Member's power a good deal indirectly, by throwing the balance of the Viceroy's interest into a class of questions in which he has more direct concern, and over which he has now exclusive control, such as the public works, military, and foreign matters. The Provincial Governments, since the decentralisation scheme was introduced and elaborated, have taken the internal administration of India from off the shoulders of the Council and of the Viceroy as representing the Government, in a degree which before was never dreamed of. The result is that, I think, the internal affairs of India occupy less the attention of the Viceroy than the external, which are costly. I am not speaking of the rightness of it, or the wrongness of it; but the external, which are costly—the public works, as well as military—engage his time, and engage his interest in a greater degree.

2958. I quite understand your meaning to be that, without prejudicing the question whether these measures are wise or not, the tendency of them is to be costly?—Yes; I am not speaking of their rightness or wrongness. With regard to the second part of your Lordship's question, as to whether I have anything to suggest as to strengthening the Finance Minister, I think that no one individual's suggestions would be in anyway adequate to meet a position of that sort. It would require a very careful and thorough examination of the circumstances, the conditions, under which the Government of India can be carried on, or presumably could be carried on.

2959. One great difficulty, of course, that you have in India is always a present danger, namely, the constant emergencies that occur, such as those of famine, which make it more desirable, than in a country like this, that the financial situation of the country should be kept essentially safe; I mean by that that there should be, as far as possible, a good surplus maintained against such emergencies. The general tendency of administration, unless it is very much checked, is to work expenditure up almost to the limit of the revenue. I think heads of departments, if they see that the revenue of the year is 90,000,000*l.* and the expenditure 88,000,000*l.*, look upon the intervening 2,000,000*l.* as fair to give away. Here there may not be much danger in doing so, but in India there may be considerable risk in doing so; would you take that view?—Yes; entirely.

2960. And I should take it as a weakness of the present system that the Finance Minister is the only check upon that tendency; he stands alone. The Finance Minister is the only person whose warning can check the tendency of the departments to spend up to the hilt?—Yes. The Finance Member, I would say more especially, in consultation with the Viceroy.

2961. In such cases, as a general rule, is it the tradition of the Viceroy to support the Finance Minister?—The Viceroy is the only member of Council, other than the Financial Member, who has a direct interest in economy, because he is the head of the administration in all its branches, and, therefore, within the limits of that interest, I think, generally, within my experience, that he feels the necessity, and acts upon it, of supporting the Financial Member so far as he possibly can consistently with his own views.

2962. Passing now to the question of estimates, I think we have learned from Sir David Barbour that on the whole he was very well satisfied with the arrangements under which the estimates are prepared and brought forward for the consideration of the Finance Minister. Do you agree in that view, or do you think there are any amendments in the system which are necessary?—No, I think I quite agree in that view. I read what Sir David Barbour said.

2963. He said he had ample time for considering the estimates when they were brought forward?—I think so.

2963*a*. And, further, that he had also ample notice in those deliberations that precede the adoption of measures on which estimates are based; and ample opportunity of making his views known beforehand?—I think so.

2964. In fact, he knows as well as anybody—as well as any other head of a department—what the programme of expenditure is before the estimates are actually put into draft?—Yes, he does.

2965–6. Were you satisfied with the organisation of the Revenue Departments in India? I called Sir David's attention particularly to the position in England, where the Chancellor of the Exchequer has, as it were, a standing Council in the persons of the Chairman of the Board of Customs and the Chairman of the Board of Inland Revenue; the whole of the administration of the revenue is centred in London, and these two officers, who are expert officers, every day engaged in the details of revenue administration, intimately acquainted with the law, and not only with the law, but with the operation of the law, knowing where the law pinches, are always at hand, and always in constant communication with him. Nothing of that kind is provided in India, I believe? You, as Finance Minister at headquarters, had no officers close by with whom you could communicate personally on these very important questions?—Well, I saw the replies to your question, and I am not quite sure that I should put my own reply in exactly the form in which it has been put by others. So far as departments are directly under him, as the Salt, Post Office, and so on, he has all the means necessary of informing himself. The head of the department is always by him, and is his immediate adviser. With regard to other departments, such as the Land Revenue, for instance, or Local Rates, he has always by him a colleague in the Revenue and Agricultural Department, to whom, in that section of the work, the several Provincial Governments are subordinate, and such colleague is, as a rule, conversant with all questions that are arising in them and capable of advising the Financial Member in many matters in which he would need aid. This colleague has the expert knowledge on all questions arising in those departments for discussion between himself and Provincial Governments; he has cognisance of them as having been directly referred to him, or as having learned them through the proceedings of these Provincial Governments, which are the record of their daily work. That is the first line of expert knowledge. Then if his colleague is unable to give him the information that he requires, or to advise him in the respect in which he wishes to be advised, he then would refer to the Provincial Government, or would ask his colleague to do it for him; that would probably be the way.

2967. That is, so far as the Salt and Land Revenue are concerned?—Some Salt, Northern India Salt, for instance, is directly under the Financial Department. So far as Land Revenue, Stamps, Customs, Local Rates, for example, are concerned.

2968–9. Is there any officer at headquarters responsible for Stamp Revenue, Excise, and Customs?—Other than the Member in charge of the particular Department of the Government of India concerned, there is no officer at headquarters.

2970. And that officer would not be intimately acquainted with the Custom law, or the Excise law, or the Stamp law?—Well, Sir James Peile was the officer in charge of the Home and Revenue and Agricultural Departments in my time. There would be revenue questions in that Department that would daily come

before him. I should say he would be very well acquainted with most, if not all, of them.

2971. Then on the whole you would not quite agree with Sir David Barbour?—That was the *lacuna*, as it appeared to me in the evidence given before, that those who gave it had not taken sufficient stock of the existence of departments at headquarters represented in the Council by Members whose business it is to focus all the information in the various sections of their departments, and all the questions arising in connexion with them.

2972. Now, let us suppose there is a question about spirit duties—presumably a no less important question in India than here. In any question of a change in the law relating to the interests of the revenue it is a most important matter how far an increase of tax might be accompanied by danger of smuggling or illicit distillation. Knowledge of the details of Excise administration is almost essential to an expert officer before he can give advice to a Finance Minister upon that subject. Were you satisfied when you were in India that you had at command an officer to whom you could refer easily and directly, on whose information you could rely, if you were considering a change in the duties on spirits?—The Excise Department is directly under the Finance Department; it is not under the Revenue. Therefore, I should have no colleague by me who could advise me on that matter. It would be under my immediate observation and control. On a question arising, such as your Lordship describes, which I might feel myself incompetent to decide, I should have probably to seek further information from the Provincial Government which was in charge of it.

2973. Then, I suppose, to a certain extent the same would apply to Customs. You have no central Customs offices in Calcutta?—I should imagine not, but happily in my time the Customs were at a minimum.

2974. There probably is a difficulty that is inseparable from the immense area of India; but, as a Finance Minister, if you could have a choice of the two systems would you not prefer such a system as ours, in which you had absolutely at your command officers thoroughly competent in all the details of administration, who are actually themselves the responsible persons under you for carrying on the administration? There is an advantage in that as compared with the system in India, would not you say?—I should scarcely say that the difficulty was inseparable from the system of administration, because I think it would be competent for the Government of India to appoint an officer, like the Postmaster-General, for instance, to be Inspector-General of Customs, who would go about to the various provinces, and in whom could be concentrated the control, the ultimate control, of the department; but I think that the cost of such a measure would not be compensated by the advantage to be derived from it.

2975. I asked Sir David Barbour a question upon this point, which is borrowed from the analogy of the French Government. As I understand it, they have a staff of Inspectors-General of Finance who are specially chosen officers of the very highest class, who are, as it were, the eyes of the Finance Minister, by whom they are sent about the country to conduct personal investigations or collect personal information for him. We learnt from Sir David that there is no such staff in India; but did you ever employ means analogous to that, by getting certain persons in whom you had confidence to collect information for you, because you could not move about very freely?—I have had the pleasure of being associated with some of these gentlemen in Egypt. My colleague in the Control was one of them, and the Secretary of the Control was another, and so I heard a good deal about it from them.

2976. You remember hearing of it in Egypt?—So much so that I thought of introducing the system when I returned to India. I discussed it with Sir David Barbour at the time; he was rather unfavourable to it; it involved expenditure.

2977. I was only speaking of the principle?—Well, I was going to say that the principle commended itself to me. I saw the advantage of it from what I heard of these gentlemen in Egypt. I think in principle it would very likely prove very useful as a means of collecting information, comparing experience, and perhaps of controlling and checking the increase of expenditure.

2978–9. A recent instance in India occurred to me, the imposition of the countervailing excise duty to the cotton duties. That was a question which wanted an enormous amount of expert and detailed information in the different places where cotton is manufactured. Here any measure of that kind would be the result of constant and long communications between the Chairman of the Board of Inland Revenue and the Chancellor of the Exchequer, such communications as personal interviews alone give scope for; and I should have thought that the Finance Minister, from the circumstances of India—probably circumstances perfectly inevitable—would be in very great difficulty in such a case, if he had to get his information by correspondence or telegram in a disjointed fashion?—Well, occasions of that sort arise only from time to time. They postulate the introduction of an extraordinary element into the financial administration. The need which your Lordship has mentioned is felt no doubt by the Finance Minister; but to meet it he ordinarily delegates some special officer, in a case of that kind, to furnish him with all necessary information bearing upon the measure which is in hand. For instance, I may mention that when there was a question of the reduction of the cotton duties, Sir Theodore Hope—I forget what his post was at the time; I think he was Legislative Member of the Viceroy's Council—was employed to advise the Financial Member. And so in other cases the difficulty would be got over in fact by the special delegation of a select officer to furnish information on particular points on which the Financial Member wished to be advised. Such occasions arise comparatively rarely, and delegation will not give rise to much inconvenience or expenditure.

2980. (*Sir Ralph Knox.*) The officer selected would be experienced in the particular service?—He would be an officer specially selected as having had previous acquaintance with the branch in connexion with which information is required, and of a standing sufficient to guarantee the aid that he requires in connexion with the matter being furnished readily to him by those from whom he had to make inquiries.

2981. (*Chairman.*) May I take it, as the result of your experience, that if, as Finance Minister, you were to devise a model system, you would like to have always at hand such officers as our Chairmen of the great Revenue Boards, supported, as they are, by the best technical officers who have been educated in the service; but, that though you may prefer such a system as that, it is practically impossible in India; and Indian Finance Ministers do not find the absence of those officers close at hand an insuperable difficulty to them?—I think that as a counsel of perfection they would be glad to have them, because it would save them the trouble of making inquiries that at present they have to make at first hand. They do not find their absence an insuperable difficulty, and I think I should scarcely be justified in saying that they would find their presence a very considerable advantage. You see, until one has had the advantage of advice of that sort, one does not know how much one may lose by not having it, and, therefore, I am speaking of something which I myself have not had the opportunity of enjoying.

2982. There is another function of the Chancellor of the Exchequer here which is an important one, namely, that every taxpayer has a right of appeal to him against the decisions of the Revenue authorities; and these appeals are constant. Further, the Revenue authorities themselves, no doubt knowing that the Chancellor of the Exchequer is their defender in Parliament, are nearly always anxious to obtain his guidance on difficult points, and thus the Chancellor of the Exchequer is a Court of Appeal between the taxpayer and the Revenue authorities. It would be very difficult for him to discharge that duty if he had not these officers close at hand, from whom he could hear at first hand the reasons for the line they had adopted. I suppose that the principle of such right of appeal exists in India?—Oh, yes.

2983. And the Finance Minister, that is to say, the Government of India in the Finance Department, would be the ultimate authority to whom the appeal would lie?—It would depend on whether it was a department directly under the Finance, or under the Home or Revenue and Agricultural Department. The department of the Government of India responsible would receive the appeal.

2984. But in that case, if those appeals come frequently from the taxpayer, is not the Financial Member somewhat in a difficulty in dealing with them, if he has not the responsible officer at hand to explain and

Sir A. Colvin, K.C.S.I., &c.

15 Nov. 1985.

to give him the necessary information?—Well, the Provincial Government is the first Court of Appeal, and comparatively few appeals strain through it, or perhaps pass beyond it. Such as do generally concern questions of the reading of the law, questions of principle, and so on, on which the Finance Minister either has precedents to guide him, or, if in doubt, would take the advice of the Legal Member of the Council. If any other officer directly responsible, such as your Lordship suggests, were in his place, I do not see that he could do otherwise. He would have to adopt the same system, and appeals are few from the Provincial Government to the Central Government.

2985. In fact, the appeal of the taxpayer lies to the Provincial Government?—Yes.

2986. And the majority of appeals are decided by the Provincial Government; and, therefore, if carried farther, it resolves itself into an appeal from the Provincial Government to the Central Government?—Yes.

2987. I think we learned that the key of the financial procedure in India, or at all events, of the procedure of expenditure, is the system of district treasuries?—Yes.

2988. I do not think I need trouble you at much greater length upon that point, because we have had it fully explained. Of course, in a country like India the district treasury and the system of the strong box are inevitable? You could not use banks throughout India at the centres of expenditure?—No, they do not exist in sufficient numbers.

2989. And were you satisfied with your experience of the regulations under which those district treasuries are worked?—I think, considering the enormous area, and the different conditions under which the rules have to work, that they work extremely satisfactorily. I have seen occasions, both as Finance Member and as Lieutenant-Governor, now and again, of strong boxes being broken open, and the guard on the strong box perhaps being tampered with. But they were so rare, and the amount involved so small, that they never caused any anxiety.

2990. You agree with the evidence given by Sir Henry Waterfield and Mr. Jacob, that losses arising under this system are quite insignificant?—Quite; I quite agree.

2991. The treasurer gives security?—Yes, the treasurer gives rather heavy security.

2992. I suppose that in the majority of those 260 treasuries or more which we understand exist, the balances of money at any given time are very small?—At times—when the land revenue, for instance, is collected, which is done at certain stated periods—the tendency is for the balances to accumulate, for a day or two, but the Accountant General is always in correspondence with the Treasury officers as to the circulation of funds, and he does not allow them to remain an hour longer than is necessary.

2993-4. Were you satisfied when you were Financial Member of Council with the arrangements, under which the district treasuries report the state of their receipts, issues, and balances as a means of checking the progress of expenditure in India? Of course, you will see that my question refers to the mistakes of the Military Department at the time of the Afghan war, which, I think it was seen, might have been checked by closer attention to the outflows from the treasuries. Certain changes were made after that time. Were you satisfied that those changes were effective, and that the Finance Minister has now at his disposal, within all reasonable limits, the means by which he can check the public expenditure?—They are useful, not as providing a check, but as drawing his attention to the state of things. And in ordinary times I think the Finance Member, his attention having been drawn by an examination of those figures, would find that his inquiries enabled him to inform himself of what was going on, and to check any expenditure—or, at any rate, to prepare a check for the expenditure which was about to be put before him in more ample form. I found at the time of the Burmese war, and also in 1885, when we were preparing for a possible war with Russia, that the indication given of military expenditure by the returns was ample. But it was not easy, in a case of that sort, to obtain the further information very promptly, because money was being furnished to and spent by different departments, who could not, until a later date, make up the accounts so as to let me know which department was finally to be debited with every given charge.

2995. Quite so. But you would know, on the 9th, we will say, of January, that up to the 31st of December such and such had been the issues from the treasuries; and you would see whether that amount was very much in excess of what it had been in previous peaceful years or years when there had been no emergency: and your attention having thus been directed to that excess, if the estimate of the Military Department did not prepare you for that excess, you would be in a position most effectively to call them to account, and to say, "What is the reason of this"?—You would immediately do so, and that was done.

2996. Of course, the only means of checking is by the actual fact that so much cash has gone out?—Yes.

2997. Nothing can give you the power of knowing at that date for what special purposes cash was going out?—No.

2998. The check is merely that you have, within a very few days, the knowledge that so much money has been issued?—Exactly. It is a weathercock which gives an indication in which way the wind is blowing.

2998*a*. (*Sir Ralph Knox.*) But you would know that it was going for military purposes, would you not?—Not necessarily. For instance, during the Burmese war—the latter part of it—the military police were introduced, and charged as a civil charge. My attention having been drawn to heavy outgoings apparently on military account, on various occasions I was told that, until the accounts were finally made out, they would not be able to inform me how much of this out-going was for military expenditure, and how much was on account of the police which was being levied and embodied. There would be other civil charges also which might issue in the first place from the military chest.

2998*b*. (*Chairman.*) But would you know from the return furnished to you on the 9th of the month, how much had been issued to the military authorities as apart from what had been issued to the civil?—Yes.

2999. And, so far, what Sir Ralph Knox states would be the case—that you would know that it had gone to the military authorities?—Furnished to the military authorities for military purposes.

3000. (*Sir Ralph Knox.*) It might be moved on to the police?—Yes, later on. *Primâ facie*, I would know that it had gone to the military authorities. The communication that would then be made by the Military Department to the Finance Department would, at a later date, elucidate the precise object for which the money had been employed.

3001. How much later?—That would depend on the local officers very much, and on the course of events. I mean if events developed further—took a greater extension—you might get it later. I should expect in the course of three months to be informed, at the very outside; it would probably be earlier than that.

3002. (*Chairman.*) Had you not a more complete account up to the close of the preceding month? You got a first draft on the 9th, and I think you got a more complete one on the 26th?—On the 16th I think, and we have another one, if I remember right, at the end of the month.

3003. And by that time you would have as good a view of the expenditure as we have here?—Yes.

3004. Here we should only know the issues from the Exchequer?—Yes.

3005. And the issues from the Exchequer are only imprests to the different departments. The Chancellor of the Exchequer would know the issues from the Exchequer, and would also know what balances in cash were in the hands of the great departments. Between these he would be able to say what money had been actually spent, though he might not know the details.

(*Sir Ralph Knox.*) But he would know as between the large departments.

3006-7. (*Chairman.*) Yes; he would not have the details of the expenditure, but he would see what had been the corresponding issues from the Exchequer in previous years. If he saw that the issues from the Exchequer, instead of being 8½ millions, were 10 millions, he would then look and see what amount of cash remained in, say, the War Office. That

would give him a very fair view of what the actual expenditure had been?—Yes; I do not think that would hold quite as much in India on account of the peculiarities of the country. For instance, in the Public Works Department, you may find at the end of half a year that the amount spent in any section of the department is very considerably less than the half year's budget would seem to justify.

3008. That applies to us here; I only gave you rough figures?—You would find contractors asking to be paid in the latter half.

3009. The real test is that you compare with previous years?—Yes.

3010. And if he saw that the issue is going on at a greater rate than previous years without any reason for it, then the Chancellor of the Exchequer would begin to ask reasons for it?—Quite so.

3011. (*Sir Ralph Knox.*) But it would be understood by you at headquarters that the money that was being drawn by the Military Department was being devoted, in the case of Burma, to both military and police services?—Yes, in the first instance.

3012. In the first instance that would be known?—Yes, perfectly.

3013. And therefore there would be an explanation of some excess upon the purely military provision?—Yes, exactly.

3014. And you would expect that excess?—I should.

3015-6. (*Chairman.*) I quite understand the necessity and the value of the district treasury system in India; in fact, in the larger part of the country it is indispensable: but do you think that where banks exist, the Government of India makes as much use of them as it might economically do?—I think so. The Government of India very properly declines to place its balances in the possession of any bank with which it is not completely satisfied. There are banks and banks. There are banks at present not used which it might possibly employ, but I think it is well advised not to.

3017. Practically the Government does use to a great extent the three Banks of Bengal, Madras, and Bombay, does it not?—Yes.

3018. And, I presume, other banks, what I may call private banks as distinguished from the Presidency Bank, very seldom have branches in places where the latter have not got a branch?—Precisely. I should doubt if in any case they had branches where one of the larger banks was not represented.

3019. Mr. Jacob has called our attention this morning, in further explanation of some evidence that he and Sir Henry Waterfield gave, to a correspondence that took place, I think, in 1874 with the Bank of Bombay. I think he brought this matter forward in illustration of the difficulties in a country like India of employing the banks. The Government, had a balance of a million Rx.—I am only speaking roughly—in the bank at Bombay, and they proceeded to draw upon it to the extent of Rx. 350,000. This appears to have led to a warm remonstrance from the bank, and if I may judge from the correspondence, the idea seems to have been in the mind of the bank that the Government was bound to keep a balance there, not, like the ordinary customer of a bank does, for its own use, but for the benefit of trade. The bank remonstrated against such a sum as Rx. 350,000 being drawn out of a balance of a million Rx., and intimated that, if it was persisted in, it would very likely cause a panic. Of course, if that is the case, it is a very strong argument against the use of banks. Do you know the circumstances to which I refer?—I think I remember them; I have no personal experience of them at all, but I remember reading of the incident.

3020. Of course, the only object of the Government in keeping a large balance is, that its needs are large; and it ought to keep exactly the balance required to meet those needs; to keep an extra balance which might be necessary for trade would be going beyond the functions of a Government, would it not?—Unquestionably.

3021. Therefore, if those are the terms upon which the banks want to keep the Government balance, it is an argument in favour rather of the District Treasury system?—Yes; I do not think now any bank in India would put forward that claim, or expect to have it listened to if it did put it forward.

3022. In the first case, the question was, whether the bank at Bombay had not got itself into difficulties; they had doubtless made large advances, and the consequence was that they were in a difficulty themselves?—Yes.

3023. And were dependent upon the Government not using its balance?—It led to a change of system eventually.

3024. You use the Bank of Bengal, do you not, in India very much in the same way as we use the Bank of England here? It manages your debt for you, and keeps your balance—your central balance?—Yes.

3025. Does the Government go to the bank for temporary advances?—No. We are in possession of the balances rather than the bank—accumulated balances find themselves in the hands of the Government. The evidence given on that point by those who have been examined before me appears to me to give complete information.

3026. You agree with them that the system of large balances in India is indispensable?—Yes. One has to be very careful not to keep a balance in Government hands larger than is desirable—to work as near as possible to a minimum balance.

3027-8. As in contrast with our system, which is to work with low balance and to borrow?—Yes.

3029. And I understand, from Sir David Barbour, and now from yourself, that that system would not apply to India?—If we frequently borrowed we should disturb the money market in India, which is a much smaller market than we have here; and we should have down upon us all the merchants; competition by the Government would be a most serious matter for them.

3030. There is not that reserve to draw upon there?—No; there is not that reserve to draw upon.

3031. The account by which you, as Finance Minister, inform yourself of the progress of finance, is, I understand, that which comes in on the 9th of the month; that tells you of the progress of finance, and we gathered from Sir David Barbour that that was the only account of importance by which you kept yourself informed?—That and the subsequent one.

3032. That is to say, you are content there with a monthly statement?—Yes.

3033. You will have seen, probably, from the evidence given, that I spoke to Sir David Barbour of the return on which the Chancellor of the Exchequer relies, which is a weekly one; we learn from Sir David Barbour that he is perfectly satisfied with a monthly one, and would not think a more frequent one, even if it were possible, necessary?—Yes.

3034 Here the weekly return is of very great importance to the Chancellor of the Exchequer. It is a return which is always in his hands; he is always referring to it. You would not see the necessity of having it so frequent, even if it could be possibly obtained, in India?—I think not.

3035. Of course, a weekly return enables the Chancellor of the Exchequer to watch finance more closely; and if he sees variations, those variations want explanation. Though the return taken by itself is apt to be misleading, by means of it, and with the aid of his revenue officers, he is able to understand precisely his position every week?—I fancy the system of finance here admits, or may require, a weekly check which, in our own case in India, would be neither useful nor almost practicable. It would entail a great deal of extra work upon all the various officers of account, which, I think, would not be compensated for by the additional control which it would give to the Finance Member.

3036. We learn that you make your Budget statement before the close of the year?—Yes.

3037. That is done in order that the Budget may reach England by a certain time, is it not?—I understand that is the reason. It is only three or four days before the close of the financial year, as a rule.

3038. Here in England we have always thought it a most inconvenient thing to have the Budget before the close of the year, because it involves a certain amount of estimate, both of receipts and expenditure; but we gather that with you that inconvenience does not exist, inasmuch as you would still have to estimate, to a certain extent, your expenditure, even if the Budget was produced a fortnight or three weeks after the close of the year?—Yes.

Sir A. Colvin, K.C.S.I., &c.

15 Nov. 1895.

3039. Has the number of estimates, with which you have to deal, ever struck you as an inconvenience in the Indian system of account? For instance, you have, first of all, your Budget estimate, and then you have a Revised estimate, which is the estimate in force at the time, we understand, when the Budget is prepared; but Sir David Barbour has told us that the Revised estimate is always more unfavourable than the actual out-turn, and therefore, when the Finance Minister produces his Budget, he is obliged to give a needlessly unfavourable account of his income and expenditure. Would you agree with him on that point?—I think so; for "unfavourable" I should substitute the word "cautious."

3040. Precisely. But still the Finance Minister has been obliged to give to the public something less favourable than the out-turn shows was actually the case?—It concerns two months only of the year, and neither of them are months of great importance. The important months of land revenue collection begin with the new financial year, almost about the time the Budget is appearing. The financial year begins, that is to say, on April 1st. The question of the time of publication of the Budget seems to me—as to when it is desirable—an executive question. Really, it is to be considered in connexion with climatic and other considerations, which must be allowed very great weight. For instance, the Viceroy, between the close of the cold weather and his going to take up his summer residence, generally takes advantage of the weather still admitting it to extend his personal acquaintance with the Peninsula, and travels largely during the month of April; it is desirable that he should be able to do that. Officials proceeding to England on leave generally do so about the end of March. It would be inconvenient that they should go before the Budget was brought out or be prevented from going away. There are, therefore, a variety of considerations which counterbalance the question of the financial exigency merely.

3041-2. You know that it is a distinctive feature of the English Budget, that it is based upon what we call Exchequer receipts and issues, not upon the actual receipts that come into the hands of the revenue departments, or the actual expenditure of the spending departments; on the one hand it consists of those sums which the revenue departments have paid into the Exchequer; on the other hand, it consists of the imprests which have been issued from the Exchequer to the different departments for the purpose of expenditure; the consequence is a considerable practical advantage, namely, that on the night of the 31st of March the Chancellor of the Exchequer has the complete account in his hands of the income and expenditure of the year, which he will not have under any circumstances to alter. That, of course, is not the same thing as the audited account; but all his Budget calculations are based upon this Exchequer account, and it is an advantage, especially with commercial people like ourselves, who like to know things quickly, and to have a quick closing of the accounts. And there is no very great practical inconvenience, because we find, as a matter of experience, with the exception now and then of an extraordinary circumstance, like, say, a war, or something of that kind, that the audited expenditure does not differ from the Exchequer issues by more than, we will say on an average, a quarter of a million on 90,000,000*l.* to 100,000,000*l.* of expenditure. That, of course, for practical purposes is inconsiderable. To a certain extent the same result might be obtained in India, I suppose, if you were to take the issues from the Treasuries as the basis of your Budget account, and, in that case, by the 9th, you would know what your actual expenditure for the purposes of the account was?—Yes.

3043. It you could have the Budget after that time, would you see any advantage in such a system over your present system of Revised estimate which you have again to revise as you get more perfect accounts?—Well, I have never been called upon to consider that, and I should not like to answer the question off-hand; I should have to look into it more closely.

3044. There is a certain inconvenience, is there not, in the public eye, in constant revisions of the financial statement?—Yes, I see that.

3045. It gives the public outside the idea that there is something imperfect in a system which involves constant revisions?—I should be inclined to say *primâ facie* that they are inseparable from the variety of administrations with which you have to deal, and the extent of the country concerned.

3046. I am only bringing out the difference between the two systems, to see how it strikes you. It is perfectly clear that, if it is a necessity of your administration to have your Budget in March, you must have, under any circumstances, a certain amount of estimate in it; and, if that is the case, such an approximation to our system as I have suggested, would not be very important, because in March you could not know the issues from the district treasuries up to the close of that month?—No.

3047. Take the provincial budgets. We have had a very strong expression of opinion from all the witnesses who appeared before us, as to the advantages which have accrued to the Indian system from the decentralization system introduced by Lord Mayo, and developed by his successors; do you agree with that?—Entirely, from the point of view of improvement of administration; I mean the facilities given for improvement in administration.

3048. And Sir David Barbour has, I think, expressed himself to the effect that, taking into consideration the great powers of control reserved to the Central Government, he would exercise those powers discreetly and with as much reserve as possible—that is to say, he would make decentralisation as complete as circumstances admit; do you agree with him on that point?—Quite; on the principle that where the responsibility lies great discretion should be allowed. Provincial Governments being responsible for the administration, they should be allowed great discretion in questions arising on financial charge to them.

3049. He seemed to be opposed to the periodical revisions of the arrangement between the Central Government and the Provincial Governments. Under those revisions, as we understand, the Central Government, in addition to taking its share of the increasing revenue, practically pockets a considerable amount of the increase upon the provincial share. Have I made myself clear to you?—No; I am not quite sure that I follow your Lordship there.

3050. Well, we have had evidence put before us that the Provincial Governments and the Central Government take varying shares; just for my purpose, let us suppose that in certain duties each takes half?—Yes.

3051. At the end of the period an estimate is made of what the needs of the Provincial Government are, and it is found that there has been an increase in the receipts generally over and above the balance sheet, as made at the commencement of the last period of revision, of Rx. 600,000?—Yes.

3052. That sum, in the next revision, the Central Government takes to itself?—No; that sum would have come into the balances of the Provincial Government.

3053. But in the revision?—In the revision the Imperial Government would either arrange to maintain the proportion it had before, in which case that sum would go into the coffers of the Provincial Government during the next term of five years; or it would alter the proportion which it would propose to take, in which case some of it would be diverted into the Imperial coffers.

3054. I think I can make it clearer from Sir Henry Waterfield's evidence?—I think what your Lordship means may be this, that when it is found what the proceeds, say, of various sections of receipt, have been during the last five years, they are taken as the probable receipts for the ensuing five years; and in the contract for that term division is made on the basis of such receipts, between the Imperial and Provincial Governments.

3055-6. It is Question 704, page 13 of the second day's evidence. I asked the Question "I gather from the "memorandum that, on the principle laid down at the "commencement of the new system, the Central "Government has taken at each revision a large part "of the net increase of the provincial revenue as "estimated, or rather ascertained, at the time of "revision. Thus in 1887, setting aside Burma, the "seven Provincial Governments showed a surplus of "Rx. 686,300, and under the revised arrangement "the Central Government was to take Rx. 655,200, "leaving a bonus of Rx. 31,100 to the Punjaub and "North West Provinces?—(*A.*) The Government of "India practically took the whole of the net increase,

" (that is, increased surplus of revenue over expendi-
" ture) though for special reasons they had to forego a
" certain sum in one or two cases; it cannot be de-
" scribed as a bonus, it was a remission in consequence
" of the Provincial Governments having lost the revenue
" through the failure of an aqueduct and other causes.
" There were special circumstances in those two
" provinces. (*Q.*) In fact, the principle is that the
" Imperial Government takes the whole of the increase?
" —(*A.*) Yes." Well, that is what I mean, and there-
fore under those revisions, I take it, any increase that there is at the end of the time which the Provincial Government cannot actually say that it wants for provincial expenditure, goes to the credit of the Central Government, and therefore the Central Government gets two benefits; it gets increased share of a growing revenue, and, further than that, it gets any realised increase which has taken place beyond the expenditure during the past five years?—Let me endeavour to explain. In the first place, the Central Government would get its own share of the increase calculated on the basis of the last five years. Then, in making the contract, all the receipts are summed up on one side, and all the expenditure on the other side. They then find what amount must be given to the Provincial Government to make the receipts balance the expenditure, or what must be taken from it, as the case may be. any surplus of estimated quinquennial receipts over expenditure, should such exist, is to its advantage.

3057. In this particular case it turned out that the increase of revenue had surpassed the increase of expenditure, as sanctioned by the Central Government, by Rx. 655,000, and the Central Government took that?—They would have to bear the loss in the other case.

3058. They might or might not?—They might or might not. But they have to balance the revenue and expenditure of the Provincial Government.

3059. Yes, they have. But if the Provincial Government was extravagant, that would be the fault of the Central Government, and they would have to bear the loss?—It would be a charge upon the receipts.

3060–61. And so far it is the interest of the Central Government to keep the Provincial Governments within the limits of economical government, is it not? because, if it were to allow the Provincial Governments to increase their expenditure, it would eventually be the loser?—That was one of the principles underlying the introduction of the system.

3062. I ask the question, because it may be thought that the arrangement might encourage excessive local expenditure. But I think the Central Government has always got a personal interest in keeping the local expenditure within economical limits?—Yes.

3063. (*Sir James Peile.*) The Provincial Governments send up a budget every year, do they not?—Yes.

3064. Which is considered by the Central Government and comments passed upon it?—Very—I will not say—superficially, but the Central Government does not look upon it as part of its own especial business; as long as the Provincial Governments keep within their allotment it does not consider it its business to scrutinise the Provincial Budget.

3065. (*Chairman.*) What is your view? Would you keep the periodical revisions, or do you agree with Sir David Barbour in preferring to do away with them?—Like every other Financial Member I saw the drawbacks attendant on them; and my own inclination, I think, would be—I do not think they could be done away with—to give them far longer terms—to make them decennial, say, instead of quinquennial, and to give to the Provincial Governments a smaller share in the various branches of receipts made over to them—to give them a longer term of enjoyment, say, but less accumulations, in the first years at any rate, from the increased receipts.

3066. We had from Sir David Barbour some interesting information and interesting opinions upon the result of the decentralisation system. We had tables put before us which showed a very large increase in the amount of revenue that had been levied since this decentralisation system came into force. But Sir David Barbour, I think, warned us against any hasty generalisation that that increase was due to the improvements following the giving to the Provincial Governments an interest in the collection of the revenue. He thought that, in a case put before him, we should find there were other reasons at work. For instance, he pointed out, in the case of the Excise, which showed a very large increase, that though there had been no additional duties imposed by Act on spirits, yet that the Government had what I may call maximum rates, and that at the beginning of the time those maximum rates were not in force, but that during the years that had elapsed they had worked up to nearer the maximum. Well, that, of course, is equivalent to increase of taxation. Speaking generally, would you consider that one of the main expectations had been realised which was held out, when the decentralization system was brought in, by the then Financial Member of Council, namely, that the revenue which was very badly collected as long as the Provincial Government had not an interest in the amount collected, would be more closely, and—what shall I say?—conscientiously, collected when the Provincial Governments had an interest in the amounts collected?—Yes, I should. I should not attribute, especially in the particular instance your Lordship has referred to, that very large increase merely to improved administration. But I think the administration has improved in proportion as each administration has been interested in the results of its own action.

3067. Naturally speaking, the Provincial Governments, having now a direct interest in the amount collected, would have a keen eye to smuggling and other devices for evading the payment of taxation?—Certainly. I should like to say with regard to the particular illustration your Lordship gave, if I might—a point not previously noticed in the evidence before the Commission—that the large increase in Excise is mainly due, in my opinion, to the uninterrupted course of favourable years of late in India—almost unprecedently uninterrupted. When there is a good season the Excise revenue increases; marriages are more frequent, more largely attended, and there is a large increase of personal expenditure. Marriages are frequent sources of consumption of liquor; and I think, in view of the favourable years we have had since 1878, that the greater part of the increase in the Excise in particular may be put down to that.

3068. (*Sir William Wedderburn.*) Might not a part of the increase be also attributed to the fact, that our system has been introduced into Native States bordering upon British dominion under some pressure, which has made it more easy to enforce the excise laws?—You speak of the Bombay Presidency, perhaps.

3069. Especially where the territories are much mixed up?—It is possible, but I have no personal experience of it which would enable me to express a useful opinion upon that point.

3070. (*Chairman.*) That would rather point to the good years, and the greater power of consumption on the part of the consuming classes, as the cause of the larger part of this increase?—Yes, we invariably find the Excise rise and fall with a bad or a good season.

3071. The figures of the Excise are very striking during this period, from 1881 forward; they show an increase in 1893–4 of 90 per cent. over 1879–80, of 72 per cent. over 1880–81, and of 57 per cent. over 1881–2?—I do not say that that was the only cause; I say it is a cause, which was not sufficiently brought into prominence in the evidence given before this Commission hitherto.

3072–3. I think there is only one more point on which I should like to ask you a few questions; that is on the system of audit. You will remember the discussion that took place somewhere about 1880–81, as to whether an independent auditor should be appointed in India, and I think various alterations were made at that time; do you remember those circumstances?—Yes, perfectly.

3074. I think, from the correspondence which has been put before us, one may come to this conclusion. The Indian Government did not object to the idea of an independent auditor as, I will not say recommended, but submitted to them by the India Office; but they came to the conclusion, which the Secretary of State endorsed, that there was no such necessity for establishing a thoroughly independent auditor as would counterbalance the expense that would be caused thereby. At present the Comptroller and Auditor-General is to a great extent an executive officer, is he not?—Yes.

3075. You, as Finance Minister, would be not unfrequently in communication with him?—Constantly.

Sir A. Colvin, K.C.S.I., &c.

15 Nov. 1895.

3076. Getting much information from him on various points?—Yes.

3077. I may regard him as one of your financial advisers, may I not?—Yes, certainly, in all questions of movement of currency.

3078. And accounts, bearing on the budget?—And all budget accounts.

3079. He is the first officer who gets the accounts from the Treasuries on the 9th of the month?—Yes.

3080. Therefore it is rather difficult to speak of him as a thoroughly independent officer, is it not?—So far, certainly; "independent" is an ambiguous word; you could not speak of him as an officer independent of the control of the executive and the Government of India.

3081-3. So much importance was attached to the point of independence here, that the Comptroller and Auditor-General is hedged round by the same guarantees for independence that accompany the position of a Judge. He is only removable on address to the Houses of Parliament; he holds office during good behaviour. And every precaution has been taken to secure that he will, without fear or favour, report any irregularity that takes place. Are you quite satisfied that the Comptroller and Auditor-General in India occupies an equally independent position, and that the position that he occupies is a guarantee that he will report, without fear or favour, any irregularities, whether committed by subordinate officers or by higher officers?—The irregularities are usually detected by subordinates of the Accountants-General. They in rarer cases come to the Comptroller-General. I think all might be trusted to report them. In fact they would not report them; they would immediately check them—call on the officer concerned for an explanation; they certainly may be trusted to do that.

3084. Of course when one speaks of irregularities, one has to be very careful about one's definition. In any orderly system of finance a number of irregularities may occur, which have not the slightest connexion with any mishandling of moneys. For instance, a Minister may transgress the law—and it may be most important for orderly finance that such transgressions of the law should be reported as the best security that they should not be repeated. Is any officer who is not completely independent, quite in a fair position for reporting any non-observance of the law by his superiors?—Broadly speaking, I think, yes. I think that you can rely upon him. I should rely upon him, certainly, to do so.

3085. Would there not be a greater guarantee of that if the officer were completely independent?—That applies to almost every officer in India except the Viceroy. There is no official in India, except perhaps the Viceroy and the Commander-in-Chief, who is absolutely independent in the sense of the word in which your Lordship uses it. But I think, in spite of that, they could be, and are, very properly entrusted to perform every function that is expected of them in the discharge of their duties. I do not think I should doubt more of the independence of the Comptroller and Auditor-General than, say, of a Member of Council, who might hope to be Lieutenant-Governor, for instance.

3086. But the Comptroller and Auditor-General is entrusted with power to check, which the Financial Member is not?—The Financial Member has a very disagreeable power.

3087. That is an executive power?—He has the power of combating the Viceroy and dissenting from him, and calling upon the Secretary of State to decide between them.

3088. The Financial Member of Council corresponds very much to our Chancellor of the Exchequer, one of the highest officers in the State?—He is not independent; not necessarily independent.

3089. The Comptroller and Auditor-General represents really, as nearly as we can make the analogy, one of our permanent officers?—Your Lordship is speaking of independence, I think?

3090. Yes, that is all?—I should say neither of them is independent, absolutely; the Comptroller-General is as independent as the Financial Member. I should say they are on the same footing.

3091. The way in which it strikes my mind is this: The office of Comptroller-General represents, as far as one can understand, the positions held by some of the officers at our Treasury, positions that I myself have held. I should have been very much astonished if it had been ever suggested that the duties of the Comptroller and Auditor-General should have been entrusted to me?—If they had been so entrusted, would your Lordship have been astonished if you had faithfully discharged them? Would you not expect the Comptroller-General faithfully to discharge that duty?

3093. I think that is quite possible?—In India we are in the habit of looking upon him as entrusted with it.

3094. I should expect it to be quite possible and probable, that the officer would do his duty; but what I mean is, I do not think it is a fair position of responsibility to put him in?—I think in India we are all accustomed—I think I should be corroborated by members of my own service—and it has become habitual to us to look on the Account Department as something outside the Executive, and the head of that Department as perhaps more outside than any of the rest. We accept him, and concede to him an authority which at first sight he might not seem perhaps constitutionally to possess. I think that point of view would be corroborated generally.

3095. As we understand the system in India the power of disallowance rests in the first instance, of course under the regulations, in subordinate officers?—Yes.

3096. They disallow, and they really can enforce disallowances subject only to the right of the officer against whom the disallowance is directed, to appeal. Do you think that a good system, that the auditor, especially a subordinate auditor, should have a direct power of disallowance?—My experience is that in spite of occasional friction it works very well.

3097. Then there is one point upon which there appears to be a certain lack of information on the part of the Comptroller-General. He knows those cases in which an irregularity such as I have described has occurred, but which has not been condoned; but no reports reach him to show the cases in which the disallowances have been removed by his subordinate officers. Therefore he does not know how his subordinate officers have exercised their discretion. Of course, it may be quite possible for a subordinate officer to construe quite wrongly the regulations. We understand that the security in that case is a test audit which the Comptroller and Auditor-General exercises in every department in India, and he trusts to the result of that test audit to show him how his subordinates have been exercising their functions in the service. Do you think that sufficient?—I think the experience of those who have been immediately concerned in the business of audit has found it sufficient, and I have no reason to disagree with them. I should also imagine—I cannot speak positively on this point, for I have never been in the Finance Department except at the head of it—I should imagine that the Accountants-General sends monthly analyses of their correspondence to the Comptroller-General, as other departments do to their superiors, in which would be entered all instances of that and other nature.

3098. I do not think they do?—You think not?

3099. It is a question whether they should not?—That I cannot say; I am not acquainted with the practical working of the office; it is the exception if they do not.

3100. Have you ever had the opportunity of looking at the reports made by our Comptroller and Auditor-General upon the Appropriation Accounts?—No, not the English. I should like to ask a question if I might with regard to that. I am not sure how far the Appropriation Reports in England follow on a system of audit such as we have in India, or whether they entirely supersede such audit?

3101. I did not quite catch your meaning?—I mean I am not sure whether the English system contemplates an audit like ours, supplemented by a final report by the Comptroller-General, or whether that report takes the place of all other check?

3102-3. The system in England is that every Department examines its own accounts for its Chief, not for Parliament, and it is its own interest to have them thoroughly examined and get them into complete order before it sends them to the Comptroller and Auditor-General?—Yes.

3104. The Comptroller and Auditor-General in most Departments institutes his own detailed audit, but in the case of the Army and Navy, which are very big Departments, he accepts the detailed examination of

the Army and Navy officers, only instituting a test audit of certain branches every year which he takes at hazard. But the Comptroller and Auditor-General, being perfectly independent, addresses his report to Parliament. The Departments send their accounts to him, and he examines and signs them, but he accompanies the account of each Department with a report in which he calls attention—and his report consists of nothing else but that—to any irregularities which he has found and which he thinks sufficiently important to report?—Yes.

3105. But he, the chief officer, passes the smaller disallowances and picks out those which he reports to Parliament, the object being, of course, only to call the attention of Parliament to things which are really irregularities?—Yes.

3106. If you look through one of his reports, you will see that every year he reports a number of irregularities, hardly any of them of any great importance; but some of them are and some of them involve questions of principle; every one of those goes to Parliament. Now when I look at the Appropriation Report of your Comptroller and Auditor-General in India, instead of resembling that, it is rather a financial review of the past year, which does not in the least correspond with my idea of an auditor's report. Have you turned your attention to it?—Oh yes, it has been my duty—you spoke of the Indian report—it has been my duty to read it while I held office.

3107. Would you agree with me that it takes rather the form of a financial review?—Yes. I do not think we attached any great practical importance to it, because the check followed almost immediately on the expenditure.

3108. May I ask, would you not think it a preferable form if the report followed the lines rather of our Comptroller and Auditor-General's, confining its remarks, not to explanations of revenue and expenditure which the Finance Minister can give, but to pointing out those cases in which irregularities had been brought to view?—Does your Lordship mean making a *resumé* of the irregularities which have been detected by subordinate officers?

3109. Not the smaller ones?—Yes, I think that might with great advantage be embodied in it.

3110. Would you think it desirable or not, that such a report, merely calling attention to irregularities, should undergo the review of any body at home, whether a committee of the India Office or a committee of review of some other kind?—It would be almost impossible to express an opinion, in answer to that question, until one had some experience of what form the report would take. You would require one or two years to see how to value a report of that kind; it would then be time enough to decide whether it should undergo further scrutiny.

3111. Allowance must be made for the difference between the two countries; but it would be an endeavour to bring the check upon irregularities of expenditure into something of the same form as that in which the check exists here. The check here is that the Comptroller and Auditor-General reports to the House of Commons, and the House of Commons appoints its own committee to review the Report. The difficulty of the House of Commons in dealing with such a Report in the case of India would be that the witnesses could not be brought here; but a committee of the India Office, assisted by one or two independent persons, could go through the Auditor-General's Report and advise upon it, getting their information by correspondence upon those points which require explanation?—The object of such a report would be not so much the detection of irregularities, as to present a pillory, as it were, in which would figure those which had been detected by subordinates.

3112-3. Of course they are detected in the first instance by subordinates; but any irregularity of principle, any act of the Executive inconsistent with orderly finance, would be reported and published, whoever had committed it, from the Viceroy downward, and it would have to be explained and explained publicly?—It would have, I should say, rather a political than a practical value. I think in the practical working of the administration it would probably be not of great importance as a check, but it might bring to light certainly any class of cases in which the administration was most inclined, if there is such a class, to disregard financial order.

3114. Is that point one which you would consider deserving of the attention of the Government?—I should consider the point deserving of further examination certainly.

3115. (*Mr. Buchanan.*) You told us in the earlier part of your evidence, that since 1885 when the change of policy took place, there was a change in the position of the Finance Minister, or at any rate a change in the weight attached to financial considerations in the government of India?—I did not say since the change of policy; I said that since the establishment of the Russian power in Central Asia, a change in the Council of the Indian Government has been brought about which has led to a great *bouleversement* of the relative powers of the Financial and Military Members of Council.

3116. What I was going to ask was this—You were Finance Member of Council from 1883 to 1887?—Yes.

3117. And are we to understand from you that you found that during the latter part of your tenure of office financial considerations had less weight in shaping the policy of the Government of India than during the first period?—Very much so.

3118. And you think, without expressing any opinion as to the rightness or wrongness of it, that that change, so far as you know, has, as a matter of fact, continued since that date?—I think so.

3119. Has any remedy been suggested for this weakening of the financial position of the Government of India?—A remedy was suggested in my time by the Secretary of State, which I believe was afterwards carried into effect. It was suggested that when the Viceroy and the Finance Member of Council agreed in opposition to a majority of the Council, the action of the Council should be suspended until the Secretary of State had decided; but the suggestion was opposed by all the other members of the Council, and, when I left, the matter was undetermined.

3120. But we understood from some of the previous witnesses that that rule had been laid down. Sir David Barbour, however, I think, told us that it had never been used?—Yes, I saw that reply.

3121. Has anything else been suggested by the Government of India to remedy this defect?—Not that I know of, from any responsible quarter.

3122. The defect, so far as your observation goes, still continues?—I have had no personal experience since 1887.

3123. Without asking you for any detailed scheme, could you give us any suggestions as to the direction in which financial interests might be strengthened in the Government of India?—I can give no scheme; that would involve far greater inquiry, and means of inquiry, than I at present possess. I think the direction in which you would have to look for it, would be the strengthening of the financial interests in the Council of the Secretary of State, and ultimately in trying in some way, without undue interference with the authority of the Government of India, to establish a control emanating from what theoretically is at present the last court of control—Parliament.

3124. You would look for it then in two directions—in some form of alteration in the constitution of the Council of India here, and also in making more direct, by some method or another, the control which Parliament has got by the statute of 1858 over the finances of India?—I cannot say what the form of alteration would be, or whether change in the constitution of the Secretary of State would be necessary or not; what I mean is, that the financial control of the Council should, if possible, be made, at any rate valid, very valid.

3125. You think that in the main the improved action of the Council in India would tend towards the interests of economy in the Government of India?—I think so.

3126. I think we had some statement on the subject from Sir David Barbour. Would you agree with him that, with regard to the Council of India, a good deal of its experience is somewhat remote, that it wants to have fresher experience of the more recent development of the conditions under which India is to be governed?—Well, I should not be prepared to lay that down so strongly and largely in a general form. There are members upon it whose knowledge of India is as recent or more recent than my own, for instance; and there are others who have been disconnected with it longer.

Sir A. Colvin, K.C.S.I., &c.

15 Nov. 1895.

3127. Then, looking in another direction, do you think that financial interests ought to be either more largely or more strongly represented in the Council of India?—Well, I think financial interests ought always to be represented in the Council of India as military interests or other interests are.

3128. You will say then, I suppose, that, just as, in your opinion, financial interests in the government of India have been increasing in importance, whilst their weight has slowly decreased, so they ought to increase in power and weight in the home government of India as centred in the Council?—Yes, that the proportion of interest should be maintained in the matter of its representation in Council.

3129. And it is decidedly your opinion that, even more than in other States, financial interests are of paramount importance in the Government of India?—I am not quite sure that I caught what you mean.

3130. The Chairman, in some of the questions that he put to you, introduced a parallel between India and other European countries; should I be right in saying that your opinion would be that, owing to the comparatively small margin of possible new taxation and the rapidly increasing expenditure of past years, financial interests are of even greater importance to the Government of India than to almost any other country?—I do not think the Chairman put that question to me. It was put to Sir David Barbour; but, in any case, I have no experience of Foreign governments.

3131. But, largely, we may take it as your opinion that financial questions are most important with regard to the Government of India at this moment?—I would not say they are the most important; I say that their importance is as great as any other class of questions which can be brought before that Government.

3132. I do not know whether you could give us any further details or suggestions with regard to the mode in which you would strengthen the control of Parliament over Indian finance?—No; I do not think I should be well advised in occupying the time of this Commission with any suggestions at present on that; I do not think they would be worth anything.

3133. Of course we are very anxious to have suggestions, particularly from persons like yourself and Sir David Barbour, who were recent occupants of the position of Finance Minister?—I do not think, except as the outcome of a complete inquiry by competent persons, that any answer of any value would be obtained on a subject of that sort.

3134. Would you like any interference on the part of Parliament, not indiscriminate, but upon large questions and according to certain definite fixed principles and rules?—One must remember that the exercise of the control of Parliament would have to be harmonised with the absolute necessity of maintaining the authority of the Government of India. Those would be the main points to bear in mind.

3135. There was a question I should like to ask you with regard to the decentralisation of the Government of India. You stated that one result of it was that the Viceroy's attention had been largely diverted owing to that from consideration of home affairs to the consideration of foreign and military affairs? Is there any remedy for that state of things to be found in anything like a further decentralisation of Indian finance devolving more upon the Provincial Governments? I merely ask for information?—I think not. So far as the Army and Navy are concerned, it would be difficult to divest the Central Government of that. On the other hand, if you are to maintain the decentralisation system, it would be difficult to open a larger field of immediate occupation or personal administration to the Viceroy.

3136. You think the Government of India has gone just about as far as it can in the direction of decentralisation?—I am not prepared to say that it may not be able to complete and carry further some of the side channels of decentralisation, but, I think, they have gone nearly as far as they can go.

3137. Looking at it from the economical point of view, do you think that we have got as much economical result from it now as we are likely to get?—Approximately.

3138. It is not an available source from which to look for increased revenue?—The results of the future are not likely to be as much as they hitherto have been.

3139. It is not an available source from which we can look for any substantial financial results in the direction of economy in Indian finance in the future?—No, not at all comparable to those that have already been gained, because the field has been mostly covered, I think.

3140. (*Sir William Wedderburn.*) I should like to ask you a few questions regarding the machinery for the control of expenditure. I think the control that is now exercised, or supposed to be exercised, may be divided into two sections: there is the control which is exercised over the different departments by the executive itself, that is to say, the control up to the Secretary of State—that I should consider the first section: and the second section is control over the whole of the executive, including the Secretary of State, the second section of control being exercised on behalf of the taxpayers. I think that we may make a division of that sort between the two classes of control, may we not?—Possibly.

3141. The Chairman has referred you to correspondence which referred to the office of Auditor-General and the House of Commons, and the analogy that might be established in India; and in accordance with that correspondence, it was made part of the duty of the Comptroller and Auditor-General in India to audit everything up to the sanction of the Secretary of State. I think that was the case, but that, I think, comes under the first section, because that is an audit only for higher executive officers up to the Secretary of State upon subordinate executive officers, and that audit, I think, only refers to matters of detail and administration, and not to any question of policy. I think I am right in saying that?—Yes.

3142. But, as regards any general control of expenditure touching large questions of policy, any control over the Secretary of State would have to be exercised by Parliament; there is no other authority that could exercise that control, I think? What I should like to inquire into is, what support the Financial Member of Council, as the Finance Minister of India, receives in trying to control the expenditure when he thinks it is getting too great? The financial member of Council appears to be a sort of watch-dog on behalf of the taxpayer, whether in England or in India, and he can either give warning, if he thinks that a dangerous financial policy is being initiated, or he can do his best to prevent the money being spent; when the question of the expenditure of money arises he can do both, I think?—Yes.

3143. I think you said that as regards giving warning, the difficulty arises from his not being acquainted always with the details of the policy which eventually leads to the necessary expenditure?—It may arise from that cause.

3144. The necessity may arise without being brought directly within his knowledge. And, as regards his power of preventing the expenditure, he has the power of dissenting either in Council or by a formal minute, but he has no confidence that that dissent will have a definite result in checking the expenditure?—No.

3145. That, I understand, to be the position. Then, as regards the different authorities from which he may possibly receive support, the Chairman, in likening his position to that of the Chancellor of the Exchequer, points out that he may have to deal with the Viceroy personally, in the same way that the Chancellor of the Exchequer has to deal with the Prime Minister personally, and economy or otherwise will depend a good deal upon the personal inclination of the Viceroy. You mentioned that the Viceroy takes personal charge of certain departments, the Foreign, the Military, and the Public Works Departments?—Not the Military.

3146. The Foreign and the Public Works Departments?—No, the Foreign alone.

3147. He takes charge?—He takes charge of that as a rule. It is matter of arrangement between the Viceroy and the members of his Council; the custom is, that the Foreign Department should rest with the Viceroy.

3148. But he generally takes a considerable personal interest in the Military and Public Works Departments, I think, does he not?—Yes.

3149. So far as those departments are concerned, those are departments that lead to very considerable expenditure—the Foreign Department, both political and military—and the Public Works Department?—

The Foreign may, the Public Works usually does, and the Military always does.

3150. The fact that the Viceroy takes charge of the Foreign Department, which may lead to military expeditions, would put him a little in the position of representing a spending department, would it not?—Well, a spending department is, I understand, a department that must necessarily spend.

3151. Yes?—The Foreign Department is not necessarily that. By the adoption of a certain policy it may find itself involved in circumstances which might call for expenditure, but not necessarily.

3152. I was looking to the circumstances which rather detract from the Viceroy's position as taking a judicial view of any difference of opinion between the Finance Minister and other Members of Council: and it appeared to me that the fact that the Viceroy becomes personally interested in questions of foreign policy which may lead to military expeditions, would rather deteriorate his judicial position in dealing with any question where the Finance Minister objected to expenditure?—The Viceroy is responsible in every department of the Government, and I do not know that his direct administration of the Foreign Department would cause him to exercise less impartial judgment in that than in any other. His responsibility, I mean, extends to all.

3153. I meant rather—I might give an example—let me suppose that the Viceroy had decided to have a military expedition beyond the frontier. If the Finance Minister objected to that, he would be objecting to the policy personally supported by the Viceroy himself; would not that make it more difficult for him to get the Viceroy to take a judicial view of the subject?——

3154. (*Sir Andrew Scoble.*) I should like to ask before you answer that question; does the Viceroy personally decide upon military expeditions beyond the frontier, because the question rather assumed that he did?—I did not understand Sir William Wedderburn to say so; I understood him to say "if a military expedition were decided upon."

3155. Oh, no, "if the Viceroy decided upon an expedition."

3155*a*. (*Sir William Wedderburn.*) Or recommended it?—My answer to that would be that the Finance Minister would have had opportunities of expressing his views in Council before the expedition was decided upon; and the Viceroy would hear what he had to say before he made up his own mind in all probability.

3156. Yes. Then in the Council of the Viceroy most of the other Members of Council represent spending departments as against the Finance Member who has to provide the funds; is not that the case?—All in their various degrees.

3157. Therefore to a certain extent he is one against all the others?—I think so.

3158. You mentioned that he gets a certain support from the Secretary of State in Council in financial matters; he looks to get some support in financial economy?—Yes; he also looks to the Viceroy I think, too. I should say, speaking of my own experience, he looks to the Viceroy and is largely supported by the Viceroy.

3159. Yes, but if the Viceroy is against him he is rather helpless in the Council?—Yes. Of course, he cannot expect the Viceroy to support him when he differs from him in view.

3160. He would not expect to get the support of the Secretary of State where his recommendation was adverse to a policy approved of by the Secretary of State. Supposing the Secretary of State had—to give an example—sanctioned an expedition beyond the frontier, an appeal to the Secretary of State would not be of much value against the expenditure involved in that policy?—When the Secretary of State had sanctioned an expedition there would be no appeal to him against it.

3161. He would not hope to get much by any remonstrance or protest?—No; if sanction had been given and acted on it would probably be too late. Perhaps I may bring out again more clearly the point of the answer I gave. He would have ample opportunity before the decision was arrived at, and when the mind of the person at the head of the Government was in a state, presumably, of suspense, of putting all his views before him, while there was yet time.

3162. Well, I will take another instance; supposing it is a question of engaging upon large public works, if that policy of public works had been started by the Secretary of State, he would feel that he had not much hope in an appeal made by him against that expenditure?—If he thought such a policy would be likely to be injurious to the finances of India or beyond their power of meeting the charge, and if he could enlist the rest of the Council with him, I think he might have hope that he could induce the Secretary of State to modify his opinion. If he found himself alone, of course he would have much less assurance upon that point.

3163. Is it not the case that a good deal of the general expenditure upon great public works in India has been initiated from home, more than at the request of the people in India?—Whom do you mean by the people in India?

3164. Any local demand there?—Do you mean the authorities in India or the people of India?

3165. Either; I mean is it not rather initiated in this country than in India?—Than in India? That is a very broad question I should scarcely reply to. I think within my experience that there is a constant pressure upon the Government of India from the Secretary of State to expand the railway system of India as much as possible.

3166. Are you aware that a good deal of Parliamentary and other pressure is brought to bear upon the Secretary of State to spend money in this way?—That may be; but within my personal knowledge, of course, I could not answer that question.

3167. But, upon the whole, it appears that pressure is brought by the Secretary of State rather upon the Government of India to extend railways?—Pressure is, perhaps, scarcely the word to use. I should say that every encouragement is given to the Government of India to develope its railways for the purpose of the commerce and the security of India.

3168. Then we come to the second section that I referred to, namely, the means of controlling expenditure on behalf of the taxpayers, whether in Great Britain or in India. The Chairman has pointed out that a good deal of the check in this country is check by anticipation, the anticipation of parliamentary interference. Do you think that operates in India?—I think I replied to that question to the Chairman, that it operates in increasing degree as we get nearer to Parliament; as the authority concerned gets nearer to Parliament.

3169. But I suppose it would operate more usefully, if, instead of desultory interference, there was a well regulated and systematic control exercised: then the anticipation of that control would have a very good effect, I presume?—If the best possible arrangement could be made, that would presumably have the best possible effect.

3170. At present we have what is called the Indian Budget debate?—Yes.

3171. Do you think that much benefit is derived from that?—Benefit to the Government of India?

3172. Yes, and to India?—No.

3173. What are the drawbacks to that?—It is debated, as a rule, long after the period to which it refers is closed; it is debated at the end of the Session when everybody is very anxious to get away, I believe; and it is usually debated, I am told—I am speaking without any experience from what I see in the papers and from what I learn from others—in a very thin house, and among persons many or most of whom are neither competent nor careful to weigh the matter which they are discussing.

3174. If the Financial Statement could be considered by some well-organised committee in the House of Commons to report to the House of Commons, would that not be a step towards getting the debate on to a more business-like footing than it is at present?—I am so entirely unacquainted with the probable course of affairs in Parliament, that I could not give any answer to that; at least within my knowledge.

3175. What I would like to get at is how best the dissent of the responsible Finance Minister could be utilised, in order to bring proper inquiry upon anything that is going wrong in the finances of the Government of India. The Financial Member of Council, when he thinks that the finances are going wrong, has an opportunity of recording a dissent or of

Sir A. Colvin, K.C.S.I., &c.

15 Nov. 1895.

bringing it to notice. My object is to ascertain how that dissent or opinion may be best utilised for practical purposes, so that his view of the case may be properly looked into, and the ultimate authority of Parliament brought to bear so as to indicate a mature and good policy to be followed in financial matters. That is my object, and I would like to know whether it would not be advantageous that such an opinion of the Finance Minister should in some way be brought before the House of Commons?—I believe it can be; if any member of the House of Commons chooses to ask for it, it may be published, and I know in the case of my own dissent, which Sir Courteney Ilbert and I recorded with regard to the increase of the army, it was published; it was called for in the House and published.

3176. But that depended upon private members?—Yes.

3177. But I mean in order to inform the House or a committee of the House, as a formal thing, of the important issues, would it not be advantageous that they should have before them any dissents or opinions or reports by the Financial Member, and also any dissents that might have been recorded here in the Secretary of State's office on financial matters; would that not be very useful material for the House of Commons or a committee of the House of Commons to deal with? And should it not be regularly and formally placed before them?—It seems to me a question to which one cannot reply without knowing what the constitutional powers of such a body as you speak of would be.

3178. But you think it would be valuable if those issues could be satisfactorily brought before the House of Commons with a view to their dealing with the finances of India, which they have to do once a year upon the East India Accounts?—Yes. I think they already have the power. I rather think a dissent of a member of the Secretary of State's Council must be published. Am I wrong in that?

3179. (*Sir James Peile.*) No, not published; it is recorded?—Recorded.

3180. It may be called for by a member of Parliament?—I could not answer that question. Sir William Wedderburn's question touches upon the relative authority of the Government of India and of Parliament, and it would be impossible, I think, to say; the amount of caution to be exercised in order to prevent undue interference with the Government of India would have to be very carefully considered, and also the constitution of this proposed body, which has been mentioned, before a satisfactory answer could be given to a question of that kind.

3181. (*Sir William Wedderburn.*) Were you, as Financial Member of Council in India, made aware of any dissents or minutes of the Secretary of State's Council, recorded here?—No, nothing that passed in the Secretary of State's Council was ever communicated to me.

3182. So you would not be made aware supposing a certain number of members of Council had minuted in favour of your views?—I should not be made officially aware. I might learn it from private sources, but it certainly would not come to my official cognisance.

3183. Are you aware if there have been in the Council of the Secretary of State members specially trained in the Finance Department in India?—There usually are.

3184. Are there any at this moment?—No. Sir John Strachey was the other day, but he has resigned.

3185. Can you name any others that have been on the Council besides Sir John Strachey?—Sir William Muir. Both the Stracheys—General Strachey acted a short time in charge of the finances—and Sir William Muir, those are the three that occur to me for the present.

3186–7. I daresay you have read debates in Parliament upon such questions as the import duties and the Chitral expedition. Did it appear to you that the members of Parliament who spoke had sufficient information upon these subjects on which they spoke?—I do not think I read from that point of view. I should not have said they were insufficiently informed, so far as I could see, at all; they knew as much as I did, anyhow.

3188. With regard to a support to the Finance Minister in any proposals for economy, I think Sir David Barbour said he would be a good deal supported if there were an enlightened public opinion, an educated public opinion, upon financial questions in existence. Do you agree in that view of the case?—Yes.

3189. What is the line generally taken by the Press in India, the Anglo-Indian Press and the Indian Press upon questions of economy?

(*Sir Andrew Scoble.*) We surely do not want to go into that; as to the line taken by the Press in India.

(*Sir William Wedderburn.*) Public opinion.

(*Sir Andrew Scoble.*) We are not enquiring into public opinion.

(*Sir William Wedderburn.*) Sir David Barbour referred to public opinion. What we are dealing with is the support necessary to control the expenditure. I think that this is very material.

(*Chairman.*) An allusion has been made to public opinion. You were going to ask what evdence there was of public opinion.

3189*a*. (*Sir William Wedderburn.*) The Press is the way in which public opinion is shown in India. Can you say how public opinion is expressed in the Press? Does the Financial Member get support from public opinion in the Press in India, that is my question?—I think, speaking generally, that he does get it, both from the Anglo-Indian and from the Indian Press.

3190. Supposing the Finance Minister were of opinion that certain expenditure was illegal under Section 55 of the Government of India Act, on the ground that it was expenditure for military operations beyond the frontier without the consent of Parliament, what steps could he take to prevent that expenditure being made?—He would consult the Legal member of Council, through the Viceroy probably; he would have the question referred to the Viceroy with a request that legal opinion might be got upon it, I should say.

3191. Can you tell me whether that point has been considered as to the legality of such expenditure?—I cannot say; not in my time; no question arose in my time to call for that.

3192. Section 55 of the Government of India Act refers to British India as it was transferred to Her Majesty at that time. Can you tell me whether any steps are taken to keep a record of the successive additions to those dominions of Her Majesty in India since 1858?—I do not quite follow the expression "to keep a record."

3193. Section 55 of the Act of 1858 puts a limit upon expenditure beyond the external frontiers of British India, of Her Majesty's dominions; but those frontiers have been extended from time to time since 1858?—Yes.

3194. Is there any formal or official record to show the extensions, and whether they have been legally and constitutionally effected?—The only case that I can recall is the case of Upper Burma, and I think there was an Order in Council in London, a proclamation of some sort, (I do not know what form it took) declaring that Upper Burma was annexed.

3195. But as regards these gradual enlargements of the frontier, of the western and north-western frontier, are you aware whether any formal proceedings are taken to include these new territories within the dominions of Her Majesty contemplated by the Act of 1858?—I am not aware that they have been included within Her Majesty's dominions. They have been included within a treaty protectorate, but not within British dominion, I think.

3196. Can you refer me to any authorised map which at present shows the existing dominions of Her Majesty—British India?—No, I cannot.

(*Mr. Naoroji.*) I want a little explanation from you, my Lord. I understand from our conversation last time that we are at present considering the system or method, or mechanism, rules and regulations and powers and control of auditor, accountant, and Finance Minister, but the question of the character and efficiency of that expenditure with its economical and financial or other effects, and the persons or the motive power which carries out this whole mechanism, has to be deferred?

(*Chairman.*) I think what we have said was that we would deal first of all with the mechanism of the administration. The question of the progress of expenditure forms a separate branch which could be

more conveniently taken at the second series of sittings.

(*Mr. Naoroji.*) That would include the expenditure on the manning, and the whole personnel of the service and so on—the whole expenditure, in fact?

(*Chairman.*) When we come to the progress of the expenditure, if you are desirous of raising the question as to whether we can go into grievances, the Commission will have to settle the points at the time. I do not think that grievances come within the purview of our inquiry, But at all events that would not form part of the machinery of administration as I understand it; now we want to get the mechanism.

3197. (*Mr. Naoroji.*) It is the mechanism we want to get at. Now, I will only put one question as regards the difficulty of finance and so on. Is it not a great weakness in finance that, as in this country, the people or taxpayers in some suitable way have no direct interest or voice in the finance?—Is it not a weakness in finance, do you say?

3198. Yes, if the people had any direct voice and direct interest in the settlement of the finance and the expenditure of everything, would it not be a great strength to the Finance Minister? while at present, having no such support of such interest from the people themselves, it is a great weakness in the finances?—It is difficult to answer the question in that form, quite. It might be a weakness or it might be a strength to him.

3199. Consent of the people is the great strength of the Chancellor of the Exchequer?—So far as he could obtain the opinions of the people, and use them in support of his views, it would be a source of strength to him.

3200. But it is not merely the opinion of the people expressed outside, but some direct voice, some representative of the taxpayer in the Council, who can actually give a voice as to any particular expenditure? At present the budget is entirely the result or the work of the Executive; the people have no voice in it at all, whether they should diminish that expenditure or increase that expenditure. As it is here, you get six months in discussing the budget and seeing what the expenditure ought to be?—That is a hypothetical case on which I find it difficult to express any direct opinion. In other countries it has been found to be of use I believe, and presumably, therefore, it would be so in the case of India.

3201. Of use, yes, that is all I wanted, that would be a very great strength to the Finance Minister, or the settlement of finance, if some such voice was given to the people, direct voice, I mean to say, and direct interest. That is all. I do not want to ask any more.

3202. (*Mr. Ryder.*) May I ask you whether the result of decentralisation, of which we have heard a great deal, and which we have heard described as being economical, has been to diminish expenditure by the Provincial Governments or to increase it?—You mean, since the Provincial Governments were decentralised, has their expenditure increased or decreased?

3203-4. Yes, what I am driving at is this: it seems to me that a great motive has been given to the Provincial Governments to increase their expenditure. Now that they collect so much revenue for themselves, they are of course very much more careful about the collection; but is it not true that they also have an immense motive that they had not before to increase their expenditure?—I should scarcely say that; before, their expenditure depended on how much they could obtain from the central funds of the Government of India, and therefore it was the interest of every Government to obtain as much as it possibly could; it was in no way responsible for finance.

3205. Well, and now it is the interest of every Provincial Government to increase the collection of its own revenue?—Yes.

3206. And it knows that if at the quinquennial revision its revenue turns out to be more than it needs, the excess will be taken by the Central Government?—Yes.

3207. Therefore there is a great motive for bringing up the future expenditure to a level with the provincial income?—Yes, that unquestionably is the case. But whether one can say that, beyond that, they have a greater motive than they had before the introduction of the decentralisation in increasing their expenditure is another matter entirely. It is a comparison between things that are unlike.

3208. But, before, there was a closer control and watchfulness over them, was there not, by the Central Government?—No. I saw some of the working of it before; each Provincial Government made it a point to get all it could out of the Central Government, because it knew that so far as it failed of success, some other Government would be more successful.

3209. There was one question about the balances that I should like to ask you; I think we were told that, after inquiry, it was held that something like from eight to ten millions Rx. ought to be in hand constantly. That, you may say, would represent something like five millions, perhaps, of our money?— Rx. would be equivalent to £ sterling.

3210. Not now, I am sorry to say?—Rx. expresses an equivalent to sterling.

3211. It means tens of rupees?—It means tens of rupees.

3212. Well, I will not raise that point. I thought that it could not mean so much as eight or ten millions sterling. However, my point is this, we must not compare that balance with our own balances in the Banks of England and Ireland. I imagine if we want to compare them with balances here we must take into account all the balances in the hands of subordinate accountants, must we not, by which I mean all the balances in the hands of our army officers who pay money for our army?—Yes.

3213. And for our navy?—Yes.

3214. And when you come to do that I think the amount does not appear so very large. I wanted to make sure that this balance that is spoken of—we will call it eight millions Rx.—really means not only the balance in the head Treasury, but the balance in all the local treasuries all over the Indian Empire?—Yes, the reserve balance. Of course, there is an immense amount of floating balance besides that which is being constantly used up or added to; this is the balance which is kept in reserve.

3215. A minimum balance?—Outside all probable calls.

3216. May I ask you one or two questions which Sir Ralph Knox wished to ask you, and which I shall be glad to put to you even in an imperfect way. They referred to the constitution of the Council of the Viceroy. Am I not right in thinking that the number of the Council, the Executive Council I think you call it, is eight?—Not so many as that.

3217. Seven?—There are the Viceroy, the Commander-in-Chief, the Military Member, the Home Member, the Public Works Member, the Finance Member, and the Legal Member—seven. It varies, it is not necessarily the same; the Public Works Member is not always there.

3218. Out of that number we may say that all represent spending departments, except the Viceroy himself and the Financial Member?—I should not make that exception there; I should make no exception there. The Viceroy is in charge of the Foreign Department which has a very large political area beyond the Indus, which causes very considerable expenditure.

3219. Unless the Viceroy throws his weight on the side of economy, the Financial Member stands quite alone?—Yes.

3220. One naturally thinks, therefore, that it might be possible to strengthen the financial element in the Council. I think I am right in saying two of the members are military?—Yes.

3221. Would it be possible, and might it not be expedient, to do with one Military Member, and appoint, in place of one of the two, someone who would be quite independent of any spending department, and who would naturally lean to the financial side?—If it were possible, of course it would strengthen the Financial Member's hands very much.

3222. Do you think it necessary to have two Military Members?—That is a very large question that has been much debated.

3223. Has it ever been considered whether it would not be possible to add a member who would not be interested in expenditure?—I do not think that that has ever been considered,

Sir A. Colvin, K.C.S.I., &c.

15 Nov. 1895.

3224. Someone, say, to represent revenue. You now have on your permanent staff a Secretary for Finance, and a Secretary for Revenue. Their duties are to a great extent akin, and that fact seems to suggest that there might be a second Financial Member of Council, who would specially represent Revenue?—But there is a second member of Council; the Member in charge of the Home Department is also in charge of the Revenue and Agricultural Department.

3225. I see, but he is deeply interested in expenditure, is he not?—He is interested in expenditure because the Provincial Governments indirectly are under him—I will not say under him, but the Provincial Governments are mainly in his department, and the expenditure initiates with them; he has no direct administrative reason for expenditure.

3226. But, then, does he naturally tend towards siding with the Financial Member?—No, I do not think he does. He naturally, I think, tends towards developing the country, for instance, by railways. I think that is very natural; and he naturally tends towards the extension of the various administrative departments of the Government in the directions which his own experience teaches him are requisite; most of which necessitate increase in expenditure. On the other hand, he probably feels in common with the Finance Minister that he is responsible for the well-being of the people, and that any burden put upon them in excess of what they are likely to be able to bear, would lead to consequences which he would consider it his duty as far as possible to guard against.

3227. That leads to his support of the Financial Member not infrequently, perhaps?—I think the Financial Member very often reckons upon his support, but my experience is that he finds him very often in opposition.

3228. (*Chairman.*) What was the origin of its being thought necessary to have two Military Members of Council, do you know?—No, I do not know. I think the second man is put as a financial check on the Commander-in-chief.

3229. (*Sir Andrew Scoble.*) But the Military Member is an ordinary Member of Council?—Yes.

3230. The Commander-in-chief is an extraordinary Member of Council?—Yes.

3231. (*Chairman.*) That is the point I wanted to ask; was the original idea that the ordinary Member of Council was a financial check upon the Commander-in-chief in Council?—That is the use to which he has grown up; whether that was the original idea one would have to go very far back into the history of the Crown and Company in India to find out. But that is one of the recognised functions which he is now supposed to fulfil.

3232. And would you say that that is the result, and that the Military Member of Council is, in practice, a financial check upon the Commander-in-chief?—No, I cannot say that he is.

3233. (*Sir Andrew Scoble.*) In your recollection, have you not known that the proposals of the Commander-in-Chief, in regard to an expedition, for instance, have been considerably modified upon the advice of the Military Member of Council?—I do not think in my time that there was any expedition. Beyond Upper Burma, I do not remember any other expeditions; there may have been.

3234. The recent Black Mountain Expeditions were not in your time?—No.

3235. Now, when you speak about the Financial Member of Council standing quite alone, does he not constantly receive support from his other colleagues in his proposals for economy?—In matters of comparative routine very constantly.

3236. Have you not known, for instance, the proposals of the Public Works Department cut down in Council, when they came to be considered?—In some cases cut down; in others I have found myself alone, combatting them.

3237. But the practice is, is it not, that all these proposals for expenditure, large expenditure I mean outside the routine, come before the Council as a body, unless they have been accepted previously by the Finance Member himself?—Yes; certainly distinct proposals involving expenditure come before the Council as a body.

3238. And was your experience so unfortunate that you always found yourself unsupported by your colleagues?—I found myself more frequently in opposition than supported by them, both with regard to public works and with regard to military expenditure. The proof with regard to the latter was that the Legal Member of that time alone supported me, and he was the only member who did. The proof with regard to public works was, that on more than one important occasion I had to record a solitary dissent.

3239. But on all those occasions the voice of the majority of the Council was against you?—Yes.

3240. The Legal Member's is not a spending department, is it?—He is interested in the improvement of the judicial administration throughout India, and so far, indirectly, like the Home Member, his is a spending department.

3241. But not so directly as the others are?—Not like the Public Works nor the Military, no; neither his nor the Home Member's.

3242. Now, with regard to Parliamentary control. You were asked whether a well-regulated and systematic control exercised by Parliament, by means of a well-organised committee, would be an advantage. Do you consider such a control possible?—I gave my answer. I do not remember exactly what my answer was; but I recorded my answer.

3243. Having regard to the circumstances of India, do you think that a well-regulated and systematic control over Indian finance could be exercised by a committee of the House of Commons?—I could not possibly answer a question of that sort—give any direct answer to that question. I mean it would be necessary to know what would be the powers of the Committee, what is possible, and so on. I have not thought of coming to a conclusion about it.

3244. (*Sir James Peile.*) You are aware of the order in force, that if the Viceroy and the Finance Member agree about a financial question as against the rest of the Council, action is suspended until a reference is made to the Secretary of State?—Yes.

3245. Sir David Barbour told us that that rule was never used; it would, however, only be not used, I suppose, where the Viceroy and Finance Member were strong enough to do without it?—It did not exist in my time. I cannot say how it would work.

3246. But if the Finance Member and the Viceroy agree, generally speaking their view would prevail, would it not?—I should think so.

3247. But what Sir D. Barbour called the weakness of the Financial Department would come in when the Viceroy did not support the Finance Member?—I think so, yes.

3248. Then the Finance Member would only have one vote, like any other member of the Council?—Yes. He has, of course, the right to dissent, if he finds himself overruled.

3249. You would not be in favour of allowing him by himself to suspend action pending a reference to the Secretary of State?—No.

3250. That would be inconsistent with his position as a member of a Cabinet, which he really is?—His individual responsibility, large as it is, is not sufficiently large to entrust him with that power.

3251. The Viceroy may incline to the views of the Political, or the Military, or the Public Works Department, as against the Finance?—He may.

3252. We have had tables put before us in which there is shown in the ten years 1884–85 to 1894–95, a net increase of military expenditure of Rx. 2,500,000 annually, besides exchange upon that sum, and in the Civil Departments an increase of Rx. 500,000 annually. I suppose the increase in the Civil Departments, 1884–85 onwards, would be a great deal due to the annexation of Burma?—I think so.

3253. And the military charges are shown to be due to special operations and also to operations in Upper Burma?—Since what year—1884?

3254. Since 1884–5?—It would be largely due to increase in the strength of the army of India.

3255. (*Chairman.*) That was in 1884, was it not?—It was brought into effect in 1886; it began in 1886.

3256. (*Sir James Peile.*) The increase in the military expenditure largely arises from the extension of our

sphere of political influence, does it not?—So far as Upper Burma is concerned.

3257. Which leads to small wars, expeditions, and occupations?—The military expenditure?

3258. Yes?—May I ask you to repeat that question? That it largely arises from——?

3259. From the extension of our sphere of political influence in India?—It largely has so arisen during those ten years.

3260. That has been the chief cause of increased expenditure during those ten years?—Well, without seeing the total increase analysed, I could not answer that.

3261. I mean that small wars and expeditions and so on account largely for increased expenditure?—They are a constant source of increased expenditure.

3262. And they really arise, you may say, in the political department of the Government, do they not?—They really arise in the political department of the Government. They are a constant source of military and political expenditure there.

3263. And the cost of a military expedition very often is not known or capable of being put in a Budget, before it is incurred?—No; unless it is foreseen. If it arises during the currency of the year it would be impossible to put it in. May I supplement a reply I gave just now with regard to the case of those expeditions originating in the political department? I ought to supplement that further by saying that military considerations largely govern political considerations in India—that it is difficult to distinguish between the two departments as to the precise source of origin.

3264. They act together?—Political questions will constantly arise in connexion with military expeditions.

3265. On these large questions the Government of India originates measures or proposals; but the decision of the Government of India about them is not final?—No; the Secretary of State decides.

3266. The question comes before the Secretary of State, with, I presume, the financial position fully stated, as well as the other considerations?—Probably. I do not think that in the case of the Burma war, for instance, financial considerations were taken into consideration there. I do not think any exposition of the financial result was put before the Secretary of State.

3267. Still an enormous expenditure was evidently certain to be incurred on it?—Certainly.

3268. The Secretary of State is a member of the Cabinet, of course. Then the decision as to wars and expeditions, the cost of which is charged to the revenues of India is made by the Cabinet rather than by the Secretary of State in Council?—I am not acquainted with the working of either.

3269. You have read, perhaps, Mr. Balfour's speech, reported this morning?—I have not seen it.

3270. In which he spoke of the Chitral Expedition, and gave to his Government the entire credit for deciding to maintain troops at Chitral and on the road to it?—I cannot reply; because these are not matters within my personal knowledge. Any answer I might make would be of no use on that point.

3271. But, in former expeditions, I suppose you must be aware that the Cabinet finally decided whether the expedition should be made or not?—In Chitral?

3272. Not only Chitral, but Chitral, certainly?—Which was the one you quoted? I think you said the Chitral expedition?

3273. Yes; but in other previous expeditions? In the case of Burma?—Yes, in Burma.

3274. The Cabinet would decide whether Burma was to be annexed or not?—I cannot say whether it would. It would depend on the circumstances of the expedition. Sometimes an expedition is taken out of the hands of any authority in England from a combination of circumstances out in India.

3275. I suppose the general impression is that the Cabinet really does settle the question of an expedition?—It may be.

3276. And the Cabinet, of course, is responsible to Parliament?—Yes.

3277. So that if that assumption is correct, the responsibility for the expenditure on expeditions and wars in India rests where the responsibility for, say, the war in Ashanti rests, that is, on the Ministry and the Government?—Well, "the responsibility" is a doubtful word. The final decision may rest with the Cabinet. The responsibility must mainly rest with those whose policy brought about the war.

3278. Exactly. The Cabinet, however, would be responsible for their final decision to Parliament?—Yes; if they decided it.

3279. And, in this, might there not be found ground for an argument that the whole cost of expeditions so sanctioned should not be charged to the revenues of India?—So far as the decision rested with the Cabinet.

3280. And ultimately with Parliament?—If the action of the Cabinet brought about the war. That argument would appear to me to be stronger if the Cabinet was the *causa causans* of the war, I mean; but, if it merely had the last word as to whether there were to be war or not, and circumstances outside its control had brought the question about, I do not think that that argument would be so strong.

3281. (*Chairman.*) I should like to ask you one further question. Taking the point that Sir James Peile called attention to, it is very true that the Secretary of State decides on the expedition. He decides on information derived from the Viceroy, and the Viceroy is practically the sole source of information as to the necessity for the expedition?—Yes.

3282. Therefore, so far, it is all the more important that the information that reaches the Secretary of State should be as complete as possible?—No doubt.

3283. And that would rather add force, would it not, to the idea, which I ventured to suggest to you, of the importance that the Finance Minister's views should in some form or another, emanating from himself, reach the Secretary of State?—Yes.

3284. You spoke, I think, in answer to Sir William Wedderburn, of the desirability of strengthening the financial element in the Council of the Secretary of State?—Not of strengthening it—of having it adequately represented—having an effective representation in the Secretary of State's Council of the financial interests in the Government of India.

3285. I can quite understand the desirability of doing so; but have you any reason upon which you found your opinion to that effect? Is it because you think the Finance Minister would be benefited by a check applied here to irregular expenditure when reported?—I think that the more effective the financial voice of the Secretary of State's Council, the more the Finance Minister would be benefited by its support or its criticism.

3286. I suppose you mean that you would like to see the financial element more strongly represented in the Council, in order that the Secretary of State might be sure of having competent financial advice upon the information which comes to him from India, so that his scrutiny might be effectual?—Precisely; for the same reason that the military element is represented in his Council, that he may have good advice upon military matters.

3287–8. And for that purpose would you like to see men of actual experience in Indian finance both in the Council itself and also in the Finance Department of the India Office?—In the Council they usually are.

3289–90. Well, you have given two or three?—Yes, I have given two or three. Of course, though only two or three in number, they held office successively for a period extending over many years; Sir William Muir from 1876 for, I think, ten years; Sir John Strachey, nearly the last, from 1885, for ten years. That covers 20 years; and the Council has only been appointed since 1858, or so.

3291. (*Sir James Peile.*) There is also an Indian banker in the Council of India?—Yes, there is also an Indian banker, but with no practical knowledge of Indian financial administration.

3292. (*Chairman.*) That is, you are aiming at a larger infusion of special financial knowledge?—I think it would be of very great importance.

3293. Would you introduce it into the Finance Department of the office here? Of course I am not speaking of any criticism that is necessary at the present moment, but of principle?—On general grounds. Quite so. Well, I should say theoretically—the present system works so admirably well that it is very difficult to

Sir A. Colvin, K.C.S.I., &c.

15 Nov. 1895.

oppose theory to practice—but, theoretically, I should be inclined, I think, to look to India for an efficient Financial Secretary in the India Office, although circumstances have proved that you can find him out of India.

3294. I quite understand that we are not applying the principle to the Finance Department as at present organised?—No; my theory is checked by my experience to the contrary. That is what I wish to bring out. There is, however, one point with regard to the Financial Secretary's sphere of executive work which struck me much on reading his evidence, as weakening the effective aid that he can give to the Financial Member, and that is, that it is limited to certain branches, When questions were put to him with regard to the increase of Excise revenue, for example, I observe he was obliged to refer you to another Secretary. That seemed to me to be a matter worth attention. I think that it would be more important to increase the sphere of his information so as to include the growth of receipts and expenditure in as many branches as possible, than to find the occupant of the office in India rather than in England.

3295. I think Sir Henry Waterfield told us, that questions affecting Revenue, though they went first to the Revenue Department, were communicated to the Finance Department; that the Finance Department had an opportunity of seeing them, and of passing an opinion upon them before any decision was arrived at by the Council?—No doubt they would have, but they are not cognisant of them at first hand; and, therefore, they are not as intimately informed of the cause of growth or falling off of receipts in their Department, as, for instance, the Financial Member in India is.

3296. Quite so. He pointed out that there is a Revenue Department looking at the questions from a taxation point of view: but I think he would say that the Finance Department watches them from the mere progress of revenue point of view?—From the point of view, say, of growth. But growth, after all, is only a symptom; growth, until you analyse the cause of growth, has no value to you as Financial Secretary or Financial Member. Therefore, so far as diagnosis of the cause of growth of receipts and expenditure in any department lies outside his sphere, so far, I should say, his usefulness is detracted from.

3297. Would your idea be that the Revenue Department and the Financial Department should be combined? Would that be the conclusion of these considerations?—In that direction, as far as possible. How far it might be found possible at this time I cannot say. But that is the direction I should wish to see taken.

3298. You spoke of its being in your mind that a certain anticipation of Parliamentary action would be beneficial to the Indian Government; that is to say, that a greater interest taken by Parliament might be of financial benefit to the Indian Government—that is an extremely difficult point, is it not? And I gather from what you subsequently said that it is a question, on which before you expressed yourself decidedly at all, you would require to consider the matter very maturely—that is to say, whatever benefit you might think Parliament may cause or has occasionally caused by its interference, the form which such interference takes, or should take, is a very difficult question?—I think I have been careful in my replies to indicate my opinion to that effect, and the phrase which your Lordship used as to the anticipatory effect was not mine; it was a phrase which was put to me in the question.

3299. No; but I thought that having alluded to the possible benefit of Parliament taking a greater interest in Indian matters, you guarded yourself at the same time by saying how very difficult it was to define the conditions under which that greater interest could be shown?—In my replies to Sir William Wedderburn and Sir Andrew Scoble, I very carefully indicated my extreme consciousness of the immense difficulty of the question.

3300. The most practical method of affording greater strength to the Finance Minister would probably be through the India Office itself?—I think so.

The witness withdrew.

Adjourned till the first Tuesday after the meeting of Parliament.

At the India Office.

SEVENTH DAY.

Tuesday, 18th February, 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

THE RIGHT HON. LEONARD COURTNEY, M.P.
SIR WILLIAM WEDDERBURN, Bart., M.P.
SIR E. W. HAMILTON, K.C.B.
SIR RALPH KNOX, K.C.B.
SIR JAMES PEILE, K.C.S.I.
SIR ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
MR. G. L. RYDER, C.B.
MR. T. R. BUCHANAN, M.P.
MR. DADABHAI NAOROJI.
MR. R. G. C. MOWBRAY.

MR. COLIN G. CAMPBELL, *Secretary.*

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

18 Feb. 1896.

Major-General Sir EDWIN H. H. COLLEN, K.C.I.E., called in and examined.

3301. (*Chairman.*) Sir Edwin Collen, what posts have you held in India?—I have been Military Secretary to the Government of India since the 1st November 1886, and previous to that I held for one year the post of Accountant-General in the Military Department, in the year 1885–86; and I have served in every grade in the Military Department. I also held the post of Assistant Controller General of Supply and Transport during the Afghan war, and I held the appointment of Ordnance Officer for some time. I served also for a short time in the Quartermaster-General's Department.

3302. May I ask over what length of time your service in India has lasted?—Nearly 32 years.

3303. You have seen the evidence, I think, tendered to the Commission?—Yes; I have seen most of the evidence.

3304. You are aware that the Commission has divided its inquiry into three branches, viz., 1. Financial administration; 2. Increase of expenditure; and 3. Apportionment of charge between the Imperial and Indian Governments; and that up to this period we have only been dealing with the first branch?—Yes.

3305. Sir Oliver Newmarch has described to us the regulations under which and by which the military expenditure of India is conducted and controlled, but we understood from him that some years have elapsed

since he held the post of Military Secretary in India, and he therefore spoke with some reserve as to the working of the military financial system at the present moment. The Commission is, therefore, glad to avail itself of your presence to obtain the benefit of your more recent experience, especially as you state in your memorandum that within the last few years strict and more detailed regulations have been laid down within the Military Department for watching and controlling military expenditure. For this purpose I propose to ask you to give us your view in some detail of the financial machinery of the Military Department, and perhaps, as we proceed, you would call our attention to those points on which the regulations have been modified in recent years, and on which you would supplement or expand Sir Oliver Newmarch's evidence?—I shall be very glad to do so if possible.

3306–7. May I ask here, with reference to that remark that stricter and more detailed regulations have been laid down within the last few years, would you say that the regulations for the promotion of economy in the Military Department are distinctly stricter than they were in the period to which Sir Oliver Newmarch's evidence extended?—I should say that although there has been always a very strict check in the Military Department on military expenditure, and numerous rules were laid down before the period to which I alluded, yet, within the last five years, certain more precise regulations have been laid down—I may say by Sir Henry Brackenbury—in order to govern the disposal of financial questions in the Military Department; consequently there has not been the same latitude given to subordinate officers; within the last few years there has been, perhaps, a more minute consultation of the Finance Department; and the Military Department now is really hardly able to do much without consulting the Finance Department.

3308. (*Sir Ralph Knox.*) That is, the Military Finance Department?—No, the Finance Department of the Government of India.

3309. (*Chairman.*) You say, as I understand, that rather less latitude is given to subordinate officers of the Department by the new rules?—Yes, the subordinate officers in the Military Department itself.

3310. In what form has their latitude been curtailed?—When a proposal comes up now, I think that the Secretary has not so much power as he had before, and certainly the Deputy and the Assistant Secretaries have not; but I will, if you will allow me, refer to my memorandum on that point. In the memorandum I have given the financial powers of the Military Department. A very large number of rules were laid down before Sir Henry Brackenbury's time, which were very strictly attended to; but within recent years—within the last five years, say—there has been greater strictness, and more returns have been laid down. For instance, with every proposal for expenditure a statement is required to be put up to show clearly the amount proposed, initial and recurring, and whether the sanction of the Finance Department is required. That enables the Military Member of Council at once to decide whether any question is to be negatived or to go to the Finance Department. Then, no proposal involving an increase in future estimates is to be sent even for the concurrence of the Finance Department, except by the Military Member of Council. In previous years these proposals had been sent by the Secretary without the intervention of the Military Member of Council, that is in minor cases; but the above is rather a hard and fast rule, so that the same latitude is not, perhaps, given at the present time.

3311. Therefore the greater strictness has been rather in the direction of concentrating more power in the hands of the Military Member of Council?—I think so.

3312. Could you illustrate that?—I have brought a manuscript paper. I took one week of questions referred by the Military Department to the Finance Department; if you would allow me just to consult that, I could give you some instances. Of course, I will not venture to trouble the Commission with all these examples; I took this week at hazard; I did not select it in any way. Now, take a case of this kind; it comes from the Controller of Military Accounts in the Punjab command.

3313–5. May I ask to whom does that go from the Controller?—It is addressed to the Secretary to the Government of India in the Military Department.

3316. Exactly?—The question is whether all monies received by the officer commanding at Kohat on account of the station funds should be deposited in the Treasury or in the regimental treasure chest. That is a question that would always have been sent to the Finance Department, but which possibly would not have come before the Military Member in previous years; that is, the Secretary would have sent it to the Finance Department, and they would have given their opinion on the subject. There are a great many instances. It always has been the case that important questions should invariably come before the Military Member of Council, but practically now the rule is that all questions that require the concurrence of the Finance Department must go before the Military Member of Council.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

18 Feb. 1896.

3317. And do you yourself attach importance to this assurance that the Military Member of Council knows every reference to the Finance Department, or may it be the case that in some instances the inquiries or the references are of so minute a character that perhaps it causes the Military Member of Council to be unnecessarily cumbered with papers?—Well, that is rather a delicate question for me to answer, because Sir Henry Brackenbury, as Military Member of Council, decided that it was advantageous and beneficial; but personally I should be inclined to think that some greater discretion might be allowed.

3318. (*Mr. Courtney.*) In the case of these applications tending to the expenditure of more money, do you find, as a matter of fact, that their going first to the Military Member of Council strengthens or weakens the case of the demand for more money?—I should say that all demands for money of real importance should go before the Military Member of Council.

3319. Yes, but I am asking you to look at your own experience. A certain number of these demands went at one time to the Finance Department without being seen by the Military Member of Council; now, they are seen by the Military Member of Council; does that strengthen the military side against the financial side, or weaken it?—I think that, on the whole, it strengthens the financial side.

3320. It strengthens the financial side?—Yes, because although it puts an immense amount of work upon the Military Member of Council, at the same time it provides that the whole business is centred in him.

3321. Yes, but is the Finance Member of Council more able or less able to withstand the pressure or to apply criticism?—I think that the Finance Member is more able to apply criticism, provided he has the time at his disposal for dealing with these numerous questions.

3322. Do you think the Military Member of Council supplies criticism on the financial side?—Certainly; but that is also supplied by the whole of the Military Department, because it is their first duty to criticise any proposal from its financial aspect.

3323. (*Chairman.*) Does it not come to this, that the fact of the Military Member of Council himself forwarding these references to the Finance Department gives a greater importance to them than if the reference takes place from a subordinate officer, passing, no doubt, into the hands of a subordinate officer in the Finance Department?—Yes.

3324. Would not that be the extra weight which Sir Henry Brackenbury would probably be seeking when he laid down this more stringent rule about the papers passing through the Military Member?—Very probably. I see I have an example here. In September 1895, the sanction of the Government of India was applied for by the Adjutant General to the entertainment of a sweeper on Rs. 5 per mensem for the period during which a pontoon section of the sappers and miners may be on field service. Well, that proposal was sanctioned; and if I recollect rightly, that under rule, went before the Military Member of Council. In previous years a few years ago, the Secretary, or even the Deputy Secretary, might have said, "This is absolutely necessary; if the concurrence of the Finance Department is required, send it over."

3325. (*Mr. Courtney.*) Now, without going from that, do you think the Finance Department was stronger to withstand the demand for that sweeper, because it had gone to the Military Member?—No, I do not think in that particular instance it was. There was another example. In November 1894, I think it was, the Government of Madras asked for sanction—that was when the Presidential system was in force—to the quarterly supply of four goblets and four tin pots at a

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

18 Feb. 1896.

cost of 8 annas (*i.e.*, Rs. 2 per annum), for the use of the Garrison School, Fort St. George. I may mention that the application was made because it did not come within any regulation, and therefore, under rule, it had to come to the Government of India, and went before the Military Member of Council because it affected future estimates.

3326. (*Chairman.*) Still, a great number of those very small questions, unless they involve some principle, must occupy, I might almost say unduly, the attention of the Military Member of Council, diverting it from more important questions; that would be the *per contra* argument?—Yes, that is the argument, that I, having been a long time Secretary, should be, perhaps, more disposed to support.

3327. Therefore, on the whole, may we come to this conclusion, that, so far as your experience goes, the greater strictness of the regulations now is hardly of a nature to have a very great effect upon the relations of the Financial with the Military Department?—Yes, I think that is the conclusion which might be formed, and perhaps my own predilections are towards that opinion; yet there is no doubt that the Military Member of Council, by means of the various statements which are called for and kept up now in the various divisions or sections of the Military Department, has a greater grasp of the progress of military expenditure, and opportunity of knowing what is likely to come into the estimates of next year than he had before; and therefore I think that these rules which have been introduced, and which are detailed in my memorandum, work towards the satisfactory end of his being better acquainted with the whole subject of military expenditure.

3328. Then the meaning of your calling attention to the fact that the regulations have been made more stringent is to bring out the fact that the information which now comes to the Military Member of Council is more perfect and complete than formerly, and therefore gives him a greater grasp of the situation?—Yes, I think so.

3329. There are two representatives of the War Department in the Viceregal Council, the Military Member of Council and the Commander-in-Chief. Would you describe their relations to each other?—The Commander-in-Chief, as his name implies, has the whole command of the Army and staff, and is the executive officer, it may be said, of the Government of India. He has, with the exception of certain limited powers of sanctioning extraordinary expenditure, no dealings with finance; that is the special province of the Military Member of Council, who also controls the Army Departments, such as the Commissariat, the Transport, the Ordnance, the Army Remounts, Military Works, Medical Store Departments, and so on.

3330. When you say the Commander-in-Chief has no financial power except a limited one, may we not put that aside at once? The power to which you allude is only that that he may authorise expenditure up to a certain number of rupees?—Yes, Rs. 10,000 in a month.

3331. That gives him no real financial power over the expenditure?—No. Any question which he considers ought to be taken up has to be submitted through one of his chief staff officers, the Adjutant-General, or the Quartermaster-General, to the Secretary to the Government, and it is dealt with in the Military Department from its financial and, of course, from other points of view.

3332. Of course, one naturally compares in one's mind the relation of two great officers of this kind with the similar officers, so far as the analogy can be made, in England; would it be fair to say that the functions of these two officers correspond—roughly of course—to those of the Secretary of State and the Commander-in-Chief here?—Well, in a very general way, perhaps, but the Military Member of Council is not— as the Secretary of State for War is here—supreme over the military administration, because the supreme control rests with the Governor-General in Council. The Commander-in-Chief, as I explained, commands the Army, and is the executive officer of the Government. The Military Member of Council is the Member of the Government who is placed in charge of military finance in the Army Departments, and advises the Governor-General, and is responsible for placing the military questions that come from the Commander-in-Chief before the Governor-General in Council in due form.

3333. Putting before the Governor-General what their financial effect would be, I presume?—Yes; and he would also, supposing it were a question connected with the organisation of the Native Army, for example, express his views on that point, and they would be laid before the Governor-General.

3334. (*Sir Ralph Knox.*) Would there be no previous reference to the Finance Department?—In any case which, under rule, had to be referred to the Finance Department, it would certainly go to it.

3335. Before it went to the Governor-General in Council?—Quite so.

3336. (*Chairman.*) In order to understand as fully as possible what the relations between the two are. I would ask you, have you ever read anything about the old system of our War Department here when the Secretary at-War existed?—Yes.

3337. And, if you remember right, the Secretary-at-War was the financial officer of the War Office?—Yes.

3338. He prepared the estimates, and all military finance went through him. If we were to seek for an analogy between the Military Member of Council and some officer here, would you be more nearly correct in taking the analogy of the old Secretary-at-War rather than that of the Secretary of State?—I think so; because, of course, his business is, or should be, chiefly financial; but at the same time I must explain that he also deals with military questions generally.

3339. Under the Military Member comes first a Secretary; has he any financial duties?—No precise financial duties, but he is bound to lay before the Military Member of Council and the Governor-General the business of the Department in a manner in which it can be dealt with properly, and to see that the financial review or opinion of the Controller or of the Accountant-General has been obtained.

3340-1. That is to say, in placing before the Military Member of Council, say, an administrative measure, he would show the Military Member of Council that the Finance Department had been duly consulted?—No; he would lay the case before the Military Member of Council with such financial report as he thought necessary. As a general rule, the Controller of Military Accounts reports financially on a question, and then it may be sent to the Accountant-General in the Military Department for his financial review; or sometimes the Controller's report is full enough to enable us to dispense with the Accountant-General's review.

3342-4. I should like to ask you at this point, what is the relation of the Controller in the different commands to the Accountant-General? Are they, so to speak, subordinates of the Accountant-General? Do their reports, when they come to the Central Government, all pass through the Accountant-General, or have they any right of action independent of the Accountant-General, any communication with the Central Government?—It does not follow that every report by the Controller need go to the Accountant-General. For example, a question may arise and the Secretary may decide "this should have the report of the Controller of Military Accounts," if it does not come through him; but as a general rule, under the regulations, all questions involving expenditure are reported on by the Controller of Military Accounts. Then he forwards the papers to the Secretary to the Government of India, so that it is not absolutely necessary that it should come to the Accountant-General first.

3345. The Accountant-General would always know of such communication, would he not, when the papers had reached the central Military Department?—Not in every case. Of course, if it were a case of importance he would, undoubtedly, be consulted, but it would really overwhelm him with business to send up every question which had been reported on by a Controller to the Accountant-General.

3346. Therefore, it would not be correct to look upon the Accountant-General as the chief over the Military Accounts Department?—He is undoubtedly the chief of the Military Accounts Department, but just as in some cases the lieutenant-generals commanding the Forces in those Commands send up questions when they are of local importance only, and do not affect the army as a whole, direct to the Government of India instead of through the Commander-in-Chief; so when the Controller reports on a matter which may not be of very great importance, he sends the papers direct to the Military Department

of the Government of India, and the Accountant-General need not necessarily be consulted. I may say that in most cases the tendency is to consult him; sometimes he complains and says: "The Controller's report is very full, what more do you want." Then again, he might be asked to advise besides, on the whole question, not to give a technical report such as the Controller would, but to give his financial opinion.

3347. I asked the question particularly, because I notice in your memorandum that the estimates do not appear to reach the Accountant-General direct from the Controllers of Military Accounts, but through various departments—the Ordnance Department and other departments? Am I correct in deducing that from your memorandum?—Yes. The estimates are prepared by the Controllers and sent to the heads of the departments in order that they may see in what way the Controllers have revised the departmental estimates prepared by the subordinate officers, and that the head of the Department may offer any opinion to the Accountant-General on those estimates, whether by way of increase or decrease. Then they come to the Accountant-General.

3348. Through the heads of departments?—Yes. Take for instance the Ordnance estimates; they would go to the Director General of Ordnance in the Military Department of the Government of India, and then, after he had looked through them and given his opinion on any questions at issue, he would forward them to the Accountant-General.

3349. The Accountant-General is the head of the Finance Division; and that division again, I gather, is divided into two branches, the Accounts branch, and the branch over which the Accountant-General presides as Deputy Secretary. Would you distinguish to us the duties of this officer in each of those two branches?—In the Accounts Branch, I should say the Accountant-General was acting as chief of the Milltary Accounts Department, and as the official adviser of the Government of India; when we want a precise report—a financial report—on a military question, we should refer it to the Accountant-General. As Deputy Secretary, he presides over a section which we call Section F. in the Military Department, in which section or division are gathered up the various financial questions, such as pay and allowances, advances, compensation, contracts, pensions, prize, indents and estimates, store accounts, funds, and many other subjects.

3350. What I could not quite understand from your Memorandum is where his functions, as head of Section F., differ from those which belong to him as Accountant-General; I quite understand, in the first place, an Accountant-General who is responsible in chief for all the military accounts of the Empire; but I am not so clear as to the reason why the Accountant-General had also a branch in which he discharges certain administrative duties; that I take to be the distinction between the two?—Yes. Perhaps I might venture to explain it. At one time all these financial subjects were dealt with in the various sections of the Military Department. I proposed the change which followed—that is, to gather up these subjects, instead of their being dealt with all over the Military Department, and place them in one branch of a finance division. The Committee which sat at home in 1880 on the accounts and estimates of the Government of India recommended that the Accountant-General should be a Deputy Secretary to deal with finance and the Military Accounts Department. The Section F. was established on the advice of that Committee, but was very limited in its scope. Then I expanded that; that is, I proposed to the Military Member of Council that, instead of having all these subjects scattered about in the Military Department in the different sections, we should place them in one branch, under the Accountant-General, who had been made Deputy Secretary.

3351. Can you give us an instance of the duty of the Accountant-General as head of Section F.? You were mentioning just now that he deals with pay and allowances; can you give us an instance of the kind of control or check which he exercises over pay and allowances, as Deputy Secretary?—Well, a case might come up from the Commander-in-Chief recommending that a particular man should be permitted to count towards pension certain previous service. This is an instance I have before me here—that of a private in the 4th Infantry of the Hyderabad Contingent. (This particular case came from the Resident at Hyderabad.) Before this system was initiated that would have gone to the Assistant Secretary who dealt with the particular subject, and he would have submitted it to the Secretary, who, perhaps, might have asked for the report of the Accountant-General. But in this case it comes direct to Section F., and is dealt with by the Deputy Secretary, who would then perhaps say, "this is a proper proposal," and would suggest that it should be referred—as in this case it was necessary that it should be referred—to the Finance Department.

3352. Under the Accountant-General and his two assistants come the Military Accountants. Are they the military officers of whom you speak as military officers seconded?—Might I ask whether you mean the Deputy Accountant-General and the Assistant Accountant-General in the Accountant-General's office, or the Military Accountants who are in the Military Accounts Department in the four Commands?

3353. If you look at page 2 of your Memorandum, you will see that first of all comes the Accountant-General, then the Deputy Accountant-General, the Assistant Accountant-General, the Controllers of Military Accounts, the Military Accountants, and the Assistant Military Accountants, making up a total of 33. I was under the impression that those were the central Accounts Branch, under the Accountant-General?—No. The only officers he has in his central office are the Deputy Accountant-General and the Assistant Accountant-General. If you will notice, there is a bracket "with the Military Department of the Government of India."

3354. Yes?—Then follow these administrative officers, as it were; the Controllers of Military Accounts, of whom there is one for each Command with the staff mentioned below.

3355. I beg your pardon; I see now your arrangement. First, the Accountant-General, and down below, the Military Accounts Department, divided into four branches, corresponding with the four Commands?—Perhaps I might explain that, as a technical matter, we do not speak of the Accountant-General's office as the Military Accounts Department, although the officers do belong to the department; he and his officers form the Central Military Financial Office.

3356. Then these Military Accountants, of whom I have been speaking, are scattered throughout the commands?—Yes, this is the way in which they are graded: Military Accountants, first class, second class, third class, and so on; Assistant Military Accountants, first class, second class, and third class. They hold specific appointments as examiners, paymasters, and so on, so that they really form the body of the Military Accounts Department under the four Controllers.

3357. I think we have heard, in previous evidence, that the Military Accountant-General has a considerable staff of men under him?—Yes, he has a certain number of clerks; he has a chief accountant, who comes, at the present moment, from the ranks of the Military Accounts Department, and various officers, who belong to what we should call the Subordinate Accounts Service.

3358. Therefore, the greater part of his staff are not military officers seconded?—No, he only has two. I could give you the numbers of his office, if you wish.

3359. I think we have had it before; I do not want to put questions unnecessarily; Sir Oliver Newmarch gave us all those details?—Yes.

3360. Now, is there a division in the office of the Military Accountant-General between the executive duties of account and the audit duties, or are the same clerks and officers employed indiscriminately upon both?—The Accountant-General in the Military Department is not an auditor in the ordinary sense of the word; that is to say, he does not check accounts according to vouchers and rules.

3361. No accounts come to him in that form?—Not in that form, only what may be called the consolidated or compiled accounts, and very numerous returns and statements.

3362. He receives the accounts in a complete shape from subordinates in the Commands, and he compiles them into convenient statements for record, and for his superior officers?—Yes.

3363. But he does not go into the detail of audit; that is all done locally in the Commands?—Quite so.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

18 Feb. 1896.

3364. (*Sir Ralph Knox.*) But all the important discrepancies would come to him for decision, would they not?—Well, the object has always been to make the Controller of Military Accounts the chief financial authority in each Command, or as it used to be, in the Presidency, and, therefore, he is the man who would deal with these discrepancies, unless, of course, there was something extraordinary which needed the orders of Government.

3365–6. That is what I mean; important questions that were raised, questions of principle, questions of excess, questions which are not covered by regulations, they would come up for decision to the central authority, would they not?—Questions of any importance would undoubtedly come up.

3367. And they would come through his branch for consideration?—Yes.

3368–9. (*Chairman.*) Are there any other points connected with the central department of the Accountant-General to which you would call our attention?—I think he is very much overworked, and rather undermanned. I think that it would be a very great improvement if some of what I may call the deputy secretary's work could be taken off him by another officer acting under his orders. And I may mention also that I think the position of the Accountant-General is hardly sufficiently great in these days, especially in the matter of pay. He receives exactly the same pay as the head of the Commissariat or Ordnance. I think he should be rather a greater personage.

3370. So as to recognise him more distinctly, possibly, as the second officer under the Military Member of Council, the Secretary being the first?—I think that his position is very clearly defined; but I was speaking rather of the excess of work—the tendency nowadays—which, perhaps, is due to what was carried out on the recommendation of the Committee of 1880 at home, that he should be made the Deputy Secretary.

3371. I think we are not quite on the same point. You called our attention, first of all, to the overwork; and then I understood you to say that in the matter of pay, which we all know is a great mark of difference of rank, you did not think his position was quite sufficiently marked, and I asked you whether you meant by that that his position as second officer in the department of the Military Member of Council should be made clear; is that what you meant?—I think the position should be enhanced.

3372. Would your criticism that he has too much work thrown upon him tend rather in the direction that you would wish to see his office less centralised and fewer references from the commands, or more assistance given to him within his own branch?—I think I might answer in the affirmative to both those questions; that is, I should like to see fewer references, if possible, but I am afraid that is very difficult to achieve, and I should like to see greater assistance given him. The tendency of the present day is to refer questions too much.

3373. We come next to the account officers in the four commands under the several Controllers of Military Accounts. I gather that the Accounts Office is divided into (1) the central branch; (2) the accounts branch; (3) the pay branch; (4) the commissariat branch; (5) the ordnance and clothing branch; (6) special branches, besides a certain number of military accountants detailed for inspection and special services. I am reading from paragraph 8 in your memorandum?—Yes.

3374. To what extent now in those different branches are military officers employed?—As a rule, the heads of those branches are military officers, but of late years we have taken some men from the subordinate accounts service, and have promoted them from the position of Deputy Examiner to be Examiner. I think the Examiner in Calcutta was so promoted; he is the Examiner of clothing accounts.

3375. (*Sir Ralph Knox.*) Is he not a military officer?—No.

3376. (*Chairman.*) Now, looking through the description that you have given of these establishments, I see a certain number of officers in the central branch of the Controllers of Military Accounts; they are military officers, I take it?—In the Central Branch I do not think that any of the officers come from the Army except the Controllers,

3377. Are the Examiners and Assistant Examiners military officers?—Well, take the Pay branch. The Military Accountant or Examiner is a military officer, and the deputy examiners and the assistant examiners and accountants are all civil; they belong to what is called the Subordinate Accounts Service.

3378. Therefore, the only military officers are the one or two Examiners who form the first line in each of these departments?—It may be said generally that the chief officers in these various branches are military officers, who, I might explain, are taken from regiments, are appointed under examinations, are on probation for one year, and are seconded for five years, and are then removed from the list of their regiments, and entered in the Military Accounts Department permanently. Taking a man for five years at first, only reserves the power of sending him back to the regiment; either he may not be fitted for the Accounts Department or he may not wish to remain.

3379. When they have once entered into this civilian life, do they persevere in it, or do they frequently go back to their regiment?—No; I think, as a rule, they persevere in it.

3380. Therefore they become permanent officers in the Military Department?—Permanent officers in the Military Accounts Department.

3381. I gather from the extract of your evidence before the Committee of 1885–86 that you distinctly approve of the arrangement under which military officers are seconded from their regimental duties for this account work. Account duties are technical in their nature; and the question naturally arises whether the active military service does not lose more than the Account branch gains by the seconding of military officers for the purpose, and whether inconvenience does not arise from constant change under the five years' rule of the officers employed on account work?—I may explain that that was a paper which forms an appendix to the memorandum. It was a paper I wrote for that Committee—the Finance Committee—but I was never examined before it; in fact, I was about to be made a member of the Committee when I was appointed Secretary to the Government of India.

3382. But the gist of it is, I think, that you very strongly approve of the system under which military officers are detailed for this work?—Yes, I do.

3383. You do not think there is any inconvenience—that the military service loses more than the civilian service gains by losing the services of these military officers?—No; their places are filled up.

3384. (*Sir Ralph Knox.*) About what age do they join in the first instance?—I think they must have had five years' service.

3385. They usually join this Department after five years' service?—Yes, I think that is it. I have forgotten the exact age.

3386. (*Chairman.*) Rather an obvious criticism suggests itself to one; do you think that the man who goes into the Army—he generally is a man of rather an adventurous turn of mind—is likely to take very kindly to the somewhat dull work of accountant?—Well, I think there are some in the Army who are very well fitted for the work; a great many are not certainly, but we hope to get those who are fitted. I heard, for example, of a man in the Army who became a great actuary—he was a man of considerable mathematical powers, and became an actuary. I think it depends upon the individual; we try and get the best men.

3387. (*Sir Ralph Knox.*) Having tried five years of military life, he has tired of it, and becomes a civilian; is that it?—Well, we should not say so, because all the military administration in India is conducted by military officers; with very few exceptions, all the appointments in the military administration are held by military men.

3388. Men who entered the Army as a means of getting into this department?—I do not think so; I think as a rule a young officer does not know quite what will suit him, and for various reasons he may desire to enter what is really a fairly well paid department.

3389. (*Chairman.*) Financially, is an officer who becomes a military accountant better off than if he had remained with the colours?—Certainly.

3390. Would you describe the principles upon which the central audit and the account of the financial

transactions of the Military Department are conducted? I am now taking you to paragraph 16 of your Memorandum?—I think that the great principles which are followed are that all claims, of whatever kind, which are received, are checked in a very minute way, and that the audit, which is conducted by the Examiners in the different Commands, is performed with what I should call severity. I know that the present Finance Member, Sir James Westland, some years ago thought we were almost too minute in the audit of the various accounts which come before these Examiners. Then another point is that as the audit proceeds these accounts are compiled, and they form what are called technically the compilations of accounts which are dealt with in the various branches of the Controller's office, and which, finally, after passing through various stages, reach the Comptroller and Auditor-General.

3391-2. You divide the principles on which the control over and audit of the financial transactions of the Government are conducted into 1, the strict preliminary scrutiny of the demands; 2, a careful examination of all demands prior to supply. Those are rather administrative duties, I think, are they not? they are examination before the money or supplies are issued?—Yes; using the term "administrative" in that sense.

3393. And you then name three other principles; 3, a stringent control over the due application of money and stores to the service for which they may be sanctioned; 4, a prompt check and audit of the accounts of such expenditure when rendered, and, 5, an appropriation audit explanation. These three would come under the heading of "audit," that is to say, they follow the expenditure?—Yes, quite so. I might supplement my answer by saying that the estimate naturally is the basis of everything. The Examiner has no discretion; he applies the audit rules to every question that comes before him, and as the charges are audited they go into the accounts. And I might mention, while on this portion of the subject, that the rules in the Military Account Code, which I have here, are very detailed, and, of course, rather lengthy.

3394. I was going to ask you whether the regulations, which appear to be numerous, and, to an outside observer, somewhat complicated, are fairly simple, and well understood by both accountant and auditor?—I should say that as a whole the Military Account Code is fairly simple, but then I must qualify that reply by saying that there are hardly any regulations in any department, or in any country, which could not be made more simple.

3395. The object of my question is this—if these rules are very complicated and minute, that almost implies a widish discretion on the part of the auditor; the more rules there are, the more interpretations can be placed upon them. Are they so far intelligible that they do not give rise to much friction between the accountant and the auditor?—A great deal of correspondence very often takes place, that is, certain objections are raised—I think they are called "queries" at the War Office—to charges, and there is a list of objections of which, usually, all officers are in possession—it is in this book—so some friction must occur. An officer thinks he ought to get something, and the auditor thinks he ought not to get it, and then there is a good deal of correspondence on the subject. The Army complain generally, I may say, of the strictness of the audit of the Military Accounts Department.

3396-7. No auditor need mind such an objection as that, provided always that questions asked by the auditor are fair and reasonable questions. The grievance really arises if subordinate officers are, we will say, rather Jacks-in-office, and apply their own discretionary interpretations to rules; do you find that there is any objection on that score?—I have no doubt that in some cases objections are raised when they need not have been raised; in some cases, not in many cases.

3398. Taking those five principles which I have just been through with you, upon which the control and audit in the Military Department is conducted, may I ask is there a distinct separation of functions between the officers engaged on these duties of scrutiny before payment, and the officers engaged in the checking of expenditure after payment; that is to say, are a certain part of the staff in each of these branches employed upon what I have just now described as the administrative duties of account, and another distinct set of officers employed upon the audit?—No. Taking an Examiner of clothing, for instance, he checks all the clothing charges that come forward, and he audits them. I hardly know how to describe him as an administrative officer.

3399. I think it is a more simple manner of putting it that the two functions are distinct, namely, that of examination before payment or issue, and that of check after payment. I think the first is fairly described as an administrative duty?—Yes.

3400. The other is a check upon the administrative officer: and the point at which I am aiming is this—that there seems to be a certain confusion of functions; the auditor audits himself, if he is the officer who examined the claim before payment, and afterwards examined the voucher on which he allowed that claim?—But, as a rule, no claims are paid until they are audited. I mean—for instance, take the Clothing Department—they may be paid out of the assignment which the Superintendent of Army Clothing has; he, of course, is concerned in his accounts, and has to render certain accounts; then the Examiner steps in and says, "Why did you pay this; what authority "have you for paying this?"

3401. Yes, but if the functions of the two classes of officers are intermingled, is it not open to the criticism that the same officers are at once employed in the administrative duty of passing a claim, and then of checking themselves in admitting the claim to audit?—Well, I should not say that it was the same officer; I should say that whether it is the chief Commissariat officer of a district, or the Superintendent of army clothing, or an ordnance officer, or a paymaster, those are the persons really who make the payments, and the Examiner is the person who checks them; he audits their accounts.

3402-3. Then I think we have not quite understood each other. If you will allow me to put the question again to you. You remember the question of principles of control and audit which you have laid down in paragraph 16; I called your attention to the two first of these definitions as relating to examination preliminary to payment: namely, first, strict preliminary scrutiny, and review of demands entered in the estimates. Second, a careful examination into all demands for money or stores prior to supply?—Yes.

3404. And I asked you whether those were not administrative duties; that is to say, approval of demands before payment. And after that we came to a stringent control over the due application of money, a prompt check and audit, and an appropriation audit explanation. I asked you whether we should not be correct in calling those duties of audit after payment, and I think so far you assented?—Yes.

3405. Then I asked afterwards whether the officers in the different branches who were employed upon the first two duties, and upon the last three were separate and distinct officers, or whether the same men might be employed upon both of them, and I gathered from you that that distinction did not exist?—No.

3406. And that led to my asking, in that case is it not open to the criticism that the same man can sanction and pass his own account?—Yes, I understand.

3407. But you do not think that is the case in practice?—No, I do not think so in practice.

3408. Then does it not want a little explanation?—I may not have put this perhaps as clearly as I ought to have put it.

3409. (*Sir Ralph Knox.*) Does the Commissariat officer, for instance, hold funds and make payments himself?—Yes, he holds certain funds. But, for instance, the chief Commissariat officer of a district has not a large amount of funds in cash; he pays on the Treasury by cheque.

3410. But he has a balance there which he can draw upon?—He has a certain assignment made by the Controller—a letter of credit—and, for instance, the chief Commissariat office of the Peshawur district would have so many rupees a month placed at his disposal by the Controller, whose centre is at Rawul Pindi, and he would draw on that just as a man draws on his balance at his bankers.

3411. The claim would be presented to him on account of Commissariat services, and that would be examined by him or by his officers?—Yes.

3412. And upon being found correct he would draw a cheque upon that balance in payment of it?—Yes, he would.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

18 Feb. 1896.

3413. Then would his account be locally examined by the Examiners of the Military Account Department?—No, not locally; but the chief Commissariat officer in a district (the system has not yet been applied to Madras, I believe), would have one of his officers detailed to supervise these commissariat accounts and a certain number of accountants to assist him. Then the accounts are worked up in a way—you might call it possibly the first audit—after that they pass to the Examiner of Commissariat Accounts stationed at Rawul Pindi (I am speaking now of the accounts of the chief commissariat officer at Peshawur), who would audit them and see that they were correct.

3414. But he would not be under the Commissariat Department, he would be in the Military Accounts Department?—Yes, quite separate.

3415. (*Chairman.*) There is provision taken that the same men, or that the men in the same office, sitting side by side, do not at once sanction the claim and then pass the account?—There is certainly such provision taken. I might further explain again that the chief Commissariat officer of a military district has under him an account officer belonging to the Commissariat, that is, one of the Commissariat officers who is detailed for that work. He may have other work to do, but still the commissariat accounts of that district are concentrated and supervised by him. The chief Commissariat officer passes the claim as it were, it is paid—a contractor's bill, for instance—and then those accounts go to the Examiner of Commissariat Accounts at the centre. The chief Commissariat officer is in one department, the Examiner of Commissariat Accounts is in the Military Accounts Department.

3416. They are not sitting side by side?—No, not at all.

3417. (*Sir Ralph Knox.*) The Examiner would be serving under one of the Military Accounts officers?—He would be serving under the Controller of Military Accounts of that command.

3418. What class of men are these Examiners; you said they were not military men?—They are military men, but I said in one or two cases we have brought in civilians from the Subordinate Accounts Service; but, generally speaking, you may say the Examiners, the chief auditors, in the Military Accounts Department, are military men who have been trained up in the Military Accounts Department.

3419. (*Chairman.*) On that point there is a possible criticism, namely, that you want the auditor to be as independent as possible?—Yes.

3420. Is there not a risk that the *esprit de corps* which exists in the military service would tend to weaken the independence of that check, that is to say that a man belonging to the military service might have a certain unwillingness to show up an irregularity in the military service? I am not speaking now of money; there are many irregularities one must bear in mind which are not misappropriation of money?—I must point out that I have never been an executive officer in the Military Accounts Department. I have only acted for a year as Military Accountant General; but according to my experience the Examiners have no feeling of that kind. I think they are extremely independent in their judgment.

3421. Then, therefore, may I take it that you are satisfied with the manner in which the duties of account are performed, namely, that the scrutinising before payment is efficient, that the progress of expenditure is efficiently watched, and that the audit is efficiently and intelligently applied?—Yes I am certainly.

3422. On the point of audit we have gathered, I think, that the examining officers have a power of allowing payments which they have queried on receiving what they consider satisfactory explanation. Are you satisfied that under this system there is satisfactory safeguard that serious irregularities, of whatever kind, come to the knowledge of the heads of the Department; in other words, have the Controllers means of knowing how the Examiners discharge their duty, whether they are keen and strict in detecting irregularity, and that there is no laxity of practice in passing irregularity?—I should say that an efficient Controller must necessarily know how the Examiners are working. He can apply a test audit to any branch of his office, and he does so; and he is able to call for papers and to see exactly whether certain work has been disposed of properly and so forth.

3423. Then he does apply this test to his officers as a matter of course, and frequently, does he?—Yes, that is laid down as a part of his duty. It is laid down in these regulations, and, so far as my knowledge goes, the regulations are very closely acted up to.

3424. You mentioned, I think, that a certain number of Examiners are maintained, who are available for detachment on inspection service?—Yes, but of course my remark applied chiefly to the inspection of accounts outside the Military Account Department. My answer just given referred to the test audit that the Controller might make of the branches in his own department.

3425. In what manner would he apply that test; and who are the officers he would send to test the accounts?—That is a question that I can hardly answer: but he might himself apply it and call for the accounts.

3426. Or he would detach an officer?—Or detach some trusted officer.

3427. And does he often apply such a test to the accounts?—No, I cannot say that there are any particular dates laid down; but I should say that he frequently looked into them.

3428. The only independent method by which he can learn how his Examiners perform their duty is by this test audit?—Yes.

3429. And therefore it is by his frequent use of that test that he can learn how the Examiners do their duties?—Yes; I may mention also that he would know if the accounts were being compiled properly and the expenditure under certain heads were being audited, that there were no arrears and no delay; then he would also have further information, supposing there were many appeals against the Examiner, supposing the Examiner was wanting in discretion or wanting in judgment.

3430. But then he would have no check except by this test of the other side of the question, namely, whether the Examiner was too easy in passing irregularities, because there would be no appeal in those cases. There would be an appeal in the cases where the Examiner was too strict; but there would be no appeal in the cases where the Examiner had been too lax?—No, perhaps not, but I may say from my experience I have never known of an Examiner being too lax.

3431. You say that the Government of India look to the Military Accounts Department as well as to the heads of executive and administrative departments to suggest economies and scrutinise all sources of expenditure, and that when advisable the Controller will address the Government of India through the Accountant General in regard to such matters. Are you satisfied with the manner in which this duty is performed?—I have sometimes thought that the Controllers might do more in looking into military expenditure: but, on the other hand, I know a great many instances in which they have suggested economies; still I regard it as one of the most important parts of their work.

3432. And within your experience, are such suggestions frequently made?—I should hardly say frequently, but they are made at intervals. Very often we call upon the Controllers to look into their grants and see what economies can possibly be effected.

3433. But, on the whole, the duty is so important that it might, in your opinion, receive almost more attention than it does?—I think I might answer that in the affirmative. We have called attention to it once or twice.

3434. You mention as one of the duties of the Military Department the rendering of an Appropriation Audit explanation. Is such an explanation rendered as a matter of course by the Controller in each command to the Accountant-General, and also by the Accountant-General on the accounts of the military expenditure as a whole?—Yes.

3435. Each Controller sends in his Appropriation Account?—Each Controller sends in his Appropriation Report, which is consolidated by the Accountant-General in the Military Department.

3436. Does the Accountant-General add any remarks of his own?—I have brought a copy home, thinking the Commission might like to see it. He does not enter

into any long explanation, of course; he consolidates the reports.

3437–8. Perhaps you can give us a slight description of what the Appropriation Report consists of? I may mention that the general Appropriation Report of the Government of India is, perhaps, liable to the criticism that it is rather a financial review than an auditor's report, in the sense in which we understand an auditor's report here. And I would ask you whether that appropriation explanation rendered by a Controller in one of the Commands notes irregularities which have occurred? I will explain what I mean. There are irregularities of very different kinds, of course. There is the personal misuse of public money, but there are various irregularities besides, due to carelessness, mistakes, misapprehension of regulations, &c., which, though not such as to demand the recovery of the money from the accountant, would, if frequently occurring, indicate a laxity of practice, of which it is very desirable that the heads of departments should know. Are you satisfied that the attention of the Controller, and in the last resort of the Accountant-General, would be called to such irregularities, and would they be noted in the appropriation explanation?—No, I do not think they would be. Really, the appropriation report is more an explanation of the way in which the money, which has been granted under the various heads, is expended, and the reasons for differences. Any irregularities that might have occurred, as a rule very unimportant in character, would not be entered in the appropriation audit statement.

3439. A cursory look through the specimen of them that you are kind enough to hand in gives one the idea that it answers rather to the description I gave just now of the Comptroller and Auditor-General's report on the accounts of India?—Yes, I think so.

3440. It is rather a review of the finance than an audit report proper?—Yes.

3441. With us the Comptroller and Auditor-General practically reports to the House of Commons every such irregularity as those which I have just been describing, and I have no hesitation in saying that the knowledge of such publicity is a powerful factor in the interests of financial order. I should like to learn if you are satisfied that in India sufficient publicity is given to irregularities such as I have described?—Any irregularity which has occurred would come before the Government of India if it were of sufficient importance. Now, perhaps I might illustrate my meaning in this way; it was with reference to the Chitral Expedition. A Controller passed a charge for what is called "field batta" to certain troops in a reserve brigade. Well, this matter came up to the Government of India, and it was decided that he ought not to have passed it, and certainly not without reference to the Government, but I do not suppose it was mentioned or would be mentioned in an appropriation audit report. He misinterpreted certain regulations, and we were of opinion that his interpretation was wrong, although I may say that opinion was divided upon the subject. However, in that case a letter was sent to him pointing out what we considered to be his error, and there the matter ended; he would not be pilloried, as it were, in the Appropriation Report.

3442. (*Mr. Buchanan.*) Where would the record of what passed be kept?—It would be in the proceedings of the Government of India, Military Department. It would be a printed letter, and, supposing, for instance, it had been a very bad case indeed, then if there was any question of promotion or his selection for a higher appointment, it would be one of those things which would be considered.

3443. (*Chairman.*) Supposing an irregularity occurs, only due to a misinterpretation of regulations, if it is at all important in its nature, ought it not to find a place in a report such as this?—I do not see any objection to any irregularities being entered in a report of that kind.

3444. I think the criticism from people conversant with our system here would be, that it was extremely desirable that such irregularities should be noted, because it is only through such notes that the ultimate authority can really judge whether the financial regulations have been efficiently carried out?

3445. (*Sir Ralph Knox.*) I did not quite catch how it was the question was raised; was it raised in the central department, the fact that this irregular payment had been made?—No. I think it came up through the Commander-in-Chief with reference to some regiment which was supposed to form part of the reserve brigade or which he thought should form part of the reserve brigade.

3446. It was not detected by means of any examination of the accounts?—But it would have been by the Accountant-General.

3447. By what kind of examination?—Not by an examination, but by a report which would have been made by the Controller of his action in the matter.

3448. He would necessarily have reported?—Yes, he would have reported.

3449. Did that report come in?—That I cannot say.

3450–1. (*Chairman.*) You would not perhaps lay so much stress as I should on the collection and publication of irregularities which have taken place: but may I put it to you that you would have no objection to its being done; may I add that you think there would be a certain advantage in it?—I think there would be an advantage in it, but, at the same time, I must say that the irregularities that do occur are very few indeed. Of course there may be, as happened in the expenditure in Burma, frauds in a department. That, of course, is specially reported and specially dealt with—I mean frauds by subordinates.

3452. Would frauds by subordinates be mentioned in the Appropriation Report?—No, but I think they would be very clearly set forth in what are called the financial reviews of the departments; every department, such as the Commissariat, Ordnance, and so forth, has a financial review of its transactions, which is prepared by the responsible officer in the Military Accounts Department, and he would, of course, notice the matter at once, and enter cases of irregularity in that financial review.

3453–4. But the Auditor's report is, I think, the proper place for the report of irregularities, whether by fraud or by misinterpretation?—Yes, I think it would be advantageous.

3455. (*Sir William Wedderburn.*) But would not any irregularity of the smallest importance have already been brought to the notice of the highest authorities at the time?—Well, not perhaps those of the smallest importance, but certainly those of any serious importance.

3456. (*Mr. Buchanan.*) But there is no official document at the present moment in which the irregularities, of whatever character, have a place or are collected together?—No; they are entered, as I have explained, in these financial reviews of each department, which are laid before the Government. It is my duty, for example, to examine these financial reviews.

3457. But there is no general report upon them?—There is no general report upon them.

3458. (*Chairman.*) Would you give us some description of the duties of the military accountants whom you described as detailed for inspection?—These are officers who are held, as it were, for any special work or for inspection purposes, and if arrears have occurred in, say a Commissariat office in some command or in a regiment, if after repeated rebukes by the Controller the accounts are not properly brought forward and difficulties occur, and he suspects that things are not going as they should, he would send one of these officers personally to examine these accounts, with certain instructions.

3459. Well now, do you not think that the fact of such inspection and the general result of it should also find place in this report?—Yes, I think that would be a very good vehicle for conveying the reports.

3460. I suppose I may take the ultimate authority on military accounts to be the Accountant-General at headquarters. Has he any independent means of testing the accounts of expenditure in the four Commands?—The Controllers of military accounts are responsible; but the Accountant-General corrects, as it were, the military expenditure by the cash issues from the treasuries, which he receives every month from the Comptroller and Auditor-General.

3461. But I rather meant, has he, being the ultimate authority, any means of testing, if, for instance, he thought that the Controller of Military Accounts in one of the commands was in any way lax?—Then he goes himself; as a rule he makes a short tour, and

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

18 Feb. 1896.

he visits those places and goes through the accounts and offices and looks into them, and very often corrects some procedure.

3462. And would he ever detach men himself to examine into any station in one of the four commands with the view of satisfying himself that the general practice within that command was satisfactory?—No, I have never known of such a case.

3463. In paragraph 21 of your memorandum you say that the Comptroller-General has to see that the accounts rendered by the Military Controllers work up to accounts received by him in other departments. Therefore, the Comptroller and Auditor-General, being an officer of the Finance Department may send his directions to the Controllers of Military Accounts, who are subordinate officers of the Accountant-General, independently of the Accountant-General?—Yes, on all matters of what may be called technically matters of account.

3464. Therefore, the Comptroller and Auditor-General might be reproving and severely criticising one of the Accountant-General's subordinate officers, without the Accountant-General knowing anything about it?—I think the Accountant-General would know in cases of that kind, as he would always get a copy of any remarks which the Comptroller-General might think fit to make, in which he animadverted on the action of the military Controllers, and of course the Accountant-General receives the report which the Comptroller-General's deputies make on these various officers.

3465. I take it that your answer is that practically the Civil Comptroller-General, when he is criticising the subordinate officers of the military Accountant-General, would inform the military Accountant-General that he was doing so?—I think he would send him a copy of his letter.

3466. But there is no absolute direction to that effect?—No, I do not remember that there is one.

3467. Then the Comptroller and Auditor-General prescribes the manner in which the accounts of the Controllers are to be kept and sees that the accounts are punctually rendered?—Yes.

3468. Do the Controllers render their accounts direct to the Comptroller and Auditor-General, or through the Military Accountant-General?—Direct to the Comptroller and Auditor-General.

3469. Is it not rather an anomaly that military accounts should be rendered to the Audit Office, that is, to the Comptroller and Auditor-General, by anyone else than the Military Accountant-General? Ought not he to know what his subordinate officers are reporting to the Audit Office?—I think he does, through the returns and the accounts which he receives from the Controllers.

3470. You say that the Controllers have charge of the annual estimates of cash requirements, and grant letters of credit on the Civil Treasuries for such cash as may be required for military services. Do the Civil Treasury officers only pay on cheques or letters of credit from the Controllers, or are other military officers empowered to draw on them directly, and if so, under what restrictions?—No other officers are empowered; but at the same time, if services of emergency arise, the officer commanding a station can issue a station order directing that a certain sum should be issued from the Treasury. That happens very rarely indeed.

3471. That is an emergency power?—An emergency power.

3472. Then the check by the Controller or Military Account Officers, you say, is applied to stores and materials as well as to cash transactions. Would you explain to us how this check is applied to stores and materials?—It is applied by means of the returns and books and documents that are forwarded by the factory or the Department which either manufactures or has charge of the stores—their ledgers and journals, work returns, and so on.

3473–4. It is a check merely upon the balance of stores shown on the accounts; it is not a check on the stores themselves?—Well, it would be a check on the manufacture of stores, for instance, that is to say, it would be a check on the amount of labour and material. I may mention, as you have mentioned this part of the subject, that the question has been quite lately discussed as to whether it is advisable that the accounts of the military factories should be forwarded to the Examiners as they are now, or whether we should have a staff of accountants on the spot, which, I believe, is the practice at Woolwich.

3475. (*Sir Ralph Knox.*) You mean at the factories?—Yes, at the manufacturing department; but there is a good deal of difference of opinion; there has been a very lengthy investigation into this branch of the subject.

3476. (*Chairman.*) Yes, but still the result of the thing is this, that the check of the examining officer is a check of the book record of stores, not an attempt to examine the balances of stores in existence?—No, the officers who are in charge of an arsenal, for instance, take stock, and of course they have to report. Sometimes they have to report deficiencies; things may have been wrongly classified, lost, or destroyed, It is very rarely that there is any great discrepancy in the store.

3477. (*Sir Ralph Knox.*) Is there any independent stock-taking outside that of the officials in charge of the arsenal?—The Inspector General of Ordnance of a particular Command goes round on his tour, and he goes into the arsenal, say at Allahabad, and makes what may be called a test audit, I suppose, of the stores; he inspects the stores and books. He is the administrative officer over the whole Command.

3478. But there is nothing, independent of that, on the part of the Military Accounts Department?—They check by books and returns, and so on, and an officer of the Department is deputed every year to the factories and arsenals, and takes stock of the branches he selects for his investigation. He also inspects all the books and accounts.

3479. You say there are not many discrepancies found?—No, I do not think so, as far as my knowledge goes.

3480. But they would not necessarily come before you?—Well, perhaps not always officially, but I know a good deal about the Department, and, having served in it, I take a good deal of interest in it, and I should know of any case; any case of importance would be reported officially.

3481. But, as regards the custody and charge of stores, discrepancies almost of necessity must arise in regard to them?—Yes.

3482. Which would not arise in regard to cash accounts?—Yes.

3483. That is to say, stores cannot be kept with the same accuracy as cash?—No.

3484. (*Chairman.*) Would you tell us the method in which the Examiners conduct their audit, to what extent they possess a discretionary power, and in what instances their demands for explanation are addressed to the accounting officers themselves, or to the Controllers for transmission to the Accountant-General?—I think that I answered that question to a certain extent in my previous replies. The method under which they conduct their audit is detailed in the several chapters of the Military Account Code, and of course it varies very much; the rules, at all events, vary with the particular class of accounts that are audited.

3485–6. I wanted to know whether the Examiner was understood to exercise a discretion. For instance, the accountant might not have complied with a regulation; the Examiner might be convinced that he had not complied with the regulation, but has he a discretion to say, "This is a very small matter, I shall not press it," or would he be bound in such a case as that to report it to his superior officers?—I think I may say that he would have no discretion, that he would be bound to report, if what was sent in did not comply with the regulation under that head.

3487. In some instances, you say the demands for explanation are not addressed to the accounting officers themselves but to the Controllers, for transmission to the accounting officer. Do I not gather that to be the case?—I think it is so. For instance, in the case of the chief staff officers of Command, say, I suppose the Controller would address them and not the Examiner; but, as a rule, the Examiner sends forward the objections to specific claims.

3488. The exception would be in the case of higher officers, to whom it would be right that the application should be made by a person of a certain rank and standing?—Yes.

3489. Then, if an appeal is lodged against the action of an Examiner, and the Controller decides in favour of the appellant without convincing the examiner, the question is referred to the decision of the Government of India in the Military Department?—Yes.

3490. That is a very large power to rest in the hands of a subordinate officer, is it not?—I think it really is a means of keeping intact the independence of the Examiner. I have always striven that those who may be termed the chief auditors should have this independence, although they work under the Controller and are part of the account administration.

3491. Such a power as that works very much in the direction of informing superior officers of irregularities?—Yes.

3492. I see that an ordnance officer can spend sums not exceeding 50 rupees in the supply, renewal, or repair of furniture. May I ask does this represent 50 rupees in each case?—He could only pay such sums within a certain limit provided in his estimate.

3493. I wished to take that as an example of a case in which an Examiner might exercise a discretion. Would an Examiner call attention to the demands of an ordnance officer if he was constantly repeating these small charges?—I should think so, certainly.

3494. From your memorandum it appears that the Director General of Ordnance has considerable power of transferring a saving on one head of his estimate to another, provided it is for the same class of work. Is that a power generally possessed within the department?—No.

3495. Within other departments?—No.

3496. Is there any general power of transfer of savings under one head of service in the Army Estimates to meet deficiencies or demands on others, and is the assent of the Finance Minister required in any cases for transfer?—The Military Department has the power of transferring savings under the same grant from one Command to another; for instance, from the Punjab to the Bengal Command, but it has no power of transferring savings from one grant to another.

3497-8. For instance, supposing there to be a large saving in pay and allowances, could that be transferred by the Military Department, with the assent of the Finance Department, to meet a deficiency upon the Works branch of the service?—No; but the Works branch is entirely separate. It comes under a separate head of the General and Imperial Estimate.

3499. But could the saving be transferred to any other branch with the assent of the Finance Department?—No, the procedure then would be that we should apply for a readjustment at the end of the year.

3500-1. In paragraph 21 you say:—"The Comptroller "and Auditor General has full power, in person, or by "deputy, to inspect the offices and accounts of the "Controller and to make test audits." I gather from you that he does not very often exercise that power, does he?—I referred in my previous answer to the Controllers themselves in their offices; so far as I am aware, the Comptroller and Auditor General sends a deputy, say a deputy Auditor General, to inspect some of the offices every year. I have some of the audit reports.

3502. Could you hand one in?—Here, for instance, are two; one happens to be rather favourable, and one rather unfavourable. I have brought them both (*Reports put in*). I did not select them.

3503. Well now, would the Comptroller and Auditor General have a like power of examining the accounts of the Military Accountant General?—Well, the Military Accountant General hardly possesses any proper accounts in that sense.

3504. His is rather a compilation of accounts?—Yes; he does not keep accounts in that way.

3505. (*Sir Ralph Knox.*) May I ask one question in connexion with stores, as regards discrepancies which are found, and losses upon stores, and so on; are they dealt with by the Stores Department or the Ordnance Department, or are they referred for financial consideration?—It depends entirely upon the amount. There are certain rules which are laid down. There are four commands, the Punjab, Bengal, Bombay, and Madras. In each of those commands the Ordnance Department has an Inspector General, and he has certain administrative powers. Among them is the power of dealing with losses; he has power to write off such losses as ordinary losses or ordinary wastage, where no blame attaches to anyone, up to 100 rupees, extraordinary losses up to 500 rupees. Anything beyond that comes up to the Director General and to the Government of India in the Military Department.

3506. Then it is referred to the Finance Department of the Government of India?—No, it would come up to the Military Department, not necessarily to the Finance Department.

3507. But to the Finance Branch of the Military Department?—It would come through the Controller of Accounts to the Military Department of the Government of India.

3508. It would come through the Accountant-General in the Military Department?—That might not be the channel—it would not necessarily come to him as Accountant General, for the Controllers are, in a way, practically independent, and they correspond with the Secretary to the Government of India in the Military Department. They would, for instance, say:—"Here is a loss which is beyond the power of "the Inspector-General to sanction; the circum-"stances are so-and-so, I advise that it be written off," or, "I advise that it be recovered from the particular "officer." That would come up to the Secretary to the Government of India in the Military Department.

3509. Would not that come up to the Military Accountant-General?—He would of course see it as Deputy Secretary, but it would not come to the Accountant-General as Accountant-General.

3510. Would it be referred to the Finance Department?—No, I do not think so, unless it were of any very considerable importance.

3511. (*Chairman.*) Will you tell us by what dates the Controllers must forward their estimates to the heads of departments; and at what dates the heads of departments have to forward them to the Accountant-General?—In September and October. They vary with the different departments, but they are from the 15th of September to the 15th of October.

3512-3. And by what dates must heads of the departments forward the estimates to the Accountant-General?—From the 1st to the 10th of December the heads of the departments must forward on the estimates to the Accountant-General.

3514. Would you describe the procedure of the Accountant-General in dealing with estimates?—When he receives these estimates from the Controllers and from the heads of departments—of course he gets a large portion of the estimate direct from the Controller, that is to say pay and allowances and establishments, and so on—he goes through them with his chief accountant and revises them according to the actuals of three or perhaps more years in certain cases; then he may revise them according to the orders of Government which have been promulgated since the estimates were initiated, and he may revise them according to what he knows would be the policy of Government. Then, again, he has sometimes to correct them for prices. Rates may vary. Lately we have had a very favourable time in India, but I hear that the winter rains have held off, at all events in some districts. The Accountant-General would take that fact into consideration and say:—"You have estimated "too low in the Punjab; you must put on something "more."

3515. At what date does the Accountant-General send the estimates to the Comptroller-General?—He does not send them to the Comptroller-General, he submits them to the Military Department on the 12th of February, and then the Military Department send them to the Finance Department.

3516. And at what date do they send it?—Well, as soon as possible after that date.

3517. The Military Department, I suppose, after it has passed through the Accountant-General, do not take very long to examine it?—No, because the discussion on any items which are in suspense, as it were, has been going on for some time past.

3518. So, therefore, the local officers prepare their estimates in September or October of the expenditure to be incurred in the year following?—That is so; they begin to do so.

3519. I suppose a very large part of the charges in the estimates are fixed, and subject to comparatively

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

18 Feb. 1896.

small modification from year to year; that must be the case?—In the case of pay, and allowances, and establishments, and so forth.

3520. And, therefore, so far, they have not much difficulty in framing the estimate, and not much inconvenience in framing the estimate so long before?—No, I think not, coupled with the power of revision which the Accountant-General has.

3521. Quite so. Of course, in the case of certain stores there is room for variation according to prices?—Yes.

3522. And especially in victualling stores, I suppose?—Yes.

3523. But, I suppose also, that experience has taught that there is an average scale round which prices range without much variation in ordinary years, and extraordinary emergencies are left to be met as they arise. I suppose victualling prices are really fixed beforehand?—No, there is a great deal of variation; it really all depends on the rainfall in the districts where the crops are raised, so that we can never be certain as to rates.

3524. That is what you alluded to just now, I suppose, when you said that the Accountant-General, when it comes to his examination, will revise the figures according to his information in February or March, even?—Yes, quite so.

3525. And so far there is no great practical difficulty in framing the estimates so long beforehand?—No, I think not.

3526. But with stores and works the case may be different. What guides the local officers in framing these estimates?—Well, in the estimate for work—say a fort on the Hooghly or a barrack at Peshawur—it would depend on the local rates for labour and material. They would, of course, vary very much, but that estimate would come up to the Director-General of Military Works and the Military Department.

3527–8. A large number of the works are works in actual progress which have been sanctioned and which have to be provided for in the year?—Yes.

3529. With regard to them there is not much difficulty?—No, the practice is to put down what we can afford for works in progress. We know there are certain works in progress. We know there is so much to be fulfilled, and it is approved of according to the urgency of the work.

3530. The estimates, after leaving the Controllers in the different Commands, pass through many hands in their upward course. Are they much altered during these varied examinations?—Yes, they are a good deal altered.

3531. So that advantage is taken of the latest information?—Yes, quite so.

3532. Is not great care now taken in watching expenditure as it progresses? The cash issues from the different treasuries are reported to the Finance Department at the close of each month, the cash issues from the Treasury being, of course, the speediest method of feeling the pulse of expenditure. Are copies of these issues sent to the military authorities?—Well, to the Military Department; not to the Commander-in-Chief, but to the Military Department and the Accountant-General. As Deputy Secretary he explains, for the information of the department and of the Member in Council and Secretary, the variations between the cash issues and the monthly proportion of expenditure, because he knows exactly what particular charges for pensions, and so forth, will come at particular periods in the estimates, and he divides off the total amount for military expenditure in ordinary times into monthly proportions; then he writes a minute or note, and explains the figures which the Comptroller and Auditor-General has furnished him with, explains the difference between the estimated monthly expenditure and the cash issues, and shows the reasons for these differences.

3533–4. But still, I suppose, the military authorities test the reports which they receive of the progress of expenditure by these returns of cash issues so as to satisfy themselves whether the facts correspond with their forecasts or information?—Yes.

3535. Regulations upon this point have been more strictly laid down and enforced since the Afghan War?—Yes, they have.

3536–7. Are you satisfied with the operation of the regulations as they now exist? Do you think they give complete information as to the progress of expenditure, which is a sure indication of the rate at which expenditure is progressing?—That is a subject to which I have given a great deal of attention. It covers a very large field of inquiry, but I may say that, at one time, I thought that with the information given by the record of cash issues you did not quite measure the expenditure that might occur, or that was occurring. To take the earlier days of a campaign, we know that the bills have not come in; therefore, we must feel that in the first few months the cash issues do not show the real expenditure which is going on. Then this occurs very often—it occurs rather often with native contractors—they hold back bills for various reasons, and we cannot get them to assist the local authorities in getting them in; the cash issues, therefore, do not show what liabilities we have; but, if I may venture to say so, the experience of the Chitral campaign has convinced me that, provided the Accountant-General gives, as he did in this case, a really reliable estimate, we are able to judge pretty closely of the actual expenditure and the liabilities. The final estimate may be based on the Controller's estimate; but in this case of the Chitral campaign the Controllers estimated, and the Accountant-General estimated, and as he knew of the policy of the Government, his estimate was very correct. So long as that is the case, and we can feel that we get a really good forecast of the total expenditure within certain limits, I think the cash issues are a great guide, but I do not think they are an absolute guide.

3538. But the Military Department, I suppose, know early what liabilities have been incurred on account of stores?—That, of course, is the particular duty of the Controller of Military Accounts, or of those officers who are engaged in the war expenditure.

3539. And it is their business to report to head-quarters?—Yes, they have to make such reports.

3540. I quite agree with you, that we must not put too much stress upon the cash issues. The cash issues are valuable in this sense, that while your officers are collecting their accounts and bringing them in a considerable time after date, a careful watch of the issues from the treasuries would mark the progress at which expenditure, as apart from liability, is progressing?—Yes, exactly.

3541. I remember we had much evidence placed before us on that committee, to which I think you alluded, which was held in this office in 1880, that if more attention had been paid at head-quarters at that time to the issues from the treasuries, the note of warning would have been much sooner struck?—Quite so. Now I may say that with the returns and statements which are forwarded, and with an active Accountant-General and a good Controller—one must suppose that these are efficient officers—I think that the chance of any failure is reduced to a minimum: but all I meant was that we cannot say that the cash issues give complete information as to what the war expenditure is, because so much may remain in arrear; and we know also that in the early days of the campaign a great deal is not spent, that is to say, the troops may leave their pay on deposit, what is called field deposit, and the bills are not all paid. Then, again, the stores are issued from stock in the first instance, and you have to think of the replacement of all these stores. That comes into the war expenditure. The actual cash expenditure does not occur in a campaign at all.

3542. (*Sir Ralph Knox.*) You mean your experience has taught you a good deal?—I hope so.

3543. (*Chairman.*) Are there any other points connected with the preparation or framing of the estimates, or the checking of the expenditure, to which you would wish to call our attention?—Would that apply to any proposals for improvement?

3544. Well, with regard to the preparation and framing of the estimates themselves, or to the check of expenditure in carrying out the estimates?—No, I have no proposals to make on that head. I think the estimates are very carefully framed, and they are closely discussed, and I do not see that there is any further safeguard to be provided.

3545. One question upon that point. In the framing of the estimates, or previous to the framing of them, is there much formal communication at head-quarters

between the military authorities, the Viceroy, and the Finance Department, that is to say, the Financial Member of Council, in which the general financial situation is discussed, so that in framing the military estimates sufficient regard may be had to the revenue which is available?—A large proportion of the military estimates has been framed beforehand, and framed on certain establishments which could not be reduced, but I may say, as regards what may be termed the balance, very complete consultation takes place between the Military Member of Council and the Financial Member of Council, and what happens is that the Finance Member of Council says:—"Well, I can "only give you so much for all these items, and you "must select, with the Commander-in-Chief, what are "considered the most important and urgent." Therefore we have hundreds of proposals, which are cut down to comparatively few, which can be provided for in the estimates at the last; that is what I may call the balance of expenditure.

3546. And the sums that are reasonably available for these variable or varying services are considered between the military authorities and the financial authorities before the expenditure is finally settled?

3546*a*. (*Sir Ralph Knox.*) There was one particular point which I could not quite understand. I think you said that the estimates came up direct from the Controllers, then you have subsequently stated that they passed through a great number of hands before they came to the Accountant-General?—No; perhaps I may explain it in this way; a large portion of the estimate is, of course, *personnel*, and pay and allowances and so forth; and this portion comes up direct from the Controllers: but all the departmental estimates, such as ordnance, manufactures, commissariat, equipment, go to the heads of departments for their information and for any suggestions which they may be able to make to the Accountant-General.

3547. But the latter go from the Controllers to those heads of departments?—From the Controllers to the heads of departments with the Government of India.

3548. Then the Controllers do not send up a consolidated estimate, but in portions?—It comes up in these portions to the Accountant-General.

3549. But, I understand, the estimates come through the heads of the various departments?—Through the heads of the various departments.

3550. That is to say, the Commissariat, the Ordnance, and so on, after they leave him?—Yes; the Controller would send up the consolidated estimate for all these services for which he estimates, as it were, directly, but the departmental part of it would wait for the head of the department.

3551. A direct estimate, quite complete, would come up to the Accountant-General, but it would not be dealt with in the Accountant-General's branch until the heads of the other departments, responsible for ordnance and commissariat, and so on, had had their say upon it?—Quite so, but the estimate of the ordnance department, for instance, would not come from the Controller, it would come from the Controller through the Director General of Ordnance.

3552. (*Chairman.*) Would you tell us, Sir Edwin, whether the military estimates are ever reduced by the Governor-General in Council?—Yes, they are occasionally; generally when any particular financial exigency demands. I have known cases in which they were reduced by a large amount. For example, it was intended to spend a certain sum on mobilisation requirements, and it was decided that it should not be spent; that it was better to incur any risk than to incur the risk of over-expenditure.

3553. About what time was that?—That particular instance I am thinking of happened in 1888, but there have been other cases since then.

3554. I presume one of the most important functions of the Military Department is to consider proposals by the Commander-in-Chief, and to advise the Governor-General to accept or reject them, as the case may be; by the Military Department I mean the Military Member of Council?—Well, the Military Department is a distinct part of the administration. The Secretary is the ministerial agent of the Government, the Military Member of Council is a member of the Government, but we always speak of the Military Department.

3555. Just as you speak over here of the War Office and the Treasury, rather than the Secretary of State for War, and the Chancellor of the Exchequer?—Yes.

3556. But still the Chief of the Department is the really responsible, all-important personage, is he not; the Secretary rather corresponds to the permanent secretary over here, I take it?—Yes, I should say so, in a general way.

3557–8. But what would you say in reply to my question as to the function of the Department?—I think the function of the Military Department is to check any undue expenditure that may be proposed, and to endeavour to do the best for the Army with the money that can be found. Perhaps I might give an example of the way in which the proposals are dealt with. For example, a question came up of the additional transport required for a siege train. There are certain siege trains maintained in India. For some of these no transport is maintained, because they are placed at the seaboards and ports, and they are intended for operations beyond sea; for others a transport is maintained. This transport is distributed about and is used for various commissariat purposes on grounds of economy. A proposal came up to increase the number of bullocks on account of armament for a siege train that was being sent out from England. When that came up it was reported upon by the Controller so far as the expense was concerned, and it came into the Military Department. I then thought, when I looked over the papers, that so much transport was not really required, and I consulted the Director-General of Ordnance. He agreed with me. I put forward a note to the Military Member of Council suggesting that we should make use of the transport already maintained. He marked it to the Adjutant-General for the consideration of the Commander-in-Chief, the Commander-in-Chief, on the report of his officer, the Inspector-General of Artillery, saying that he agreed with me, concurred, and a large saving was effected on the original proposal. I merely put this forward as an instance of the way in which questions are taken up in the Military Department, and of the routine under which they are dealt with.

3559. But the general deduction from that is that you look upon the Military Member of Council as watching to a certain extent, in the interest of economy, the military expenditure?—Yes, and any proposals that may be put forward by the Commander-in-Chief. For instance, I happen to have a paper here which I can put in; I did not think of any particular year, but it was a statement that I had by me. "List "of some of the more important proposals involving "extra expenditure submitted by the Commander-in-"Chief in 1890–91, and negatived or modified in the "Military Department." That gives a list of the various proposals, at all events the more important ones, which were negatived or modified. Hundreds of applications are made. It comes up in this way from the Commander-in-Chief, from the Adjutant-General, or the Quarter-master-General. The Adjutant-General in India writes, by direction of the Commander-in-Chief, and says: "I am directed by the Commander-in-Chief to submit "to the Government of India a proposal to change five "field batteries into horse artillery batteries." Then it is found that that involves considerable expenditure. We deal with that. The Secretary advises, and probably the Military Member of Council accepts his opinion, that this expenditure shall not be incurred, and it goes before the Governor-General in Council, who endorses the opinion of the Department and of the Military Member of Council, but in some cases, naturally, the question is much discussed. If the Commander-in-Chief has any very strong opinion on the subject then it is discussed in Council and decided.

3560. I suppose the Military Member of Council is always an officer of the Army, is he not?—Yes.

3561. Is there any rule to that effect?—There is no absolute law, but it has been the practice since the appointment was instituted.

3562. I should like to understand clearly, your view on that point which arose when we were speaking of the Military Appropriation Audit Account, whether you do or do not think that irregularities in audit, which may have occurred, should be brought prominently to notice in that report?—Yes. On the whole I think it would be a good plan, I think it would give them publicity.

3563–5. That, of course, is an important expression of opinion on your part, because it places you so much in

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

18 Feb. 1896.

consonance with the opinions to which we have come over here, as the result of our experience of the working of our Audit Office system, which, I think, I may say, is absolutely founded on the principle of giving publicity to irregularity ; and, in many cases without reflecting upon the accountant, of merely noting it for future guidance?—Yes.

3566. I believe you have in India financial reviews of the annual work and expenditure of each department?—Yes.

3567. Do you consider these are valuable aids to administration?—I think they are. I think that they afford the heads of departments a very good means of grasping within a small compass the expenditure which is going on in the department, and they indicate very often the economies that can be effected in the future.

3568. I suppose the financial review is a general retrospect of what has taken place in the department during a year or series of years?—It is an annual report. For instance, this report I hold in my hand is the financial review of the Army Clothing Department, and it deals with everything connected financially with that Department, the reports of the receipts and expenditure of the factory, store transactions, comparisons of expenditure during the last three years, the chief articles obtained from England and all the local supplies; our expenditure on stores and on the clothing factory. It gives the balance sheet. Then it gives the garments manufactured, the garments issued, cut, and trimmed, the garments repaired; it is a financial review of the whole of the transactions of that particular Department. I have simply brought this as an example; there is one for each Department.

3569. But a report of that kind is extremely useful inasmuch as it obliges the responsible administering officers to collect and put together the results of their experience?—Yes, and not only that, but it enables the officers, whether the Secretary in the Military Department or the Accountant-General or the Military Member of Council, to see exactly how the department is working financially; and we have the report every year. And then, of course, they are criticised, at least they are reviewed by the Accountant-General, minuted on by him and submitted to the Secretary.

3570. Now have you any other form of departmental reports, besides these reviews?—Yes, we have what are called the Administration Reports. I have brought a copy of the Administration Reports. That is a report by the head of the department; the Director-General of Ordnance, for instance, submits to Government his Administration Report of the Ordnance Department in India, and it gives his report on the factories, on the arsenals and depôts, the changes in the *personnel*, financial statements, the principal items of machinery received, additions to buildings and so on, a variety of things.

3571. Then in what point does that report differ from the review of which we have been speaking?—Well, the financial review, appertains solely or chiefly, it may be said, to the financial conditions of the manufacture of the stores, and to cash, and so on, while the Administration Report is a briefer summary of the principal work of the department during the year.

3572. You think it desirable to keep the two separate, the financial review, and the administration report?—I think so.

3573. But putting them together, you get a complete history of the work of the year?—Your Lordship has hit upon a particular point which I have considered at various times, that is, whether they ought not to be brought together, in the form of one volume, but practically they come up to the same authorities. Then, besides that, I may say we have in the Military Department itself a very complete review of the material and stores expenditure for the whole of India.

3574. Now, in India do you work much by special committees appointed to inquire into subjects of administration?—We have no particular standing committees now, but we have had on various occasions committees of inquiry into the expenditure of the Army. For instance, there was a commission in 1879 which went very closely into all the questions connected with Military Expenditure. Then we had a Finance Committee in 1886, and there was a committee in 1886, of which I was a member, to inquire into the question of the Commands and staff, and how the expenditure could be reduced. These are examples of the sort of committee we have; there have been several committees on clothing. They assemble specially, and work out the various details that are required, and analyse the expenditure.

3575. These are the methods by which the Indian Government can learn what the progress of expenditure is year by year, first of all by these reviews, and then by means of committees, if necessity arises, appointed to investigate the expenditure?—Yes; the committees are generally assembled for some special purpose with regard to the reduction of expenditure and so forth.

3576. Have you any officers in the departments who analyse the reviews to which you have been alluding, the review and the administration report?—Yes; they are analysed as a matter of course in the Military Department, that is to say, one of the Assistant Secretaries probably takes up the report and goes into it thoroughly, and produces a note or minute on it, which the Secretary may or may not endorse. That is the way in which it is done; the Secretary himself goes into the matter.

3577. That is to say, these reports do not lie as waste paper on the table; they do actually come under the scrutiny of the responsible officers?—Yes, and then they are submitted to the Military Member of Council also, with the note of the Secretary; but I may say that the Secretary also, and the Military Member of Council, on various occasions analyse the expenditure that goes on. I remember preparing a long memorandum on Military Expenditure, analysing the whole of the expenditure grant by grant in 1888, and again in 1892. Then, of course, the Accountant-General also, at certain periods, reviews the whole of the expenditure, so that there is really a great deal of that kind of analysis going on.

3578. Now, in dealing with the estimates, you must have constantly before you demands which you may admit to be desirable in themselves, but for which there is no money, or you may have demands coming down when it is too late to insert them in the estimates in the immediately ensuing year. Is there any particular course followed in that case, in order to keep these demands on record?—Those demands which are too late, for example, are carried forward into a list of demands for the following year.

3579. So that they are safe to receive consideration?—They come up again for consideration.

3580. Is the question of the necessity of the expenditure discussed by the Finance Department before the items are entered on the supplemental list?—Yes, invariably. When it is desired to enter any item of expenditure in the estimates for the following financial year, we discuss it in the Military Department, and then, if we accept the proposal as desirable and support it, we refer to the Finance Department for their conditional sanction to entering it on what we call "List C," which is a list of items to be considered when the estimates are under final consideration, and their consent is conditional because the Finance Department only agree to the entry being made in the list if money is available.

3581. I think you said that the Commander-in-Chief had a limited power of expenditure, though no general power of sanctioning expenditure. What is the limit within which he can act?—The limit is 10,000 rupees in one month. I think I mentioned this in my memorandum: 2,500 rupees in each case, or 10,000 rupees in one month. It is given at paragraph 43, page 11. But then, of course, he can only sanction the expenditure on certain conditions, provided that no permanent alteration of existing rules is involved, that the amount so sanctioned is non-recurring, that there is nothing irregular in the character of the expenditure so sanctioned, and that the authority is only used for charges which are now recognised as fit subjects for military expenditure, also, that the amount can be provided from the budget estimate of the year under the particular head of the grant affected. All schedules in such cases are submitted monthly to the Government of India.

3582. But besides these limited powers, the Commander-in-Chief has, I suppose, a considerable power of influencing the course of military expenditure?—Yes; I should say that if the Commander-in Chief is a strong man, and supports a particular policy, for example, he would have very considerable power in

influencing expenditure both in the Council and out of it.

3583. You have read, I presume, what Sir David Barbour and Sir Auckland Colvin said on the subject of the financial control?—Yes, I have.

3584. Do you consider that control of the Finance Department over military expenditure sufficient?—Well, I confess that, according to my experience and knowledge, it is absolutely complete and sufficient.

3585. In theory?—I should say in practice also. Of course I am not saying anything about the adoption of a policy which may lead to military expenditure, because that is a matter both for the Government of India collectively and for Her Majesty's Government; but with regard to military expenditure generally and the submission of fresh proposals, the inability of the Military Department to sanction expenditure except in certain cases and under certain rules, and the necessity for consulting the Finance Department, combine to make the control efficient. I should say that the power of the Finance Department or the control of the Finance Department over military expenditure as represented by fresh proposals for expenditure is very complete indeed. I think it depends also very much upon the Finance Member, upon his personality.

3586. Is there not always a danger that the Finance Minister would not be able to make his reasons sufficiently known for not undertaking expenditure, because the Military Members of Council are naturally very much interested in the subjects which they advocate and they could always plead the danger of India? Of course the danger of India must depend very much upon personal opinion. There are cases in which everybody would be agreed; but in many cases, say one of your small expeditions which is quite sufficient to turn a surplus into a deficit, do you think that the opinion of the Finance Minister has sufficient weight?—He has not the power of negativing the expedition, but he has the power of expressing himself very strongly on the point, and I should think that if he expressed himself strongly enough and there was any possibility of the thing being avoided, the Viceroy would take heed to his opinion and advice. Of course if it had gone so far that certain tribes, for instance, had raided upon one of our frontier towns and it was absolutely necessary to attack them, then naturally the considerations of general policy would override what the Finance Minister might say with reference to the expenditure being a large one on this particular expedition.

3587. I will put it in this way; do you think the impetus of financial opinion in the Government is sufficient to counterbalance the impetus of military opinion?—Yes, I think it is. Of course it is very difficult to give a direct answer to such a question because the Viceroy is the head of everything.

3588. The reason why I asked you these questions is this; you will have seen the answers that both Sir David Barbour and Sir Auckland Colvin gave, which led the Commission to think, as I put it just now, that the impetus of financial opinion does not counterbalance the impetus of military opinion in the counsels of the Government?—But, my Lord, if I read these answers correctly, I cannot quite agree. There was, for example, say the increase of the Army, which had been approved by Her Majesty's Government, and was entirely concurred in by them at the time. That and also the approach of Russia nearer to the frontiers of India have resulted in military requirements being more considered than they were before; and I do not know that it can be said that, apart from those considerations, military interests have received any particular impetus. I should say that certain things having occurred and a certain policy having been laid down for the Military authorities, they naturally followed what had been laid down for them; and in the case of the increase to the Army, even if the Military Member of Council had been personally averse to an increase of the Army—it is quite possible that he might be; I have known Military Members of Council who objected to the increase of the Army and who did everything they could to reduce the establishment—in such a case, supposing Her Majesty's Government had decided that it was necessary for certain considerations for the Army of India to be increased by so many men, then in my humble opinion it would be the business of the Military Member to see how that could be carried out in the best and most economical way.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

18 Feb. 1896.

3589-90. But there is another way of looking at it financially, it is this; the Government adopt a policy, we will say, of constructing frontier railways. Of course there are two ways of carrying out that policy. The Military Department may desire to be protected against all hazards, and at the first immediate moment, without reference to financial considerations; and the policy of the frontier railway having been adopted, they would, therefore, urge that it should be made, say, in two years. On the other hand, the more prudent Finance Minister says: "Oh, no, that will put us in a position "possibly of having to put on more taxes, let us do it "in six years"?—Yes.

3591. Now here comes in the important question of the impetus. Would not the impetus, as I call it, of military opinion in all probability carry the point against the impetus of the financial opinion? The idea of immediate danger is one upon which the military opinion might very possibly err; they might lay too much stress upon it; but still they would carry their point as against the more prudent view of taking a longer time to do the work?—I think in a case of that kind it would be the Viceroy himself who would step in. I have known several cases in which he said: "It is all very well for "you Military authorities and the Commander-in-"Chief to say, 'We must have this' and 'We "'must have that,' and 'It constitutes a danger to "'the Empire if we do not have these things,' but "I do not think we can do it at present at all events." He might possibly say, "Well, I shall hope to make a "beginning with what you require in a year or two, "but at present we can do nothing." I may give a very complete instance of that in the moneys which have been required from time to time for the mobilisation of the Army. Constantly these have been postponed, and it has been said: "We cannot afford it; it is "quite impossible," and the military authorities have agreed. In one case, I remember a large amount of money required for mobilisation was cut out because it was said: "We must run the risk rather than incur "the expenditure."

3592. But if I may venture to put it so, a more apprehensive officer than yourself in your position might have urged that postponement would be dangerous; and it would be very difficult for the Viceroy to refuse that argument?—He would have to weigh the opinion that the Commander-in-Chief had urged, and the opinion of the Finance Member; and in a case like that the Financial Member would be supported by the Military Member.

3593. An audit officer has to satisfy himself, has he not, that a charge against the public revenues requiring the sanction of the Secretary of State, has already received that sanction?—Yes; every auditor in the Military Department knows the rules under which the sanction of the Secretary of State is required, and he would challenge the authority of the Government of India in such cases.

3594-5. And if the Government of India, we will say, or the Accountant-General, or the Controller were to say: "Oh, no, the sanction of the Secretary of "State need not be taken in this case," the examining officer has a right of requiring a reference home, has he not?—Yes. Well, as matter of fact, it has never come to that in the military expenditure, so far as I know, but he has such power; I mean the Government of India would then be bound to refer the matter to the Secretary of State.

3596. (*Mr. Buchanan.*) I want to ask you this question with regard to the subject recently alluded to by the Chairman. I think you gave us some instances of the way in which, when new military expenditure is proposed by the Commander-in-Chief, it is reported adversely upon by the Military Secretary; and you said that then the matter went before the Governor-General in Council, and it might lead to debate and be decided in one way or in another. Would you say that the Military Secretary represented an economical element with regard to the increase of military expenditure?—I should say so, certainly. I look upon it as the duty of the Military Secretary to do everything in his power to promote economy, and, when expenditure has been decided upon, to see that that expenditure is made in the most economical way. I mean, that he and the Military Member are really charged with the financial interests from the point of view of the Army. Of course, they have to consider also the question of

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

18 Feb. 1896.

efficiency, and to weigh the one set of arguments against the other.

3597-8. And is it in your experience frequent that suggestions are made with the authority of the Commander-in-Chief for new military expenditure which are reported negatively upon by the Military Department?—Frequently. Very frequent instances might be quoted, but I am glad to say, if you will allow me to supplement my answer—I am glad to say that of late years a great deal has been done to bring not only the Commander-in-Chief but Generals Commanding districts more within the scope of military administration, and consequently very much has been done by those officers themselves. An example just occurs to me. I was inquiring the other day about the increase of expenditure in Burmah, and asked how it could be reduced; and I found—although I did not know it at that moment—that the General-Commanding there and the Lieutenant-General Commanding the Forces in Madras had actually themselves initiated proposals for reducing the amount of transport in Burmah, and so making an economy. Of course there would be many cases in which they would say: "We want new barracks," or "We want something or other for the troops," or "better sanitary arrangements," but I am merely giving you that as an example that they really do constantly think of economy as well as the efficiency of the military service—at least that is the experience that I have.

3599. Sir William Wedderburn asked me to put this question to you for him: Would you say that the presence of the two Military Members on the Council of the Viceroy, namely, the Commander-in-Chief and the Military Member, is an advantage to the side of expenditure or of economy?—I would answer that question by saying that the presence of the Commander-in-Chief is very useful in the general interests of the Empire, and that the presence of the Military Member of Council is absolutely necessary with regard to the control of military expenditure. It is rather difficult to answer the question in the way you have put it, because it depends so much on the particular man. You might have an example of two men who were both extravagantly inclined who would coalesce. On the other hand, you might have an example of one man having very economical tendencies, and considering that it was his duty to check excess of expenditure, and the other man might desire to press for expenditure.

3600. Would you say that from your experience the fact of having two military representatives on the Council had given what you might call an unfair predominance to military expenditure in the Council?—No, I should say not.

3601. Would you agree with Sir David Barbour—I think it was both Sir David Barbour and Sir Auckland Colvin—that the strongest factor for economy in the Council of the Viceroy is the fact of the Viceroy himself being economically inclined?—Yes, I should.

3602. That substantially the economical restraint which can be exercised by the Government of India very largely depends upon the economical or non-economical tendencies of the Viceroy himself?—I should say so. I should say that the Viceroy is constituted a court of appeal, that is to say, he decides. If he is convinced that some great danger to the Empire exists against which it is necessary to guard, and that this involves expenditure, then I presume that he might consider that the arguments in favour of the expenditure outweighed those in favour of not doing anything at all.

3603. If the Viceroy and the Financial Member of Council were united, the joint representations of the Commander-in-Chief and the Military Member of Council would probably not have effect?—No, they would not.

3604. (*Mr. Ryder.*) May we gather that the Financial Member of Council, and the Military Member of Council, are very commonly in alliance on the side of economy?—Yes, I should think so.

3605. They are not naturally antagonistic?—No, not natually. Of course, it may often happen that the Military Member of Council might think something necessary which the Financial Member does not, but I should say they were very often in alliance in the desire that the military administration should be conducted on the most economical principles.

3606. (*Sir Ralph Knox.*) I wish to gather from you a description of the machinery for carrying out the work of the Military Finance Department in India. You have said that there were local Examiners, and I suppose there are local subordinate *employés*; of whom do they consist?—May I say that perhaps a clear idea would be gathered from the following description: India is divided as you know into four great Commands; it used to be three Presidencies; now it is divided into four great Commands—Punjab, Bengal, Bombay, Madras; we will take the Punjab as an example. At Rawul Pindi is the centre, and at the head of the military account system in the Punjab command, or what you may call the Punjab Army, is the Controller of Military Accounts. Under the Controller are his particular officers, his examiners or chief auditors; under those Examiners are deputy-examiners, assistant-examiners, accountants and clerks. The Examiners are at the head of different branches in the Controller's establishment or office, and they are his assistants although they are to a certain extent independent.

3607. Yes, of whom do the accountants and clerks consist?—They belong to what we call the subordinate account service; that is to say, they are civilians, they are recruited from the Army sometimes. The Department is divided into three parts: there is what you may call the superior or commissioned grade of the Military Accounts Department; those are practically military officers, with one or two exceptions of men who have been promoted for merit from the second division. The second division consists of the subordinate account service, who are recruited in various ways, sometimes from non-commissioned officers of the army, sometimes from civil life, sometimes from the clerical service. Those below that are the actual clerks, the clerical service; they do all the routine work, registering, recording, indexing, all that sort of thing.

3608. Are they very numerous; those lower appointments?—Yes, they are given in the tabulated statement I have put in.

3609. Are many of them natives?—A very large number—most of them I should think—the clerks certainly.

3610. And you say some of them are non-commissioned officers?—Well, they have come from the Army; I think they are generally Europeans.

3611. Generally Europeans?—Or Eurasian.

3612. Then the superior Examiner is almost always an army officer?—Yes, that is, when he has come from the Army; he remains on the list of the Army.

3613. And they serve for five years on a sort of probation? Do many of them go back to the army after the five years?—Very few, I think.

3614. Some do?—Well, some may do; one or two may do so of their own wish, but of course cases have occurred in which it has been found that the officers are not suited, and then they are given a gentle hint and they return to their regiments.

3615. These accountants or examiners, are promoted in the service, and ultimately become chief Examiners or Controllers in districts, do they not?—Yes, they may become Controllers in the Commands.

3616. And, having commenced their career as junior officers, are they frequently promoted to the higher positions in the Military Accounts Department?—Yes, they may succeed to be Controllers of Military Accounts, but it does not always follow. For instance, they might not be made Accountants-General. I was never in the Military Accounts Department, but I was selected for the post of Accountant-General. But on the other hand the present Accountant-General has risen from the ranks of the Military Accounts Department.

3617. Is he the first who has risen to that position?—I think not. Colonel Pritchard, his predecessor, was one.

3618. Has anyone who has been trained in that way ever succeeded to be Military Member of Council?—No. You mean, absolutely trained in the Military Accounts Department.

3619. Yes?—No.

3620. The Department is recruited by other methods than that which you have described; some are introduced into the higher positions in the service then, such as Controllers, are they not?—Well, I do not remember any instance of that sort occurring for a great many years.

3621. In which position was it that you entered the Military Accounts Department?—I never entered the

Military Accounts Department. There is a difference between the Military Accounts Department and the Military Department of the Government of India; the latter is one of the branches of the Government at headquarters, just as the Foreign Department or the Home Department, or just as you have here the Treasury, the Home Office, and the War Office, and so on. In the Military Department there is a branch charged specially with the interests of finance.

3622. It is not looked upon as a future or as a perquisite of the Military Accounts Department that they should succeed to the higher financial positions?—No, because the Military Secretary of the Government is not a purely financial officer; he is what may be called the administrative officer of the Government of India, and on every question connected with the Army he is consulted.

3623. Then in that sense he is not what would be called a trained financier?—No, certainly not.

3624. And, of course, it often happens that the Military Member of Council is a man who has had no financial training whatever?—It might so happen.

3625. And in such a case as that, that officer would be simply an additional military officer in the Council of the Government of India?—Yes, he would be. But my experience of Military Members of Council teaches me that they very soon adapt themselves to the positions in which they are placed.

3626. But in the case of an officer who had been trained as you yourself have been, in the *quasi* subordinate positions of the Military Department, you would have been entering upon your duties as a trained financier, more or less, would you not?—Well, in a certain way, I suppose I should.

3627. Well, much more so than one who had never so served?—I should have a much greater knowledge, of course, of the administration, and of finance.

3628. And a good part of your life would have been trained in watching the economies of your service?—Yes.

3629. Whereas you cannot rely upon that in the case of an officer who is appointed straight off to be a Military Member of Council?—No.

3630. And it may be that his military instincts would be stronger than his civil or financial instincts under such circumstances?—It might be so, of course, but, as I say, my experience teaches me that if you put a man in a particular position, with particular duties, most Englishmen endeavour to fulfil those duties without reference to their previous predilections or training.

3631. Then you think, in fact, that the man would be just as well if he had no training?—I did not say that. No, I think it is a very great help; but what I said was that I think a Military Member of Council appointed from the Army, who has had no previous financial training, often throws himself into the work of checking expenditure with great vigour. But I quite admit that it is better for a man to have a previous financial training.

3632. But a difference of opinion between such an officer and the Commander-in-Chief could hardly be regarded as much more than a difference of opinion between two military men, could it?—Yes, because if I understand your question rightly, they are both charged with different work, their spheres of action are different, and when the Military Member of Council receives the Queen's warrant, he knows that he is charged with particular duties, and he knows it is not his business, for instance, to put forward great proposals of policy for the increase of the Army, and so on. It is his duty to endeavour to carry out the policy that has been laid down by Her Majesty's Government, and by the Government of India, in as economical a way as possible, and also to do all in his power to ensure the economical administration of all the departments under him.

3633. But in a case of that kind, supposing a large proposal were made for the increase of the Army; supposing there was a difference of opinion, would not the Viceroy be really placed in this position, that he would either have a difference of opinion between two high officers to consider, from a military point of view, or be in the position that the two officers had combined to support that military policy?—Of course, it is quite within the bounds of possibility that they might combine; but when you deal with a great question of that kind it would have to come before the whole Council, and all the Members of the Council would discuss it. Some might support the Financial Member very strongly; others might go with the Commander-in-Chief.

3634. But the two military officers, the Commander-in-Chief, and the Military Member of Council, combining, or holding the same opinions, their position would be very strong and very difficult for the Viceroy to resist, would it not?—Of course it would be strong, but the Viceroy's power is much stronger.

3635. Well now, to descend to an instance of a very simple kind: supposing a question were raised as to the rate of pay of officers in India, especially of the higher officers in India, do you think that the opinion given by the Military Member of Council as representing the financial point of view would be a reliable and valuable opinion on such a question as that?—Yes, I do.

3636. From a financial point of view?—Yes. You must remember that all these questions are thoroughly threshed out by the various departments; I mean the Viceroy has not only the opinion of the Military Member of Council, he has the opinion of the Secretary and the Accountant-General, and so on. The Accountant-General would very probably put forward some very strong reasons why the pay should not be increased.

3637. I was considering the question of the pay being reduced?—I beg your pardon, I thought you said increased.

3638. You mentioned that from time to time, in order to secure economy, committees were appointed to examine into certain branches of the expenditure: by whom would those committees be appointed?—They would be appointed, as a rule, by the Governor-General in Council in the Military Department; that is when the Committee had been resolved upon, a letter would issue under the signature of the Secretary in the Military Department convening it.

3639. But the appointment of such a committee would be considered by the Viceroy in Council probably beforehand?—As a rule it would be. Of course, you mean committees whose appointment had been considered by the whole Council, but the Finance Department would also be consulted, and if it were a question of expenditure they would probably nominate a member.

3640. Who would be a likely member to suggest the formation of such a committee: it might be suggested, I suppose, by anybody?—The Commander-in-Chief, or the Secretary might suggest it, or the Military Member of Council might suggest it.

3641. Or the Finance Member?—Or the Finance Member might suggest it.

3642. And then that would be considered by the Council, and they would determine, as to whether it should be appointed or not?—It might not go before the Council, unless it were a question of importance.

3643. Who would be the person to order such an inquiry without the intervention of the Council?—Well, theoretically, I suppose the Governor-General *in* Council; the Viceroy himself would order it on the advice of the Military Member in most cases, but, of course, it depends upon what sort of a committee it is. For instance, if it is such a Commission as was created in 1879, to inquire into the organisation and expenditure of the Army, it would be made the subject of correspondence between the Government of India and the Secretary of State.

3644. I was not contemplating so large a subject as that, but such a subject as you referred to just now, viz., that the clothing of the Army was expensive and economy might be effected, or that a certain portion of the commissariat was in excess, the transport and so on; is there any one of the departments which might initiate a committee of that kind without consulting the others; that is to say, could the Military Member of Council, could the Commander-in-Chief, could the Finance Minister?—The Military Member could do it in communication with the Commander-in-Chief. The Commander-in-Chief, of course, might suggest the advisability of constituting such a committee, but the Military Member of Council would be the official who would decide, under the Viceroy's orders.

3645. But could he do it *proprio motu* without the sanction of the Viceroy?—Not as a general rule.

Major-Gen. Sir E. H. H. Collen, K.C.I.E.

18 Feb. 1896.

3646. Then, I suppose, it would of necessity come before the Viceroy in Council?—Not necessarily before the whole Council, it might come before the Governor-General himself only.

3647. (*Mr. Mowbray.*) Have you any opinion of your own as to the necessity of the Military Member of Council being himself a military man?—I think that it is necessary because the whole Army administration in India is conducted on military lines, and I think it is far better to have a man in that position who is conversant with the Army and all its requirements.

3648. You have told us that the Commander-in-Chief has the power of sanctioning certain small expenditure, but it would have to be in accordance with regulations. Whose business is it to see that those regulations are observed?—The Controller of Military Accounts in the particular Command in which the expenditure occurs; and he makes monthly reports to the Accountant-General, by schedules, of whatever has been passed by the Commander-in-Chief without reference to the Government.

3649. It would come specially before the Controller?—Well it comes as a matter of routine, I mean it *must* come before him. All such items of expenditure are reported to him and are scheduled and are submitted monthly by him to the Accountant-General.

3650. But what I meant was, would the expenditure sanctioned specially by the Commander-in-Chief come before the Controller in any other way than ordinary expenditure sanctioned in the ordinary way under the estimates?—It would so far be different to some extent, that there is a special regulation that all these items of sanction must be reported specially to the Controller by the disbursing officer, and they must necessarily come before the Controller.

3651. Would the disbursing officer draw the Controller's attention to the fact that this expenditure had been incurred, not under the estimates, but under the special sanction of the Commander-in-Chief?—Yes, that would come up on audit by the Pay Examiner; the disbursing officer might do it but, it would certainly be brought to the Controller's notice, because there is a particular regulation that these items must be brought forward in that way.

3652. Supposing expenditure becomes necessary, which has not been provided for in the estimates of the year, after those estimates have been sanctioned, what is the process by which such further expenditure is sanctioned?—In that case the Military Department would be bound to consult the Finance Department, I may mention, however, where there are savings in a grant the Military Department has the power to appropriate those savings.

3653. That I understand. But I am referring to something larger?—Then, of course, we should go to the Finance Department, and we should say that this expenditure is absolutely necessary, and they would pass it. They would tell us either to ask for a special grant at once, or, more probably, to wait till we see how the expenditure is running, and they would give a grant at the end of the year, if such be necessary.

3654. And is that the process which is gone through when an expedition is decided upon, for instance, which had not been foreseen when the financial estimates for the year were drawn up?—Well in that case what we do is this: directly the Government have decided upon an expedition it is the duty of the Military Department to advise; in the first place they send a sort of preliminary advice; they say: "This expedition is in "contemplation, it will lead to extra expenditure, we "will tell you what the amount will be as soon as "possible." Then we have to draw up an estimate, as close an estimate as we can and send it to the Finance Department. Then sometimes they would make a special grant, at other times they would say: "we had "better see how ordinary expenditure is progressing."

3655. They might either sanction the further expenditure or they might say: "you may spend now, "and if necessary we will make you a grant later on"?—The latter course is as a rule pursued.

3656. They wait to see what the expenditure will be?—They wait to see what the expenditure will really be.

3657. Do they in that case get the same control over the expenditure as if they sanctioned an estimate only for a limited amount in the original estimates?—I think so, because we make an estimate as near as we can. Of course it cannot be absolutely accurate, but we do it as closely as we can and they practically sanction that estimate within which we must work. It may be, supposing we have estimated only for six months and the operations are prolonged say to nine months, that then we have to come forward for an additional amount.

3658. Supposing they do not sanction the expenditure until the close of the year, or supposing they do not make you a definite grant until the end of the year, how do you get the money that you require out of the Civil Treasuries during the currency of the year?—They do not actually give us a formal grant for our estimates, but the money is drawn from the treasuries because we have obtained the sanction of the Finance Department to this particular estimate, and then fresh assignments are made on the different treasuries by the Controllers acting on the authority of the Accountant-General: that is to say, the Accountant-General, knowing that the Finance Department have sanctioned this expenditure, addresses the Controllers and authorises them to grant additional assignments.

3659. That I quite understand in cases where the Finance Department has sanctioned your estimates: but I rather gathered from you that there were some cases in which the Finance Department did not sanction your estimate but deferred it until the end of the year?—No; perhaps I did not quite explain myself clearly; they sanction the estimate, but they do not, as it were, give an actual grant to be put into our estimates, because the estimate may be altered.

3660. Then I may take it they sanction the estimate?—Yes.

3661. And they give sanction to the Treasury officers to pay on that estimate?—Yes, that is really what it comes to.

3662. (*Sir Ralph Knox.*) I should like to ask with regard to the power the Commander-in-Chief has of spending extra money. Do all these cases come up to the Central Government and to the Commander-in-Chief?—They come up to the Accountant-General; that is, there is a schedule monthly of all these cases, but they are not very numerous.

3663. But they go personally before the Commander-in-Chief for his sanction, do they?—I do not quite catch your meaning.

3664. The 10,000 rupees?—I cannot tell, of course, whether he sees all these cases. I suppose he delegates power to his chief staff officers. For instance, if he wants anything costing 1,000 rupees for an experimental purpose, in that case they would go up to him and say: "May we sanction this out of the allotment?" but I suppose some of the minor things would be done without his personal cognizance.

3665. And without his previous sanction, at all events. Does he depute in any degree the power to spend some of this money to the general officers in the different districts?—No, because there is a separate power to the Lieutenant-Generals Commanding the Forces.

3666. They also have a power?—They also have a more limited power.

3667. What is their limit?—They have power to finally sanction expenditure not provided for by regulation up to a limit of 1,000 rupees in each case, not exceeding a total of 2,500 rupees in any one month.

3668. Then what is given to the Commander-in-Chief to expend is over and above that?—Yes, it is separate from that.

3669. But an expenditure may be suggested by some of the local officers, or the Commander-in-Chief may order it himself?—Yes. I think that it may be looked upon that the 10,000 rupees is applied to cases which he deals with himself, and that the Lieutenants-General would not suggest that something they wanted to be done should be spent out of the Commander-in-Chief's allotment.

3670. Unless, I suppose, it were something very large or general?—Yes, exactly, of general application.

3671. But no one below the Lieutenants-General has any power of this kind?—No, no purely military officer has a specific power in that way.

3672. Except that, as you said, the officers in charge of the ordnance and so on have powers of writing off?—Yes, and so have the Commissaries-General and the heads of departments. And then, again, the General

Officers Commanding Districts; there are certain detailed regulations under which they can order certain things; for instance, they can give extra blankets, if necessary, or they can order extra rations and things of that sort on medical authority.

3673. And they could allow, I suppose, certain small irregularities as regards pay, some small charges?—No, not as regards pay; they must come to the Examiner; no, it is chiefly in connection with what you may call the local services of troops that they have certain powers.

3674. The travelling charges, I suppose, for instance?—No; all these would be audited by the Examiner; the General of a district would have no power in the matter.

3675. Not to allow anything in the way of divergence at all from the regulations?—No, nothing under these heads.

The witness withdrew.

Adjourned till Thursday, the 27th February, at 11 a.m.

(For the Eighth Day's Evidence. *see* p. 167.)

At the India Office.

THIRTIETH DAY.

Tuesday, 4th August 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

Sir WILLIAM WEDDERBURN, Bart., M.P.
Field Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. COLIN G. CAMPBELL, *Secretary.*

Lord CROMER, G.C.B., G.C.M.G., K.C.S.I., C.I.E., formerly Financial Member of the Council of the Governor-General of India, called in and examined.

Note.—Questions 13,641 to 13,681 refer to the general question of Apportionment of Charges.

13,503. (*Chairman.*) Lord Cromer, I think you have had considerable experience of service in India, have you not? Would you tell us what posts you have held there?—I was private secretary to Lord Northbrook, the Viceroy, from 1872 to 1876, that is four years; and I was Financial Member of Council from 1880 to 1883; that is to say, I have seven years' Indian experience, with an interval of about four years out of India.

13,504-5. Were you not succeeded by Sir Auckland Colvin as Financial Member of Council?—Yes, I think so.

13,506. We have heard the opinions of two former Financial Members of Council, Sir David Barbour and Sir Auckland Colvin, on the relations between the Finance Department and the spending Departments in India. You have, I think, seen their evidence?—Yes, I have seen their evidence. I should wish to make one remark about that. I observe Sir Auckland Colvin says that the condition of affairs as regards financial control generally has changed so much since 1885 that the testimony of anyone who has not had any Indian experience since 1885 is not of much value. Unfortunately my experience dates before 1885, so that, if Sir Auckland Colvin's view is correct, I am afraid my evidence will not be of much value.

13,507. I think Sir Auckland Colvin's opinion, as far as I recollect, was directed to this point, that since 1885 there had been a considerable change of policy in consequence of the relations between Russia and England, which, perhaps, had led the Viceroy to incline rather more to policy than to finance?—Yes, I understood such was the case. Of course, I am unable to give any evidence on that particular point, because I have not any special knowledge on that subject.

13,508. We bear in mind that it is now a considerable time since you held office in India, and the Commission would not, therefore, ask your assistance in examining details of finance; but they would be glad to have the benefit of your experience in considering the general principles of Indian financial administration. Perhaps I may ask whether you are of opinion that the control of the Financial Member of Council over expenditure is as complete as that of the Chancellor of the Exchequer at home?—I do not think I can add anything to what the other witnesses, who have been before the Commission, have said on that subject. Theoretically the position of the Finance Member of Council is, except in a few details, very much the same as that of the Chancellor of the Exchequer in England; but there can be no doubt whatever, I think, that the Financial Department in India does not occupy the same predominant position in India that the Treasury does in England. You are probably more familiar than I am with the causes which have led to the peculiar position of the Treasury in this country; no doubt, one of the causes, which is brought out in the evidence, is the fact that the Chancellor of the Exchequer is responsible to Parliament, and that he has to defend any measure he may bring forward before a body of men, of whom a considerable number are there purposely with the object of opposition. But I do not think that that is the sole reason. I speak under correction upon a point of this sort, but I should say that the peculiar position of the Treasury in this country is very largely due to the fact that for a great many years the Treasury was notoriously supported by one of the most powerful ministers in this country; of course, I mean Mr. Gladstone. I allude to this point because I see the whole of this evidence turns a good deal upon the personal element of government; and although, of course, the personal element is more important in India than it is under the parliamentary system; at the same time, under whatsoever system you act, it is perfectly impossible to get rid of the personal element. It will always, in my opinion, be a most important factor of the whole situation.

13,509. What you say about the support given to the Treasury by a very powerful minister is no doubt true; and I think with you that the point is important in considering the relative positions of the Treasury in England and the Finance Department of the Government of India. I think I should carry it rather further, and I should say that, the strong position of the Treasury is due to the fact

Lord Cromer, G.C.B., &c.

4 August 1896.

of the prime minister being usually the head of the Treasury, and of leaders of parliamentary opinion being almost always chosen for Chancellor of the Exchequer, owing to the need for great care in the administration of finance which was caused by the tremendous stress laid upon England by the great war. I need hardly remind you that one of the great supporters of the Treasury before Mr. Gladstone was Sir Robert Peel?—Yes.

13,510. And of all ministers, I suppose, in this century, that might be quoted as economical ministers, Sir Robert Peel's name comes first to one's lips?—I only allude to the fact, that under the parliamentary system you cannot get rid of the personal element. It is a mistake, I think, in dealing with Indian finance to suppose that, whatever system you adopt, you will not still mainly rely upon the influence and idiosyncracies of the various high officials who are engaged in the government of the country; that is all I meant.

13,511. Would you go a little further than that, and agree that part of the power of the Finance Department, which is represented by the Chancellor of the Exchequer in England, is derived from the fact that all measures increasing in any notable degree public expenditure have to go before Parliament; and that, therefore, the Government of which the Chancellor of the Exchequer is one, is always checked by the fact that close behind them, if they differ from the Chancellor of the Exchequer, is the criticism of Parliament?—I think there can be no doubt of that fact. I do not mean to say that the interest of Parliament is always in the direction of economy; that is quite a different matter; but the mere fact that a man has to get up and defend his measures before 600 or 700 people, of whom, roughly speaking, one half are disposed to be hostile critics, and that must be the case under party system of Government, makes him extremely careful of what he proposes. I think of that there can be no doubt whatever.

13,512. And further than that, it makes his colleagues satisfy themselves that they have got a good parliamentary case, before they run into expenditure?—Clearly. But I do not think that that helps us forward very much, because we have not a parliamentary system in India.

13,513-4. I want to draw the distinction. You, as Finance Minister, had not such support as that in India?—Not the smallest doubt of it.

13,515. That support is a very important element in the financial system of England. though I quite agree with you that it does not always follow that it is on the side of economy?—Certainly.

13,517. At the same time we must remember that a great part of the power of the Treasury of England was built up at a time when the House of Commons was very economical, during, say, two-thirds of the present century. Of course, there is another side of the question, that the Chancellor of the Exchequer exercises this power, which sounds very great, under effective checks. In case of difference of opinion between himself and his colleagues at the head of the spending departments, there is first of all an appeal to the Prime Minister, and, at a later stage, to the Cabinet; while Parliament itself, as I have just been saying, very often overrules the Government in the matter of expenditure. These checks very effectively control the tendency of the Chancellor of the Exchequer towards economy. Would you describe to us the checks or supports under which the Indian Finance Minister exercises the power of control?—I suppose I need not go into the merely technical portion of the precise powers of the Secretary of State, of which you have been already informed. You mean the more general aspect of the case?

13,518. Yes, if you please?—Of course a thorough answer to that question would take a considerable length of time. I think I see running through this evidence an idea that the Indian Council consists merely of a number of heads of departments, each of whom is interested in pushing forward the views of his own department and nothing else. In one of Sir David Barbour's answers that is almost stated in so many words. That certainly is not my conception of the Indian Council, neither did the system work in that way when I was in India. Of course, every member of Council has to be acquainted with the facts of his own department, and to put forward the interests of his department exactly as the First Lord of the Admiralty and the Minister of War do in England, but he certainly is expected to do more than that. I regard him as a member of a government, who are collectively responsible for every act they undertake. When I was Financial Member of Council, I considered myself, when once a decision had been taken, as almost equally responsible for a decision of a large nature in the Military Department as for a decision in the Financial Department. I did not myself always advocate the financial side. I was quite willing to admit that the political or the military or some other side predominated over the financial. I must say that in my own day I always found my collegues quite equally willing to give due consideration to the financial side of the question; in fact, I think it was almost a cardinal principle, that the question of balancing expenditure and revenue came not, perhaps, before everything, but it was one of the most important considerations which had to be taken into account. I always found the Council—every member of it, I may say—very willing to listen to that argument, and to give due weight to it.

43,519. My recollection of Sir David Barbour's evidence agrees very much with your view of it. I think it is he who says in one place that at one time he found himself practically only supported by the legal member, which represents with regard to the time when he was Finance Minister, an impression left on his mind rather contrary to that which you derived during your time?—I can quite understand that if there were a particularly unfortunate combination of Council, if two or three important members of Council urged views which tended towards expenditure, and if those views were supported by the Viceroy, then certainly the financial control would be very materially weakened. I have no means of saying whether that has happened, but the same may be said of almost any system of government. Even in England, with the Parliamentary system and the audit and the whole of the paraphernalia for checking extravagance, if you happened to have a Cabinet which wished to take measures which would lead to large expenditure, I imagine the views of the Treasury would go to the wall.

13,520. Yes, exactly. I think another point upon which either Sir David Barbour or Sir Auckland Colvin—I forget which—was inclined to lay stress was that those responsible for the financial government of India should always bear in mind that India is essentially a country in which times of depression follow times of prosperity; and that therefore the financial administration in times of prosperity should look forward to and anticipate the time of depression which will very probably follow. But he thought that, as a matter of fact, if there was in a times of prosperity a surplus, we will say, of a million or a couple of millions, heads of departments, being naturally anxious for the efficiency of their own department, were anxious to spend up to the hilt, instead of favouring the maintenance of a considerable balance in anticipation of less favourable times?—That is undoubtedly the case. I have had to deal with exactly the same phase of thought in Egypt. There is no doubt that India is especially exposed to lean years and fat years, and account must be taken of that.

13,521-2. He thought his colleagues did not give sufficient weight to that consideration, and that that was a difficulty to which the Finance Minister was exposed?—Of course, that brings in the personal element. No doubt, as everybody who has been concerned with finance knows, the moment there is a surplus available, there is a much greater pressure by the spending departments to get hold of it. I have had some little experience of these matters in India and Egypt. Up to a certain point, but not very far, you may make a very cautious estimate, that is to say, a rather low estimate, of revenue, and an estimate of expenditure which leaves a large margin, so that you have your margin not shown upon the face of the estimates, but hidden away a little.

13,524. May I ask you whether, in your time as Finance Minister, you had any traditional method of making your estimates? that is to say, did you base your estimate upon an average of the revenue of two or three past years, or did you base it entirely upon what you thought would be a fair calculation of the produce of the ensuing year?—I think the averages were taken; except in the case of opium, in which case we went rather upon current prices. That is a very important part of the estimate, and you had to be guided by current prices more than by anything else, of course. But in the Indian Budget, the real figure that is of importance on the expenditure side is what you take the rupee at—that is the really important figure.

13,525. Allowing that the powers of financial control entrusted to the Finance Minister are theoretically complete. do you think that they are complete also in practice and operation? I gather from what you have said that that must depend very much upon the personality of the Finance Minister and of the other members of Council?—I have always

had an impression of that kind. To a great extent I think it must necessarily largely depend upon the general tone of the Council. I see great stress is laid in the evidence upon the power of the Viceroy, and the power of the Viceroy is very great in India, probably greater than that of the Prime Minister in England—it is very great indeed. Moreover, the Viceroy fulfils a function in India which is scarcely, I think, to the same extent fulfilled by the Prime Minister in England—a very useful function—and that is, to give a certain unity of action to all the departments. In England, it has been very often brought to my own notice that there has been rather a want of unity of action in the various departments of Government. The Viceroy sees a great many more papers than the Prime Minister, therefore he is able to impart a great deal more unity of action. He holds rather the same position as the Chancellor of the Empire in Germany, bringing all the departments together. His power is very great.

13,526–7. If I understand your impression on the point, it is this: The Prime Minister in England, so far as the administrative government goes, is rather a person of appeal; in India the Viceroy is rather the living head of the administration, originating and controlling it?—That is very much the case, no doubt. Every big point in every department must, or certainly ought to, go to the Viceroy; the result is that he sees pretty well everything of importance to a greater extent than is the case with the Prime Minister here, I think.

13,528. In answer to Question 1833 Sir David Barbour says, "I do not wish to see the position of the Finance "Minister strengthened in so far as all questions of "expenditure must come before him. I think that is "provided for." So far, I think he means, the theoretical control is complete, but he goes on, "But I certainly think "that something is, I will not say necessary, but desir- "able, which would ensure greater attention being paid to "financial considerations in connexion with the Govern- "ment of India. I do not know that I am prepared to "suggested alterations in rule or machinery that would "secure that; but I have no doubt that something is "desirable, if it can be obtained"?—That is the key-note that runs through the whole of his evidence. Everybody wants to adopt some system which will ensure that financial considerations shall be fully weighed, before any action is taken. But neither Sir David Barbour nor Sir Auckland Colvin appear to have made any practical suggestion as to how that can be done. I must say, after reading through the evidence, that, although I quite admit the desirability of strengthening the Financial Department, if it can be done without running into other evils, I have not seen any suggestion which will entirely meet the case. It is possible that in some small points of detail—I shall have one or two to indicate myself—something may be done; but, broadly speaking, I do not see any suggestions which will ensure that consideration of financial affairs, which is so desirable.

13,529. As I have read their evidence, it appears to me that they see no method by which the power of the Finance Minister in India itself could be strengthened without impairing the due authority of the Viceroy; but they seem to think, that some more active support might be given to the Finance Minister from home by the Secretary of State. Do you not think that that is the gist of their evidence?—Yes, I think it is.

13,530–1. I should like to obtain your view upon that point about strengthening the power of the Secretary of State?—I confess that I look with a certain amount of dislike upon anything which would transfer the power of government from India to England, whether it is exercised by Parliament, or by the Secretary of State, or by any other body; that is to say, though they might wish to deal justly and even generously by India, I rather doubt whether any authority in England would be able to take into sufficient account local considerations or to interfere with real advantage to the public. I do not mean to say on that account that I would like to weaken the powers of the Secretary of State as they exist at present, and I agree that the Secretary of State is the natural ally of the Financial Member of Council. I found it so in my own experience. But the action of the Secretary of State I found more useful about small things than about big ones. For instance, pressure would be put on to strain the rules as regards a pension, or something of that sort, a small affair, and the Financial Member of Council would be obliged to give in; it was in that case rather an advantage to be able to refer to a distant authority with the almost certain knowledge that the claim would be refused. I cannot remember in my own experience, as regards financial affairs, any matter of really first rate importance where the interference of the Secretary of State was required. I should not object at all to increasing the power of the Secretary of State, if it is done with great care and after full consultation with the Government of India; but, as I say, the general tendency should be rather to endeavour to govern India more in India and not more from England, on account of the great liability of a governing power in England to mistakes, not from any sort of intention, but simply from want of knowledge of the facts.

13,532. (*Sir James Peile.*) I suppose the Secretary of State's power is, in fact, complete already?—Yes, I suppose so.

13,533. It is rather his increased interference which you would regard as a danger?—Yes, to some extent. *A propos* of that, perhaps I may anticipate a question of the Chairman. All that class of expenditure concerned with the question of little wars is a matter of very great importance. With your own financial experience you must know that, whether in England or India, the main thing is to interfere at the initial stage of the proceedings. Very often a step is taken, of which nobody concerned at the moment sees its very grave financial importance. It is not referred to the Treasury; no rule obliges it to be referred to the Treasury; it is possible that even the Chancellor of the Exchequer, or the Financial Member of Council in India, is not consulted. A step is taken, and from that flow many consequences, many of which are of the very greatest importance financially. I do not see how the Secretary of State can check that sort of action. These little wars may very often be checked at an early stage by giving some instruction to a subordinate officer; but when once an error is made, a number of consequences flow from it, and it is impossible to stop. Exactly the same thing happens in England.

13,534. (*Chairman.*) The only thing is, that we are not exposed here to the same number of small wars?—You have had a good many little wars during the last few years. I do not want to go into particulars, but I think you can remember cases where very important matters were settled without any official consultation with the Treasury.

13,535. Oh, certainly, and, as you say, very often one despatch will give a bias to all subsequent policy, which cannot be recalled?—What, no doubt, is most necessary is that everything should be done to give the Financial Member of Council early information of all that is going on. There, again, a great deal depends upon the Viceroy. When I was Financial Member of Council, I think I may say that I was certainly very fully informed of all the important acts that were going on in every department. If anything came to my own department which did not, under the regulations, necessitate a reference to any of the other departments or to the Viceroy, yet if I thought it important that the Viceroy or another department should be informed, I noted on the papers "to go to the Viceroy," or to the other department. The Viceroy in some cases marked papers to be circulated to the Members of the Council, as mere matters of information. That is one safeguard, and undoubtedly the more that system can be adopted of keeping the Financial Member of Council fully informed the better. In England, I read in the evidence that you mentioned in connexion with the Education Department, that important steps are sometimes taken without the Treasury being fully informed beforehand; is not that so?

13,536. Yes; I gave the education policy as an instance, in which important financial results may follow even here?—The system which is followed in England of keeping every member of the Government informed on foreign affairs is very perfect—more perfect than anything in India—that is, by the circulation of telegrams, with which you are acquainted, no doubt.

13,537. I think we may look upon one thing as inevitable, that the practical control of the Finance Minister is very much reduced—if it is not reduced to nil—if the Viceroy takes the side opposed to him?—Yes, very much impaired, no doubt; very much impaired.

13,538. And the supreme power of the Viceroy is the leading characteristic of Indian administration. Therefore, we may almost take it for granted that no rules of office could give the Indian Finance Minister a check over, or veto on, expenditure in opposition to the Viceroy. I mean we may put that aside at once as an impossibility?—Yes, I think so; but I think I should turn it another way. I do not think that any rules would do very much to help the Chancellor of the Exchequer in England, if all his colleagues were against him; is it not much the same thing?

13,539. The chief difference between the financial government of England and India, is this: the Chancellor

Lord Cromer, G.C.B., &c.

4 August 1896.

of the Exchequer here has, either for or against him, Parliament close at hand; the discussions in Parliament are present not only to himself, but to all his colleagues. There can be no similar check in India?—Quite so; no doubt that is perfectly true.

13,540. With your knowledge of India would you say that this overruling power of the Viceroy is a necessity of our rule in India, and that it is a factor of administration to be accepted, without question?—That is a very broad question to give a "yes" or "no" answer to. I confess, broadly speaking, I should think it would be unwise to do anything to impair the power of the Viceroy; but it is really so vague a question that it is very difficult to give a distinct "yes" or "no" answer to it.

13,541. I am anxious rather to get the tendency of your opinion?—Well, the tendency of my mind—and I think the tendency of the mind of almost everybody who has been behind the scenes in India—would be that it would be unwise to impair the power of the Viceroy. I observe, as I say, that a good deal of this evidence is manifestly given under the impression of what apparently has taken place during the last few years. I do not offer any opinion upon that at all. Supposing certain evils have occurred during the past few years—let us assume that that is the case, I do not say that they have occurred—the maxim that hard cases make bad law would apply. It is a bad thing to change your system, because some particular evil may have been predominant over a short period.

13,542. I quite admit that the question put to you is a very broad one. The reason I put it is this; you will see from the evidence of such high authorities as Sir David Barbour and Sir Auckland Colvin, that, though neither suggests any remedy, yet they do think there is a weakness in the financial system, and that it should be strengthened from some quarter or other; and they point out that the position of the Finance Minister is very much impaired when the Viceroy is against him. When the Commission comes to consider that evidence, they must form an opinion whether there are any means by which on important financial questions the balance may be redressed in that case; but if such a high authority as yourself thinks it would be very unwise to impair the Viceroy's authority, it is rather important that we should know your opinion?—I think I should certainly stick to the answer that it would be undesirable on the whole—risk for risk.

13,543. Do you think that the composition of the Council could be advantageously changed?—I have got something to say on that point which, I think, is very important. All my experience in India and in Egypt also, has shown me the enormous importance of selecting the right man for the right place. It is, perhaps, more important in oriental governments, such as India and Egypt, than it is in England, though it is important enough everywhere. As the Commission are aware, the Indian Council consists partly of Indian officials and partly of Englishmen nominated from England. On the whole, that is the wisest composition I think that you can have. Both classes bring different sorts of experience to bear upon the different questions, and I should be very sorry to see that composition in any way changed; but there is one very important point to be noted, and that is, that it is more easy to get the pick of the Indian Civil Service into the Council than it is to get the pick of the English services, by which I mean not merely the public services, but the legal, and so on. It is more easy, I say, to get the Indian officer than it is to get the Englishman of equivalent ability. I am not quite sure whether I express my view quite clearly. The point is, I think, that the Indian civilian enters into his career young, and he looks forward to being appointed a member of the Council as one of the prizes of his profession. I do not know whether it is the case, but I should very much doubt if there is a case on record of any Indian civilian having refused to become a member of Council. The case is altogether different as regards the nominee from England. He is presumably a man between 40 and 50 years of age; he probably does not like the idea of going to India on account of the climate; most English people have rather an exaggerated idea of the evil effects of the Indian climate. Then he is probably married and has got children; he has to entirely change his private family life. He breaks off his career in England, whatever it may be, and when he comes back he is rather stranded. All that makes it much more difficult to get equally capable men from England than from India. On the other hand, I should say, there is, no doubt, a strong opinion among the natives of India that these appointments are highly paid, and that, in fact, many qualified men are looking out for them, instead of its being very difficult to find a qualified man. In my own experience I have exactly the same thing to deal with in Egypt. The real difficulty is to get the right man to take the place. There are always quantities of men who want the place, but who are not suited for it, that is abundantly clear; but there are very few who are qualified for the place; and, so far from these men being easy to get, exactly the opposite is the case. In Egypt we have solved the difficulty, the salaries there being lower than they are in India, by appointing young unknown men; and the system has worked fairly well. Of course, it is a very different thing getting a man who is young and unknown and has his reputation to make, from having to choose a man who is already half way up the ladder of his career, so to speak. I cannot say that taking very young men would do for India, because there are some appointments (one or two of which I have in my mind, such as the Legal and Financial Members of Council) of very great importance, in the case of which I think it would be too great a risk to adopt that system; but I do think that so long as the present composition of the Council remains, it would be almost worth while to do something to make the places of Members of Council, certainly in so far as those appointed from England are concerned, more attractive. They are becoming less attractive every day in consequence of the fall of the rupee. I think the salary is now 4,500*l.* a year for a Member of Council. The fact of its being so low, under all the circumstances, is just enough to make a capable man hesitate to go; and, certainly, it would be very well worth the while of the Indian Government and of the Indian taxpayer to pay a few thousands a year more, in order to get the very best men that can be got for the place. That I have no doubt about.

13,544. I rather understand the tendency of your answer to be, in the first place, that it is better to exhaust the Indian services, and that the Viceroy or the Secretary of State should satisfy himself that there is nobody fit for the place in the Indian service; that is to say, you give the preference rather to the Indian service?—Not quite. I do not want to draw any invidious distinction between men appointed from England and men appointed in India. We have had able men, whether they have been appointed from England or whether they have been appointed in India. Take, for instance, the Financial Member of Council; I should be inclined to say, appoint the best man in England or in India. I think it would be unadvisable to change the constitution of the Council to such an extent as to have it wholly composed of men of Indian experience with only the Viceroy with English experience. I think that would be going too far. The merit of the Council is, that it contains men of both Indian and English experience; they both serve very useful purposes.

13,545. Yes. Then the question I was going to ask you was whether you do not see an advantage in a certain strain of external blood coming in?—Most distinctly I do. Of course, the Member of Council appointed from England has the disadvantage of no local knowledge. On the other hand, the connexion with England is so close now, that it is a very desirable thing that he should have a certain amount of knowledge of the way in which matters would be viewed in England; that he should be more or less in touch with the views likely to prevail in Parliament; a number of considerations of that sort will suggest themselves to you.

13,546. I think, as a general rule, that appointments from England are confined to the Legal Member of Council and the Financial Member, are they not?—It was those two that I had specially in my mind. There are other appointments made from England, but they do not bear upon this question. The difficulty I see in the way of adopting my suggestion is, that it will be certainly very invidious to make a distinction in the salary. I know only one way of making a place attractive, and that is by increasing the salary; but I think it would certainly be invidious to make a distinction in the salary between those members appointed from England and those appointed from India. The difference in their position is, however, very great. The improvement need not, moreover, necessarily be in the form of salary; it might be in the form of pension. Men appointed from England have nothing further to look forward to, whereas the man appointed in India gets his salary and his pension afterwards. Their situations are wholly different. Then also, you remember, that some of the judges appointed from England have special terms as regards pension, just in the same way as the consular judges have special terms; that is to say, they enter with some 10 or 12 years' service to the good.

13,547. Quite so. I think the office of Finance Member of Council has been very evenly divided since its creation between members of the Indian Civil Service and men appointed from England?—I think it has. I do not want to lay down any principle that any special member of the Indian Council should be appointed from India or England. When you find a capable man, take him where you can get him. If the Financial Member of Council is appointed from India, I certainly think it is desirable to appoint the Legal Member from England. I think there should be an admixture of both elements.

13,548. If the Viceroy's tendencies are towards economy of course the power of the Finance Minister is established; and, if you are satisfied with the general rules under which the Finance Minister exercises his powers, there is nothing more to be said. But, of course, the Viceroy may lean in the contrary direction, and, if so, does that constitute a serious danger to sound finance?—I think I have already answered that question in the course of my remarks. No doubt nothing in the system of the Government of India, or of any government conducted on similar principles, can compensate for a want of frugality and thrift at the head. There can be no doubt about that. If the Viceroy, and the members of Council round him, are bent on economy, and are thoroughly frugal and thrifty, that tendency will percolate down throughout the whole of the service. Let me put an analogy of what is actually happening in Egypt at the present moment. My position there, as you know, is a very anomalous one, and cannot be defined nearly to the extent that the Viceroy of India's can; but I have not the least doubt that if I had persistently for the last 10 or 12 years exerted my influence, whatever I have, on the side of extravagance, Egyptian finance would not be in the state in which it is now. On the other hand, if I had never looked at anything else but the financial side, I should have very much discouraged the heads of other departments, such as the military, sanitary, and so on. It appears to me that the Viceroy should do something of the same sort in India. He should lean towards finance with a view to seeing that expenditure and revenue balance; but at the same time not lean to it to such an extent as not to listen to any but financial arguments; he should hold the balance with a bias in favour of economy.

13,549. My question was not so much directed to the fact of the Viceroy being economical, because the most economical Viceroy may, when a difficulty arises, especially a military difficulty, err in the direction of going too suddenly into extravagance?—He cannot help himself. Take an English analogy; Mr. Pitt conducted the longest war, and probably spent more money than any minister England has ever had; and all his tendencies were towards financial reform and economical administration.

13,550. Quite so. But I am looking for the possible remedy for the weakness of the Finance Minister; and supposing, we will say, that the Viceroy is very much impressed with the necessity of action which would involve expenditure, he, having that bias would hardly be the best interpreter of the arguments and opinions of the man who opposed him, would he? You would not choose the man who is opposed to you to interpret your arguments as a rule?—I do not quite follow the drift of your question. I can only answer it in this way: I would rather state my own arguments than allow anybody else to state them; I have no doubt about that.

13,551. I am leading up to this question, whether in your opinion it would be desirable that, when the Finance Minister and the Viceroy differ, it should be open to the Finance Minister, which I understand is not the case at present, to write and explain his own arguments to the Secretary of State, it being always understood that they pass through the Viceroy?—Yes, I fully understand your question now. I have given a good deal of attention to that point in reading through this evidence, because no doubt it is a point of considerable importance. Certainly every facility should be given to the Secretary of State to have at his disposal the opinions, not only of the Financial Member of Council but of every Member of Council, and, as the Commission are aware, each Member of Council now can write his dissent; but it has been objected, and I think there is some force in that objection, that that is a very formal means of bringing forward their opinions; certainly, when I was in India, it was very rarely used. I think Sir Donald Stewart will confirm me in that. It was very rarely used, and there was rather a disinclination on the part of any Member of Council to separate himself from his colleagues; the power to write a minute is, I conceive, used more as a protest than anything else. If there is the least difficulty about the Secretary of State obtaining the views of the Financial Member of Council, I think the procedure might be altered a little in that respect, but I certainly would not alter it in the shape of allowing Members of Council to write private letters; I think that is a bad form of procedure. Why should not any Member of Council who likes, write a confidential memorandum? As it stands at present a minute is a very formal affair; it may be published and laid before Parliament, and, no doubt, written under those circumstances, there are a good many arguments and many methods of putting the same subjects, which any official would rather hesitate to state fully when he knows that what he writes may be published. In the diplomatic service, for instance, if every single despatch or telegram sent by the various diplomatic agents to the Foreign Office were published, the government of the country could hardly be carried on. I should have thought, therefore, that the Members of Council might have the right of writing confidential memoranda, which should not be published without their consent. When I write anything to the Foreign Office and put "Confidential" on it, I know very well that it will not be published without my consent. I write frankly with all the freedom of a private letter, and it is very desirable, I think, that that should be allowed in India, so that the Secretary of State may be fully informed if a Member of Council disagrees with the Viceroy or with any of his colleagues or with the Secretary of State himself, which may certainly occur.

13,552. (*Sir Donald Stewart.*) Are there not occasionally departmental notes, which are not quite the same thing as the formal dissent?—Quite so; those are written with much greater freedom.

13,553. We used to call them initial papers?—Quite so; that system might be somewhat extended. In an official world like India, anything that can be done to get the officials to express their opinions before action is taken, and to ascertain whether they have any objections to make, is a very good thing; there is no doubt about that. I myself have served the Government a good many years. I think I have disagreed with almost every Government I have ever served; I have never found the slightest difficulty in putting my views before them.

13,554. (*Chairman.*) What you mean is that, in the discussion with the Government, you put fully before them the arguments that tell against every line that may be adopted?—Quite so. I have never found the slightest difficulty in doing so. I have served under Liberal ministers and under Conservative ministers, and I have always found them only too glad to have remarks, if put forward in a proper manner and with a certain amount of discretion; they are not intended necessarily for publication.

13,555. I understand that in your view it would be desirable that different Members of Council should have the opportunity of expressing their views in a form that would reach the Secretary of State under their own hand and in their own expression?—I think so.

13,556. (*Sir William Wedderburn.*) And these would be seen by the Viceroy?—Yes, certainly.

13,557. (*Chairman.*) That I think is deemed essential in all the evidence on that point?—I think nothing should be sent to the Secretary of State unknown to the Viceroy.

13,558. Do you agree with Sir David Barbour's answer to Question 1858, that the position of the Viceroy has tended to become more powerful, as time goes on, rather than weaker?—I noticed that answer of Sir David Barbour, and I confess I was rather surprised at it. I cannot say what has happened during the last 13 years, but I thought the opposite was the case. I always imagined that the telegraph had rather weakened the power of the Viceroy. I cannot say whether that is the case now.

13,559. (*Mr. Buchanan.*) I think Sir David Barbour was referring in that answer to "his authority inside his Council"?—I beg pardon, I misunderstood the question.

13,560. (*Chairman.*) I think there is other evidence which shows what is in his mind. He has spoken in one place—I think he was the witness who did so—to the effect that the great devolution of provincial affairs to the Provincial Governments has left the Viceroy a great deal more leisure to deal with questions of policy?—Yes.

13,561. That, I think, gives the clue to what he means by saying that the Viceroy is becoming more powerful?—I see.

13,562. But, so far as that is the case, that is rather an argument in favour of letting the views of the Members of

Lord Cromer. G.C.B., &c.

4 August 1896.

Council percolate to the Secretary of State, is it not?—Yes. I think that anything that keeps the Secretary of State very fully informed must of necessity be a good thing.

15,563. You have already given us an opinion upon the difficulties caused to a Finance Minister by small expeditions, namely, that it is very difficult for him to see at the first moment what is coming; but do you think that full weight would be given by the Viceroy and the Council to the Finance Minister's plea for graduating expenditure or spreading it over some time—a sample of what is in my mind is, such a charge as that for frontier defences?—You are not speaking of wars?

13,564. No, I am not speaking of large expenditure, the policy of which is admitted. Of course, one knows that in every financial system discussion takes place when expenditure is undertaken. Supposing seven or eight millions have to be spent, if that sum could be spread over seven or eight or nine years, it could probably be done without adding to taxation under ordinary circumstances. On the other hand, the party who advocate expenditure are generally anxious that it should be incurred off-hand. Do you think that in the Indian system the Finance Minister's plea for not incurring a deficit would have sufficient weight attached to it?—I have already said that in my day I think the Council—every member of it—was very fully impressed with the weight of financial arguments, and I cannot say that I ever had what I may call unfair pressure put upon me to discard financial considerations; but, whether that will always be the case or not, it is quite impossible for me or anyone else, to say.

13,565. It seems to me an important question, as regards India, for this reason. The evidence has established to us the difficulties and risks attending increase of taxation in India, which are much more obvious than they are in England?—Manifestly.

13,566. Of course they involve such dangerous questions as those which have arisen recently between Lancashire and India. Would you say that some inconvenience, even some risk, ought to be encountered, in order to avoid raising such dangerous questions?—Broadly speaking, I should say yes; but of course it depends enormously what the risk is. I rather deprecate the view which is put forward in the evidence—and I must repeat this—that the Financial Member of Council must always take up the financial side of the matter, and that the Military Member of Council must always take up the military side of any matter. That is not what has always happened. I can say in the presence of Sir Donald Stewart that many of the military officers who were there when I was in India, were very deeply impressed by the great difficulty in Indian Government, namely, the undesirability of increasing Indian taxation; and their experience was of very great importance in connexion with financial affairs. Outside Indian experience, again, I come back to the point that it depends enormously upon the individuals.

13,567. Do you think that the presence of two military authorities in the Council tends to give too much weight to the military side?—The theory always was that the Military Member of Council was rather to act as a check upon any proposals for excessive military expenditure put forward by the Commander-in-Chief. That was the theory; was that not so, Sir Donald?

13,568. (*Sir Donald Stewart.*) Quite; they were supposed to be antagonistic?—I can quite understand that, if the two are fully agreed and the Viceroy backs them up, then it is a bad time for the Treasury.

13,569. (*Chairman.*) But on the whole would your experience be that that object was gained?—I do think, looking at it from quite a broad point of view, that in a small Council the presence of two military members is rather excessive; but I do not quite see my way to recommending anything better. You cannot possibly exclude the Commander-in-Chief from the Council, and I do not see how you can exclude the Military Member either. I do not see my way to change the present composition of the Council in that respect.

13,570. Did you yourself find that the supposed object was attained, and that the Military Member of Council was a check on the Commander-in-Chief in practice?—My Commander-in-Chief never wanted checking; that is the only answer I can give to that.

13,571. You will have seen from Sir David Barbour's evidence (Q. 1887) that he does not advise direct communication between the Finance Minister and the Secretary of State. At the same time he admits that there is want of close touch between the Financial Department in India, and the controlling financial authorities at home; do you agree with him on that point?—I think the answer I have already given about communicating with the Secretary of State rather covers that, does it not? I do not think I would encourage any further communication except that which I have indicated; that is to say, I do not think the writing of private letters between subordinate officials is a very good way of carrying on business.

13,572-3. I think Sir David Barbour had in his mind the possibility of strengthening the Council at home on the financial side, and I think that is what he meant by the rather singular expression that there is a want of close touch between the Financial Department in India, and the controlling financial authorities at home. Assuming that that is his view, do you think it would be possible to strengthen the financial advisers of the Secretary of State at home so as to enable him to be a more expert and instructed chief to the Finance Minister in India?—It is very difficult to answer a question like that. Certainly I think that it is a very desirable thing to have a certain number of members in the Secretary of State's Council who attach the utmost weight to finance. On the other hand—I speak under correction about the Secretary of State's Council, I have never had anything to do with it—I imagine that, if you appoint experts to a large extent in London, their tendency would be to govern India rather too much from England. Of course there will be objections to whatever system you adopt in these matters; that has always to be borne in mind; but I am very much impressed with the undesirability of endeavouring to manage India entirely from London, although I think there should be, in the Council, a certain element that will give very great weight to the larger considerations.

13,574. You have had a very large financial experience; do you not think there is rather too much tendency to lay stress upon what is called the financial expert? What is a financial expert?—Yes, I should think so.

13,575. The point is rather important, if you are considering the question of strengthening the council at home by financial experts, which I take to be a suggestion which crossed Sir David Barbour's mind. First of all, I am not quite clear what a financial expert is, and next, if you make up your mind, I doubt very much where you would find him?—There are two wholly different orders of ideas; that is to say, the financial expert, a man who understands accounts and the technical parts of finance; and the other, a man who has a financial head on his shoulders, who is fully convinced of this fact—that he must not spend more than he receives.

13,576. The last man is the one who is really of service as a financial adviser?—On the whole he is the most valuable no doubt.

13,577. And he must have common sense with a certain amount of experience?—I quite agree.

13,577*a*. (*Mr. Buchanan.*) Did not Sir D. Barbour lay stress upon this fact, that for a good many years past there has not been on the Secretary of State's Council any man who has been Finance Minister in India?—Is that the case? Was not Sir John Strachey in the Council for years?

13,578. His answer was that Sir John Strachey had retired?—Sir John Strachey was here for years; also General Strachey who, though not Finance Member of Council, yet had a very large knowledge of finance. I do not remember any other case.

13,579. (*Chairman.*) Did not Sir John Strachey precede you, Lord Cromer?—Yes, he preceded me; he left India in 1880.

13,580-1. In answer to question 2176, Sir David Barbour made another suggestion; he threw out the idea that questions of expenditure might be referred to the Minister of Finance and two other officials specially appointed for the purpose. I really do not know that he laid great stress upon that, but we were rather pressing him—as he had experience in the practice of financial control—for remedies?—In Egypt we have got a little committee, just of this nature, which is useful; but I think the circumstances differ so very much from those in India that I am not quite certain that it would be of the least good to apply such a system to India. In Egypt there is a small Committee, consisting of the Finance Minister, the financial adviser, and a few departmental officers, most of them in the Finance Department, who, before any financial proposal comes before the Council of Ministers, examine it and make their report. They have done rather well. The conditions of government in Egypt are such as I need not

dwell upon just now. But at any rate they are so different from those of India that I do not think the same system could be applied.

13,582. (*Sir Donald Stewart.*) Would not the value of a suggestion of that sort depend on the men composing the Committee?—You can never get out of that; that is what we always come round to.

13,583. (*Chairman.*) I do not quite see the advantage of that. This small council would stand outside the Indian Council; would it carry any more weight than the Indian Council?—I do not advise it; I do not see the object of it.

13,584. You have already given an opinion which answers this question, but I should like to recite it to you from Sir David Barbour's evidence. He sums up his comments on Indian finance in his answers 1928 and 1929: and I think he considers the chief weakness of Indian finance to be that there are too many officers among those who make and direct policy, interested in efficiency—that is, in expenditure; too few who give attention to finance, and who therefore know and appreciate the instability of Indian finance; have you any comments to offer on this point?—Throughout this evidence there is always the contrast made between economy and efficiency. It never seems possible to anybody that economy and efficiency could go together. I have sometimes found the most economical administration also most efficient. That is by the way. I have already remarked, with reference to the evidence of Sir David Barbour, that I rather demur to the view that the Council consists of a number of high officials, who merely represent their own departments and nothing else. If that is what they do, then they do not fulfil what appears to me to be their duty. I think they should rise rather above the departmental view, and look at general interests; they should, in fact, to a certain extent, keep the purely departmental view of their subordinates in check. No doubt, as probably nobody knows better than you do, in every department of every Government that I have been associated with, there is a strong tendency for one department to regard every other department as a hostile foreign power. That, no doubt, is a tendency which exists in every Government, is it not so? It is the business of the head of the department, now and again, to keep that in check, and not to allow it to go too far.

13,585. Sir David Barbour lays stress upon the point. There is evidently a difference between the experience of different Finance Ministers?—Certainly it is rather different from my conception of what the Council has got to do; and I do not see what remedy you are to apply, supposing the state of things to be what Sir David Barbour says, because, as Sir Donald Stewart remarks, it always comes back to the individual; the moral of the thing is, choose your individuals well. Outside that I do not see very much what ought to be done. Of course, I am not saying that the Members of Council perform their duties badly, not in the least.

13,586. Oh, no. Now, passing on from that general question to some of the minor points of Indian finance, are you an advocate of the provincial system of finance, and would you extend it?—I certainly think it is a most admirable system, I mean the system introduced by Lord Mayo and extended by various Viceroys. It has a great many merits. There is the purely financial merit, of decentralizing the administration and relieving the Government of India of a great deal of work. It is perfectly impossible for one central authority to enforce economy over a whole continent like India. As you know, the control, under any system, of the expenditure of such large sums as pass through the English and Indian treasuries is a matter of very great difficulty. I think that should be borne in mind. The most economical administration I have had to deal with is the Egyptian. The reason is that we have 5,000,000*l.* of money to spend, and not 50,000,000*l.* It is a very different thing to control 5,000,000*l.* from controlling 50,000,000*l.*; therefore I think the provincial system is an admirable system. Moreover, it interests the provincial authorities in economy. Then, moreover, it has been combined with a system of local government in the municipalities and rural districts, which brings in the natives of India and interests them in administration, and, therefore, from the political point of view, I think it is a very wise system.

13,587. It has been represented to us that one great financial result has been gained, which was Lord Mayo's object at the time of adopting it, namely, it interests localities, first of all, in the better collection of revenue, and next, in more careful expenditure?—Most distinctly; but when I am asked whether I would like to extend the system, I really have hardly sufficient recent knowledge of Indian affairs to know whether it should be extended. I have often tortured my brain to find out—I daresay you have done so too—whether that system of interesting spending authorities in economy could not be applied to the spending departments of the army, and so on. If one could once find out the secret, whereby the spending authorities themselves would benefit in some way by any economy, a great many financial difficulties would be solved. I have often thought over that matter, but I have been unable to solve it.

13,588. But I believe the cheapest method of military administration, if we could get the bargain adhered to, would be to give the military authorities a certain sum and let them lay it out to the best advantage?—That is the Treasury view. I do not like that system. The fault of the English system and of the Indian system too, is that it looks too much to the amount spent, but not enough to seeing that the money is well spent; and sometimes certainly it is not well spent.

13,589. But at all events, if the military authorities know they had got a limited sum which they can lay out practically as they please, that is the best incentive they can have to economy?—In some respects that is the system adopted in India in the case of the military works. They get a crore of rupees a year, do they not, Sir Donald?

(*Sir Donald Stewart.*) Yes; a crore.

13,590. (*Chairman.*) At present there is a power retained by the central government in the case of an Imperial emergency of retaining, or withdrawing, a portion of the money that has been granted to Provincial Governments. Do you think it is a necessity for the Indian Government to keep such a power in its hands?—I am afraid it is, though I think it is a power that should be most sparingly used, because naturally, when the Provincial Government by virtue of its own good administration has got together a surplus, to have it taken away for some Imperial purpose takes away all incentive to economy; you strike a blow at the root of the whole system. That power must be reserved for any Imperial emergency which may occur, but it ought to be used very sparingly.

13,591. It has been used, as you are aware?—Yes.

13,592. But I think it has been used in the spirit of which you speak, because, if I read aright the financial proposals of the present year, this being a year of prosperity, the intention is to replace, or to replace to a very great extent, the sums which have been temporarily withdrawn?—I am very glad to hear it.

13,593. That would be in the sense in which you would wish?—I am very glad to hear that that has been done.

13,594. You are aware that in this country the Chancellor of the Exchequer conducts his business in constant communication with the heads of the Revenue Departments. He can therefore obtain without delay the most minute and complete information on all subjects which require his decision. The Indian financial system does not centre revenue administration in departments at Calcutta. Did you as Finance Minister experience any inconvenience from not having skilled advisers like our chairman of the Board of Inland Revenue or Customs at hand?—No; I do not think so. I always had very able secretaries, and a very able Comptroller-General; I was always able to get any information I required from people who were thoroughly qualified to give it; I do not think I suffered any inconvenience from that.

13,595. First of all, you never had what we will call the Chairmen of the Inland Revenue and Customs by your side, whom you could summon daily to your council?—I was partly instrumental in doing away with the Customs; there was none left.

13,596. You have known, I daresay, several of those officers of the French Government, called *Inspecteurs Généraux des Finances*?—Yes.

13,597. M. Bligniéres was one?—You are alluding to a remark which was made in the course of this evidence. I have been brought to a certain extent into connexion with the French system, but not, I think, to such an extent as to be able to give an opinion. We have in Egypt inspectors of finance, but they are quite subordinate officers, and hardly fill the same position as the high officials of the French Government. Inspectors of finance in Egypt are merely sent, if the land revenue is in arrear in any province, to see what is the matter, and so on. They are not nearly such high officials as the French *Inspecteurs Généraux*. Whether the French system could be used in

Lord Cromer, G.C.B., &c.

4 August 1896.

India I do not know enough to say. It might tend to create a good deal of friction.

13,598. You have got, not a country, but a continent in India, for the finance of which you yourself for a time were responsible. I should have thought there was a great deal to be said for a system by which you would be able to send what may be called *legatos a latere*—which I understand to be the *Inspecteurs Généraux* system—into a particular district to inquire into matters and obtain information?—The interest of the central government in provincial finance has been so diminished that I hardly think that would be necessary. I will tell you what I think might be done. The Provincial Accountants-General might be utilised to a greater extent than they are now, which would rather answer the same purpose. At present the Provincial Accountants-General are used entirely as Accountants-General and nothing else whatever; they are not in any way used to advise on financial matters. All the detail goes through their hands, and they are thoroughly competent to advise on financial matters, and I think their advice might be utilised as to where economies might be made to a greater extent than at present.

13,599–600. I think we heard that the Provincial Governments do constantly avail themselves of their advice?—Yes, but that rather depends on the discretion of the Provincial Governments, does it not? I think something might be done rather in the way of systematising that practice, and using their advice more than is now done. That would rather answer the purpose of *Inspecteurs Généraux* without appointing any further officials.

13,601. Quite so. I happened to be thrown across several of the *Inspecteurs Généraux*, and they always struck me as being very accomplished men in their profession?—I have seen many of them: they are very able men. The French administration is extremely intelligent. You must always bear in mind, from what I have seen of French methods, that there is one very great vice in the French system, which is that it tends to multiply *employés* very much—that is a very great fault.

13,602. The point that occurs to me in connexion with this point is the immense field over which the ultimate responsibility of the Finance Minister extends. If he is to completely and efficiently discharge his duty, does he not want some assistance, which would enable him, as it were, to see through his own eyes, or rather his lieutenant's eyes, what is going on in a distant province?—I say that, if that is to be done at all, it had better be done through the Provincial Accountants-General; but great care must be taken not to have constant friction between the Provincial Accountants-General and the Provincial Governments.

13,603–4. You remember the mistake that took place on the Afghan estimates?—Yes.

13,605. Are you satisfied that the precautions taken after that event are sufficient to prevent recurrence of such errors?—I think so. I was instrumental in introducing that change and received very great assistance from Sir James Westland, without whom I should not have been able to do it at all. Under that system, within ten days of the end of the month, a short account—the major heads of account—was submitted, showing how the money was going out; and also there was a rough estimate made at the beginning of the year of how the revenue and expenditure should stand at the end of each month. I was able, therefore, to compare the actuals with the estimates, and keep very well *au courant* with what was going on.

13,606. In fact, within eight or nine days of the end of the month you were practically well aware of what the outflow of money was?—I do not think that under the present system such an error as occurred in 1880 can possibly occur again.

13,607. Would you prefer the Budget being made up after the close of the financial year, so as to present for the expired year an actual instead of an estimated result?—I should think that would be inconvenient, because, if there are any fiscal changes, they can hardly be brought into operation until the Budget is brought out; therefore I think it would be more convenient to do what is done in England, which is, to bring the Budget out very shortly before the close of the financial year.

13,608. Our budget is brought in after the close of the financial year?—If you have fiscal changes?

13,609. No. Of course, in all cases there are exceptions, but the exceptions are very few?—Do you make your change retrospective then?

13,610–1. No, prospective. A change that takes place is made to date from the beginning of the financial year?—Say you bring your Budget out on the 15th April, and you have some change in the customs?

13,612–3. That change only dates from the passing of the resolution?—Then you lose a few days' revenue. I think I should prefer to do it a little before, so as to get my whole revenue. As Finance Minister I should not like to lose 10 days.

13,614. Perhaps you would not lay the same stress upon this point which I am going to name. When once the year is closed, according to the English system, which is founded on Exchequer issues, not upon actual expenditure, the Chancellor of the Exchequer lays before the country, not what is called in India the revised estimate, but what, for the purpose of the Budget, is an actual account. So much money has gone out of the Exchequer and that is the account for the year. This could not be done in India till a fortnight after the end of the year?—A fortnight is a very short time. It would naturally take longer in India than in England. The country is so very large and local accounts would have to come in. I hardly think it would be done in a fortnight, but a short delay would enable that to be done very well. I do not see any very great object in making the change.

13,615. Perhaps it is more a theoretical than a real object. There has always seemed to me to be a financial objection to a great number of re-calculations of the same account. You, first of all, have in India your Budget estimate; then you have your revised estimate, which is mentioned in the Budget?—And then you have your accounts.

13,616–7. Your revised estimate, which is drawn upon the principle described to us—upon careful lines—is very different from that account which comes out perhaps three months later, or whatever the time may be—which is the actual account?—There are three different statements—the estimates, the revised estimates, and the accounts. But is there any very great practical inconvenience in that?

13,618. Well, if in the Budget, which is brought out, we will say, at the end of March, and, as happens, has been drawn carefully, a surplus of, say, 200,000*l.* is estimated, whereas in the actuals, which are brought out a little later, the surplus is turned into 600,000*l.*, it has the defect, has it not, of putting before the people a number of different accounts or estimates for the same period?—You mean, the disadvantage is with reference to the public understanding?

13,619. Yes, that is the only point. Of course, officials can understand it.

(*Sir Ralph Knox.*) You must have the actual account.

(*Chairman.*) That comes later.

(*Sir Ralph Knox.*) But you must have that; that is the real account, is it not?

(*Chairman.*) That is the eventual account.

(*Sir Ralph Knox.*) You must have that.

13,620–1. (*Chairman.*) We do get here the actuals. But it is only the experts who care about the actuals. They are dealt with by the Comptroller and Auditor-General in his appropriation account. The actual expenditure of the year goes before the Committee on Public Accounts; but inasmuch as it refers to a past year nobody outside experts cares anything about it so long as there are no irregularities. The only thing the public care about is that on the night of the 31st of March the accounts are made up and there is a definite and final account of the Chancellor of the Exchequer's expenditure and revenue for the year?—I quite understand as far as making the public understand; but, until we can get rid of the item in the Indian account, "Local and provincial surpluses and deficits," it will be almost hopeless to get the public to understand Indian accounts; I have never got anybody to understand them.

13,622. On the whole, we are rather making a theoretical criticism?—I do not know whether you know that item in the accounts of which I am speaking.

13,623. Perhaps you will explain it to us?—I do not want to go into a long story about it; but it is an item which is necessitated by the provincial system and which has to be brought in in order to show what is the general result, after the adjustments have been made with the Provincial Governments.

13,624. That must take time?—It does not take a very long time, but it is confusing, being a most difficult thing

for non-experts to understand. It was a good deal misunderstood in Parliament; and on one occasion I took an immense amount of trouble to write a memorandum explaining the figure and I gave it to one or two people, who had no knowledge of finance, with a view to seeing whether they understood it; and I found that they did understand it. But when it came to be discussed by a leading member of Parliament with large Indian experience, I found he did not understand the A B C of it. That shows how very difficult it is.

13,625. Is it in your opinion an absolute necessity that this adjustment should be stated?—I am afraid it is.

13,626. And in this form?—I am not an accountant sufficient to say that, but I am afraid it is a necessity. However, that is by the way.

13,627. Did you consider that the organisation of the Audit Department was complete when you were in India?—On all that branch of the question my evidence is very much less valuable than that of others that can be obtained. I have never professed to have a technical knowledge of accounting and audit. I should say the system was a good one, and I am certainly not able to point out any faults. But, on the other hand, if experts—particularly those in India, who have had experience of it—can show any means by which it could be improved, by all means let it be done. There is one important point which I see is noticed, that is, the question whether the Auditor-General is independent. That is a point to which, I know, great importance is attached in England. I think that the evidence of the Auditors-General themselves would be most important on this point. I do not know who is Auditor-General now; but if Sir James Westland and others were to say that they were at all hampered by the fact that they were not quite independent of the Government, by all means let them be made independent. If there is any doubt, or if they have any feeling that they are hampered by the fact that they are not quite independent of the Government, they can express their opinions.

13,628. We have had Mr. Jacob over here—the present Comptroller and Auditor-General?—What are his views on it; does he think that he is hampered?

13,629. Oh no, he does not think he is hampered; but the Indian official would take a different view of that from the English official. Possibly it is because the system of the independent auditor has not been introduced in India. What strikes the English official in considering the question is this, that the Indian Comptroller and Auditor-General is in many respects also an executive officer of the Treasury. *Quâ* an executive officer of the Treasury, he is in consultation with the Finance Minister, it is to be supposed. In fact, I think he occupies the position of the second officer of the Treasury. It is very difficult for English officials to understand how a man engaged in executive work and partially responsible for many of the executive decisions, can possibly be an independent man, if a question arises which involves the action of his chief, or action on which he has advised his chief. It is impossible for him to be a good critic?—If there be any doubt on the subject, let him be made independent. I should hardly think it is worth while incurring any expenditure for the purpose, but if there be any doubt on the subject, let him be made independent; there can be no objection to it whatever.

13,630-1. I do not think the Indian system has realised up to the present, a state of things, which, I think, has been realised here, namely, that there is a great officer—a Parliamentary officer—outside the executive government, holding office under tenure very similar to that of the judges (he can only be removed by an address to both Houses), who has access, first of all, to the accounts and then to the books of every department—a perfectly free hand—and it is for him to report to Parliament any irregularities that have occurred in the period of the account. On every vote he makes a report. Of course, when things are working well, the greater part of his report is a report that all is orderly. But any irregularity, any case in which the vote of Parliament is exceeded, or Parliamentary powers have been exceeded, or if the assent of the Treasury has not been obtained in those cases in which it ought to have been obtained, he is quite certain to note; and his reports are referred to a standing committee of the House of Commons, which takes in succession every single item on which an irregularity has occurred and judges it. The consequence is that Parliament at least has the satisfaction of knowing that it has the report of the examination of an independent officer upon every detail of expenditure, and its own committee judges whether the irregularities to which attention is called, are such as may be passed by, or whether they require more grave notice. In one or two instances, in one instance certainly, this was a means by which a very grave irregularity in English administration was detected, which I think otherwise would not have been detected for a long time. And the system certainly now works here, I think I may say, to the general satisfaction of Parliament. Well, I do not think that that end is attained by the Indian audit system. The reports of the Comptroller and Auditor-General read to me more like financial reports—such reports as a Minister of Finance might make, reviewing the total income and expenditure of the year simply. That is not what you want from a Comptroller and Auditor-General. You want him to tell you merely that the expenditure has been orderly, that it has been incurred under due authority, properly vouched, and to report any irregularities?—I do not think that my opinion on any of those points is of very much value. If there is any idea in the opinion of competent experts that the Auditor-General's position should be changed I can see no sort of objection to its being changed. I rather deprecate the view taken in England sometimes that these systems of audit, and so on, can do more than is actually the case. At present over and over again waste takes place in spite of the most elaborate checks to prevent it. On the other hand, I have seen economy introduced without some of these very elaborate systems. My experience rather leads me always to come back to Sir Donald Stewart's principle, that it depends on the economical mind; that is the main thing.

13,632. I think you would agree, would you not, that you must have a properly devised system of examination and check, that acts independently of the man?—Certainly; I do not want to have no system; still I think it is a mistake to attach too much importance to it.

13,633. (*Sir Donald Stewart.*) Is it not your experience of the Audit Department of India that it is satisfactory?—I think so. I had any instances of violation or evasion of rules communicated to me by the Financial Secretary and others; it is their business to do that. It is sometimes the business of a Member of Council to break the rules, or rather, when I say break the rules, I mean to take rather a less stringent view of them than his subordinates.

13,634. Of course, the idea of a system of audit is that it is a check, not only on the lowest clerk, but on the Minister himself?—Certainly.

13,635. (*Chairman.*) And acts exactly the same with the Minister as with one of his subordinates?—Certainly.

13,636. I think your view of the audit system is probably rather different from that to which we have been educated. I should not quite agree with you that the audit system here is thought to be capable of doing anything more than any audit system can?—It checks irregularity, but it does not ensure economy; is not that your view?

13,637. I think no person who knows anything of the working of the system here, would hold that it has anything to do with economy?—It ensures regularity, that is your point.

13,638. That is all, but is not that the most important thing in the world?—Well, all I say is summed up in this—if the Indian system is considered by experts to be not independent (and their opinion is much more important than mine on a subject of that sort), by all means let it be altered; there can be no objection to that in the least.

13,639. Allowing the desirability of detecting and reporting irregularity—that is to say, bringing it to the knowledge of high authorities—do you think that there would be any advantage in submitting the reports of the Indian Comptroller and Auditor-General, drawn in the form I speak of—that is to say, noting all irregularities, not to a committee of the House of Commons—because you could not have the witnesses over here—but to a committee, we will say, consisting of members of the Council of India here, with perhaps one or two independent persons on it, who, every year, would go through these accounts and make their report upon them, which might be laid before Parliament?—There can be no sort of objection to that.

13,640. It would tend in the direction of securing that which I think we all feel has been a great advantage gained during the last 30 years in England, namely, the certainty we have that irregularity will be detected and denounced?—There can be no sort of objection to it, certainly. I doubt whether it will do very much good, but there can be no objection to it.

Lord Cromer, G.C.B., &c.

4 August 1896.

13,641. We have had evidence upon the apportionment of the home charges for the Queen's troops serving in India; that is an old story, and probably has not been recently in your mind, and I would only ask you if there is anything you would like to say upon it?—I am hardly in a position to answer in detail upon all these series of accounts, though I used to be pretty well up in the question at one time; I have not looked at it for years past, and it has gone out of my mind. I have something to say generally on the home charge.

13,642. That is what we should like to hear?—My view of the question of the home charges is this; I believe there is a very general wish in this country, in Parliament and amongst Ministers of whatsoever party, to deal not only justly, but even generously, with India; but I think it would be an extremely good thing if you could arrange in some way a court of arbitration to deal with these matters. It is not only that the settlement should be just, it is of the highest importance that everybody in India should think it is just, not only the natives, but the European public, who have also to be considered, and the Government of India themselves. Under the present system, although I am not alluding to any special point, or saying that the distribution has been unjust, there is no means of making the people in India think it is just. It is supposed to be arranged between the various departments and the India Office, and the general impression, rightly or wrongly, is that the English view is advocated with greater strength, and more successfully, than the Indian view. Whether that be right or wrong, the mere fact that such an opinion exists is an evil, and therefore I should be very glad indeed if something could be done to have some court of arbitration to settle these matters. That is all the more desirable, because a great many of these matters must be rather the subject of equitable compromise than anything else. Take the case of Aden, to which somebody alluded in the course of these discussions; it is perfectly impossible for anybody to make any precise calculation as to what contribution India should pay for Aden. India is very much interested in Aden, and so are Ceylon, Hong Kong, and the Straits Settlements and English commerce generally. It is a matter of judgment how much India should pay; and it would satisfy Indian opinion, and do a great deal of good in that way, if there were some court of arbitration instituted to settle these matters.

13,643. The point you raise seems to me a most important one; but that leads to the consideration that you have so much relied on, namely the man; and I would ask you with reference to that, whether you are aware of the great difficulty that has existed in the last 10 years, even with the best will in the world between the Indian and English Governments, of choosing an arbitrator. Probably you know that that has been the case?—Yes.

13,644. There has been very great difficulty in finding men of high position and experience who would undertake the task. May I ask you whether you do not think that the best man into whose hands to put the arbitration would be a judge, who would be accustomed to deal with evidence, and who from his training, directly he got into his judicial chair, would look upon things without any party feeling? I should say certainly the judicial element should be brought in; but did you contemplate having only one arbitrator, or a board of arbitration?

13,645-6. Well, this question has hardly been discussed. I have for a long time, from my Treasury experience, been convinced that there can never be a satisfactory arrangement between England and India until you have a tribunal of arbitration. Whether that should consist of one man, or whether it should consist of two or three, is a matter for subsequent consideration. But I have been struck, knowing that the Secretaries of State for many a generation were anxious for an arbitration, with the length of time that has passed in discussions as to who the arbitrator should be; therefore, I should like myself that the person or persons should be definite, not chosen *ad hoc*?—A permanent board.

13,647. A permanent board?—Quite so; that is my view.

13,648. And, when any question arises between the two Governments, it should as a matter of course, be referred to the tribunal—I am now speaking of my own view?—That is quite my own idea; I think I should have more than one arbitrator, I should have a permanent board consisting of three or five people; the whole of the case should be prepared by the particular office, say, by the War Office on the English side and the India Office on the other side; the two stories might be given to the arbitrators, who should have power to hear evidence, and they should give their award. I do not think it should be extremely difficult to find the proper arbitrators. I quite share your view that the judge element would be an admirable component part of the board. Whether it should be exclusively judicial is another matter. I should imagine that in the House of Lords there are men eminently qualified for work of this kind, men not very much associated with party in any way; but after all these matters are a good deal outside party.

13,649. I remember discussions as to the arbitrator in two or three different cases. The Duke of Devonshire was asked in one case. He accepted, but afterwards found it impossible to carry on the arbitration. Lord Rosebery then undertook the task, but had to resign it on taking office. Thus on every occasion there has been great difficulty in securing an arbitrator that would be satisfactory to both parties; that is why I lean to the judge?—I would rather have a permanent board of three, or, if you like, five men. Three men, I think, would be enough, of the nature of Members of the House of Lords, or men of that stamp; I should utilize the judge element to a certain extent most distinctly; it would be rather desirable if you could get men with no very special connexion either with India or with the English Treasury, if you could find them—good business men.

13,650. (*Mr. Buchanan.*) Would you give power to either party to refer any question on which there was apportionment of charge to the board of arbitration?—I think I should. I should make them the court of appeal; in fact, I almost think they ought to be constituted by Act of Parliament with the necessary powers laid down specifically.

13,651. Something like the Judicial Committee of the Privy Council?—Very much of that nature, yes.

13,652. And when a question arose between Home Departments and the Indian Government as to the apportionment of any charge, would you give the power to either party to refer it to the board of arbitration, or would it necessarily go there?—No; I think I would give either of them the power of referring; of course, restricting myself to financial questions—nothing else but pure finance.

13,653. And in regard to these charges which have permanently to be apportioned between England and India, the military charges, and the capitation grant, would you say that they, at intervals of five or ten years, should be referred to this board of arbitration?—I think so. My inclination certainly would be to give the utmost possible guarantee to the Indian taxpayers and the Indian public, that all these questions are decided by some body of men who are quite independent, and who are not in any way biassed against them. I repeat that I am not saying that in the past the decisions have been unjust, but what I want is to satisfy the Indian public that that is not the case, which I think is of great importance.

13,654. And you think it would be of great importance as regards public opinion here and in India, if you could assure the public that, with regard to charges for expeditions outside India, in the future the division of these charges would be submitted to the approval of some such tribunal?—I think it would be a wise measure.

13,655. And on that account you particularly urge it?—I do not want to make any particular allusion to recent events, which I would rather not go into; but I am talking of the question generally.

13,656. (*Chairman.*) Of course, there is one point to be taken into consideration. You say you would confine the arbitration purely to the financial question, not the policy; but supposing that Indian troops were lent for Perak, the arbitrator would have to judge to a certain extent what interest the two countries respectively had in this expedition. To that extent he must judge policy, must he not?—My view was more based upon the division of these permanent charges, military, naval, and so on; it was more with reference to those than with reference to the question of these expeditions.

13,657. In fact my questions to you were addressed to that point. It was Mr. Buchanan who very rightly brought in this further question of what was to be done in the case of expeditions?—I confess I did not quite understand the bearing of the question of Mr. Buchanan at the moment; that is going a step further. It is a serious question to consider whether you could hand over to the board of arbitration to decide on the political interests

that India has in any particular expedition, whether it be to Perak or anywhere else. That is going a step farther.

13,658. (*Mr. Buchanan.*) But would not the two sides of that question be set out in the cases which would be presented by the two Governments, or Government departments, appealing for arbitration?—Then that is constituting a board to decide a political question, which is more in the province of Government and of Parliament, is it not? I have not considered this sufficiently to be able to give a matured opinion, but my particular proposal was more with reference to the apportionment of the permanent charges. The other point requires rather more consideration than I have given it yet to enable me to answer it very definitely.

13,659. Still it is within your knowledge that the division of charges with regard to these expeditions has given rise to a great deal of dispute and difference of opinion, and probably dissatisfaction; would it not, therefore, be eminently desirable, if we are to have this board of arbitration, that it should deal with these very difficult cases, which give rise to most difference of opinion?—I do not say the contrary; but to tell the truth I have not considered the subject fully enough to give a decided opinion upon it one way or another, because it opens out very difficult elements for discussion. *Primâ facie*, I do not see why something of the sort should not be done; but I have not considered that point sufficiently.

13,660. (*Chairman.*) I think we can draw a line between the two cases. We know the case of the permanent charges; and the first point is to get a satisfactory tribunal, such as you have spoken of, which should deal with these questions, which are purely financial questions. When we get beyond that, though it may be desirable to adjust such an important question as that connected with the financial share of the two countries in an expedition, still we are stepping there a little bit beyond pure finance, and it will have to be a matter for subsequent consideration?—Exactly; that is my view.

13,661. (*Mr. Buchanan.*) May I put it in this way. I suppose, Lord Cromer, you would acknowledge, and I should certainly, that there is a distinction to be drawn between permanent charges, such as the military capitation grant, and occasional charges for expeditions outside the frontiers of India; and that under the Government of India Act there is a tribunal, so to speak, appointed, by which the apportionment of these latter charges has to be sanctioned by resolutions of both Houses of Parliament; and I suppose, you would agree, on the whole, that that tribunal has not very efficiently discharged its duty?—I am not quite certain that I know what you are alluding to.

13,662. Under section 55 of the Government of India Act, wherever any money is to be expended outside the limits of India, there is a necessity of getting a resolution of both Houses of Parliament to confirm it. To a certain degree we may look upon that, may we not, as a court of appeal in these cases?—Yes.

13,663. Well, what I wanted to say was this; supposing we could establish a board of arbitration for dealing with the less difficult, if more permanent, charges which had to be apportioned, would it not be a good thing too if we had the power to assign to that board of arbitration the determining of those more difficult charges of expeditions?—I am not prepared to say that you ought not to have it; as I say, I cannot give a very definite answer to that. I have not thought over the question sufficiently, and it is a very difficult question. Moreover, the cases you have mentioned are the exceptional instances, whereas the really important thing for India are these permanent charges, which are with them always.

13,664. From the point of view of the effect on public opinion, would you say so?—No; the money is one thing and the sentiment is another; and, as an ex-Financial Member of Council, perhaps I may be pardoned if I look more to the rupees than I do to the sentiment.

13,665. (*Sir William Wedderburn.*) May I ask if your idea, as regards the tribunal of arbitration, is that that tribunal is to make a recommendation to the Crown, or to make a final decision on the question; which was your suggestion?—My view, within the limits which I have described, and not dealing with the quasi-political point we were discussing, was that it should give a final award, which should be binding.

13,666. Because, supposing the suggestion of the Judicial Committee of the Privy Council were accepted, the form in which they make their recommendation is a recommendation to the Crown?—The recommendation of the Judicial Committee of the Privy Council has all the weight of a decision of a court of law; is not that the case?

13,667. Yes, that is as regards judicial matters?—The recommendation to the Crown is a mere matter of form, is it not?

13,668. I was only dealing with the point, whether in these financial questions that form might not be usefully retained, leaving it to the Houses of Parliament and to the Government finally to decide upon these questions, because otherwise you are taking away the authority of Parliament, and delegating it to a separate authority?—But as regards the analogy, has it ever been heard of that Parliament or the Government interfered with the judicial decision of the Judicial Committee of the Privy Council?

13,669. No, but under the Act which constitutes the Judicial Committee of the Privy Council, the Crown has power to refer any other matter besides judicial questions to the Privy Council?—I see.

13,670. And in those cases which are not judicial, which would be financial, I was only suggesting that the report should be laid—of course, with all the weight that such a tribunal carries with it—before both Houses of Parliament, in order that the Government and Parliament might have a proper responsibility in the matter?—You are getting on to ground now on which my opinion is of very little value. I have never been in Parliament, and I am not in touch with these matters; but I certainly should not give the executive Government the power of overruling the award of the arbitrators. If done at all, I think it should only be done in virtue of a resolution of the House of Commons or both Houses of Parliament.

13,671. (*Sir Edward Hamilton.*) That is practically the same?—Well, hardly, because it is one thing to do a thing by the power of the executive Government, and another thing to get a vote of the House of Commons about it.

13,672. (*Chairman.*) Must we not bear in mind, when we talk of reference to the Judicial Committee of the Privy Council, that the important practical point is this; many questions would arise from time to time, such as would not occupy a tribunal for a very long time; the principle that we want to establish is that either the Indian Government, if it does not come quickly to agreement with the Imperial Government, or the Imperial Government, if it cannot get the Indian Government to assent to its terms, should have the power of going at once to a tribunal; but to put all the machinery of the Privy Council, its judges and counsel, and so forth to work to settle whether India should pay two or three consuls, or a share of the pay of two or three consuls, might be too much a case of using a Nasmith hammer to crack a nut?—I did not understand Sir William Wedderburn to suggest that the Privy Council should take all these matters into its consideration and deal with them; what I understood was that he was using the Privy Council as an analogy.

13,673. (*Sir William Wedderburn.*) No, I was actually suggesting that these cases should go to the Privy Council?—I beg your pardon: I misunderstood you. I think that suggestion is open rather to Lord Welby's criticism. My opinion is that there should be a board of arbitration which should consist of, say, three or five people; the actual composition and powers would have to be fully considered. I should give them very ample powers, and I should certainly not let the executive Government of the day overrule their award. That is the main thing.

13,674. (*Chairman.*) I think that, if the obligation of reference to the tribunal ought only to be withdrawn on sufficient notice, the decisions of the tribunal would be binding on both sides?—Quite so, and I would allow both sides to plead before it. The point, as I have said, to which I have not given much consideration, is as to how far I should submit any political considerations to it.

13,675. There is only one other question I want to bring before you; very possibly you may like to make remarks upon it. You are aware that as between England and India (without taking any special case into consideration) a question has repeatedly arisen as to the loan of troops. It is an important question for India. I do not know whether as an old Finance Minister of India you would like to express any opinion upon it. The arrangement hitherto has been that India lends troops, and in a great number of cases, so long as she is put to no extra expense, she does not charge the Imperial Government; but, of course, then comes the question under what limitations is that part-

Lord Cromer, G.C.B., &c.

4 August 1896.

nership to be established; and I think it has been more or less understood that the determining principle has been that India has an interest in the expedition?—Will you allow me for one moment? I am afraid I cannot go into this matter, because it has been a burning question lately, and perhaps it is not all over. I have been concerned in it, and, therefore, I would rather not deal with that point.

13,677. (*Sir Donald Stewart.*) I presume the cases that would be submitted to this court of arbitration would only be disputed cases in which the two governments could not agree?—Quite so; there would be no necessity to submit them otherwise; if they were agreed, there would be an end of the matter.

13,678. (*Mr. Buchanan.*) In this paper presented to the Commission, there is a despatch on the subject of the apportionment of military expenditure of the 10th August 1883 written by you?—Yes; I remember it

13,679–81. May we take it that you still adhere generally to the views that are laid down in these two paragraphs on the subject of the apportionment of military expenditure?—I have not read the despatch right through. It is rather hard to be asked whether I adhere to the views contained in a despatch written 12 years ago; but, broadly speaking, I adhere to the views expressed in the passages you have marked. I should not like to pin myself to every word in that despatch, but I think I may say that I do adhere to that.

13,682. (*Sir William Wedderburn.*) I should like to refer to the opinion given by Sir David Barbour and Sir Auckland Colven regarding the machinery for controlling Indian expenditure. I understand that you concur generally in their view that the Indian administration does not give sufficient attention to financial considerations?—Oh, no, I do not say that. In my time they gave ample consideration; but I cannot give any opinion as to whether they have done so since. What I said was that I could quite understand a combination of circumstances under the Indian or any other system, which might cause the Government to become extravagant; but I make no accusation against the Indian Government by any means.

13,683. But the Financial Department, I think you said does not predominate?—It does not occupy such a predominant position as the Treasury does in England. That is what I said. That is no doubt the case.

13,684. Do you consider it is desirable to take any steps to strengthen the financial control over Indian expenditure?—I have dealt at length with that point already. If any steps could be taken which would not involve other evils, and more especially impair the power of the Viceroy, perhaps it might be desirable to do so; but I have looked through these papers and I have not seen anything that really meets the point at issue.

13,685–6. I would refer you to Sir Auckland Colvin's answer to Question 3125. Sir Auckland Colvin says that he would look for a remedy in the direction, first, of strengthening the financial interests in the Council of the Secretary of State, and, second, in the direction of trying in the same way, without undue interference with the authority of the Government of India, to establish a control emanating from Parliament, as the ultimate authority. May I ask if you concur in that generally?—I have also answered those questions incidentally in the course of the conversation I had with Lord Welby. I said that, broadly, I did not much like any further transfer of power from India to England on account of the very great difficulty of exercising a control here with a perfect knowledge of the local circumstances. As regards the Secretary of State's Council, I see no objection whatever to rather strengthening the financial side, particularly by appointing men with financial knowledge and economical tendencies, and I have also intimated my opinion that it would be advisable if facilities could be given to every Member of Council in India to lay his views before the Secretary of State. As regards Parliament, how is the control of Parliament to be exercised at all?

13,687. In his answers to Questions 2235 to 2237, Sir David Barbour suggests that Parliament should appoint a select committee from time to time to report upon particular questions. Would you concur in that?—I see no sort of harm in it. Of course it is entirely within the discretion of Parliament to do so; they have already had endless commissions and committees about India. There was that very large committee, Mr. Fawcett's. Was it productive of great result? I am not aware that it was.

13,688. That was more upon general questions like this Commission; but I was suggesting a select committee to be appointed each year to examine the Indian accounts; and report to the House of Commons, in the same way that the Public Accounts Committee reports to the House of Commons regarding the accounts of the United Kingdom?—But the Public Accounts Committee here limit themselves expressly, do they not, to seeing whether rules have been attended to and so on; they do not go into any questions of policy, do they.

13,689. That is their main function?—They do not go into any general questions.

13,690. No, I was rather taking the analogy of the Public Accounts Committee, in order to make suggestions, with a view to the decision of the House of Commons being a well informed one, and made upon some definite inquiry and examination of the accounts, instead of being arrived at in the somewhat casual way in which the matter is now dealt with, as you are aware, at the end of the session without any preliminary examination of the accounts. Would not such an inquiry help to give that better informed opinion, which I think you said was very desirable in those matters?—I can see no harm in a proposal of that sort; but I confess I do not think it would do much good. I think whatever you can do in the way of independent real examination it should be done in India, and through the Secretary of State's Council to a great extent. I very much doubt whether a committee of that sort would affect any object which would be worth all the trouble that it would give. I very much doubt it; but there is no harm in it.

13,691. I think you said that it was very desirable that the administration of India should not be transferred from India to England?—Yes, I think that is desirable.

13,692. If it is localised in India, is it not very desirable that the taxpayers—the people of the country—should have a little more voice in the administration? If there is to be something like finality in the decisions of the official Government in India, is it not very desirable that the people should have some little opportunity of having a voice in important financial matters?—That is a very important question, Sir William Wedderburn, which touches the general question of developing, more or less, popular institutions in India, which I should have thought lay a little outside the scope of the present inquiry. It raises some very large issues indeed, and I hardly think I need go into that fully. I may say if anything of the sort was going to be done, and I had to deal with it, the first thing I should do would be to set to work and see how the natives of India had exercised the authority which has already been given them on the local boards and municipal boards, where they had been sitting for a good many years, and make a very exhaustive inquiry into that. If I found they had exercised these powers wisely, and in the interest generally of their fellow countrymen, the taxpayers, I think, then, there would be something to say in favour of some very gradual and tentative measures for giving them some further voice in the affairs of the country; but it is a very difficult and delicate question, which would have to be treated with great care, and I certainly should not like to give any very definite opinion about it without having the views of the best authorities in India about it.

(*Chairman.*) Must we not be rather careful at this moment? we are just treading on the verge of asking Lord Cromer the form of extension of rights in India.

(*Sir William Wedderburn.*) I was going to limit my question to the financial question.

(*Chairman.*) Lord Cromer prefaced his answer by saying that he did not quite know whether the question came within our scope; of course, it would open up a largish field, and I do not know that we should be entitled to enter upon the subject of popular rights.

13,693–4. (*Sir William Wedderburn.*) I do not propose to go in that direction at all; I was going only to refer to the financial question. You are aware that, since you left India, under Lord Cross' Act the Budget is laid before the Legislative Council, and that the unofficial members, in fact, all the members of the Viceroy's Council, have the power of discussing the Indian Budget?—Yes.

13,695. You would see no objection to the members being permitted to move amendments upon the budget, and to divide the Council upon such questions?—I do not know how the Council is constituted at present.

13,696. It is exactly as it was in your time, except that the Viceroy now appoints some quasi-representative men upon the nomination of certain public bodies, but within his own discretion?—I really cannot undertake, Sir William, to answer such an important question as that without much further reflection. I think anything in the direction of generally extending representative institutions in India—I do not say that I am radically opposed to them at all,—requires the utmost possible reflection, and consultation with the best Indian authorities before giving any opinion.

13,697. I do not wish to press for any answer with regard to that; I am only, taking the Council as it is, asking your view as to a method of procedure?—Yes, but I do not know myself how the Council is constituted; in fact, I have not sufficient recent experience to answer such a question as that.

13,698. I think it has been agreed that the personal power and influence of the Viceroy is very great?—Yes.

13,699. And, I think, that, during the time that you were in India, you found economy, to a certain extent, easy, because you received, I think, the support of Lord Ripon pretty generally?—My relations with Lord Ripon were of the most friendly description. I always received his support, but I would not confine my answer solely to Lord Ripon; I always found the whole of the Council took a very reasonable view of all financial questions.

13,700. But the tone of the Council would depend a good deal upon the personal leaning of the Viceroy?—Yes; I have already mentioned that the power of the Viceroy is very great.

13,701. As regards economy, I suppose that really the only strong interest towards economy proceeds from the people who pay the taxes?—No, I am not so sure of that.

13,702. Directly or indirectly from them?—Cases occur very often where people who pay the taxes are generally in favour of economy, and in particular instances very much in favour of extravagance. I think the same may occur in India, but in Egypt the people who are most in favour of economy, are the European officials who do not pay any taxes at all; and the people who are always urging money to be spent, are those who pay the taxes. It seems a paradox, but it is so.

13,703. Do you remember Mr. Disraeli's proposal that there should be four members of the Indian Council here appointed by what he called a special Indian constituency?—No, I cannot say that I remember that.

13,704. In one of his bills there was a proposal to appoint four?—This is the first time I am aware of that; I never knew that there was such a proposal made.

13,705–6. Do you see any objection to a certain number of members being appointed from India by the non-official members of the Legislative Councils in India, in order to give the benefit of Indian feeling and experience to the Secretary of State?—I do not quite follow the question. The point is whether the members of the Indian Legislative Councils in India should elect from amongst their own non-official body a member of the Council here?

13,707. One or more, not necessarily out of their own body, but that they should delegate one or more persons who should be members of the Council here?—I have never thought over that at all. I have never had any experience of the working of the Indian Council here; I should not like to express any very decided opinion upon that point.

13,708. Is it not desirable that Indian feeling and experience should, to a certain extent, be brought under the notice of the Secretary of State here?—Most decidedly. I do not know whether that is the best form of doing it though.

13,709. When members of the Indian Council here dissent from the majority, they are allowed to record their minutes. Would it not be a good thing if those minutes were always laid before Parliament?—Well, I was arguing in the opposite sense in the remarks that I made to Lord Welby. If you wish to have thorough confidential communication between the Members of the Council in India and the Secretary of State, my view is that it should be laid down that those minutes are not necessarily to be laid before Parliament; I mean I make a distinction between ordinary and official but still confidential documents. You will readily understand what I mean. I think there is a certain class of documents which may appropriately be laid before Parliament; on the other hand, if a document is to be laid before Parliament, it certainly puts a very great check upon a man writing what he thinks.

13,710. I quite understand that; I was referring to minutes in the Council here, not the Legislative Councils?—In the India Council here; I know so little about the India Council here that I really cannot answer the question. But I think it much better that formal official minutes should be laid before Parliament.

(*Sir Donald Stewart.*) As a matter of fact they are always laid before Parliament when called for.

(*Sir William Wedderburn.*) No, they are sometimes refused; Sir Donald Stewart's minute was refused.

(*Sir Donald Stewart.*) The paper you are referring to was not a Council minute.

(*Sir William Wedderburn.*) It was asked for under the belief that it was a minute.

(*Sir Donald Stewart.*) It was a confidential paper written for a particular purpose.

13,711. (*Chairman.*) I think Lord Cromer's view was that when a member of the Council out in India wrote a paper, if he headed his memorandum "Confidential," like diplomatic papers, it should not be published without his consent?—That is my view.

13,712. (*Sir William Wedderburn.*) I was not referring to India; I was referring to the India Council here. Would it not be the means of exercising a certain check in Parliament, if a portion of the salary of the Secretary of State in India were placed upon the British estimates? I understand that you are desirous that an intelligent and well-informed criticism on general questions should be exercised in Parliament in place of the somewhat desultory interference that now takes place?—Yes; I have not gone into the general question of Parliamentary interference in Indian affairs; it may have done good sometimes, but I think I could mention one or two cases where, with the best intentions, it has done harm. The tendency of Parliament to interfere in Indian affairs, I think, has done a good deal of harm. The alteration of the Contagious Diseases Acts, for instance, has done a good deal of harm; and so I am not sure that it is wise in Indian interests to encourage English interference, not on account of the intentions of Parliament, which I have no doubt are excellent, but on account, possibly, of their not knowing how to deal with the questions which arise.

13,713. These suggestions were directed to getting greater knowledge of Indian affairs. No doubt Parliament has a power of interference and the danger is that it interferes without knowledge. My suggestions were in the direction of giving Parliament such knowledge?—And what was your particular suggestion?

13,714. The particular suggestion was that the salary of the Secretary of State for India should be placed upon the British estimates, so that matters might then be properly discussed in the House of Commons?—You, being in the House of Commons, are much better able to judge than I am, whether that is the best method of bringing the matter forward, I should imagine. Are there no other means that members of the House of Commons have of bringing the matter before Parliament, without adopting a remedy of that sort?

13,715. It is almost impossible to bring them forward?—That is a matter as to parliamentary procedure, as to which you are much better judges than I am. Not having been in the House of Commons, I cannot say.

13,716. I think you referred to the frontier wars?—Yes.

13,717. And said that, if these wars were to be stopped, it must be in the beginning that they must be dealt with?—Yes.

13,718. I think during the time you were in India there were no frontier wars?—No, there were no frontier wars properly so-called. Sir Donald Stewart will know better than I do.

13,719. (*Sir Donald Stewart.*) There was a small expedition, mainly for survey purposes, on the frontier; I think that was the only one?—There was the Egyptian expedition.

13,720. (*Sir William Wedderburn.*) There was no frontier war?—No.

Lord Cromer, G.C.B., &c.

4 August 1896.

13,721. And by careful dealing with the matters in the beginning—I suppose there were threatenings of them—they were got rid of, probably?—I can tell you that as a matter of fact there were none; but whether that is the reason why there were none, I really do not know enough about the subject to tell you, because, of course, that is outside the Financial Department, with which I was concerned. They were dealt with either in the Home Department or in the Foreign Department. I cannot dwell too strongly upon the necessity of dealing with these matters carefully in the early stages; in fact it is only in the beginning that they can be stopped; but I must repeat I do not think that the observation applies only to the Indian system of government; it applies to almost every known system of government; and I could certainly mention cases in England which are analogous to what has happened in India.

13,722. I think you were able to reduce taxation in India?—Yes, because my predecessor handed over a large surplus to me. That was the reason I was able to reduce taxation. I am afraid I cannot lay claim to credit for anything I did myself; I was handed over a large surplus by Sir John Strachey.

13,723 And you considered that the expenditure that you sanctioned in the Financial Department, was sufficient for the needs of India upon the scale that they were on when you were there?—Yes, I think so.

(*Mr. Naoroji.*) My lord, I have been advised, and I think it is good advice, that, as I am to be examined myself, I had better reserve all my questions for my own examination and all my criticism, so I do not think I will trouble Lord Cromer with any questions.

The witness withdrew.

Adjourned till January 1897.

SECTION II.

PROGRESS OF EXPENDITURE.

8th to 11th, 15th, 16th, 18th, and 20th to 25th, and part of the 29th DAYS.

Q. 3676 to 5704, 7184 to 8217, 8718 to 9264, 9614 to 12,268, 13,409 to 13,502.

At the India Office.

EIGHTH DAY.

Thursday, 27th February 1896.

PRESENT:

THE LORD WELBY, G.C.B., (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.

Mr. COLIN G. CAMPBELL, *Secretary*.

Colonel R. WACE, R.A., Inspector-General of Ordnance, Bengal, called in and examined.

Colonel R. Wace, R.A.

27 Feb. 1896.

Ordnance Department.

3676. (*Chairman.*) What office do you hold in India, Colonel Wace?—I am Inspector-General of Ordnance in the Bengal Command.

3677. How long have you served in India?—I went out to India in 1864—32 years.

3678. And what other offices have you held besides that of Inspector-General of Ordnance?—In connexion with the Department?

3679-82. In connexion with the Department. I suppose at first your service was military?—My service was military up to 1874. Then for three years I served as Assistant Superintendent in the Ordnance Factories in Bombay. I then had command of a mountain battery and commanded it through the Afghan campaign from the end of 1878 to 1881; after which I came home and went through a course at Woolwich. On my return to India in 1882, I was appointed Superintendent of the Shell Factory at Cossipore, where all the artillery projectiles are made for India, and served in that capacity for seven years. I was then appointed Deputy-Director-General at head-quarters at Simla, and served in that capacity for four years. Since then I have been Inspector-General of the Bengal Command. I was officiating for a short time, and then I was confirmed.

3683. Would you describe the duties with which the Ordnance Department in India is charged?—The Ordnance Department in India is charged with the duty of providing, storing, issuing, and accounting for all equipments, accoutrements, and munitions of war required for the use of the Army in India, the Native Army, Reserves, the Volunteer services, the Imperial service troops of Native States, and the supply of arms and ammunition to the military police and regular police in India. The total strength of these forces amounts to 355,000 men. In addition to the supply of troops and police as above, there is also the upkeep and supply of ammunition for the several armaments on the coast and frontier defences, which are now mostly equipped with B.L. ordnance, and for those in inland forts; also the supply of munitions of war for the Indian Marine, and the maintenance of certain reserves for ships of the Royal Navy on the East Indian Station, and for fitting out armed merchant steamers in time of war.

3684. Is the Ordnance Department under the Military Member of Council?—Yes.

3685. The direct control of the Department is vested in the Director-General?—Yes.

3686. Does he always report to the Military Member or the Military Secretary, and are decisions given in the name of the Military Department?—All matters in which it is necessary to refer to the Government; of course he would not refer questions with which he has the power to deal himself.

3687. My question was directed rather to ascertain the exact position of the Director-General, in what respects he might act independently, in what respects he is subordinate to a higher authority, especially in regard to his relation to other Departments—for instance, whether he communicates directly with the Commander-in-Chief, and whether the Commander-in-Chief would give him directions which do not pass

Colonel R. Wace, R.A.

27 Feb. 1896.

Ordnance Department.

through the Military Member of Council?—The Director-General is the adviser of the Commander-in-Chief.

3688. But would he receive directions which do not pass through the Military Member of Council from the Commander-in-Chief on a subject involving expenditure?—No.

3689. Again, does the Director-General communicate directly with the Department of the Financial Member of Council on questions connected with Ordnance expenditure?—No.

3690. He would do that through the Military Member of Council?—He would do that through the Military Member of Council; all finance questions go through the Military Department.

3691. Therefore he would raise the question and lay it before the Military Member of Council who would represent it to the Financial Department if necessary?—All questions involving considerable expenditure are referred in that way.

3692. Does he always report to the Military Member of Council the financial effect of Ordnance questions which have originated in his Department or have been referred to him?—He reports to the Military Secretary to Government.

3693. That is the same as referring to the Military Member of Council, is it not?—Well, that I could not say, but I should think the Military Secretary generally would refer all considerable questions of finance to the Military Member of Council; I am hardly in a position to answer that question.

3694. On a question of official procedure in this country we always regard the head of the office, the Minister, as the person to whom reports are addressed. Of course those reports or communications are very often actually addressed to the Secretary?—Yes.

3695–7. And in minor matters the Secretary may deal with them without absolute reference to his superior; but all he does is by delegation from his superior, and in his superior's name?—Yes.

3698. And I suppose that is the case in India—the Military Secretary would merely speak in the name of the Military Member of Council?—I should think so, but I should prefer that the question should be put to Sir Edwin Collen.

3699. What is the organisation of the departments in the four Commands into which India is divided?—The Department is divided in accordance with the latest Army scheme into four circles, corresponding with the four Commands, the four circles being the Bengal, Punjab, Madras, and Bombay. An Inspector-General of Ordnance is appointed for each of these circles; he is on the departmental staff of the Lieutenant-General Commanding.

3700. Is the Inspector-General in each circle immediately under the orders of the Director-General, or does he communicate with him through the Lieutenant-General commanding in the circle?—He is under the orders of, and directly responsible to, the Director-General, but he also acts as the official adviser of the Lieutenant-General commanding the Forces.

3701. Then he occupies very much the same position—the Inspector-General in the circle—as the Director-General occupies at headquarters, namely, that he belongs to the Military Department, but he is the adviser of the General Commanding in the circle?—Yes.

3702. Does the Inspector-General communicate direct with the Military Controllers in the Command to which he belongs on financial matters?—Yes, with the Controller of Military Accounts.

3703. And he can do that without reference to headquarters?—Certainly. If we want to know the financial effect of anything we are ordered to communicate with the Controllers and find that out before we communicate with the Director-General.

3704. Quite so. I think your system in India is rather a system of decentralisation than increased centralisation, is it not?—I hope so.

3705. You say the Inspector-General of Ordnance in Commands has full power over all ordnance establishments in his circle, and disposes in accordance with the regulations of all questions regarding pay, promotion, leave, pensions, and so on of the establishments, excepting commissioned officers, subject to the control of the Director-General? To what extent and in what particular does that control limit the Inspector-General's power?—The control of the Director-General?

3706. You speak of the Inspector-General having full power subject to the control of the Director-General, and I wanted to ascertain the kind of control which the Director-General exercises over the Inspector-General in relation to those powers?—We submit, for instance, all recommendations regarding promotions to the Director-General for his final sanction.

3707. Matters of the increase of the establishment?—Yes, of any permanent increase; we cannot carry out or inaugurate any permanent or recurring increase without reference to the Director-General, who submits proposals for the sanction of Government.

3708. Then I suppose with regard to material—any increase of any moment would have to go to the Director-General?—Oh, yes. The reserves that have to be kept up are laid down very rigidly, and we have not the power of increasing those reserves.

3709. I observe in one part of your memorandum you say that the Inspector-General has a power within his circle on emergency of making up his stores?—Yes.

3710. Can he do that without reference to the Director-General?—Within certain limits.

3711. Up to one-fourth, is it not?—That is the power given to ordnance executive officers in charge of arsenals.

3712. An independent power left in their hands?—A certain amount of power is left in their hands.

3713. You make an exception in regard to the commissioned officers in your establishment?—Yes.

3714. Whom are they under?—All questions of their promotion have to be referred home, and the Commander-in-Chief has a voice in the matter.

3715. Then, with regard to their pay. If there is any alteration suggested or proposed in the rates of pay, does that lie with the Director-General and the Inspector-General, or would it be managed by the military authorities?—Any question of increased staff might be put forward by the Inspector-General, and then it would be forwarded to the Director-General for the sanction of Government.

3716. Do these commissioned officers who are seconded and placed upon the ordnance establishment receive their regimental and service pay, or are they put on a consolidated allowance representing a salary for their civil work?—A few receive consolidated allowances, viz., the Director-General and the Inspectors-General, but all the other executive officers receive their regimental pay and allowances, plus a certain staff allowance.

3717. Therefore, with regard to the regimental pay and allowances, any change in them would be made in accordance with general Army regulations?—Yes.

3718. And the only point that you would have to deal with would be that staff allowance, as you called it just now?—Yes. If a new appointment is instituted, the Director-General would propose an adequate staff allowance for it, and that would be referred through the Military Department to the Finance Department. It would require the sanction of the Finance Department.

3719–20. Would you describe shortly the financial powers of the Director-General of Ordnance; can he spend the money allotted in the estimates of his Department without further sanction from the Military Department?—Yes, within his Budget; but as a rule the Budget is not big enough.

3721. That is a general complaint. As soon as the Budget is sanctioned, does the Director-General allot the share that belongs to each circle to the Inspector-General of that circle, and allow him to draw, within the regulations, to the extent which has been allotted to that circle?—The estimates have originally been put forward by each establishment, and they are collated by the Inspectors-General of circles, so that each Inspector-General has put forward his estimate, and if his estimate is cut down in any particular he is told.

3722–3. Quite so. Then, after that the Budget is finally sanctioned by the Government, and, I suppose, from that moment, that is to say, from the 1st of April then following, that Budget comes into force?—Yes.

3724. And what I want to understand is, how the sum that you would be entitled to spend out of the

Budget in the Circle of Bengal, for instance, would be allotted to you; would it be intimated to you that the Budget had been approved, that such a sum was available for the Circle of Bengal, and would you have authority to spend that money within and in accordance with the regulations, or how would you get possessed of the money that the Budget allots to you?—The allotment under each head is published, showing what is allotted for *personnel* and supplies, stores, and everything else, and then we are able to draw for that amount. The actual payment for local supplies is done by the Commissariat.

3725. Quite so, but you are entitled from the time you learn that the Budget has been passed to draw without a direct authority from the Director-General in accordance with the regulations, up to the amount provided in the Budget?—Yes, to spend within those limits.

3726. To what extent can the Director-General initiate expenditure without the authority of the Military Department, and under what circumstances can he exercise a limited power of initiating expenditure?—Only within the Budget allotment of the Department.

3727. But services of emergency occasionally arise for which provision has not been made. Has he any power of initiating expenditure on emergency arising?—His only power is the power of transference from one circle to another for expenditure of a similar kind, if expenditure is likely to be exceeded under any one head in any one circle and a sum is likely to lapse under the same head in another circle.

3728-9. Now, turning to the Appropriation Account of 1894-95 which I have got here, I will take No. 3. Manufacturing Establishments, in which a provision of about Rs. 1,400,000 was made for the eastern circle in Bengal. Could he transfer a surplus arising there to meet an anticipated deficit in Madras under Head 2, Arsenal and Depôts; or must it only be within Head 3 that he can make the transfer?—No, he could not. He can only transfer from one circle to another under the same head.

3730. And is there no power of transfer with the assent of the Military Member and of the Finance Department from one head to another?—Yes, with the sanction of Government.

3731. Quite so; of the Military Department and the Finance Department, I suppose?—Yes, that is what I mean by Government.

3732. Would you describe shortly how the ordnance budget is prepared in the different circles and revised by the Director-General of Ordnance?—Each circle has to submit by the 15th of August their estimate of requirements for *personnel*, and, by a later date, for stores: and the *personnel* budgets are submitted through the Inspector-General to the Director-General of Ordnance after having been reviewed by the Controller of Military Accounts in each circle.

3733. Then the preparation of estimates is a process from the lowest to the highest?—Yes.

3734-6. Each different establishment prepares, I suppose, its own particular estimate, and submits it to the Inspector-General, who acts for the whole of the circle?—Yes.

3737. And when he has revised it he hands it over to the Military Controller for revision, as I understand you?—For check.

3738. Within the Command the draft budget is not communicated to the Financial Accountant-General, I suppose?—No.

3739 You do not refer in any shape to the Financial Department?—No.

3740-1. Then you send it forward to the Director-General and he revises it?—Yes. He may revise it or he may raise objections; they check it very carefully in the Director-General's office.

3742. And does much correction take place there, or, as a rule, are the budgets of the circles accepted?—There is a certain amount of correction occasionally by the Controller, but it is very clearly laid down what is allowed in all matters of *personnel*. There is more correction in the budget, perhaps, of stores owing to superintendents of factories overestimating occasionally their requirements.

3743. One knows that in any service the amount of margin upon which, for a given year, you can what I may call pull and haul is very small?—Yes.

3744. That is to say, establishments cannot be altered to any very great extent within a year; but I suppose the Ordnance Department is one upon which there is a greater power of pull and haul than most departments, inasmuch as a great part of the expenditure is in stores; I do not mean to say for a moment that it is justifiable to reduce stores, but you can do it; you cannot reduce pay or establishments?—No.

3745. And, therefore, there is room for discretion to a greater extent than occurs in most departments, is there not?—There is a certain amount of room, but the estimates for material are based by factories on the estimates of work that they will have to do. Perhaps I should have said that before they submit their estimates for material, an estimate is prepared of work to be done in the following year.

3746. And that is approved at headquarters?—That is sent up separately.

3747. Therefore, that is the measure by which the amount of money is determined?—To a great extent; it is rather difficult always to look ahead and tell exactly what the work will be in any given factory in the following year, but an estimate is always prepared.

3748. There is a discretion exercised, is there not, in regard to works and stores; if you find yourself pressed, you do reduce the expenditure under those heads, do you not?—We are obliged to.

3749. To explain what I mean; I see in this report for the Military Budget of 1894-95 the explanation given of a considerable saving in that budget. It appears that works and stores provided in the original estimate were reduced during the year?—Yes.

3750. Showing that under pressure such a discretion is used?—Yes.

3751. (*Sir Ralph Knox.*) That would be done by the central authority, would it not?—It would be done under the orders of the Director-General; it would involve probably the abandonment of some work ordered, which we could not do without his authority.

3752. (*Chairman.*) I will give you this case: No. 5, stores; out of an estimate (considering 10 rupees to be 1*l.*) of less than 133,000*l.*, there was a saving of 28,000*l.*, and the explanation is that it was due to a smaller quantity of stores having been purchased, Ordnance officers having been enjoined to observe a stricter economy?—Yes.

3753-4. Therefore, after the estimates were framed, orders were given practically to the Ordnance officers that they were not to work up to that estimate; but that their purchases were to be on a more moderate scale?—Yes, that refers to arsenals, not to factories.

3755. That is under the head "stores"?—Yes, stores for arsenals.

3756. Are the estimates for the different services in the Ordnance Department based on averages of past years?—Yes.

3757. But how do you satisfy yourselves that such averages represent the real requirements of the service? The adoption of an average, I suppose, would be modified by a consideration of circumstances which might produce reduction as well as increase?—Quite so. That is very carefully watched, and every storeholder in an arsenal keeps a book in which his actual issues year by year are entered, and if there is any abnormal issue due to re-armament, that is cut out, so that the average annual issue may not be unduly enhanced.

3758-9. I rather meant to take the case of a change going on in some article of manufacture, supposing you found that cordite was going to replace gunpowder, I presume you would, under those circumstances, hardly work up your gunpowder to the average of past years?—When you come to a change like that, it requires a great deal of consideration. You cannot allow your reserves of one store to run away in the expectation of another—say, for instance, when we have gone from one class of ammunition, from Snider to Martini-Henry, or from the Martini-Henry to the ·303—you could not let the Martini-Henry run out, so as to leave yourself with a single year's reserve; there might be some failure in the ammunition which was replacing it.

3760. You will observe my question is merely directed to enable the Commission to understand that, while the preparation of the estimate is, based upon an average, it is yet an average checked by your knowledge of the circumstances of the time, and the requirements of the time?—Quite so.

Colonel R. Wace, R.A.

27 Feb. 1896.

Ordnance Department.

3761. By whom is the Ordnance expenditure audited?—By the Military Accounts Department.

3762. Who are quite independent of the Ordnance establishments?—Yes.

3763. Then at each establishment is there a Military Examiner of Accounts?—No.

3764. They are, as it were, travelling examiners, who come and examine the books?—No; each establishment has its own office establishment, who are entirely under the Ordnance officer or the Superintendent of the factory. The ordnance officer, or the Superintendent of the factory, is responsible for the correctness of the accounts as they leave his charge, and they go from there to a central office; they are all sent to the examiner of ordnance accounts, who is under the Controller.

3765. At the central establishment?—At Calcutta. They are all centred there; but all the accounts are compiled in each arsenal and factory before they are sent.

3766. (*Sir Ralph Knox.*) Does the local Controller of accounts have anything to do with them?—The local Controller is at Calcutta; I am speaking of Bengal.

3767. (*Chairman.*) Is there not some inconvenience in that arrangement? Can the masses of vouchers be sent to headquarters without inconvenience, for I suppose the Examiner requires to see the vouchers upon which expenditure is founded?—Yes, they are all sent; he requires to see the vouchers.

3768. His audit is an audit of detail; he accepts nothing upon the faith of the accountant?—Absolutely nothing.

3769. (*Sir Ralph Knox.*) That includes the store accounts as well as the cash accounts?—All accounts.

3770. Accounts of stores; receipt and issue of stores?—Yes.

3771. (*Chairman.*) And all go to the central examining office?—To the Military Account Office. There are two Examiners. The Examiner in the Pay Department, also under the Controller, who deals with questions of pay of the establishment, and the Examiner of Ordnance Accounts who deals with all questions of stores; the Commissariat Examiner checks the payments, because all actual cash payments for local stores are done by the commissariat.

3772. The commissariat are in charge of the stores?—No.

3773. In charge of the store accounts?—No, not in charge of the store accounts. The Commissariat Examiner pays contractors, for instance, who supply local stores.

3774. (*Sir Ralph Knox.*) Upon the demand of the ordnance officer who certifies to the bill?—Who certifies to the bill being a correct account.

3775. And that he has received the stores?—And that he has received the stores.

3776. Then the Ordnance Examiner sees that the stores for which a charge is made are credited in the same account?—Quite so.

3777. (*Chairman.*) Then I should like to understand about the obtaining of money, the actual cash which is required for pay, and so forth. The proper officer in the establishment draws upon the district treasury, does he not?—He receives a cheque from the Pay Examiner, but he has also a permanent advance. Each establishment has a permanent advance corresponding to what their payments are likely to be during the month, and that permanent advance is to enable him to pay the whole of his European establishment, and the permanent labourers and permanent artificers where they have any, and all the extra artificers and all the extra charges like postages, telegrams, office, &c.

3778. And does the pay officer draw the sum representing this permanent advance out of the district treasury and keep it in his own chest?—Yes, keeps it under a guard. He keeps it in the treasure chest under a guard of either native infantry or a police guard.

3779. We are now talking of what goes on at each of the 27 establishments in all India, viz., the 12 arsenals, 6 depôts, and 9 factories?—Yes.

3780. And at each of those 27 establishments, a permanent advance for these charges of pay and contingencies is placed in the hands of the head of the establishment?—The ordnance officer signs for the advance, and when they make over charge, one to the other, they sign for the permanent advance.

3781. The purchase of stores you have just described to us is done through the commissariat?—Yes, the purchase of local stores—of all stores purchased locally which are received in the arsenal; then a voucher goes to the Commissariat Examiner authorising him to pay the contractor.

3782. Does the audit officer under the Military Controller make any report upon the result of his examination of the ordnance expenditure?—The Examiner of Ordnance Accounts sends the Inspector-General a statement monthly showing the actual expenditure under different heads that has been incurred during the month in each establishment in his circle. He gets a detailed list showing what the budget allotment is and exactly what is going out month by month, and the ordnance officer of the establishment also sends him a statement every month showing exactly what he has paid under the different heads.

3783. Therefore, the Inspector-General knows first of all from the audit officer what has been the actual expenditure incurred in his department in the preceding month?—As a matter of fact, he knows it first from the ordnance officer or from the superintendent of the factory, because the Examiner's statement comes in later.

3784. So the Inspector-General gets a check over the expenditure since he learns first what his own officers have claimed and paid, and then what the auditor has admitted?—Yes; and occasionally there are little differences owing to cheques being presented later. A voucher authorising payment might be given before the end of the month to a contractor, and he might not present it till the next month, but the differences are very slight. One has a perfect check over the expenditure of each establishment.

3785. Month by month?—Month by month.

3786. What are the arrangements for stock-taking, and how is it, from time to time, ascertained whether the stores actually in store correspond with the stocks which the books show should be in the store?—Well, there are very stringent orders about stock-taking, and stock is always being taken throughout the year in each establishment of certain articles. In every arsenal there is a certain proportion laid down under regulations, and the storeholder has to check that proportion.

3787. When the storeholder is taking stock, is he accompanied by any independent officer?—No; occasionally where it is possible to do so (it depends upon the *personnel* of the establishment) a junior officer is detailed to take stock; and if the storeholder is taking stock of arms, or other important stores, an officer, or an honorary commissioned officer, actually counts and checks the stores, and signs in the ledger for having done so.

3788. And is his report compared with the ledger to see how far the articles actually found in store correspond with those that the book show?—Yes, immediately.

3789. Is that a complete system for security in your opinion, that there should be no independent guarantee?—Well, not only is a junior officer told off whenever he can be spared to take stock, but the ordnance officer in charge of the arsenal takes a certain proportion of stock himself.

3790. And there is never any test from a perfectly independent department, such, we will say, as the Audit Department of the Military Controller?—Yes. The Examiner once a year sends an officer of his Department to each establishment, and he counts a certain number of stores. That has only been instituted of late years—the last two or three years. The Examiner sends an officer round to each establishment, and he says: "lay out such and such stores." They are laid out for counting, and compared. And in addition to that the Inspector-General himself, in his inspection, often asks to see certain stores. I have often done it—had the stores laid out and counted them, and compared them with the ledger on the spot. I might mention also that there is often a great check on the quantities of stores when large issues are made. For instance, if stock has run at all low in one arsenal, and we find the stores in another, we order one arsenal to supply another. Every arsenal renders a statement of monthly balances, and if we found, for instance, that they had 100 Martini-Henry carbines which we wanted somewhere else, we would send them an order

to issue the whole lot. We should very soon find out whether the stock was not correct.

3791. How do you, as Inspector-General, satisfy yourself that the reserves of important articles of war material are, at any given moment, up to the proportion necessary; if at any moment there is an emergency, a likelihood of a drain upon the stores, how do you know that you have got a full stock to draw upon?—We know, because each establishment, each arsenal and depôt, submits a monthly balance of important stores.

3792. How long after the expiration of the month?—I think on the 10th of the following month.

3793. On the 10th of the month the Inspector-General knows what stores are in hand on the 31st of the preceding month?—Yes, we want to know that, because we have so constantly to transfer stores from one arsenal to another, and from that a statement is compiled every quarter, which goes up to the Director-General, showing the exact quantity of arms, ammunition, and camp equipment in each circle, and from these a general statement is compiled, from which the Director-General knows to a round what ammunition we have got in all India.

3794. You learn it within your circle on the 10th. When does he learn it?—The Director-General would get the return of stores in hand on the 1st of April before the 1st of May. It takes a little time to compile and to check.

3795. (*Sir Ralph Knox.*) Are those returns sent up monthly with a view to their being compiled?—Quarterly to the Director-General of Ordnance.

3796. (*Chairman.*) But at any time by telegraph he can learn from each Inspector-General what the state is within 10 days you may say?—Well, it might take a little longer than that, because I should have to communicate with the arsenals; but within two or three weeks.

3797. On the 10th each Inspector-General knows what the state of the store balance is?—Yes.

3798. Within the 10 days you would know what existed on the 1st, and you are therefore able to inform the Director-General within that very short period?—If the Director-General telegraphs to me at any time, I could tell him what the balance was on the 1st of that month within a few hours.

3799. And you also would know whether there had been any heavy drafts in the interval?—No, I could not tell that without communicating with the arsenals; for this reason, that every requisition does not come to the Inspector-General now as it used to do, but if an officer in charge of an arsenal receives a requisition which is covered by the regulations he can issue at once without reference to me.

3800. But at all events the number of establishments is not very great, the Inspector-General can communicate with them pretty quickly; it is quite a small number of places?—Yes.

3801. Would you describe the establishment of the Ordnance Department in each command?—The several circles and the establishments contained in them are as follows:—

Arsenals.	Depôts.	Factories.
PUNJAB.—Ferozepore	Dera Ismail.	—
Rawal Pindi	Khan.	—
BENGAL.—Fort William.	—	—
Allahabad	Agra	Small-arm ammunition, gunpowder, gun carriage, shell factory, harness and saddlery.
MADRAS.—Madras	Fort Dufferin	Gun carriage.
Rangoon	Trimulgherry.	—
Bellary.	—	—
BOMBAY.—Bombay	Poona	Small-arm ammunition.
Quetta	Ahmedabad	Gunpowder.
Karachi	—	Gun carriage.
Aden.	—	—
Mhow.	—	—

3802. Would you subdivide those factories, because I see afterwards in your memorandum you allude to the different kinds of work done in the factories. There are three gun carriage factories, are there not?—There is a gun carriage factory in each Presidency, Futtygurh, Madras, and Bombay.

3803. And besides that the other six factories?—There are two gunpowder factories in the Bengal circle, and one in the Bombay circle, and two small ammunition factories, one in the Bengal and one in the Bombay circle. Then there is one shell factory for the manufacture of artillery projectiles and fuzes for the whole of India in Bengal, and one harness and saddle factory at Cawnpore.

3804. Have you mentioned the small arms ammunition?—Yes, I mentioned that; there is one in Bengal and one in Bombay.

3805. I see in the Appropriation Account of the Army expenditure that Bengal is divided into two circles?—Yes.

3806. Does Bengal include the Punjab Circle, because I see there is Bengal Eastern Circle, Bengal Western Circle, Madras Circle, and Bombay?—Yes, the Eastern circle is Bengal, the Western circle is Punjab.

3807. Would you give us the distinctions between the business of an arsenal and a depôt?—Well, an arsenal is a very much larger establishment than a depôt. An arsenal exists for the supply to a very large number of troops of all equipments which they can possibly require, not only arms and ammunition, but harness and saddlery, camp equipage, and accoutrements of every kind; depôts are only maintained for the supply of ammunition and entrenching tools.

3808–9. With the amount of regular communication that there is now is that, in your opinion, a necessary distinction? Is the concentration of stores carried as far as is desirable or possible?—That is a question about which I hardly like to give an opinion; they have been reduced very largely, as I think I have pointed out. There has been an enormous reduction since the Ordnance Commission of 1875. Whereas there were in 1879, 16 arsenals and magazines, so-called, and 17 depôts, there are at the present time, 12 arsenals and six depots, so that there has been a very considerable reduction. Whether that reduction could be carried further is rather a question for the Commander-in-Chief. Personally I should like to see them reduced.

3810. You think it does admit of further reduction?—Yes.

3811. There does not seem to be any reason on the face of it why there should be any separation between a depot and an arsenal; why the bigger depository of stores should not include the smaller one if railway communication is sufficient?—It was considered necessary in former years. They had several so-called magazines in which ammunition was stored and other small stores, but there is no doubt the establishment of those depots originally was owing to the want of railway communication.

3812. There seem to be a large number of arsenals in Bombay as compared with other commands; is there any reason for such a distribution?—Yes, because it is such a straggling command.

3813. Of course we at once except Aden, that stands by itself; but then you are left with Bombay, Quetta, Kurachi, and Mhow?—Quetta, of course, is far away on the frontier, and there is Mhow.

3814. And I also see you put Kurachi?—Kurachi is a very important point, as it would be the basis of operations on the frontier. Kurachi is a very important point, so is Quetta; Mhow may be open to question.

3815. I am struck by the number of the arsenals there, because I see, taking the work, the limit for urgent expenditure in Bengal is 30,000 rupees; in Bombay 20,000; which looks as if the work in Bengal was considerably bigger than in Bombay, and yet there is a larger number of arsenals thought necessary in Bombay?—That does not refer to the expenditure in arsenals, that particular expenditure is principally in connexion with factories. We are given a larger limit in Bengal, because three-fourths of the manufacturing power in the whole of India is in Bengal in those five factories.

3816. Do you think in Bombay itself it is necessary to have an arsenal?—Yes, either there or at Poona.

Colonel R. Wace, R.A.

27 Feb. 1896.

Ordnance Department.

I should like to see it moved to Poona. I might mention that a proposal has been a long time under consideration to move the Bombay arsenal to Poona. We should be very glad to see it done.

3817. (*Sir Donald Stewart.*) What is the reason for that?—Well, the Bombay arsenal is a great deal too small, and they cannot increase the limits of it, the ground outside is so valuable; and the stores are not well arranged in the Bombay arsenal.

3818. (*Chairman.*) You were mentioning just now the reductions that had been made in ordnance establishments consequent on the recommendations of the Commission of 1879, was it not?—1874-75.

3819. Could you describe a little more fully what led to such a large reduction as that that you pointed out?—Simply financial considerations.

3820. You had come to the conclusion that the old system of a great number of arsenals and depôts was rendered unnecessary by railroad extension, I suppose?—That must have been the reason of it.

3821. (*Sir Ralph Knox.*) But have you not a store establishment handy to any considerable mass of troops; do you not find that necessary?—Not in addition to these arsenals and depôts.

3822. These are sufficiently contiguous to the troops?—Yes, these work very well.

3823. What distance are they from any large number of troops?—Well, of course, some of them are contiguous to the troops, but in some cases stores have to be sent some hundreds of miles by rail.

3824. To what force of troops would that be—a brigade for instance?—Oh, to more than brigades. The number of troops supplied by these arsenals varies very considerably; Allahabad has a very large circle of supply, and so has Rawal Pindi, because there are so many troops concentrated on the frontier there.

3825. Is there no store establishment at Rawal Pindi?—Yes, there is an arsenal at Rawal Pindi; Rawal Pindi is one of the arsenals.

3826. But what I wanted to know was, whether it is not necessary to have a store near such a force as a brigade?—No, we do not consider it necessary.

3827-8. Then what is your largest force which is without a handy store establishment?—I could not say at once.

3829. (*Sir Donald Stewart.*) Peshawur would be the largest?—But Peshawur is only 100 miles from Rawal Pindi; there is no difficulty in supplying it. Meerut has no arsenal; Meerut is dependent on Ferozepore.

3830. (*Sir Ralph Knox.*) But has it not a depôt?—No. It is a very expensive arrangement keeping up separate depôts, and very unsatisfactory.

3831. But the annual issues of ammunition and equipment of various kinds is sent from Meerut, for instance, to some considerable distance to be supplied?—Well, the immediate requisitions would be, but each arsenal has, of course, a list of the troops under its supply—so many regiments of British infantry and cavalry and so many batteries of artillery, and so on—and from that list of corps dependent upon them they are able to estimate their requirements exactly, and then all those separate regiments send their requisitions at due times to the arsenal of supply. It becomes merely a question of whether it is cheaper to send stores 200 or 300 miles by rail or to keep up a separate establishment, and then, even if you keep up these depôts, you cannot keep up establishments of all the different kinds of equipment that are required without very considerable expenditure. It is a much more economical plan to keep up arsenals that are centrally situated as regards the railway.

3832. And experience has shown that the reduction in the number of depôts and arsenals has not given rise to any inconvenience as regards the equipment of the troops?—None whatever. I have never heard any complaint of it. And we have much better control of an arsenal than we have of a depôt. For instance, the establishment of an arsenal is one ordnance officer of the first class, that is a senior officer of experience, and one third, and one fourth, and that allows of efficient control by commissioned officers. When we come down to depôts our Department is handicapped in the matter of *personnel*. You are supposed to have one third-class officer; under him you would have a few senior warrant officers; if the officer goes sick the depôt is immediately thrown on the hands of warrant officers.

3833. The force of the regiments in India is maintained at a fuller establishment than at home, and suppose they had to be moved, for instance, they would not have to be supplied with so much extra material as a force organised at home?—They are always kept fully equipped and all the troops included in the mobilisation scheme are provided with their mobilisation equipment which they keep now in regimental charge.

3834. Oh, I see, then practically you meet the difficulty of any immediate extension or mobilisation by having an increased regimental charge?—Well, I would not say an increased charge. Formerly the mobilisation stores were kept in arsenals, but it was deemed by the Commander-in-Chief in India more expedient that they should be kept in regimental charge.

3835. That explains the difficulty I was under. I understand now that you have regimental local charges of stores up to the full equipment which may be required by the units in the case of any movement or mobilisation?—Yes.

3836. So that a local store of that kind exists?—Yes.

3837. (*Sir Donald Stewart.*) Do they keep regiments in possession of their service ammunition now?—Yes, of all the regimental ammunition. For a British infantry regiment going on service each man has 100 rounds, and the regimental reserve is 239 rounds, that is, they keep those 339 rounds with the regiment. Then the ordnance reserves in ordnance charge amount to 300 rounds per man. That brings the total up to 639 rounds a man. Each regiment in the first or second army division which is in possession of mobilisation stores keeps those mobilisation stores till it is relieved by another regiment. Then it hands over its mobilisation equipment to the regiment that comes into the army division.

3838. (*Sir Ralph Knox.*) How is control exercised over those stores in the hands of the troops; is it by your Department?—No, the officer commanding is responsible.

3839. But who examines the account?—The account is rendered to the Examiner. The Ordnance Examiner examines all the accounts of regiments.

3840. It is not through your Department?—No; the commanding officer is responsible to the Government, to the Commander-in-Chief rather, that he is in possession of these stores.

3841. But those accounts are rendered to whom?—All regimental accounts are audited by the Examiner of Ordnance Accounts independently of the Ordnance Department.

3842. (*Chairman.*) The Examiner of Regimental Accounts is an officer of the Military Controller?—Yes.

3843. (*Chairman.*) I think you have told us that in 1879 there were 16 arsenals and magazines, and 17 depôts, whereas at the present time there are 12 arsenals and six depôts. I gather from your memorandum that two new arsenals in the meantime have been created?—Yes.

3844. Owing to the extension to Quetta?—Quetta, and there was an arsenal at Peshawar which has been removed to Rawal Pindi; the Peshawar arsenal has been abolished.

3845. Then one arsenal has been created in consequence of the extension of territory?—Yes, Quetta; and one depôt, Fort Dufferin.

3846-7. Fort Dufferin is in Burma?—Fort Dufferin is in Upper Burma. And there is one new depôt at Trimulgherry; also one at Ahmedabad, a minor alteration in consequence of the abolition of the arsenal at Ahmedabad, which is quite close.

3848. That was a substitution of one thing for another?—Yes.

3849. (*Sir Donald Stewart.*) At the same place?—Yes.

3850. (*Chairman.*) But at all events I gather that you are strongly in favour of a few large establishments rather than a number of small ones?—They are much better administered.

3851. And I suppose in the main more economical?—I should say so.

(*Sir Ralph Knox.*) It is coupled, however, with the system that I have just elucidated, that there is a complete equipment of stores held by each unit of the army.

3852. (*Mr. Courtney.*) What is about the largest radius from the arsenal to a regimental charge?—Well, I could not say without looking at the map. If there was a map of India here I could tell you.

3853. Could you give any estimate?—No; but as a matter of fact no inconvenience has arisen. I have never heard that advanced.

3854. (*Sir Ralph Knox.*) Where would transport be obtained from in case of movement?—On the frontier?

3855. No; where would the transport articles be supplied from; regiments do not keep the equipment of transport with them?—No.

3856. (*Sir Donald Stewart.*) Some regiments do?—Some regiments on the frontier keep the equipment of transport, but only a limited quantity I think now; but we keep a reserve of transport saddlery: we keep a large reserve of transport saddlery and transport saddles.

3857. (*Sir Ralph Knox.*) But how would the carts be obtained—the waggons?—We keep the carts.

3858. Then you would have to send them a very considerable distance from the arsenals?—No, because the carts are kept at Rawal Pindi and Ferozepore, and wherever we can keep them with advantage.

3859. But it is a considerable distance from some of the troops is it not?—Yes, it is.

3860. (*Mr. Courtney.*) Then you use the railways?—We use the railways to send them up, but that is all worked out under the mobilisation regulations—the supply of the transport. Of course that comes more under the Commissariat Department, the supply of the transport not being an ordnance matter.

3861. (*Sir Ralph Knox.*) Would they keep a reserve of transport articles?—We keep a large reserve of transport articles, of saddlery and saddles.

3862. But not of carts?—The carts have been made over now, I think, to the Transport Department.

3863. (*Mr. Buchanan.*) At depôts as well as at arsenals?—No, there are no transport articles kept at depôts; depôts are only for the supply of ammunition and entrenching tools.

3864. (*Chairman.*) But the result of your answers to these questions appears to be that you are perfectly satisfied with the present arrangements, that the regimental charge is sufficient for all immediate wants, and from the great centres supplies can be forwarded sufficiently quickly to prevent any inconvenience?—Yes, I think so; I should be very sorry to see the number of establishments increased, certainly unless we were given a very considerable addition to our *personnel*.

3865. Now, as to the ordnance factories: I see there are nine in India, of which three are gun carriage factories. The Special Ordnance Commission of 1875, I think, recommended that one of these factories should be closed and some other modifications made. Would you tell us what has taken place with regard to them?—It will be seen that there are nine ordnance factories in India.

3866. (*Mr. Courtney.*) Pardon my interrupting you; are there seven working days in the week?—Six days. The manufacture of steel for all artillery projectiles has been satisfactorily introduced in the Cossipore factory during the last three years, and there is no reason why the requirements of gun mountings and carriages should not be similarly met if proper plant and establishment are given. India would then be entirely independent of England in this important manufacture, and undoubted economies would be secured in the future by the employment of native labour.

3867. (*Chairman.*) Perhaps you would continue your remarks on the subject of the other factories?—Then the gunpowder factories; there were originally three gunpowder factories in India, one for each Presidency, but the Madras Factory has been closed for work for some years past on the grounds of economy, and the public service has not suffered in consequence. It will probably be always considered necessary to maintain the two factories at Ishapore and Kirkee, as, even if the possibility of accidents from explosives is not taken into account, the manufacture of black powder will have to be continued for many years to come, in addition to the manufacture of cordite, the introduction of which into India is, in all probability, only a question of time.

3868. Is Kirkee in the Bombay circle?—Yes.

3869. And Ishapore?—Ishapore is near Calcutta. A small plant has already been supplied to Kirkee for the experimental manufacture of this new explosive. There are two factories (Dum Dum and Kirkee) for the manufacture of small arm ammunition, the demand for which is so considerable that it would be inexpedient, and probably also impolitic, to concentrate it in one factory. There is only one factory for the manufacture of artillery projectiles. The question of an alternative factory in the Bombay Presidency was under consideration a few years ago, but was abandoned for financial reasons. The existing factory at Cossipore is fully able to meet all demands on it in the future, and there would not be sufficient work to justify the erection of duplicate steel works, with all the accompanying establishment, as well as expensive finishing plant. There is also only one harness factory, in which are also manufactured the equipments for British and Native troops in India. The factory is situated at Cawnpore, which is a great centre of the leather trade in India. The installation of a second factory at Bombay has been sanctioned by the Secretary of State for India, but for financial reasons has not yet been carried into effect. Consequently the Bombay and Madras Presidencies are largely dependent for the supply of leather on the local market, which has not been altogether satisfactory, owing to the competition of the trade being insufficient to secure a constant supply of good leather. All these factories are under the direct control of artillery officers, who are specially selected from among the officers who join the Department in the executive grades as Ordnance officers, and an assistant superintendent is allowed for each factory, who is taken from the third or fourth grade of Ordnance officers. The European staff of engineers and foremen is kept down as low as possible, and no addition to sanctioned establishment is ever allowed without the fullest explanation of the circumstances which necessitate such increase. The supervision of native labour when employed on skilled work and in the manipulation of expensive machinery, is a very important matter, and cannot be reduced without waste of labour and material, and a consequent loss of efficiency.

3870. Have you ever formed any idea of what has been the financial result of these large reforms in Ordnance establishments since 1879?—No, I have not.

3871. You have no means of forming an opinion upon that point. For instance, a comparison of the Estimates of 1879 with the current Estimates would not enable you to form an opinion?—With reference to the reduction of arsenals and depôts?

3872. With reference to the reduction of charge for arsenals and depôts?—Here is a note on the military expenditure on the army in India for 1872–73 and for 1883–84. If I might read from this, I think it is stated here. It says: "On the other hand, considerable reductions were effected in 1875 and subsequent years on the recommendation of the Ordnance Commission of 1874, various magazines, depôts, and establishments being abolished or reduced; and again in 1879, on the Report of the Ordnance Committee of 1878, when the reserves of ammunition and other stores were largely reduced. Moreover, since 1879–80 the value of all stores issued to the police and other provincial services has been deducted from charges, instead of, as heretofore, being credited to receipts under Grant 10. The average annual deductions in the last five years of the series have amounted to Rs. 3,17,000."

3873. But that refers to the reductions on account of police, does it not?—That was only a minor item.

3874. But what is the force of the word "deductions"?—Deductions from the Estimates.

3875. Are they not reductions?—There were considerable reductions.

3876. And they put it at three lakhs?—I find it so stated.

3877. Is that three lakhs annually?—"Yes. The average annual deductions," it is here stated, "in the last five years have amounted to three lakhs and 17,000."

Colonel R. Wace, R.A.
27 Feb. 1896.
Ordnance Department.

3878. (*Sir Ralph Knox.*) Has there been any corresponding increase in the regimental expenditure as to their stores?—I cannot say; but there is no doubt that there was very considerable reduction of expenditure due to the abolition of those establishments; there must have been.

3879. (*Chairman.*) Would you give us the authorised numbers of administrative and executive officers at Headquarters and in the several circles?—The Administrative Staff consists of one Director-General and a Deputy, four Inspectors-General.

3880. I suppose the Director-General and the Deputy Director have a considerable clerical staff under them?—Yes.

3881-2. The Director-General and a deputy, four inspectors-general, and four assistants?—There are four Inspectors-General of Ordnance and four assistants to Inspectors-General of Ordnance in the circles; total 8.

3883. And those are the officers that you said were seconded, did you not?—Yes, the four assistants are seconded.

3884. Does not the seconding apply to the whole of the staff?—No.

3885. Is not all the staff of the Director-General removed from the active service list?—They are seconded in the regimental list.

3886. Will you tell us about the executive officers?—The Executive Ordnance 1st class, 5; 2nd class, 7; 3rd class, 11; 4th class, 13; making a total of 36, but out of that 36 we have to find 9 assistant superintendents for the factories, so that that only leaves us 27 officers for the executive charge of the arsenals and depôts.

3887-8. These are all Royal Artillery officers seconded for the time being from active service?—Yes, seconded for employment in the Ordnance Department.

3889. And how are they allotted within the arsenals?—A first-class arsenal is supposed to have always one first-class Ordnance officer, one third, and one fourth: a second-class arsenal has one second class ordnance officer: a first class depôt, one third class ordnance officer in charge: second class depôts are in charge of warrant officers, but the Director-General has power to move them as he may consider necessary.

3890. (*Sir Ralph Knox.*) Do they often go back to their corps after having joined the Ordnance Department?—When they are first appointed they are appointed for five years, and if, when a man has served his five years he wishes to go back, he can leave the Department, and if he wishes to stay on, it rests with the Director-General whether to recommend his re-employment or not for another term of five years.

3891. They are for terms of five years only?—The first and the second terms are for five years only; but during an officer's second term of five years, or towards the termination of his second five years, he may apply to be continuously employed in the Ordnance Department. If we find an officer is likely to make a valuable superintendent in charge of a factory, he may be recommended for continuous service in India, similarly to the way in which Royal Engineer officers are employed, and then he remains in the Department for the whole of his service. We have 20 continuous service officers on the list now; out of about 55 officers, 20 have been selected for continuous service.

3892. They will have given almost all their career to Indian service, I suppose?—Yes, and they have the advantages of the Staff Corps rules as regards furlough and pension.

3893. (*Chairman.*) Then, perhaps, you would pass on and give us some information as to the European staff of engineers, foremen, and civil European subordinates, as compared with the number of Natives employed, and the cost of the two forces?—The European staff of engineers and foremen is kept down as low as possible, and no addition to sanctioned establishment is ever allowed without the fullest explanation of the circumstances which necessitate such increase. The supervision of native labour, when employed on skilled work and in the manipulation of expensive machinery, is a very important matter and cannot be reduced without waste of labour and material and a consequent loss of efficiency. The European staff of engineers, foremen, and warrant and non-commissioned officers at present sanctioned for the several factories is as follows:—

Factories.	Civil Engineers and Foremen.	Military Subordinates.
Small-Arm Ammunition, Dum Dum.	6	23
Small-Arm Ammunition, Kirkee	8	8
Foundry and Shell Factory -	11	7
Gun Carriage Factory, Fatehghar	5	9
„ „ Bombay -	8	7
„ „ Madras -	4	8
Gunpowder Factory, Ishapore -	8	6
„ „ Kirkee -	7	4
Harness and Saddlery Factory -	4	12
	61	84

3894. And these are all Europeans; and, added to the 36 executive officers of the first, second, third, and fourth class, comprise all the Europeans employed?—No, you must add to the 36 ordnance officers these nine superintendents. The definition of an ordnance officer is a man employed in charge of an arsenal. They are employed in arsenals. The nine superintendents of factories are separate from the ordnance officers. It is kept as a separate branch of the Department, but out of those 36 ordnance officers we take nine as assistant superintendents of factories.

3895-6. That makes, I reckon, without the central administration of the Inspectors-General, 190 Europeans; and if, to make it complete, you add 10 for the central establishment, exactly 200 Europeans. You have got 36 executive officers of the different classes; you have got 10 of the central establishment; you have got 9 superintendents of factories; you have got 61 civil engineers and foremen, and 84 military subordinates?—Yes, that makes 200.

3897. And that is the number of Europeans employed in the whole establishment?—In the whole establishment? No, the whole European establishment is very much larger than that. I have not introduced into this statement the number of warrant and non-commissioned officers employed in arsenals; I only brought in the military subordinates here, because I wanted to show the actual amount of supervision in factories.

3898-9. Your statement here refers to the supervising force?—The supervising force over the factory labour. The European staff in the arsenals I have not included, as I was only referring to factories.

3900. This does not include the supervising staff in the arsenals?—No, that is quite separate. I have not included the number of European storekeepers in this memorandum at all.

3901. With regard to the supervising staff in the factories, could you give us any estimate of what they cost?—I have said there are 61 civil engineers and foremen, there are 84 military subordinates; in addition to that there are nine superintendents and nine assistant superintendents, that is a total number of 163 Europeans, the actual number of Europeans who supervise the manufactures in nine ordnance factories. Their total cost, taken from the last Budget 1893-94, was 6 lakhs and 45,000 odd. The value of the out-turn during the same year of these factories was about 120 lakhs, so that the cost of European supervision of manufacture thrown over the whole of the factories did not amount to 5½ per cent. of the value of the out-turn.

3902. Yes, by the way, I should like to mention that from our estimates I should judge that the superintendence at Woolwich is 26,000*l.* against an out-turn of 2,100,000*l.*; that would represent 1¼ per cent.?—But that 26,000*l.* does not, I think, include every foreman and manager and leading hand.

3903. You include everything in your estimate?—I include every European in the factory.

3904. I asked a question about the cost of supervision at Woolwich, and I was told that was the case; but it is possible that it might require modification: I am simply putting it before you as a test?—My calculation includes every foreman we have got. The cost of superintendence at Woolwich probably does not

include managers, engineers, foremen, and leading hands.

3905. With reference to the question of the growth of military expenditure, you have reason, I think, for holding that increase rather than reduction of your supervising establishment may be expected. Perhaps you would give us your reasons for holding that opinion?—Because our manufactures are increasing every year.

3906. I think the Commission would like to hear your view upon this subject, because it bears upon the question of the growth of expenditure?—Yes. I referred to the executive officers in charge of arsenals and the value of stores, which has increased very much of late years. Of late years we have sent four officers home every year to go through courses in the Artillery College and the Arsenal, to keep their knowledge up to date, and it is absolutely necessary to do that if the ordnance officers are to be able to deal with all the different equipments of the present day. They require very considerable knowledge of ordnance stores, and sending home four officers every year makes a constant reduction of the number who are available for duty.

3907. (*Sir Ralph Knox.*) You send them home for instruction in processes of manufacture, or with a view to learning the stores?—Both; we send officers who are employed in factories home to go through courses in the Arsenal, and to follow manufactures, so as to keep our manufactures up to date; and we also send the ordnance officers in charge of arsenals home, to acquire knowledge with regard to stores, because it is necessary that the ordnance officer should be as much up to date as the regimental officer outside who has to use the stores.

3908. (*Chairman.*) Will you kindly state your reasons for considering an increase of the supervising establishment probable?—The staff of executive officers allowed as Ordnance officers is very small compared with the number of troops under supply. Deducting the nine Ordnance officers of the 3rd and 4th class who are employed as assistant superintendents in factories, and whose services in that capacity can never be spared, it will be seen that only 27 officers remain for the executive work of the several arsenals and depôts on which the Army in India and the other services numbering some 355,000 men are dependent. I know from personal knowledge that these officers are very hard worked, and that if they were not specially selected, and if care was not taken to retain in the higher ranks only men of proved ability and zeal for the public service, the work of the Department could not be carried on as satisfactorily now as it has been in the past. There is also in the sanctioned establishment of officers no adequate allowance made, as in other Departments, for a certain proportion of officers who may be absent on furlough, and the alternative of bringing in young officers to officiate during the absence of senior officers, when absent on duty or on furlough, is of little value, because no young officer can become sufficiently acquainted with his duties in the Department with less than a year's service. The reason why no fixed additional proportion in the several grades of ordnance officers was given in fixing the administrative and executive staff of the Ordnance Department was that officers are appointed in the first instance for a period of five years as for the staff of the army, and consequently the question of furlough was not admitted. Officers are still appointed in the first instance for five years, and seconded for employment in the department, but they can be re-appointed for a further term of five years, during which, if it is found advisable to continue their employment, they can be selected for continuous service in India, which carries the advantages of furlough rules and Indian pension; and up to the present time 20 officers have been granted these privileges. Of late years also the Government of India has sent to England annually four officers belonging to arsenals and factories, for courses in instruction in the Artillery College and Royal Arsenal. This is very necessary in order to maintain the required standard of efficiency in the Indian Ordnance Department, but it reduces the number of qualified officers available for duty. The time has come when some permanent increase to the commissioned officers of the Department must be given, and the Department be placed at least on the same footing as other Departments in regard to the staff of officers. The improvements in war material of late years have made it more than ever necessary to have a highly trained staff of executive officers, and the charge of a first class arsenal is so heavy that it is impossible to secure thorough supervision over all matters of receipt, storage, and issue, if the officer in charge has not under him an efficient staff. The value of stores has also increased very much of late years.

Colonel R. Wace. R.A.

27 Feb. 1896.

Ordnance Department.

3909. (*Sir Ralph Knox.*) Do the officers on joining the Department undergo a course of instruction in the stores and the duties?—Yes; they are attached to the different divisions to learn the duties connected with those divisions in a large arsenal. They are always sent to a large arsenal to learn their duties, and it takes a man fully a year before he is of much value as an executive officer.

3910. Does he take up the duties of the Department, or does he go through a period of systematic instruction on joining before he takes up work?—He goes through a period of systematic instruction on joining under the senior officer in charge of the arsenal and undergoes an examination.

3911. But without being charged with any duties in the meantime?—He would have no executive charge until he had learnt his duties.

3912. Of course, he would be a subordinate officer; but would he devote his time entirely to learning his business?—Yes, at first.

3913. And then be subjected to an examination to ascertain whether he had mastered the details?—Yes. He would be put first of all into the requisition branch, to see how the requisitions are checked when they come in from corps.

3914. But that is hardly an instruction in store duties, and in stores from an artillery point of view. Would he go through, for instance, a firemaster's class, before he would be appointed?—We have no firemaster's course in India.

3915. I allude to it, because that is the system that is to be adopted in the future in the service at home—the officers in the first instance are to go through a complete system of instruction at the Artillery College and the Arsenal before they are appointed to their duties?—Quite so, and that is what we have been aiming at in India, but we have no school of instruction. Most of our officers now go through what is called at Woolwich the firemaster's course, and that is why they are sent home. It is most important that they should do it, but we have not a school of instruction to carry it out, and in the meantime we have to utilise their services as best we can. In my own circle I have had the Calcutta arsenal, which is a very big arsenal, constantly in charge of only two officers, and I have had it in charge of one, instead of three; and I have had the Allahabad arsenal, which ought to have had a first-class ordnance officer and another one to help him, in charge of a third-class ordnance officer, a comparatively young captain.

3916. If that young captain had undergone a thorough course of instruction, there would be no objection to his being in charge, would there?—I think there would be very great objection, simply because the amount of supervision is too great; if you have a large arsenal in charge of one man, he certainly cannot go and check stores; he has no time for that, his whole time would be taken up in the office routine, in looking after his cash expenditure and checking the receipts and issues of stores. In an arsenal like Allahabad, which has some 40,000 troops dependent on it, there is a constant receipt of material which has to be checked by an officer—the senior officer. It is one of the duties laid down that the senior officer in charge of an arsenal is in charge of the receipt division, and he is supposed to see all the stores that come in, which is necessary to ensure only stores that are thoroughly serviceable being received from contractors and people. The main check that we have in the arsenal that things are going right is the supervision of commissioned officers.

3917. (*Chairman.*) And therefore you are anxious for an increase of establishment in order to get a more efficient control?—Yes, I am; I know it is absolutely necessary. I do not want to throw any slur on the honorary commissioned officers and warrant officers, who are a hard-worked and valuable body; but the staff of commissioned officers is the backbone of the Department.

3918. Do these remarks on the necessity of increase apply throughout your establishments, namely, to the factories as well as to the arsenals?—No, I referred

Colone R. Wace, R.A.

27 Feb. 1896.

Ordnance Department.

only to the arsenals. As regards the factories, so far as I can say at present, so long as we have got a superintendent, and one assistant superintendent, I do not want to ask for more. Two assistant superintendents would be better than one, but the most important thing at present is to see the arsenals strengthened. The receipt and issue and safe storage and accounting for all munitions of war for 350,000 men is a very big job, and I know from experience that our officers have complained bitterly of the amount of work that is thrown on them; and I know their complaint is true.

3919. (*Mr. Buchanan.*) Have you made application to the Government of India from time to time to increase your arsenal staff?—I believe a proposal has been put forward by General Walker, the present Director-General.

3920. The matter has been, from time to time, laid before the Government of India?—Yes, I believe with a view to a proportion of 25 per cent. additional to cover the absence of officers on furlough. It varies from 20 to 25 per cent. in the different departments, the Military, the Military Accounts, the Commissariat, and so forth, and the proportion is thrown over the whole. I would not begin with the first, but with the second class ordnance officers, who are thoroughly efficient officers; that would be a valuable addition to our arsenal staff. If you take the Army List, you will see that an addition to officers of the third and fourth class would mean that, when our senior men are absent, the arsenals would be left in charge of very junior officers, many of them very good, but the very best of them cannot learn their work in a year.

3921. (*Chairman.*) Your evidence on these points is most interesting, and concerns our Commission. First of all it is a proof, coming from yourself, of the fact that the Indian Government administers, or endeavours to administer, a great part of the army expenditure very carefully without any waste of staff, and next it is a warning to us, in looking to this in the light of your experience, that we must rather expect an increase than a diminution of staff under the ordnance head of expenditure?—Yes.

3922. But may I call your attention to one point. If you compare the details of ordnance expenditure in 1884–85 and 1893–94, the staff of arsenals and depôts has increased by some 147,000 Rx. That is a very considerable increase?—Yes, but that includes the employment of labour; that is not only the cost of supervision. The supervising staff in the beginning of that table is the Administrative Staff, the Director-General, the Inspector-General; then come the arsenals, including the pay of all the officers, and of the junior grades, and even the extra labourers, the coolies who have been employed.

3923. I refer to this in passing to show that there has been an increase?—There has been an increase there, but not necessarily on the officers who are in executive charge; it includes all the charges.

3924. (*Sir Ralph Knox.*) What is the minimum number of officers that you have in charge of an arsenal?—A second-class arsenal has only one second-class officer.

3925. And a first-class arsenal?—A first-class arsenal is supposed to have three officers, and if it always had three officers we could get on; but none in my circle have had three of late years.

3926. But for a second-class arsenal do you think the one is enough?—No, I do not; I would never like to have less than two for this reason, that if an officer goes sick, which constantly happens in India, the arsenal is left in charge of a warrant officer.

3927. He has to go on leave?—He goes on privilege leave, yes. If he goes on privilege leave an officer has to be taken away from a first-class arsenal, and the staff there is reduced. It is a matter of efficiency. The waste of money that may go on in an arsenal is very great, if it is not properly controlled. All these arsenals have a work-yard where repairs are carried out, and this has been very much developed of late years. When the Ferozepore arsenal was put on its present system, it was given a very large workshop, and the same has been done at Quetta and Rawul Pindi, so that all local repairs can be carried out in arsenals. That entails an enormous amount of supervision.

3928–9. (*Chairman.*) You say that Ordnance officers and superintendents of factories are authorised to purchase stores locally to meet out-standing demands, or to bring up stock, to a quarter of the annual issue, provided funds are available from the "local supplies grants." Would you explain rather more fully the term "local supplies grants"? Is this power used to any great extent; is it a discretion?—It has only been granted within the last two or three years, and to the best of my knowledge, it has not been used yet to any considerable extent.

3930. What equipments are the Ordnance Department charged with, besides weapons and munition tools and ammunition?—The Ordnance Department supplies everything that is required by the Army in the way of Ordnance stores. It supplies arms, ammunition tools, harness, saddlery, entrenching equipment, all magazine stores.

3931–4. Anything for the troops, tents for instance?—All camp equipage.

3935. (*Sir Ralph Knox.*) Does it include furniture?—No, we have got nothing to do with furniture, that is done by the Barrack Department; we have nothing to do with clothing or furniture.

3936. (*Chairman.*) Can you put before us and distinguish to us the stores which you manufacture in India, from those that you import from England?—At the present time we import from England all guns and rifles, and of late years we have imported gun-carriages, not completed gun-carriages, but all their steel and iron components; we have simply erected them in the country and built their wheels and boxes.

3937. That is, I suppose, because of late years the gun-carriages have become a much more complicated matter of manufacture?—Quite so.

3938. Is all your powder made in India?—Yes.

3939. What you use for big guns?—Yes, we are now making the prismatic powders. We imported some prismatic powders until we got the machinery to make them; but we are now making them.

3940. That was what I wanted to ascertain, whether you had still to get from home any of these peculiar powders?—We shall not get any more.

3941. What is the value of ordnance stores sent from England to India?—In 1875 I find that there were nearly half a million worth sent out to India, 480,468*l.*; and then, in 1884–85, it fell to 182,000*l.* odd; then, in 1889–90, it was 253,000*l.*; 1890–91, 721,000*l.*; 1891–92, 830,000*l.*; 1892–93, 583,000*l.*; and 1893–94, 547,000*l.*

3942. (*Sir Ralph Knox.*) Those larger figures would be connected with some matter of re-armament?—Yes. Might I read what has been the cause of the considerable increase?

3943. (*Chairman.*) Yes, if you please?—The expenditure in England on ordnance stores, during the last five years, has been very heavy owing to the re-armaments which have been carried out. The British infantry have been equipped with Lee-Metford rifles. The whole of the Field and Horse Artillery, comprising 53 batteries, and 11 batteries kept in ordnance reserve, have been equipped with 12-pr. B.L. guns, and even the carriages have been supplied from England, with the exception of the wheels and ammunition boxes. The coast defences have been re-armed with 10-inch and 6-inch B.L. guns on hydro-pneumatic mountings. The armament of the frontier defences, comprising 72 new B.L. guns and howitzers, are still under supply, as also a new siege train, equipped with B.L. guns and howitzers and four heavy field batteries. The expenditure on these armaments is nearing completion, and the home expenditure during the next few years will be considerably diminished; but it must not be forgotten that guns and rifles will require renewal. In the meantime, also, the expenditure in India will increase, since the cost of repairs and of ammunition for modern B.L. guns and rifles is considerably more than that of the arms which have been superseded. The total expenditure in India and England, without taking into account the eventual replacement of the present armament, can never revert to the average expenditure of former years. To show how expenditure has increased, I would quote the enhanced cost of ammunition which is yearly expended in practice. Taking War Office vocabulary rates, the shrapnel-shell of the 12-pr. B.L. gun with which all the Field and Horse Artillery is equipped cost 44*l.* 17*s.* 10*d.* per 100, as against 25*l.* 17*s.* 10*d.* for the shrapnel of the 9-pr. R.M.L. gun, which has been superseded. The

time percussion fuses now in use with the 12-pr. B.L. guns cost 31*l.* 9*s.* 4*d.* per 100, as against 3*l.* 12*s.* 8*d.*, the cost of the wooden time fuses in use with the 9-pr. R.M.L. equipments. The cast steel common shell of the 10-inch B.L. guns on coast defences cost 942*l.* per 100, as against 219*l.* 10*s.* 3*d.*, which represented the cost of the iron shells for the 9-inch R.M.L., and 655*l.* the cost per 100 of those for the 12·5-inch R.M.L. guns, which formed the heaviest armament for coast defence. Small-arm cartridges for the ·303 Lee-Metford rifle now cost 5*l.* 12*s.* 3*d.* per 1,000, as against 3*l.* 13*s.* 9*d.*, the cost of the ammunition for the Martini-Henry rifle.

3944. Then that large expenditure on stores from England, 1890–91–92, was due to the re-armament of the artillery and infantry?—Yes.

3945. Have you any remark to make upon that point?—That increase has not been due solely to changes of patterns and improvements in war materials; it was not simply done because there was a better gun brought out, but would in any case have been largely necessitated by the fact that the guns and rifles which have been replaced had mostly served their time. The 9-pr. R.M.L. guns, with which the Field and Horse Artillery were armed, had been in use for about 20 years, and the Martini-Henry rifles, with which the British infantry were armed, had been in use for a similar term. All the Martini-Henry rifles, however, which were still serviceable, or had a certain number of years of life still in them, were passed on to the Native infantry, which are now armed with the Martini-Henry rifle, and the Snider rifles (which the Native infantry had) thus set free were converted to smooth-bores for the use of police. Some 50,000 Snider arms were thus converted at very small expense, to smooth-bores for the police, and I quote it as an instance of work done by our armourers in arsenals. We took the rifling out and generally repaired them in the arsenal armouries, and re-armed the police ourselves at a less cost than it would have cost to send the arms to England.

3946. (*Sir Ralph Knox.*) Taking the rifling out was not a very difficult matter?—The arms had to be put in an efficient state, and we had to make special ammunition for them, which is done in the factories.

3947. (*Chairman.*) Do you think you could manufacture economically more articles in India than you do, and if so, in what direction would you extend manufactures on the spot?—Well, we could do all our carriage work, I think, if we had a good central carriage factory, with all the necessary appliances and plant.

3948. Even these new complicated carriages?—Certainly.

3949. What, in your view, would be the financial effect of doing so; would it lead to economy?—Yes, I am sure it would. In many of the carriages, for instance, that are now under supply at Woolwich, there is any amount of work that we could have done in India with native labour.

3950. And more economically?—Wherever labour comes largely into the manufacture it must be more economical to do it in India than in England.

3951. That is to say, you think the work would be as well turned out in India, for practical purposes, as it is here, and it would be turned out by more economical labour?—Yes, that is what I think. We are making what is more complicated than a gun-carriage, we are making all our metal fuzes for India. If we can make our metal-fuzes we can make our gun-carriages.

3952. Of course, to whatever extent you can manufacture in India, apart from your own personal view of the advantage of it, that means less expenditure over here of Indian money?—Quite so, a reduction of home charges.

3953. Do you include carriages for the larger kind of guns?—Yes, I mean all carriages.

3954. The hydro-pneumatic and all?—Yes, I include the hydro-pneumatic.

3955. How would you describe the policy of the Government of India in regard to manufacturing all ordnance stores? Do you consider that it is that of encouraging manufacture in India or not?—I have always thought that the policy of the Government of India is to make India self-dependent, only limited by economical considerations.

3956. Is it distinctly laid down and known throughout the service that that is the policy in India?—I think it has been understood for many years; I have always been given to understand that it is the policy of the Government of India that India should be independent, as far as possible, of England; it has been limited by our manufacturing power, but I think it ought only to be limited by economical considerations.

Colonel R. Wace, R. A.

27 Feb. 1896.

Ordnance Department.

3957. And, therefore, you would say that the choice between the two methods of supply is, and ought to be, solely governed by financial considerations, that is to say, how stores can be obtained at the least cost to the Indian taxpayer?—Yes, that is what I think. Someone the other day was proposing that there should be a factory in India for the manufacture of rifles. I am doubtful whether it would pay, because a rifle lasts 20 years, and it would mean putting down very expensive plant and keeping up a separate establishment. I would not say positively that it would not pay, but it would have to be carefully considered; I should be doubtful of it.

3958. (*Mr. Buchanan.*) You do not expect to be able to make your own rifles?—We could make them; but the question is whether it would pay.

3959. You do not expect to be able to do so economically?—I do not think so.

3960. (*Sir Ralph Knox.*) Why should it not be so if it is a question of labour? If the argument as regards labour applies to the carriage, why not to the rifle?—Well, because the demand would not be sufficient. We carry out all our repairs to rifles already in arsenals. We have an establishment in each arsenal, who make tours of the troops in the circle. Any arms requiring repairs are sent to that arsenal to repair. But it would not pay if you had to bring the rifles from all over India to a central factory at Jubbulpore to be repaired, as in England.

3961. As regards the carriages, is not the argument the same? You only want large supplies of carriages when you have a re-armament?—That is true; but repairs to carriages are considerable and cannot be carried out in the arsenal; only the woodwork of wheels and boxes can be repaired there; any worse breakdown, of hydraulic buffers, for instance, or of elevating gear, or extensive alterations which have to be made with expensive machinery, cannot be done in an arsenal.

3962. No, I quite understand your doing all repairs?—They would have to be replaced in a factory; therefore you would have to have a gun-carriage factory.

3963. You are arguing in favour of a place where you would make your gun-carriages?—Yes, but they would also require repairs from time to time.

3964. Yes, but so do rifles and all other war material; I do not quite see why, if it applies in one case, it should not apply in another case?—Well, we have got three gun-carriage factories at the present time.

3965. But that is entirely a matter of capital expenditure. You rely mainly upon the argument that the labour is so much cheaper out in India; it is equally cheap for one article as for another?—Yes, if you have sufficient demand for the article.

3966. But you surely have a larger demand for rifles than you have for carriages or gun-carriages?—No, I believe the repairs to gun-carriages will be very heavy indeed in the future, as soon as these hydraulic-carriages begin to wear.

3967. I understand that of necessity you have a repairing shop for these carriages?—Yes.

3968. But what you propose is that you should make them as well?—Certainly, because we could not repair all parts of them without the power to manufacture. If certain steel sections and steel parts had given way, we should have to cast and roll those sections.

3969. You have at present all machinery necessary for making carriages?—No, we have not; we have only the machinery necessary for making the obsolete carriages. To make a modern gun-carriage we should require a small steel furnace and other plant.

3970. But does it not apply equally with regard to the rifles? For instance, you have a full power of repairing a rifle; you can repair any portion of a rifle?—Yes.

3971–2. If that be the case, have you not the necessary arrangements and machinery for making a rifle?—No, we have not. We could not make a rifle barrel in the country.

Colonel R. Wace, R.A.

27 Feb. 1896.

Ordnance Department.

(*Mr. Naoroji.*) You can make it if you choose.

3973. (*Sir Ralph Knox.*) You cannot make a rifle barrel?—We could not make a rifle barrel in the country. We could repair all the smaller parts of them, re-stock them, anything of that sort, but we can only replace a barrel by putting in a new barrel received from England.

3974. But if you could make the intricate parts of a gun-carriage, could you not make a rifle barrel in India?—Yes, I say we could do it; the only doubt I have expressed is whether it would pay. I could go farther than that and say we could make our own ordnance in India. There is no real reason why we should not make a 12-pounder gun.

3975. If you rely for the cheapness of carriages on the labour, it appears to me to apply equally to everything. I cannot understand why it should apply only to carriages?

(*Mr. Naoroji.*) Only the first new capital laid out would be necessary, that is all.

3975A. (*Mr. Buchanan.*) You think it would be a good thing if you could manufacture your own rifles in India, supposing it could be done without great loss? If it could be done as cheaply as you get them from England, would you be in favour of having them made in India?—Well, I always have had doubts about the manufacture of rifles. I am against the local manufacture of guns, because it would involve a very large proof department for the proof of the guns. The guns last so long, and so do rifles as a rule, and we keep up such large reserves of them.

3976. (*Chairman.*) Confining yourself purely to the question of the cost in England, is there not something to be said on this point, that in all probability, as you have here a large manufacturing department of guns and rifles, that department could manufacture a large stock for England and India together more cheaply than two separate establishments, one in India and one in England, inasmuch as two separate establishments generally work more dearly than a single one?—Yes, probably.

3977-8. You have to take that into consideration as against the much cheaper rate of labour in India which Sir Ralph Knox has been speaking of. It thus becomes a rather complicated question, which would have to be gone into; but I take it from what you said before that the test would be the cost to the taxpayer in India, and if you were convinced that the rifle or the gun could be made in India at less cost to the taxpayer in India you would advocate it, supposing they were equally efficient weapons?—Yes.

3979-80. Could you give us any illustration of what you mean when you say that an economy results from manufacturing in India as compared with importing from England? Take, for instance, the cost of manufacturing gun-carriages as against that of importing them?—Yes. I can give you instances of the comparative cost of our manufactures. I produce a comparative list of the cost of certain stores, showing the cost of some of the principal manufactures in the ordnance factories in Bengal during 1893-4 as compared with the home supply. Take the 12-pr. shrapnel shell, we have our steel works at Cossipore, and are making those there from our own steel. The cost of manufacture in India was Rs. 760 per 100, as against Rs. 813 if imported from England.

3981-4. (*Sir Ralph Knox.*) Rs.760 against Rs.813?—That was the saving. I do not know whether they have reduced their cost at home. Those are the War Office vocabulary rates, to which are added freight charges and charges for inspection, and so forth; but that is really what the Military Accounts Department stated that they cost in India if imported from England.

3985. Including the transport, of course?—Of course; that price includes the freight and inspection charges, and so forth.

3986. (*Chairman.*) I understood you to say that the Rs. 813 included freight?—Yes, it includes everything; it is what the cost of the imported article actually amounted to in India.

3987. Can you give us other instances?—Well, take the Martini-Henry carbine ammunition or the Martini-Henry rifle ammunition, of which a great quantity is made in India, the whole of the native infantry and cavalry are supplied with it, the cost of it made at Dum Dum is Rs. 51 per 1,000. The cost, if imported—and these are actual invoice rates—was Rs.79. That is a difference of Rs. 28 per 1,000.

3988. That is 60 per cent?—Yes.

3989. (*Sir Ralph Knox.*) That includes transport?—That includes everything; that is the cost of the imported article in India. In our factory we make it for Rs.51 and if imported from England it costs Rs.79.

3990. (*Chairman.*) Take the ·303 powder?—The cost of manufacture of ·303 powder in India was Rs.110 per 1,000; the cost of the same ammunition made at Woolwich, actually invoiced, was Rs.117. The difference there is not so great, but still it exists; and that was only in the beginning of the manufacture at Dum Dum, which is always most expensive.

3991. (*Sir Ralph Knox.*) Which article was that?—Ammunition for the magazine rifle.

3992. Black powder?—The pellet powder; we first began with it.

3993. (*Chairman.*) Can you you give us one example showing the manufacture of gunpowder in India as compared with home?—The R.F.G[2] gunpowder, which was used for filling the Martini-Henry cartridges, cost in India Rs.51, and if imported Rs.79. Those are not my figures; I took those from the report of the Military Accounts Department on the financial review.

3994. (*Sir Ralph Knox.*) Could you explain how your cost accounts are made up?—Yes; I can explain how they are compiled in the factories. We take the labour first; the labour is taken by a staff of timekeepers who are natives; they are employed under the civil foremen in charge of the shops. There is a very elaborate check—a ticket check—very similar to what is carried out at Woolwich, as to the number of workmen that pass into each factory. Then they are afterwards mustered again in their several branches, and the total number of men who passed into the factory is compared with the totals that are rendered from the timekeepers of the several departments. Then it is the duty of these timekeepers to ascertain from the foremen exactly the job on which all these men are employed, and in that way the actual amount of labour that is employed daily is thrown on each separate work order. The material is drawn as it is required by the several foremen in what are called "Requisition Books," which are checked by the superintendent; who see that there is nothing excessive drawn on the several orders: the material is accounted for in a very simple form which is kept in the factories, which we call the "Daily Abstract of Stores drawn," which has vertical and horizontal columns—one shows the work orders, and the other the amount of material expended on them. At the end of the month from that daily abstract they are able to take out the amount of material that is expended on the individual work orders, and that is carried with the labour into a work report. The great difference between our system in India and the system at home is that in England they draw their material on a "Demand Ticket," and the demand ticket is priced immediately by the storekeeper. We cannot do that in India, because our storekeepers do not know the value of their stores. We account for so many pounds of material expended on a certain order, and the valuation is done in the central office. In England the demand ticket is immediately priced, and the separate demand tickets are brought together and abstracted, and the total amount of money that has been expended is thrown at once on to the work, and there is no further writing. With us I am sorry to say there is an enormous amount of writing, because the several descriptions of material used have to be written over and over again each month. The total amount of material and labour expended is entered in a work report, which is submitted monthly to the Examiner, and the Examiner has a cost ledger in which he collects these monthly, and it goes on to the end of the year, or until the job is finished.

3995. But that does not represent the cost as contained in those lists, does it?—Oh, no, but at the end of the year the total amount of the material is priced, and the total of the labour and material, to which are added the charges for supervision and other indirect expenditure, gives what used to be Balance Sheet Number 1—in which you have your labour and your material and your indirect expenditure.

3996. (*Chairman.*) That makes Balance sheet Number II.?—Well, Balance sheet Number II. has been done away with; there is only one balance sheet now.

3997. (*Sir Ralph Knox.*) How do you deal with machinery and capital charges?—10 per cent. on machinery and 5 per cent. on buildings are added to the indirect expenditure in the same way as, I believe, it is done at home. It is done in the Military Accounts Department; I have no control over that; they add the whole of the indirect expenditure together and then throw it over the whole of the work done.

3998. Do you think your indirect expenditure is accurately ascertained under the system?—I believe it is; but I am not responsible for it. I know the indirect expenditure is very heavy.

3999. Unless the system of calculating the indirect expenditure is very complete the cost ascertained may be fallacious; it depends really as much upon that as upon anything else?—Yes.

4000. (*Chairman.*) Has it ever been criticised by any inquiry in India?—Yes, they had a committee on it in 1887, I think, on which Mr. Kiernan and other men who were not connected with the Ordnance Department sat, and the system was approved. Our system is the system which has hitherto been adopted in England; I should say rather that it was formerly adopted in England. The system differs from the present system in England in so far as an enormous amount of compilation is thrown on the superintendents, whereas in England nothing is done by the superintendents.

4001. (*Sir Ralph Knox.*) Yes, but the indirect expenditure is an ingredient in the cost of the articles?—Yes, I know it is, and so it is with us; all office establishments are charged to the indirect expenditure.

4002. (*Chairman.*) In what year was that commission of which you spoke?—I am not sure; it sat either in 1887 or 1891.

4002A. Do you suppose there is a copy of its report in the India Office?—I should think so.

4003. (*Sir Ralph Knox.*) Are the cost accounts published in India?—Yes. I have got the financial report of the Ordnance Department of the Bengal Presidency for the last year; which has been published, with the cost of every article.

4004. If that is so, a comparison can be made with the cost accounts at home, and it can be ascertained how much the expenditure on labour was?—Certainly.

4005. That comparison alone would show how far the article was cheapened by the cost of labour?—Yes.

4006. (*Mr. Naoroji.*) That would be affected somewhat by the higher salaries and pay paid to the supervisors; that is to say, the European agency; and, notwithstanding, there is still an economy?—Yes, but the supervising charge is separate from the labour.

4007. (*Sir Ralph Knox.*) Still it forms a part of the indirect expenditure chargeable?—Yes, on the total; I thought you referred to the labour expenditure.

4008. (*Chairman.*) Would you put in a table of the different prices?—I submit a table showing the comparative cost of certain articles; I chose those articles because they are articles of large expenditure.

COMPARATIVE STATEMENT showing COST of some of the Principal STORES manufactured in the ORDNANCE FACTORIES, BENGAL, during 1893–94, as compared with HOME SUPPLY.

	Cost of Manufacture in India.			Cost, if Imported.		
	Rs.	a.	p.	Rs.	a.	p.
Shells, B.L. shrapnel, 12-pr.	760	0	0	813	9	0
Gunpowder, R.F.G. 2, per 100 lb.	55	0	0	69	15	5
Cartridges, S.A. ball:						
M.H. carbine, rolled case, 0/00	48	0	0	*86	3	10
M.H. rifle, rolled case	51	0	0	*79	11	8

Harness and Saddlery:						
Saddles, iron arch, luggage	9	4	0	*24	6	6
Pouches, ammunition, V.E. pattern 1888, for ·303 ammunition	5	8	0	*6	1	7
Braces, buff, V.E. pattern 1888, left and right	7	0	0	*9	5	8
Scabbards, sword bayonet, M.H. rifle	1	0	0	3	4	1
Cartouches, B.L. 12-pr. limber	5	12	0	7	11	8

The cost of imported stores marked * are invoice rates, and when not so marked are War Office vocabulary rates.

4009–10. (*Mr. Buchanan.*) And the figures in them showing the cost of the Indian manufactured article are the official figures?—Yes. I took them out of the financial review which is compiled by the Military Accounts Department.

4011. (*Chairman.*) If you imported those stores from England, would they be obtained from the ordnance factories at home or from elsewhere?—Some would be manufactured in the ordnance factories in England and some would be obtained by contract; a good deal of ammunition has been obtained at different times by contract.

4012. But at present your imports from England are chiefly guns and rifles, are they not?—They are chiefly guns and rifles; but when we have been pressed, we have had to get ammunition, and when we suddenly changed our equipment from 9 to 12 pounders we could not make all that we required at the time, so we had to get out a large amount of ammunition. Then similarly, when we changed from the Martini to the Lee-Metford we had not the power to manufacture the ammunition, because it took us some years to acquire.

4013. Your object is to make all the ammunition in India?—Yes.

4014. When your object is attained, practically the only things you would get from England would be guns and rifles?—Yes.

4015. And they would be got from the ordnance factories?—Not necessarily; the rifles are got from the trade sometimes.

4016. You go to the trade?—Well, *we* do not, but the India Office do.

4017. (*Sir Ralph Knox.*) We do very largely?—And for guns for that matter.

4018. Yes, for guns?—For both guns and rifles.

4019–29. (*Chairman.*) You have given us, in the case of the factories, I think, the number of the European supervising element. Can you give us the numbers and cost of the natives employed?—I am afraid I cannot; it is not available.

4030. (*Sir Ralph Knox.*) You told us, I think, that the accounts of your manufacturing establishments were published?—Yes.

4031. Can you put them in?—This is the Indian Ordnance manufacturing establishment for the year 1893–94.

4032–3. (*Chairman.*) Could you put it on the table?—Yes.

4034. (*Sir Donald Stewart.*) I should like to ask one question about the cost of harness. I notice in your statement that a saddle made at Cawnpore only costs Rs. 9, and a saddle made in England would cost Rs. 24. Would the saddle made at Cawnpore last as long as the English saddle?—I think it would.

4035. Is that your experience?—The experience as regards the saddlery that is made at Cawnpore now is that it is very good indeed.

4036. That is another thing; but does it last as long as the best saddles that are made in England?—I cannot say from practical experience of any trials; but I can say this, that during the last few years we had a comparative trial of Indian leather made at Cawnpore and of English leather which was imported, carried out by an expert, and most exhaustive tests were carried out of the strength of the two leathers under different conditions, and the result was in favour of the Cawnpore-made leather.

4037. How are the indirect charges upon the saddlery ascertained?—The indirect charges are thrown on the work of the Cawnpore factory just as they are on that of any other factory. There is only one system of compiling the accounts of all the factories.

4038. Is there any charge made on account of the interest of the money sunk in that factory from first to last?—In no factories in England now do they charge the interest on capital, it has been abolished of late years—they charge a certain percentage on buildings—5 per cent. on buildings and 10 per cent. for depreciation of machinery, but the interest on capital is not thrown, I believe, either in England or in India; we follow the home system in that respect.

4039. Then these charges are made out exactly on the same principle as they are in this country?—They are

Colonel R. Wace, R.A.

27 Feb. 1896.

Ordnance Department.

supposed to be, but I am not directly responsible for their compilation.

4040. Is it required to last the same period as saddlery made in England is supposed to last?—Yes, I believe the periods of duration are the same.

4041. (*Sir Ralph Knox.*) Of course, where the rate of interest in the two countries differs, it does become an ingredient in a comparison of the two prices, that is to say, if the Indian Government has to pay more highly for its capital than the British Government does for its capital, it would be an increase to the Indian charge?—Yes, of course it would.

4042. (*Chairman.*) I understand from you that some changes have been made in the method of making up the accounts; in what directions do those changes tend?—The changes have not yet been made.

4043. But you are contemplating them, are you not?—Yes, certain changes. I believe it is General Walker's wish that, as far as possible, the same system should be followed as at home in the actual compilation of the accounts from the factories. I do not think we shall be able to follow the home system entirely, because it would mean duplicating our European establishments in factories. The work is taken up in the Woolwich factories by a staff of what they call "work takers," who ought to know as much of the work as foremen, and if we doubled the establishment of our foremen it would cost too much money. But what we are aiming at is to relieve our superintendents of an enormous amount of clerical labour that they have at present.

4044. (*Mr. Buchanan.*) Are your foremen all Europeans?—Yes, all our foremen are Europeans; and the present system of compiling the accounts entails an enormous amount of work and responsibility on the superintendents of the factories, whose time really should be devoted to the supervision of the quality, quantity, and economical outturn of the factory. I think that superintendents may be very good officers and yet they may not be trained accountants.

4045. (*Sir Ralph Knox.*) But your time-keeper relieves the factories of a work-taker, does he not?—Yes, he does; he takes up the time of the men, and the distribution of the labour is shown in the work report, which is tendered monthly; we do not have weekly accounts, but we have monthly accounts.

4046. The men are all paid, I suppose, by time; there is no piece-work system?—Oh yes, we have a very large piece-work system; we work on the contract system as much as we can, as we get more work out of the men.

4047. But I thought I understood from you that the time-taker went round and took notes of the work upon which each man was employed?—Quite so.

4048. And noted it, and his note became an order for the men's wages?—Well, it does not become directly an order; what I mean to say is that from that a record is obtained showing how each man has been employed—if he is on the contract system, the nature of work on which he is employed. He is then paid in accordance with the finished work passed into store.

4049–50. But in what way does that differ from the work-takers' system at Woolwich?—Well, because the work-takers at Woolwich are under the War Office; they are the War Office staff. Our time-keepers are natives, and they are employed under the foremen.

4051. But you say it would be a re-duplication of the employment if you had the work-taker system; it appears to me that you have the work-taker system, only they are working under the directions of the superintendent instead of working under the direction of an independent person?—Quite so.

4052. It would not duplicate the staff if those time-keepers were placed under someone independent of the foremen, we will say even under the superintendent, who is the chief officer at your factory; he would carry out the function that the work-taker does at our factories?—Yes, except in this way, that all our time-keepers are natives; they do not know anything about the work. The work-takers at Woolwich are more or less intimately acquainted with the work and with all the different methods of manufacture. Our time-keeper is entirely dependent on our foremen for the information he collates; therefore it practically amounts to the same thing as if the work was done by the foremen themselves.

4053–4. But if the foremen were relieved from this duty and it was given to these men working under some independent authority, there would be no objection, would there?—They could not do it. They are simply native clerks, and they could not do it unless they were directed by the foremen and things were explained to them.

4055–6. So that really the debiting of the expenditure for wages against these different articles is left to the foreman who directs the time-keepers?—Yes, it comes to that.

4057. So that the foreman may regulate his prices very much as he likes?—He can; but the foreman has the superintendent over him, and the foreman cannot raise any man's wages without communicating with the superintendent of the factory.

4058. But as between each job that may be turned out by the factory, the distribution of the wages is entirely left to the foreman?—It is, in the first instance. When a man is brought into the factory he is tried, the value of his labour is assessed and then it is referred to the superintendent for sanction.

4059. Yes, but in the cost of labour the distribution of that man's wages is left to the foreman?—Yes.

4060. He may charge a larger portion against one order and a smaller portion against another just as he wishes?—Yes, he could.

4061. The work-taker was instituted in order to guard against that sort of thing?—Yes.

4062–3. And to ascertain, as separately from the foreman's interest as possible, what the actual cost of the output was?—Quite so, but the work-taker, to be any good, must have very considerable knowledge of manufacture, consequently, if the work-taker system was introduced with us it would mean duplicating our European establishment. Our present system works very well, and the superintendents of factories check very carefully the cost of articles. They are all only too eager to keep it down, so that the cost of their manufactures may compare favourably with imported stores.

4064. Their interest may be to keep down certain prices, and allow others to run up to anything?—Then, again, we check all their different articles of supply. For instance, in the list I gave you, I gave the shell from Cossipore, and the ammunition from Dum Dum, and the gunpowder from Ishapore; those are by far the largest items of manufacture, and we always watch those carefully year by year.

4065. (*Mr. Buchanan.*) Then, although there might be an error in one individual article, still the general result of your table would hold accurate?—Over all, the grand total would, but the superintendents watch very carefully what things are costing from month to month.

4066. (*Sir Ralph Knox.*) You are practically in the foreman's hands as regards the distribution of the labour charge?—Yes.

4067. The apportionment of the labour charge lies wholly in the hands of the foreman?—Yes.

4067*a*. (*Mr. Buchanan.*) He can make changes in individual cases, but I gather he apportions the full charge for wages?—It must all be shown.

4068. And substantially we may take the general result of the table as true?—Yes; the total amount must be apportioned.

4069. (*Sir Ralph Knox.*) The total amount is exhausted against something or other; but where it is the interest of anyone to cheapen a particular article and to throw the cost of it upon something else, it is possible for whoever has control of the business to do it?—It is possible for him to do it, if it is not detected by the superintendent of the factory.

4070. Of course, in the manufacture of large supplies like ammunition, this power would not operate at all?—No, it would not.

4071. Or a large manufacture of gunpowder and so on?—Oh, no, and moreover it would not operate very much in the shell factory at Cossipore, because the 12-pr. shell is made in one building. The cartridge metal-rolling business has to bear its own cost; it is carried on in one building by itself; the foreman could only cheapen one kind of strip and make another dearer, it would be on the same class of work.

4072. (*Chairman.*) Have you any capital account of the land, buildings, and plant of your manufactories?—Yes; I am not able to produce it, but there is a capital account kept of the value of the land, and it is very considerable in amount. The land has been valued, I believe I am correct in saying, not by the actual value that was paid for it, but by what the value of it would be if it were sold. In many instances that is far in excess of what it was originally purchased for.

4,073. Of course there is always the question how far in apportioning among articles manufactured the charge of manufacture, an item like the cost of land should from time to time be put down at an increased valuation; it only cost the Government what it paid for it?—Quite so.

4074. I gather from what you have said that in making up a capital account your object is to follow the same principle as in England?—Yes; the interest on the capital is not added in England now. I believe I am right in saying so.

4075. (*Sir Ralph Knox.*) That subject has been under discussion; it is not added as a portion of our account, because it would introduce all sorts of difficulties in selling stores as to what we should do with the credit when we got the money; but it is intended to add a note to the accounts showing how much the prices would come out at if the interest were added.

4075*a*. (*Chairman.*) Yes, exactly; is that the same line that is to be followed in India?—I could not say.

4076. (*Sir Ralph Knox.*) There is nothing included in your statement?—No, there is nothing shown there; it is not in the cost there.

4077–9. (*Chairman.*) Could you tell what has been the increase of the outturn in your manufactories of late years? You gave us the figure for one particular year?—Yes, I think I can give you that, my Lord. I find I can give you a reply to your former question. The net capital of the factories in land, buildings, and machinery increased from 59½ lakhs of rupees to 71½ lakhs in the seven years between 1884 and 1891, and a further increase has since taken place. During the same period the value of the outturn of the factories in Bengal increased from 48½ lakhs of rupees in 1884-5 to 95¼ lakhs in 1891–92, or nearly double.

4080. Therefore the increase of outturn is considerably in excess, so far as you can apply that test, of the increase of capital?—Quite so.

4081. I think it would be interesting if you would put in a table showing in juxtaposition your ordnance expenditure during certain years in India, and as against that the value of the stores sent out from England?—Yes, I have not got them all for the same years.

4082. You have got the expenditure on ordnance stores in England from 1889–90 to 1893–4?—Yes, I have, and I have got the expenditure in India for the same years.

4083. And rather more?—Yes, I go further back than that; the expenditure in India I have got from 1884–5 to 1893–4.

4084. Perhaps you would not mind giving us the figures in juxtaposition, so that we could see them together?—The figures are as follows:—

Years.	Expenditure in India.	Expenditure in England.
	Rx.	£
1889–90 -	631,667	253,504
1890–91 - -	715,984	720 814
1891–92 - -	724,316	830,247
1892–93 - -	790,195	583,819
1893–94 - -	830,074	547,202

4085. You have brought into comparison the cost of labour at Woolwich and in India. I am not for a moment thinking of stating anything in opposition to what you say, but I want to call your attention to one or two points connected with it. You give the average of all the ordinary labour in India, at 7 annas or 8 annas a day, and against that the 5*s*. a day which is the average for Woolwich. But I would ask you if would it not be necessary, before we drew any deductions from those comparisons, to make sure that the kind of labour is the same. Would it not be the case that here in England there is more work of a higher kind, which, of course, would tend to throw up an average? The more ordinary and common-place the work that is done, the lower naturally would be the advantage. Now, I believe there are quantities of boys employed in Woolwich earning from 1*s*. and 1*s*. 6*d*. to 3*s*. a day, and unskilled labourers—I do not know, I have not got the most recent returns—from 19*s*. to 21*s*. per week. Would not that kind of labour, the pay of which, of course, with us is very much in excess of that which you have put down for India, be the labour, the average of which would be a truer average to take against the Indian labour, than one which included the highest class of skilled labour? I am only suggesting to you whether, in considering such a point, we should not avoid too hasty a generalisation?—Well, take, for instance, a fuze factory; all those metal fuzes are made at Cossipore, and there is an enormous plant of machinery for working them. I am perfectly certain that the average men actually employed at those lathes and the different machines, would compare very much as I have stated with the men employed on the same work at Woolwich.

4086. Quite so, and be paid very much less?—Yes.

4087. But, for instance, we are speaking of the highly skilled work that turns out guns. You have not got that class of labour?—No, that we have not got.

4088. That would be the highest. I want to guard ourselves against assuming too hastily that an average taken from the two would give a fair comparison between the cost of labour in the two countries. That does not affect the question, which is evident on the face of it, that labour is cheaper in India?—Yes.

4089. (*Mr. Buchanan.*) What is the rate of wages for the highest skilled native labour in your factories?—I do not think any man gets more than 1 rupee 4 annas a day. The rupee now is 1*s*. 2*d*.; that is not much more than 1*s*. 6*d*.

4090. You said the average over all was about 7 annas?—Well, I put it at 8, and I know that is a great deal beyond it. I should have been nearer the mark if I had put it at 6, I believe.

(*Sir Ralph Knox.*) Lord Welby's argument is that there is none of the very highly skilled work done out there, such as is done in a gun factory here. There is no work of that kind done, and the average, as represented by Colonel Wace, is the average over the whole factory.

(*Mr. Buchanan.*) And the fact of there being that highly skilled work here brings up the average.

(*Chairman.*) My argument was one of caution, not to generalise too hastily; I was not in the least sense objecting to what the witness says.

(*Sir Ralph Knox.*) No doubt in the laboratory at Woolwich the average would be very much less than in the gun factory.

4091. (*Mr. Buchanan.*) What would be the highest skilled native labour in your factories that you compare with English work; what is the work that is highest paid in your factories?—For the steel furnacemen we have to pay pretty high, but I should think men employed on tools in cartridge factories, on gauges and tools.

4092. (*Mr. Caine.*) You mean engineers' tools?—Yes, gauging-tools. They have to be turned to the thousandth of an inch. I should think that they represented the most highly skilled workmen.

4093. And do you consider that their work is in all respects equal to the same class of work in this country?—I think it is.

4094. And can they turn out as much per hour, do you think?—I do not think they do.

4095. You have no figures to show any comparison between the two?—No, it would be very difficult to fix that, but supposing you get twice as much work out of an Englishman, after all it is not manual labour, it does not depend on him, it depends to a great extent on his lathe. If you give a man a good lathe and good tools to work with, the quantity of work produced by an English artificer and a native artificer should compare favourably.

4096. (*Mr. Naoroji.*) The quantity of work?—Yes, and the quality.

4097. (*Mr. Caine.*) One may fairly assume that two Indian workmen may turn out on an average as much

Colonel R. Wace, R.A.

27 Feb. 1896.

Ordnance Department.

as one English workman?—I think so, if you give them good lathes.

4098. It is about five to three in cotton factories, comparing Indian cotton factories to English cotton factories?—I did not know that.

4099. I should think you ought to get the same class of work out of your class of workmen?—I think so. I know we get good results. Of course, occasionally they spoil material.

So they do here, I am afraid.

4100-1. (*Chairman.*) I wish to ask you a question or two on the subject of the ordnance expenditure. I have before me now the Appropriation Account of the Accountant-General of the Military Department for the year 1894-95, and I see, taking the ordnance vote, that whereas the accounts of 1893-94 showed 83,00,733 rupees, the original budget estimate of 1894-95 showed a very considerable increase, 91,21,800 rupees, and the revised estimate of 1894-95 was 83,65,000 rupees, pretty nearly the expenditure of the previous year. The accounts of 1894-95 brought the expenditure rather lower down, but very close upon the expenditure of the previous year, namely 82,71,599 rupees. Well, that is rather a curious result, because, first of all, the department had before it the result of the previous years; they then put it up by not quite 10 per cent. in the estimate; then, long before the year is over, when the revised estimate is made, they put it down to what had been the expenditure of the year before, and the final out-turn of the expenditure is somewhat less than that of the year before. Can you explain how such a thing as that would happen?—Simply because pressure was put on by the Finance Department. Every year we are constantly asking for money that we cannot get; we cannot get money for works that have been actually sanctioned, increases of our buildings and things of that sort, but it goes into the estimate, and then afterwards, when money is not forthcoming, we are told that we must reduce in some direction.

4102. That is the form, either in the shape of stores or work?—Stores, buildings, and so forth.

4103. Well, the reduction that took place was chiefly, I see, upon the local supplies, upon the manufacturing establishments, and the arsenals and depôts?—Yes.

4104. And I think the biggest of all took place in the manufacturing establishments. There the expenditure had been the year before 19,47,518 rupees, the estimate for 1894-95 increased it to 21,79,140 rupees, that is over 200,000 rupees. Then it fell down to almost exactly the cost of the previous year, and the explanation given is: —"The decrease is due to the following "causes:—Less charges for extra temporary artificers "and others due to less work having been executed, "and to a change in the system of paying these men in "Bengal, whereby their pay for February 1895 was "disbursed in April 1895, instead of in March 1895 "as heretofore"?—That made a difference.

4105-6. And under the head of arsenals and depôts the decrease, which is a considerable one, is thus accounted for:—"Less charges under salaries, owing to the de-"duction made in the Budget on account of probable "savings having been insufficient, partly counter-"balanced by a fall in the rate of exchange for the "payment of non-commissioned officers. Less charges "for exchange compensation allowance, owing to a "larger number of officers and others having been on "furlough than anticipated. Less charges for extra "temporary artificers and others, owing to less work "having been executed than anticipated; the saving "also is in a measure due to officers of the Ordinance "Department having been enjoined to observe the "strictest economy." And therefore your answer, as I take it, is not that your estimate of 91,21,800 rupees was excessive, but that you were compelled by the Government to keep your expenditure down to the level of the previous year?—Yes, quite so, but the work done has been reduced, and that means that the reserves of stores in stock are kept down as low as possible.

4107. Now, has any mischief come from keeping the expenditure down to that of the year before?—Well, I do not think it has yet; but there has been no very heavy strain upon the Department. These things can only be tested by war. I think it would be a very serious thing to reduce our reserves much, to keep them low; you cannot tell till the strain comes.

4108. Is this reduction carried out by keeping the reserves low, do you think?—Not altogether; I could not say exactly how those figures have been arrived at.

4109. I see the greatest economy was made in the Bengal district?—Yes, because we are the principal spending people; three-fourths of the whole manufacturing power is in Bengal. Our out-turn is between 80 and 90 lakhs of rupees, and the whole out-turn is only 120 lakhs of rupees.

4110. Do you ever have any criticism addressed to you by the Financial Department as to whether your expenditure corresponds fairly closely with your estimate? Yes, it has been criticised of late years.

4111. When we say corresponds closely we ought not to call that criticism. Practically, unless there has been some extravagance going on, the greatest compliment you can pay a Department is to call their attention to the fact that their estimate is close to their expenditure?—Yes, but it is compared by the Finance Department, and it has been noticed that as a rule our expenditure runs pretty closely with our budget of late years. I think those figures that you quoted include something besides ordnance.

4112. No, it is the details of this head:—"Ordnance "establishments, stores, and camp equipage"?—8,000,000 seems a large amount.

4113. You must take it that I talk of rupees; you would call it lakhs or tens of rupees?—Yes, 80 lakhs.

4114. But we must look upon it then that the reduction in the expenditure as compared with the estimate was a bit of financing on the part of the Government of India?—It was brought about by pressure brought to bear upon us to reduce expenses.

4115. That is the official method of saying financing?—Yes, it comes to that.

4116-7. Would you be prepared to put before us your view of the reserve ordnance expenditure in India, and as to whether it will increase or decrease; whether an economy may possibly be looked for there?—Not in India; the ordnance expenditure in India will increase. I hope, but there will be a greater corresponding reduction in the home charges.

4118. Therefore the whole charge of the Ordnance Department in India, as it falls on the Indian taxpayer, you hope, will not be increased?—No, I do do not think it will; I think it is to be hoped that the total ordnance expenditure, as we gain manufacturing power, and are able to do things for ourselves in India, will decrease slightly.

4119. Are you satisfied sufficient care is taken in India to introduce, where possible, reductions. In an immense country like India, in which railroads have been of such recent development, there is always a danger that old methods and old fashions of dealing with expenditure, which were necessary when communications were difficult, will not be changed under the new state of things. Do you think that sufficient attention is turned to economies that may be effected in that manner?—Do you refer to the reduction of establishments?

4120. Economies of any kind. You have alluded to one of them, namely, the abolition of establishments: but I only give the most obvious thing that occurs to one's mind, that, as railroads are pushed forward in a great country like that, you are able to feed troops, for instance, and supply them with stores and whatever they want at much greater distances with less labour, and at less expense than formerly, when there was merely a road of communication?—Yes.

4121. Do you think that the officers who estimate in India keep that before them, and that, while expenditure grows in one direction, they are also considering whether economies are not possible in another direction?—Yes, I am sure that they do.

4122. I notice with reference to that point, that the Commission of 1879, of which you spoke, recommended various things, some of them have been carried out; but others which seem to me to have been approved have not been carried out, and the interval of time is very considerable?—Yes. The difficulty is to get all these schemes to coincide one with another.

4123-4. Are there any other points that you would like to bring before us in connection with this branch of expenditure?—I should merely like to say that the

necessity for economy in all branches of the Department has been constantly insisted on by the Military Department of late years, and every effort has been made by the Department to carry out the wishes of Government in this matter. The closest supervision is exercised by Inspectors General of Ordnance over the annual and intermediate demands of arsenals, and over the expenditure of material in arsenals. The responsibility for expenditure on extra labour must rest to a very great extent upon Superintendents of Factories and Ordnance Officers in charge of arsenals. Any extravagance in this respect leads to the cost of out-turn comparing unfavourably with that of imported stores, and all superintendents are anxious that this comparison shall be favourable to their own establishments. If the principle of making India self-dependent is to be followed with a view to the reduction of the home charges, it will be necessary from time to time, as manufactures develop, to strengthen the *personnel* of the manufacturing establishments in the direction of skilled European supervision. The percentage of cost for supervision as compared with the annual out-turn is at present very small as has been shown above, and any reduction in this direction would be false economy leading to waste of labour and material and loss of efficiency.

4125. (*Mr. Buchanan.*) I presume that the possible increase of cost due to increased European superintendence would be more than outweighed in the future by the diminution of cost owing to your manufacturing more of your ordnance stores in India itself?—That I am quite sure of.

4126. And that is the source to which you look in the future for economy, if there is to be any great reduction of expenditure?—Yes, I think so

4127. Otherwise you think in all probability expenditure for ordnance in India will not be decreased?—No, it can never go back to what is so often quoted as the average of former years; because we have all these improved armaments; if you have breech-loading rifled guns you cannot fire spherical shot out of them, and the cost of ammunition and everything has gone up so tremendously of late years: to quote one single item, the old wooden fuze that we used with the 9-pr. muzzle loading gun cost about 36*l.* a thousand, and the metal time and percussion fuse that we use for the 12-pr. breech-loading gun costs 31*l.* a hundred; that is one thing alone which costs nearly 10 times as much. Then there is the 12-pr. breech-loading shrapnel shell, which is nearly 10 times the value of the old one, and the value of the old friction tube was only 2*d.* or 3*d*, while the value of the new vent sealing tubes was 2*s.* 6*d.* the other day. I believe they have gone down to 1*s.* 6*d.*

4128. That creates a constant and automatic increase in the cost of ordnance?—Yes; then, again, the value of our Martini-Henry ammunition in India, when the British infantry was armed in that way, was 52 rupees a thousand; and the ammunition of the ·303 magazine rifle was 107 rupees a thousand. It was nearly double. That has gone down, but that is what it was for some time.

4129. And the source from which you expect a decrease is to the wider extent to which you may make your own?—Yes, developing Indian manufactures, that is our only chance of doing the thing economically.

4130. I do not want to go back on the question of the rifles, but I suppose if it could be shown that it is possible to make the rifles in India at least as cheaply as you get them from this country, you would be in favour of starting an establishment for their manufacture?—Yes, if it could be clearly proved.

4131. Is your objection solely based upon the fact that you cannot, at present, see your way to estimating to do it at a cost equal to what you have to pay?—Well, I have not gone quite so carefully into it perhaps as I should have done. I am afraid I shall repeat myself, but what I think about it is this, that we already have the power, and it is absolutely necessary to have that power, of repairing rifles within the limits of arsenal supply. Each arsenal has its armourers and civil chief master armourers, who inspect the arms in the circle, and all ordinary repairs can be carried out in the arsenal within the circle of supply, and that system works very well. If we had to send all those arms—it is nothing in England to send the arms of any corps to Birmingham to be repaired, but it is a very different thing in India—if we had to send the arms to a central factory to be repaired, there would be an enormous railway charge and it would hinder the public service altogether. I think it is an important matter to keep that power of repair within the circles of ordnance supply as we do at present, and that would limit the utility of a factory simply to the manufacture of new arms. And if we put down a factory for the manufacture of the ·303 magazine rifle, very likely 10 years hence, when we wanted to replace them, the whole set of machinery would have to be altered before we had any considerable outturn of rifles.

4132. (*Sir Ralph Knox.*) You mean that you would like all your repairing factories really to be able to manufacture?—No, to make it pay, we should have to repair arms.

4133. Your repairing factories are necessarily so numerous that you could not carry on a manufactory at each of those places?—No.

4134. And you would not have an economy arising from the fact that your repairs and manufactures were at the same place?—No.

4135. (*Mr. Caine.*) You could have three or four manufactories and repairing shops in combination in the most important districts, and simply have repairing shops elsewhere, could you not?—Three or four manufactories would involve an enormous expense. A rifle factory is a very expensive thing to set up. The present system has worked very well as regards the supply of rifles and guns, and they are wonderfully cheap.

4136. (*Sir Ralph Knox.*) You know that the principal repairing factory at home is not the same as the principal manufactory?—I know it is not.

4137. (*Mr. Caine.*) May I ask, if it were proposed to put down a rifle manufactory to cope with the Indian requirements, which of course would be rather a large factory, could you find the skilled hands in India to man it?—Yes, we could run it, I have no doubt; but I very much doubt whether we could make rifles as cheaply as at home. The magazine rifle is really wonderfully cheap. The price here is given as 4*l.* 10*s.*, but it is less now; it is 3*l.* 10*s.* now.

4138. (*Chairman.*) Would you not anticipate that it is extremely probable that, if you had one large manufactory turning out a quantity of rifles both for England and India, that manufactory would be able to work, even under the circumstances under which English work is done, more cheaply than by establishing a second manufactory in India?—It might be so, but then we should have to import the steel.

4139–40. I was asking the other way; do you not think it more likely that one great manufactory in England would be able to turn out, even under the circumstances of English labour, rifles more cheaply or quite as cheaply as India could turn them out if she were to start all the plant, buildings, machinery, and that sort of thing of a second manufactory?—Yes, I am inclined to think it would.

4141. That is the *per contra* to the view that Mr. Buchanan put forward. He rather relies on the cheapness of Indian labour, which is a most important element; on the other hand, I do not think he brought into prominence what I think is a *per contra*, namely, that two establishments generally work a thing rather more dearly than one?—Yes, I understand.

4142. (*Sir Ralph Knox.*) That is, by dividing the manufacture you would increase the cost to both countries as it were?—Yes.

4143. (*Mr. Caine.*) The item of wages must be extremely heavy, because the raw material of rifles as compared with 4*l.* 10*s.* must be very small?—Yes.

4144. So you would get a very large saving of labour?—There would be a saving of labour.

4145. The average wages in our small arms factories here must be 26*s.* a week at least?—I should think so.

4146. You would get the labour there certainly at 1½ rupees a day?—Oh, yes, less than that.

4147. (*Sir Ralph Knox.*) Of course the real consumers of stores are the regiments and batteries, the military units?—Yes, quite so.

4148. Does your department exercise any check upon the demands made upon them by the military units?—Yes. There are equipment tables published for all the

Colonel R. Wace, R.A.

27 Feb. 1896.

Ordnance Department.

different branches of the service, and against each item of stores there is the period of duration, and when stores are indented for we always want to know what has become of the others that we have to replace, and how long they have been in use, and if they have not served their time we make further inquiries, and if there is any doubt about it, we ask for a board; that is, in the final issue we have a board to decide.

4149. Then you go into that when the ordinary demands are made, but if any extraordinary demands were made; you would certainly query it or examine into it?—Yes, if any demand is made that is not covered by the regulations, by the equipment tables, that is immediately referred to the Inspector-General of Ordnance.

4150. I am rather alluding to this; supposing an abnormal demand were made for rifles or saddlery, or any portion of saddlery, it would immediately attract your attention, and you have the authority to question that demand and ask for an explanation?—Yes.

4151. Is there any stocktaking that you know of, of the regimental stores?—Yes, they are taken annually

(Sir Donald Stewart.) Inspection used to be taken twice a year; I do not know what it is now.

4152. *(Sir Ralph Knox.)* By a regimental board, I suppose?—No, I do not think it is by a regimental board.

4153. By what machinery, not by the storekeeper himself, I suppose?—No, not by the quartermaster. I cannot answer that question. It does not come immediately within my duties.

4154. But more or less an independent stock examination is made of the stores, independent of the storekeeper; is there not a board of survey, or something of that kind?—Of the stores in regimental charge?

4155. Yes. However, whether there is or not, you think it would be a very necessary provision, would you not?—Yes.

4156-7. *(Sir Donald Stewart.)* The quartermasters send in periodical returns, and one column shows the established proportion, the stores issued and expended, and the authority for everything that is expended?—Yes, they send in a return, with the vouchers; but I thought Sir Ralph Knox meant the actual counting of the stock.

4158. *(Sir Ralph Knox.)* Yes. I mean the actual counting of the stock?—The commanding officer is responsible.

4159. He is responsible, and he satisfies himself that the stores correspond with the account?—Yes, Then he sends in his account with the vouchers authorising receipt and issue.

4160. You said it was very necessary in your own establishments to have a very efficient staff of officers in order to be completely watchful as to the receipt and issue of the stores, to guard against irregularities, and so forth?—Yes.

4161. Do they, in taking stock, find from time to time many discrepancies between the ledgers and the actual stores in existence?—No, not many. There are discrepancies, always must be, but no considerable discrepancies have come to light of late years, not in Bengal.

4162. Would you describe to us what the process is for dealing with those discrepancies when they do arise?—Whenever a deficiency comes to light, it is immediately brought to the notice of the Ordnance officer in charge of the arsenal, or the superintendent of the factory. He would immediately proceed to take stock himself, and see whether it was an actual deficiency, and compare the books, and trace it up; and as soon as it is established beyond doubt that there is a discrepancy, it goes into what is called a transfer statement, which is sent to the Inspector-General. If the loss is under 100 rupees, and he is satisfied as to the explanation for it, the Inspector-General has the power to write it off—anything beyond 100 rupees and under 500 is reported to the Controller of Military Accounts of the circle. The Controller of Military Accounts has power to deal with it up to a limit of 500 rupees; beyond 500 it goes to Government. The transfer statement is forwarded to the Director-General, with a report of the inquiry that had been held upon it, and he would report it to Government; and it could only be written off by the sanction of Government.

4163. *(Chairman.)* And the sanction of Government would be, I suppose, with the assent of the Finance Department?—I am not sure as to that; that I cannot tell you.

4164. *(Sir Donald Stewart)* Is there no sort of inquiry held in case of deficit?—Not for a very small deficit, sir, but for any considerable deficit there would be a court of inquiry; and an order has been lately published in the following terms:—"In cases of theft "of arms or other important stores in ordnance charge, "ordnance officers in charge of arsenals and depôts "and superintendents of factories will apply to the "station staff officer for a board of investigation the "same day that the theft is discovered, reporting "the facts of the case at the time as far as known "to the Inspector-General of Ordnance."

4165. *(Sir Ralph Knox.)* It is rather difficult to know whether a deficit of stores is due to theft or otherwise; but it is a deficiency?—The order is to report to the military authorities.

4166. And the security that he does so report it is the independent stocktaking, or rather the fear of an independent stocktaking?—Yes, that is so.

4167. Some attempt has been made in the direction of the manufacture of cordite, has it not, out in India?—We have an experimental plant at Kirkee.

4168. Has any been turned out?—Not yet.

4169. What are thought to be the probabilities of success?—In India?

4170. Yes?—Well, the cordite question in India stood much in this way. We were strongly in favour of cordite, but some years ago they fixed a heat test for the cordite, which we found after a time the cordite sent to India did not stand. When the authorities in India found that it did not stand the heat test that had been laid down they began to be doubtful of it, and the matter was referred home. The heat test has since been reduced. But they have not stopped making the ·303 ammunition. Magazine rifle ammunition at the present time is being made up with cordite. I am not sure whether they are making it at Kirkee yet, but they are making it at Dum Dum. In my circle the cordite is sent out from home, and as far as I know there are no misgivings of it. The ballistics of it have been always good, and the shooting of it is excellent.

4171. But as regards the manufacture I was asking. Has this modification of the heat test admitted of your going on at Kirkee with the manufacture?—No. Well, I do not know why, but I presume that the authorities are not yet satisfied in their own minds about the keeping qualities of cordite in India.

4172. Really their diffidence arises, not as to a doubt of their power to make cordite, supposing it to be acceptable, but rather as to whether cordite should be adopted for the Indian service?—I think it is something of both.

4173. If cordite were adopted generally, and you found it difficult to make cordite out in India, the whole of the manufacture of the small-arm ammunition practically would come home?—No; the combustible would come from home, but we should make up the ammunition in India.

4174. *(Chairman.)* All the components for small-arm ammunition are made out in India?—Yes.

4175. Drawn cases and everything?—We make drawn cases. We perform the whole operation from first to last. I believe also we shall make the cordite.

4176. *(Mr. Naoroji.)* If sufficient encouragement and training were given to natives, would they not be able to come up to any level of any Englishmen, and drawn from a better circle of men, should we not be able to get as good skilled persons as you can have among Englishmen?—Do you refer to the supervision or the actual labour?

4177. To skilled labour, to supervision in any Department?—I think as far as regards labour, that it is very good, but I do not think we could get really good native supervision. You must have men who have been trained in factories in England.

4178. Well, if you give sufficient encouragement to train them there, and then give them a finish here, you can get such men?—Can we get such men?

4179. Can you?—Well, we have not employed any natives of India in supervising the staff.

4180. You have not employed them, and that is just the reason why you cannot get them, but if encouragement were given, and a sufficient standard put down, to say that if anybody qualified himself in a particular way he would have the opportunity of being employed, then will they not be produced?—Well, time alone could show.

4181. Yes, but unless the experiment is made it cannot be shown?—Quite so.

4182. (*Mr. Caine.*) If you brought a factory foreman out for a seven years' appointment, do you think at the end of the seven years you could replace him with a native?—I am a little doubtful whether the ordinary native workman would look up to a native in the capacity of a foreman in the same way that he looks up to an European.

4183. (*Mr. Naoroji.*) Perhaps I did not make myself clear; what I mean to say is that if the same facilities of learning and of encouragement in every way were given to natives, that you may be able to get from a certain level of natives, that you can get competent men just as well as English foremen or English supervisors; it depends upon the training, the encouragement, and the teaching?—It does depend on the training, no doubt.

4184. (*Mr. Caine.*) But you would be afraid of—well, discipline?—To a certain extent. I think as regards ability, you could train natives of India up to the mark.

4185. (*Mr. Naoroji.*) That is all I wanted to say?—They could be tried, but I doubt whether they would have the same power over the native labourer.

4186. But then there is no reason why they should not have, the natives are the same, they have the same power in the Native States?—You think they have.

4187. In fact there was one Parsee superintendent of a whole Bombay factory, with Englishmen and natives under him, and the Parsee superintendent was the head of the Department?—Yes?

4188. That depends on the encouragement given and the class of natives you draw from. If you draw from the lower level you cannot get the proper stamp of men?—That is no doubt true.

4189. But if you could provide encouragement there will be the proper stamp of men coming out; out of 300,000,000 you can get any people.

4189A. (*Mr. Caine.*) You could get some data of experience from the railway works probably?—Yes.

4190. They use Eurasians, do they not, as foremen?—I do not know them.

4191. Do you employ Eurasians much as foremen?—No, we do not employ Eurasians very much.

4192. (*Mr. Naoroji.*) There is one native of Bengal who has come over here, and gone through a training in many of the factories here?—Yes.

4193. And if he sought for employment there I do not know whether it would be given to him or not. He has gone through the whole training and done everything that was required of him?—It is very difficult for us to know what the value of a man like that is. No one is engaged for any of our Indian factories of whom we do not get a full report, where he has been employed, and the India Office make full inquiries; we know exactly what his value is.

4194. If you lay down some rules, and all the necessary inquiries for qualification can be made, then they get regularly admitted, but if no rules or no qualifications are laid down in order to admit natives they cannot prepare themselves for it?—Yes, that is true.

4195. This native that I am talking about from Bengal seems to have very valuable testimonials from all the different works in which he has actually worked. I thought you knew him?—I think I know the man you refer to, but he has been employed in blast furnaces, of which we have none. He was at Bolckow Vaughan's for some time, and I have been trying to get him employment.

4196. He is quite willing to be trained to any department if it is once suggested to him what he should do?—I was going to do what I could for him when I got out to Calcutta. I think he ought to get employment at Barakur.

4197. I do not pretend to be a judge of his qualifications, except so far as I read his testimonials, but I do not take his case, I mean to say generally, if some qualification is held out and proper training given to natives, that they would prepare themselves just up to the same mark as any Englishmen. That is what I want to say?—Yes.

(*Mr. Caine.*) I understand that Colonel Wace this morning gave evidence that a great many very intricate pieces of work can be done and are being done in India which appear to me quite as intricate as rifle work, and the mere cost of the establishment of a rifle factory, although it is great, would very soon be repaid, if it were found that Indian workmen, even at the rate of two to one, could turn out as much in a given time as is turned out in our factories here; you could afford to employ double the labour in India and still leave a very handsome profit on any capital likely to be expended on the establishment of a rifle factory.

(*Sir Ralph Knox.*) Of course what Colonel Wace points to is this: that when an arm is introduced into an army it has to be supplied all at once, a huge manufacture has to be entered upon, and that lasts only a few years, and then the supply after that is practically *nil*, and he has a fear that starting that sort of thing in India would not be reproductive or economical as compared with the plan that now prevails. We charge India exactly the same price as we charge ourselves, and he doubts whether he could do any better.

4198. (*Chairman.*) I think I understood you also, Colonel Wace, that as far as this intricate complicated work which is done in the carriage department is concerned, you have already a carriage department existing, and it is only a case of the adaptation of plant already existing, but you are rather apprehensive of starting a totally new method of manufacture without being first of all convinced that it could be done without any extra charge to the Indian taxpayer?—I think we shall have to go into it very carefully in India to find what our demands are likely to be, and what we should have to do in the time.

The witness withdrew.

Adjourned till Thursday next at 11 a.m.

At the India Office.

NINTH DAY.

Thursday, 5th March 1896.

PRESENT:

THE LORD WELBY, G.C.B., (CHAIRMAN, PRESIDING).

Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEEL, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Mr. S. Jacob, C.S.I.

Mr. STEPHEN JACOB, C.S.I., Comptroller and Auditor-General to the Government of India, re-called and further examined.

5 March 1896.

Law and Justice.

4199–201. (*Chairman.*) We propose to take up to-day the Department of Law and Justice, which, I think, you have been investigating, and on which you have given me a memorandum, embodying generally the results of your investigations?—Yes.

4202. Your comparison of expenditure on law and justice, ranges over 20 years; it begins with 1875–76. Is there any special reason for adopting that year as the commencing point?—The reason for taking 1875–76 as the commencing point is, that it was the one chosen as the starting point in the Memorandum on Indian Financial Expenditure dated the 26th June 1895, which was prepared by the British Committee of the Indian National Congress.

4203. There was another reason, was there not? Namely, that the method of preparing the accounts facilitated comparison over the 20 years, but, if you had gone much farther back than that, you would have had considerable difficulties in re-adjustment, would you not?—Well, as matter of fact we had specially to re-cast the accounts of 1875–76 in order to make any detailed comparison with the accounts as now kept.

4204. Therefore we may take it that 1875–76 is a convenient period for comparison, and that there would be inconvenience and delay if an attempt was made to go farther back than that, inasmuch as it would entail a considerable re-adjustment of account?—Yes, and a reference to India would be necessary; we could not re-cast the accounts here.

4205. Could a fair comparison be instituted without difficulty, if one single earlier year were taken as the starting point? The point to which I would draw your attention is this: the time when India fairly emerged from the mutiny is, perhaps, the date which would strike a number of people as a convenient starting point in any comparison of finance over a long period?—I do not think it would be possible to make any fair comparison with an earlier year; for instance, in 1860 I see on referring to the accounts of that year that the police and judicial charges are mixed up together, and it would be quite impossible from the accounts themselves to separate the former from the latter.

4206. Would it be possible to give us the total charges for law and police, we will say, in 1860, as compared with 1895–96?—I think the charges as given in the accounts of 1860 include all the law and police charges then incurred, but it would be quite impossible for me to say absolutely that we were comparing like with like, if we went back to the earlier years.

4207–8. Perhaps later, subject to that reservation, I may ask you if you can give us the gross figures for the two sides, as far as you know them?—Yes, I will look into the accounts and see what I can do.*

4209. Taking now 1875–76 as the starting point, can you tell us the population of India subject directly to the Queen's rule, for whom legal and judiciary establishments, costing Rx. 2,274,000, were provided?—The population as given in the Statistical Abstract for 1875–76, excluding Native States and Berar, is 183,783,537.

4210. Can you tell us next the extension of territory in the interval between 1875–76 and 1895–96 which has taken place, and the population in 1895–96 of that extended territory?—The area of British India, including Native States and Berar, in 1875–76 was 862,878 square miles. In the interval the only material addition made has been that of Upper Burma, the area of which is 83,473 square miles, and the Quetta districts, the area of which is not given in the Statistical Abstract. The total area of British India as above is given in the latest Statistical Abstract as 947,275 square miles. The addition of 924 square miles is due to numerous petty alterations, arising from re-survey, &c. The population at the last census was 218,275,461.

4211. How much of that increased population would be due, as far as you know, to extended area?—The population of Upper Burma is 2,946,933, and of Quetta, &c. 27,270. Deducting these, therefore, we have a population in 1895–96 of the territory subject to the Queen in 1895–96 of 215,301,258.

4212. That would be an increase of something like 17 or 18 per cent., I think, would it not?—Yes, it would be about 17 per cent.

4213. In asking you these questions at the outset I want to ascertain to what extent in 20 years the population inhabiting the territory for which the Budget of Rx. 2,274,000 sufficed in 1875–6 has increased and also the population of new conquests acquired since that date?—Yes, that is the information given in my reply as above.

4214. Your paper compares the actual expenditure of 1875–76 with the expenditure as estimated for the year 1895–96. As a matter of experience does the actual expenditure on Law and Justice correspond sufficiently closely with the estimate to enable the figures to be fairly compared?—My experience is that a comparison between actuals and estimates is hardly ever fair; the estimates almost invariably exceed the actuals. And for this reason it will be noticed that, while I have given in my tables the figures of the Revised and Budget Estimates for 1894–95 and 1895–96, I have made the detailed comparison with the actuals of 1893–94—the latest year for which the actuals were available until this week.

4215. I think the Commission quite understand the wisdom of taking the last complete year for the purposes of comparison; but do you think that, as compared with 1893–94 in which the ascertained expenditure was Rx. 2,996,000 (which we may call three millions for all practical purposes), you would find an increase in 1895–96 of something over Rx. 100,000?—I should doubt it very much.

4216. You see that the revised Budget of 1894–95, which, I suppose, approaches accuracy, inasmuch as it contains something like nine or ten months of actual expenditure, shows an increase very nearly halfway between the Budget of 1895–96 and the ascertained account of 1893–94?—Yes.

* *See* Appendix 14.

4217. I am omitting certain insignificant expenses in England. The figures are Rx. 2,996,000—say, three millions—in 1893–4, Rx. 3,060,000 in the revised estimate of 1894–95, and Rx. 3,125,000 in the Budget of 1895–96?—Yes, but a considerable part of the increase in 1894–95 is due merely to a transfer of charge from another head; it is not an actual increase.

4218. Therefore if we take the Budget estimate of Rx. 3,125,000 we are probably taking the very outside figure of expenditure?—I should think so.

4219. And you doubt whether the actual expenditure would represent so large an increase over the three millions which the accounts of 1893–94 show?—I should doubt it. I have received this week the actuals for 1894–95, and I find that the totals of the actuals under this head for 1894–95 are almost the same as the totals of the revised estimate.

4220. How much are they?—For India, Rx. 3,067,875.

4221. Therefore the revised estimate almost exactly represented the actual expenditure?—Yes.

4222. You point out that the larger part of the expenditure on Law and Justice has in the interval between 1875 and 1895 been transferred from the central budget to the provincial budgets, but I gather from your memorandum that that transfer does not prevent a fair comparison being instituted between the total expenditure on Law and Justice at the two dates?—Yes, that is so.

4223. In 1875–76 the provincial expenditure seems to have been very small indeed on Law and Justice—Rx. 30,000?—Yes; the head of Law and Justice (Courts) had not been made provincial at that date.

4224. And when the transfer was made it was a transfer of the existing charges *en bloc*?—Yes.

4225. Did that, within your knowledge, lead to any increase of the powers of the Provincial Governments, to increase charges for Law and Justice within the province without reference to the Supreme Government?—Yes, they had increased powers from the time of the transfer—the powers which we described in the evidence we gave before—such, for instance, as the power of sanctioning certain establishments on salaries not exceeding 250 rupees.

4226. Any power of that kind has not been largely exercised, I take it, from the very gradual increase of the Law and Justice charge?—The power has certainly been exercised, but I do not think it has been very largely exercised.

4227. Because looking at the increase of the population the increase of expenditure is not very striking?—The expenditure has increased more proportionately than the population.

4228. It has increased more?—Yes.

4229. But against that may we not give a *per contra* in the shape of the receipts?—Yes.

4230. The expenditure on Law and Justice in 1875–76 was Rx. 2,274,000; that is omitting very small sums paid in England?—Yes.

4231. The estimate for 1895–96 is Rx. 3,125,000, an increase of Rx. 851,000, or more than 33 per cent. How much of that increase would you attribute to territories annexed since 1875–76?—The estimated expenditure under Law and Justice (Courts) in Upper Burma in 1895–96 is Rx. 89,300, of which Rx. 3,000 is for refunds. The exact amount for Quetta is not given separately in the accounts but it is not large; it probably does not exceed Rx. 5,000.

4232. Then you may say that the charges for Law and Justice in the territories which have been annexed since 1875–76 would be represented by about Rx. 100,000—89,000 and 5,000?—Yes, something under Rx. 100,000.

4233. Leaving the increase upon the old territories of the Queen in India at something like Rx. 750,000?—Yes, it is a little above that.

4234–5. You have just mentioned an item in the estimates which you call "refunds"; what does that item refer to? Is that a refund of the stamps or fines which have been found overcharged?—It would be a refund of any of those classes of receipts that are credited under the revenue head of Law and Justice, such as fines; not court fees, those are credited under Stamps, and the refund of court fees would be charged under the major head "Refunds" which includes all refunds of the principal revenue heads.

4236. I see it is a considerable sum year after year?—From about Rx. 37,000 to about Rx. 50,000.

4237. Or even higher than that?—Yes, in one year—1893–4—it amounted to Rx. 58,000.

4238. It is simply a refund of fines or charges of the court which have been found to be improperly charged or have been remitted, I suppose?—Yes.

4239–41. You have shown us an increase of Rx. 750,000 on 2,274,000; that would be an increase of about——? It would be just about 33.

4242–3. It is an increase of about 33 per cent., and during that time I think you said just now the population has increased by about 17 per cent.?—Yes.

4244. Of this total increase Rx. 416,000 arises on Civil and Sessions Courts, and Rx. 291,000 on Criminal Courts; in fact there is only a net increase of about Rx. 100,000 on all the other subjects of expenditure in the Law and Justice Budget?—Yes. This is the result when the actuals of 1875–6 are compared with the estimates of 1895–96. But comparing the actuals of 1875–6, with those of 1893–94 the differences are Rx. 416,000 and Rx. 205,000. The further increases shown in the estimates are to a great extent not real increases of expenditure but transfers from other heads.

4245. Could you deduct from these two heads of Civil and Criminal courts the expenditure in territories annexed since 1875–76?—For Upper Burmah the expenditure is—

——	1893–94.	1895–96. (Estimate.)
	Rx.	Rx.
Civil and Sessions Courts - -	1,735	1,780
Criminal Courts - -	74,308	77,620

making a total of 76,000 in 1893–94, and 79,000 in 1895–96.

4246. Therefore the larger part of the increase is found in the Criminal Courts in Burmah?—In the Civil and Criminal courts. It is true that the larger part is shown in the accounts under the head of criminal courts, but in Burmah there is no separation of the Civil and Criminal courts to the extent that there is in the Regulation Provinces; the officers of the general district staff exercise civil as well as criminal jurisdiction.

4247. Is that in consequence of its being newly annexed and therefore not fully settled yet?—Yes, the system is that which has generally been followed on the annexation of a new province.

4248. It is therefore at present in a transition state? Yes.

4249. And you must lump those two sums together?—Yes.

4250. And deduct them from the increase in the total for the Civil courts and for the Criminal courts in the rest of India?—Yes.

4251. After deduction of legal expenditure in those annexed districts, can you analyse the heads into which "Civil Courts" amounting to Rx. 898,000, were divided in 1875–76 so as to show the items of expenditure in which the increase between 1875–76 and 1895–96 has chiefly arisen?—I have the figures here.

4252–3. Perhaps you would give them to us; we are first of all dealing with the Civil Courts, which show, in 1875–76, Rx. 898,000?—Rx. 898,000, yes.

4254. We want to see how that breaks up?—That includes Civil and Sessions judges; Joint and Assistant Judges, and Judicial Assistants, Rx. 253,451.

4255. Those are the highest judges that come after the Supreme Courts?—They are practically the Sessions judges.

4256. The sessions judges?—Yes, the highest civil judges, including the High Courts and the session judges.

4257. The charge for them is Rx. 253,000?—Yes, then Subordinate Judges and Munsifs, &c., Rx, 224,493;

Mr. S. Jacob, C.S.I.

5 March 1896.

Law and Justice.

establishment, Rx. 212,613; contingent charges, Rx. 34,033; diet money of witnesses, Rx. 6,175; process service, Rx. 167,370; that makes up a total of Rx. 898,135.

4258. There the Civil Courts are broken up into what I may call superior courts, between Rx. 200,000 and Rx. 300,000; subordinate courts at Rx. 220,000; establishments, Rx. 212,000—I suppose they are clerical establishments?—Clerical and menial, yes.

4259. And process servers Rx. 167,000?—Yes.

4260. (*Mr. Buchanan.*) You have broken these heads up in the same way as they are given in the Finance and Revenue accounts?—Yes. Shall I give you the corresponding figures for 1893–94.

4261. (*Chairman.*) If you please?—On the first head, civil and sessions judges, joint and assistant judges, and judicial assistants, Rx. 326,331, subordinate judges and munsifs, Rx. 331,599; establishment, Rx. 304,453; contingent charges, Rx. 85,747; diet money of witnesses, Rx. 14,195; process service, Rx. 250,284; total, Rx. 1,312,609.

4262–3. I have got here Rx. 1,314,000 on the accounts of 1893–4?—I have excluded the Upper Burma charges.

4264. I only wanted to see that we were using the same figures?—In one or two cases the classification is slightly different.

4265. Will you do the same with the Criminal Courts?—Yes, for 1875–76, Magistrates and Collectors and Assistant Magistrates and Assistant Commissioners—that is to say, members of the Indian Civil Service and of Non-Regulation Commissions—Rx. 354,232; Deputy Collectors and sub-divisional officers, Rx. 108,988, Cantonment, City, and Railway Magistrates, Rx. 51,602; office establishments, Rx. 221,494; travelling and other allowances, Rx. 35,871; diet and road money of witnesses, Rx. 9,234; process service charges, Rx. 22,171; other charges, Rx. 70,691.

4266–7. That makes up your total, does it not, of Rx. 874,000?—Yes.

4268. Now for 1893–94?—The first head—Magistrates, and Collectors and Assistant Magistrates—the Indian Civil Service and members of Commissions—Rx. 342,955.

4269. That shows a reduction?—Yes. Deputy collectors and sub-divisional officers, Rx. 213,037; Cantonment, City and Railway Magistrates, Rx. 43,205; office establishments, Rx. 224,708; travelling and other allowance, Rx. 48,531; diet and road money of witnesses, Rx. 35,018; process service charges, Rx. 31,854.

4270–1. Would you give me again the process service charges for 1875–6?—Rx. 22,000 in 1875–6, and Rx. 32,000 now in 1893–4. Other contingencies, Rx. 65,578; making a total of Rx. 1,004,886. If the Upper Burmah charges, which I have excluded from the above figures, and which amount to Rx. 74,308, are added, this makes up the total of Rx. 1,079,194 for Criminal Courts in 1893–4.

4272. This compares the two fairly?—Yes.

4273. Making, I think, Rx. 874,000 in 1875–6 against Rx. 1,004,000 in 1893–4, for the purpose of comparison?—Yes; the Upper Burmah charges make up the difference between the latter figures and the total for the minor head of Criminal Courts.

4274. Then I think on the Supreme Courts themselves the increase has been comparatively small, has it not?—In the High Courts, Chief Courts, Judicial Commissioners' and Recorder's Courts, the increase, excluding Upper Burmah, has been Rx. 47,000.

4275. That is in 1893–94?—Yes; it is the increase comparing 1875–76 with 1893–94.

4276. On Rx. 295,000?—On Rx. 299,955.

4277. Do you arrive at Rx. 4,000 to Rx. 5,000 more by excluding Upper Burma?—No, the figure I have given is the total for 1875–6, including the High Courts and the Recorder's Court; the two heads taken together make up a total of Rx. 299,955.

4278. But you say in your memorandum "excluding "the Upper Burmah charges, the total increase in "the salaries of the higher paid officers amounts to "only Rx. 84,950, and of this Rx. 49,726 is due to the "increased cost in the Punjab." Does that refer to a further classification that you have made?—That includes some of these other charges that I have been giving you.

4279. Therefore, a question as to that would come later?—Yes.

4280. Perhaps you would proceed with the High Court?—That is the figure I have given you, Rx. 47,240, excluding Upper Burmah.

4281. And does that arise on any particular items or generally down the line of the courts?—In the salaries of the judges and judicial commissioners, and so on, the increase is Rx. 24,000.

4282. Are there any sums included in this comparison between 1893–94 and 1875–76 on account of allowances for loss by remittances home?—Yes, the exchange compensation allowance paid in 1893–94 is included.

4283. And would that Rx. 24,000 practically represent, do you suppose, those allowances?—I do not think it would be so much as that; I have not taken out the exact amount of exchange compensation allowance paid under this subhead.

4284. It is really charged upon the High and Chief Courts?—Yes.

4285. Well, then there come Law Officers: that shows a considerable increase, I think, does it not?—Yes.

4286. The charge is rather more than doubled, because it rises from Rx. 43,000 to Rx. 96,000 in 1893–94?—Yes, that is an increase of Rx. 53,000.

4287. Can you tell us the reason for such a large increase?—Of that Rx. 53,000, Rx. 37,000 has occurred in the salaries and remuneration of Government pleaders.

4288. Who are the Government pleaders?—The Government pleaders are scattered over the districts; there is generally at least one in each district to represent Government. He receives a very small salary as a kind of retaining fee, and is also paid for the work that he does in Court.

4289. But how would you account for such a very large increase within that comparatively short period of 19 years, because, I suppose, the same need for Government pleaders existed in 1875–76 as in 1893–94?—Yes, but I may observe that the legal charges of Government were not so accurately classified in 1875–6 as they now are, and though I have taken pains to include for 1875–6 any such charges which were shown in the accounts under other heads, it is quite possible that some of them may have escaped notice. It is, however, the case that the interests of Government in local law suits were often very much neglected in 1875–6, and in almost every province it has been found necessary since that time to improve the arrangements in force in regard to the defence of suits against Government, and to raise generally the remuneration of the Government pleaders. In Bombay a Legal Remembrancer has been appointed since 1875–76, one of whose principal duties is the superintendence of the Government pleaders in that province.

4290. But I thought I gathered from you that the idea of a Government pleader is, first of all, that he receives a retaining fee, and then, that he is paid for the business he does?—Yes, that is generally the case; and the figures which I have given include the special remuneration by fees as well as the retaining fee.

4291. Then would you explain the reason for doubling that charge in that 19 years to be this, that the service was inefficient and that this increase represents the increase which the Government thought necessary in order to make it efficient?—Yes; that is generally the reason for the increase.

4292. Even to the extent of doubling the charge?—Yes. I may mention as regards the Bombay case that the Committee represented that Government cases in the districts were imperfectly prepared owing to the weakness of the machinery at its disposal, both at the head office (Legal Remembrancers) and in the districts (Government Pleaders, &c.), and they made recommendations for considerably increasing the expenditure; and the same was the case in other provinces.

4293. Then you may say that practically the increase on that classification of legal expenses which is above the Sessional and Criminal courts is represented by about Rx. 100,000?—Yes.

4294. Of which more than half is the result of what is an improvement which the Government thought to be necessary in the position of the men that they employed as pleaders in the courts?—Yes.

4295. Do those pleaders occupy the position of Government prosecutors?—In many cases they do;

but they generally represent Government in civil cases only.

4296. Revenue cases, I suppose, chiefly?—Suits against Government brought in the civil courts as a rule.

4297. Then perhaps you could tell us something about these other courts which you classed as Presidency Magistrates' courts, Coroners' courts, and Small Cause courts?—The Presidency magistrates' courts are the magisterial courts in the Presidency towns—Calcutta, Bombay, and Madras; they dispose of all the magisterial work.

4298. Why do not you class them with the other criminal magistrates?—They are a separate class and have separate powers.

4299. The charges remain very nearly stationary?—Yes.

4300. They therefore do not call for remark. Coroners' courts show a slight decrease?—Yes, the coroner's court in one of the Presidency towns has been abolished.

4301. And the Small Causes courts show a considerable decrease?—Yes, they ought to be taken with the Civil and Sessions courts, because in many cases the subordinate judges have taken over the work of the Small Cause courts.

4302. Then, in fact, we might throw them in with the Civil and Sessions courts in considering the matter?—Yes.

4303. And that, I think, makes up the total of the leading expenditure. I notice here, in comparing 1875-76 with 1893-94, that the refunds, which are only an expense of order, have doubled; that is casual, I suppose?—Yes.

4304. Rx. 28,000 in 1875-76, and Rx. 58,000 in 1893-94?—Yes.

4305. I call that an expense of order, because practically it ought to be deducted from the receipts; it is not a real expense?—No, in a comparison of the results of different years it ought to be deducted from the receipts.

4306. Now, just going back upon those figures, we find that the High Courts have increased in 18 years by Rx. 47,000. upon an expenditure approaching Rx. 300,000?—Yes; that is the case.

4307. The Law Officers have increased by Rx. 53,000 upon an expenditure of Rx. 43,000?—Your figures in this case include Upper Burma.

4308. They are as given in your memorandum?—They are the totals there given; but in that sum of Rx. 47,000 for High Courts I excluded Upper Burma.

4309. Then will you exclude Upper Burma from the next head?—Excluding Upper Burma from the Law Officers it would be Rx. 52,000.

4310. Then we pass on to the Civil and Sessions Courts?—And the Small Causes courts—including them.

4311. They show an expenditure in 1875-76 of Rx. 992,000, and in 1893-4——?—Rx. 1,381,000 in round numbers against Rx. 993,000 in 1875-76.

4312. Now I should like to ask you one or two questions about that. The figures show a total increase upon that head of Rx. 389,000, do they not?—Rx. 388,000.

4313. And we may divide this increase between superior courts, subordinate courts, and establishments?—Yes.

4314. The superior courts show an increase from Rx. 253,000 to Rx. 326,000?—The amount is slightly different when the Small Cause courts are included; the totals I gave you just now included them. Taking the Civil and Sessions courts and the Small Cause courts together, the charge for the higher grade courts rises from Rx. 283,000 to Rx. 347,000; that is an increase of Rx. 64,000.

4315. Then come the subordinate courts?—The subordinate courts, Rx. 240,000 to Rx. 343,000.

4316. Being an increase of——?—Rx. 103,000.

4317. Establishments?—Rx. 250,000 to Rx. 336,000. Process service Rx. 176,000 to Rx. 251,000 being an increase of Rx. 75,000: and other charges, Rx. 44,000 to Rx. 103,000, an increase of Rx. 59,000.

4318. (*Sir James Peile.*) That is excluding Upper Burma, is it?—Excluding Upper Burma. Yes.

4319. (*Chairman.*) One is struck by the increase in the process service. Can you tell us what that branch of the service is; is it simply the branch that carries out the edicts of the courts?—Yes, it is the department that actually serves the processes of the courts.

4320. They are the administrative officers that give effect to the orders of the court?—Yes. To some extent the increase is due to the fact that in former years the process servers' charges were often not shown in the accounts; the charge was sometimes levied and paid to the process server without passing through the accounts at all.

4321. Out of the sums received?—The charge was sometimes paid by the suitors into the court, and the court paid it direct to the server without bringing it into account in the Government accounts.

4322. Would that go far to account for the very large increase between Rx. 176,000 and Rx. 251,000?—I think it accounts for almost all of it except such increase as is due to the increase of litigation.

4323. There has been no large increase of staff, in order to make the carrying out of the orders of the court more effective?—There has been a large increase in some cases, but I think it is chiefly owing to an increase in the litigation.

4324. (*Sir James Peile.*) There is an equivalent receipt, I suppose?—There is much more than an equivalent receipt; there are process service fees which more than cover the process service charges.

4325. (*Sir Ralph Knox.*) That receipt is not shown in the earlier years?—Yes, to whatever extent it was levied as a fee creditable to Government, it would be shown.

4326. (*Chairman.*) When we come to the receipts, which is a very important item in our investigation, we shall see that they were smaller in those years, and according to Mr. Jacob's explanation to a certain extent this Rx. 75,000 increase in expenditure should rather have appeared as a reduction of receipt. The real charge, I take it from what you say, in process service in 1875-76 would be much nearer Rx. 251,000 than Rx. 175,000?—I should not go so far as that, because there has been a considerable increase in litigation.

4327. Contingent charges rise from Rx. 44,000 to Rx. 103,000; that is a very big increase in administrative charges, a good deal over 100 per cent.?—That to a large extent includes special charges for copying, which are covered by special fees levied; they are not paid to the regular establishments and so they are shown as contingent charges.

4328. Would those charges cover a large part of the increase, do you think?—It covers a very considerable part, but a very large increase is in Bengal, where the litigation has increased very largely.

4329. Therefore, in reality the explanation of that increase is that you will find the receipts increased on the other side?—Of a portion of it.

4330. And these expenses are covered by those increased receipts?—The total additional expense under this head is much more than covered by the increase of court fees generally.

4331. Therefore, that very large increase of over 100 per cent. does not represent *bonâ fide* increased expenditure out of the taxpayers' pocket?—It really consists to a large extent of charges for such things as copying orders, and so forth, for which the suitor pays; also the number of courts has been increased, and that, of course, increases the contingent charges.

4332. Then, reserving the Judges to the last, the increase in the clerical and menial establishments is large, Rx. 86,000 on Rx. 250,000; how do you account for that?—Nearly half of that again occurs in Bengal where the courts have been very largely increased in number.

4333. And the remainder?—Rx. 17,000 occurs in the Civil and Sessions Courts of the North-West Provinces and Oude, Rx. 14,000 in the Punjab, Rx. 25,000 in Madras.

4334. And is that increase of salaries, or is it increase of staff?—Almost entirely increase of staff.

4335. Would you confirm, from your experience, what I have seen stated on more than one occasion, that practically the pay of people occupying the position of clerks and servants in Government offices has not increased during the last 20 years?—Yes, I should say on the whole that it has not increased.

Mr. S Jacob, C.S.I.

5 March 1896.

Law and Justice.

4336. The statement I have seen is a very general one, namely, that the pay of all persons of that class has not increased, including Government servants?—Yes.

4337. *Primâ facie*, of course, this increase leaves room for the supposition that there has been an increase in the pay of the individual; but I gather that that is not your opinion, but that you believe it to be due to an increase of staff and the larger number of courts?—Yes, chiefly, I think, it is due to an increase in the staff.

4338. Taking the case of people of the clerk and menial class, does your experience confirm the view generally, that there has been no increase in their pay during the last 20 years, since the time that the rupee began to fall?—Yes, so far as my own experience goes, I do not think there has been any general increase in the pay of the clerical establishments.

4339. We now come to the Judges. Can you tell us to what extent increase of courts, as distinguished from increase of pay, accounts for this increase in the superior Civil Courts of Rx. 64,000, on Rx. 283,000, and of Rx. 103,000 on Rx. 240,000 in the subordinate courts?—In the higher courts Rx. 33,000 occurs in the Punjab, Rx. 17,000 in the North-West Provinces and Oude, Rx. 3,000 in Lower Burma, and Rx. 5,000 in the Central Provinces. These are almost entirely due to the steps which have been taken to separate the judicial and executive functions of the officers in the non-regulation commissions.

4340. Making Rx. 58,000?—Yes.

4341. And, therefore, with regard to the higher courts you may say that almost the whole amount of the increase is due to steps taken to separate judicial and executive functions?—Yes; there have been, of course, slight increases and decreases here and there, but they have not been large in any case.

4342. I suppose what is put under this sub-head is simply the judicial increase?—Yes. Where officers perform both judicial and executive duties a portion of their pay is, as a rule, though not invariably, charged to Law and Justice, and a portion to Land Revenue or to the other department in which they serve.

(*Sir Ralph Knox.*) Does this sub-head provide for both duties still?

4343. (*Chairman.*) Perhaps, having heard what Sir Ralph Knox has said, you would wish to enlarge upon that answer, so as to make it clear to the Commission how the separation of duties appears financially in the Budget?—The separation does not refer at all to the separation of magisterial and executive functions, but to the separation of the higher judicial functions, such as those of civil and sessions judge. In the Punjab, for instance, the duties of the Civil and Sessions judge were performed in 1875–76 entirely by the Commissioners, with occasionally an additional Commissioner appointed where the work was extremely heavy.

4344. The Commissioner being a civil officer?—The Commissioner being a revenue officer.

4345. (*Sir Ralph Knox.*) And not provided under this head?—No part of his pay was provided under this head. If additional Commissioners were appointed to discharge the judicial work their pay was charged to this head, and, as a matter of fact, in 1875–76 two additional Commissioners were charged to this head at a cost of about Rx. 5,000.

4346. It is really due then to a transfer of duties from another class of officers, provided elsewhere, to this department?—Yes. But, in fact, the Commissioners were overworked and they could not efficiently perform their judicial work as well as their revenue work, so that the opportunity was taken, as it was necessary to increase the establishments, of, at the same time, effecting a separation of the judicial and revenue functions as far as possible; and now the judicial establishment in the Punjab consists of 13 Divisional Judges, 9 District Judges, 14 extra judicial assistants and 83 munsifs, all of whose pay is charged entirely to this head of Civil and Sessions Judges. In 1875–76 the only pay charged to this head in the Punjab was the pay of those two additional Commissioners at Rx. 5,000.

4347–8. (*Chairman.*) And all the duties performed by that large number of additional officers that you have just named, apart from the duties performed by the two or three additional Commissioners, were performed by high officers who had also important civil duties?—By high and low officers. In the latter category I include the extra judicial assistants and munsifs; their work was done in the Punjab in 1875–76 by the general district staff; and, as I have said, the only charge under this head was for two additional Commissioners at a cost of Rx. 5,000.

4349–50. You mentioned that this increase has taken place in consequence of the separation of judicial and executive functions in the Punjab and Oude and Lower Burma and in the Central Provinces. In the other provinces—Bombay, Madras, and Bengal—had that separation already taken place?—Yes.

4351. And may we understand that, as far as these higher courts are concerned, that separation is now complete throughout India?—No, not complete throughout India.

4352. Where is it not?—In the Central Provinces and Burma a very large portion of the civil judicial work is still performed by the revenue officers.

4353. And is it the intention, as opportunity occurs, to complete this transfer?—I should say it was. I know that from the Central Provinces there have been proposals for a more complete separation, which were negatived mainly on the ground of the extra expense involved.

4354–5. Well, that accounts for very nearly the whole of the increased charge?—Yes, in the higher offices.

4356. (*Mr. Buchanan.*) May I ask one question on this subject? Has any estimate been made as to what the cost would be of separating the judicial functions throughout the remainder of India where they are not already separated?—Do you mean the separation of all original magisterial functions?

4357. You say that it has already been done at a cost of Rx. 58,000 in Punjab, Oude, and other provinces. Supposing it were carried through on the same scale elsewhere in India, have you made an estimate of what it could cost?—That, as I have said, only refers to the separation of the functions of the higher criminal courts and of the Civil Courts from the revenue functions, not to the separation of the magisterial and revenue functions.

4358. (*Chairman.*) I may take it from your previous answer that a separation in the case of the higher appointments is almost complete throughout India?—Yes, excepting in one or two of the smaller provinces, but nowhere is there a separation of the magisterial and executive functions.

4359. When we get to the magisterial courts I have a question I want to put to you about that. I will now ask you about the subordinate courts. How did the Rx. 103,000 increase, on Rx. 240,000, in the interval since 1875 occur?—Rx. 43,000 of that occurs in Bengal, Rx. 19,000 in the North-West Provinces and Oude, Rx. 21,000 in the Punjab, Rx. 14,000 in Madras, Rx. 5,000 in Bombay, and Rx. 2,000 in the Central Provinces. Those are the main increases.

4360. Now, taking Bengal, is it the opening of new courts, to which you alluded before, that has caused that increase?—Yes, the subordinate judges in Bengal have increased from 41 in 1875–76 to 53 in 1893–94 and the munsifs, the lowest grade of court, have increased from 184 to 290.

4361. And would that account for the whole of that 43,000 or has there been any increase in their pay?—There has been very slight alteration in the pay. As far as any alteration has been made in the pay of the munsifs there has been a decrease; a lower grade has been created on 200 rupees a month, which did not exist in 1875–76.

4362. That is to say, if you add a lower grade for administrative or judicial reasons to a class of judges, that lowers the average of the pay of the class which is made up of these grades?—Yes.

4363. It does not mean a lowering of the pay of the judges as they previously existed?—No.

4364. It is an addition of a class of judges with a very much smaller amount of power?—The average pay of the munsifs in 1875–76 was 359 rupees, and in 1895–96 it was 348.

4365. That is due, not to lowering the pay of the class as it existed before, but to the addition of another class?—To the addition of another grade. The pay of the other classes is exactly the same, save that in the case of the subordinate judges one grade has been extinguished. There were grades of Rs. 600, Rs. 700, Rs. 800, and Rs. 1,000; now the grade of Rs. 700 has

been abolished. The result has been that the average pay has decreased from 890 to 850 rupees.

4366. Of subordinate judges?—The subordinate judges.

4367. (*Sir James Peile.*) And the numbers have been largely increased?—Yes, from 41 to 53.

4368. (*Chairman.*) And does the same apply in the Punjab and the North-West Provinces and Oude, where you say the increase has been Rx. 19,000?—There the subordinate judges have increased from 18 to 33, and the munsifs from 71 to 94. That is largely owing to what I have already mentioned, the separation of the judicial functions in Oude.

4369. And the same applies I suppose to the Punjab?—Yes, as regards the subordinate judges and munsifs.

4370. And in Madras and Bombay and the Central Provinces the increase is comparatively small; is there any reason for that?—There has been a very small increase in the numbers in Madras; the subordinate judges have increased from 13 to 14, and the munsifs from 112 to 114. In Bombay there has been a considerable increase in the numbers, but the scale of pay has been slightly reduced.

4371. We will next take the criminal courts and begin with Magistrates and Collectors. Magistrates and Collectors have only fallen from Rx. 354,000 to Rx. 343,000: they are nearly stationary. Do I understand that the item of Magistrates and Collectors represents that portion of the pay which those officers receive which you attribute to their judicial functions?—This subhead includes all the magisterial officers belonging to the Indian Civil Service; and the charge shown is for that portion of their pay which is actually charged in the accounts on account of their judicial functions.

4372. Another portion of their pay is charged to the civil establishment?—To Land Revenue.

4373. Now this is the point at which I think Mr. Buchanan's question comes in; are not these the officers about whom a question has been raised in public discussion, as to whether they have not intermingled civil and judicial functions, which ought to be separated?—Yes, I believe there has been some discussion raised about that question.

4374–6. You may probably recollect that there was a good deal of talk about what Lord Kimberley and Lord Cross said. I confine myself to the financial side of the question; I am not going to enter into the question of whether it is desirable or not, because that is not our business; but Lord Kimberley and Lord Cross have both said in the House of Lords that they thought it would be desirable to separate these functions whenever possible; and those answers have been a good deal quoted in India. I, therefore, wish to ascertain if you know what are the classes of officers to whom they referred. You have already told us that in the Civil Courts separation is almost complete; but on coming to the item of Magistrates and Collectors in the Criminal Courts, it looks as if primary criminal justice is administered by officers, who have the executive functions of revenue collector and so forth and the judicial functions of magistrate. Are you able to say whether these are the officers to whom those remarks apply?—I believe they are the officers referred to.

4377. And therefore this is the item around which discussion as to separation of judicial and executive functions would turn?—Yes, I presume so.

4378. I ask these questions because they are leading up to a financial question. Has any estimate ever been made, that you know of, of what would be the effect of carrying out such a separation?—I am not aware of any such estimate having been made.

4379–81. You have not seen any scheme or proposal put forward as to the manner in which such a separation should be made?—I have seen a scheme which was put forward, I think, by the British Committee of the Indian National Congress, but I have only seen their paper within the last few days. It contains a scheme which was propounded by Mr. R. C. Dutt, a Bengal civilian, which I believe has been adopted by the British Committee.

4382. That is the paper that was in my mind. I did not think it quite amounted to what could be called a working scheme?—I understood it was put forward as a scheme for the separation.

4383. Still, keeping ourselves to the financial side, can you point out to us shortly the method by which Mr. Dutt proposed to carry out the separation; then I should ask you what in your opinion would be the financial effect of such a scheme?—His scheme, as far as I understand it, is that the district judge should be the head of all the judicial officers, including magistrates, in the districts, and that the magistrates should not exercise any revenue or executive functions, but should be entirely confined to their magisterial work.

4384. And, therefore, if that were done there would have to be a number of new officers appointed to perform the civil functions?—Yes, I should say it would cause a considerable increase of expense.

4385. Do you think that that proposal, which the gentleman, who puts it forward, thinks would not cause a very considerable expense, would cause a considerable expense?—His idea was as follows:—Say there were four officers, subordinate to the Collector and Magistrate and doing both revenue and magisterial work, he would take two of them and would make them magistrates, and put them under the District Judge, and two of them he would make assistant-collectors and restrict them to revenue work and put them under the Collector; and so he thinks that there would be no increase of expense at all. But, even admitting that this plan would work, my experience always has been that, when you begin to divide off the mass of work, which is done by a certain number of officers taken together, you always have to increase the establishment in order to cope with the divided work.

4386. I think it is the general experience of people who are versed in administration, that by combining work you may make economy; but that, by dividing it among a number of officers, you increase the expense?—Exactly; you cannot always divide the work exactly in the proportion of the officers.

4387. I do not ask as to whether it is desirable or not, I only take note of the fact that Secretaries of State have spoken of the principle as desirable; but I want to see, supposing it were carried out, whether the judicial budget is likely to impose a heavier charge on the taxpayer. I ask you, therefore, supposing the plan named were carried out, do you consider that the increased charge thereby imposed on the taxpayer would be a considerable one?—I think it would be very large, especially in the case of the sub-divisional officers. In the sub-divisions, as a rule, I think, only one superior officer, called either Tahsildar or Mamlatdar, carries out the magisterial and the executive work. You must have a man of a certain status in order to do the work and if you separate his functions you would need two men—each of them being on the same pay as is now given to the one—to do the two works.

4388. (*Sir James Peile.*) And I suppose if the superior officer is relieved of his administrative functions you would say that the people under him must also be relieved of theirs, that is to say they cannot serve two masters, can they?—I should think that would be the case.

4389. You would have two establishments instead of one?—You would have two establishments instead of one all through.

4390. (*Chairman.*) Should you anticipate that that would be a heavy charge?—Certainly in sub-divisions I think it would be a very heavy charge. In the districts I think it would cost some extra expense, I mean as regards the district staff. You could not always divide the staff according to the work exactly if, for instance, you have five men for the combined work, you will probably need three for each of the divided branches. There it would cause some increase of the expense. In sub-divisions I think it would almost double the expense.

4391. Really?—Yes.

4392. I think you told us before that you were not aware of any calculations having been made of what the expense of such a change of principle might involve?—No, I am not aware of any official estimate having been made out.

4393. Can you give us a sketch of a sub-division, to enable us to judge of what number of officers a sub-division now consists?—No, I could not. I could work out roughly what the cost of a sub-division would be, by dividing the whole cost of sub-divisional officers and establishments by the number of sub-divisions. That is the only way I could do it. I have not any separate accounts showing the actual cost of a sub-division.

Mr. S. Jacob, C.S.I.

5 March 1896.

Law and Justice.

4394. (*Sir William Wedderburn.*) Does not Mr. R. C. Dutt give some details with regard to some particular district which would assist in giving the information?—He speaks only of Bengal, where the system is entirely different from that prevailing in other parts of India. They have no sub-divisions in Bengal in the sense in which there are sub-divisions in Northern India and Bombay.

4395. (*Chairman.*) And would it be less expensive in Bengal in consequence?—It might be slightly less expensive there, but I do not think his plan would work as regards the sub-divisions. His proposal is that the superior officer (who in Bengal is always a deputy collector, a higher officer than the Tahsildar or Mamlatdar), should be made over to the magisterial side, and that another officer of inferior rank, a sub-deputy-collector, should do the revenue work; but I think the revenue work would suffer, if that were the case.

4396. But there have been no detailed estimates of which you know, that would give an idea of what the effect would be? To take an extreme case, which would probably not be realised, supposing the complete separation was carried out, the extra expense could hardly exceed the double of that sum of 550,000, namely, the two first items in your analysis of the criminal courts, Magistrates, and Deputy collectors. If I remember right, Magistrates and Collectors in 1893–94 cost Rx. 342,955, and deputy collectors Rx. 213,037?—Yes.

4397. Well, that would be, I suppose, something very like the outside cost, supposing that the measure led to a doubling of establishments?—A portion of their pay is charged to land revenue, generally one half, in some cases more than one half, so that the maximum extra charge would be considerably more than double this, if all the establishments were doubled.

4398. It would be more than that figure?—It would be nearer four times than double that.

4399. But if one half of their salaries is charged in respect to the executive duties they perform, and one half to civil establishments, if they were discharged of those executive duties, what would be the result?—The extra charge would be the double of the charges shown here.

4400. They would not be put on reduced salaries; you would have to pay them their salaries and replace them with fresh officers on the civil establishment side?—Yes, that is on the assumption that the whole District Staff is to be doubled.

4401. In that case, you would bring over to the Judicial grant men costing Rx. 500,000 from the Land Revenue grant, and also yet have to replace that Rx. 500,000 on the Land Revenue Grant?—Yes, that is what I mean; of course, I do not mean that that would be the real measure of the extra cost involved in this scheme.

4402. No, of course not; but, at all events, what it might come to is this, that if it were carried out in full, you could not hope to escape without a very large charge, of which the outside limit, which, of course, would not be attained, would be that which you have described?—Yes.

4403. Therefore, on looking at the future of the Law and Justice budget, and the future charge upon the Indian taxpayer, we must not leave out of consideration the possibility at all events of a considerable charge being added in consequence of the general approval that has been given to the idea of the separation of those functions?—Yes. I do not know that the proposal is approved in India at all by the Government of India.

4405. Of course, it receives its significance from the fact of two Secretaries of State having spoken in favour of the principle, and that is the only reason why I am putting the question to you?—Yes.

4405A. Now then taking these cases, the Magistrates and Collectors, their charge is practically the same for 1875–76 and for 1893–94; there is only a difference of Rx. 12,000, while the deputy-collectors have very nearly doubled, the rise being Rx. 109,000 to Rx. 213,000; can you give us the reasons for the increase?

4406. (*Mr. Buchanan.*) May I ask one question before you go away from what the Chairman has been speaking about. Do all the individuals, both the magistrates and the deputy-magistrates, who are included in these two items of Rx. 342,000 and Rx. 213,000, discharge both executive and judicial functions?—Yes, with very slight exceptions. The Cantonment Magistrates do not do any revenue work.

4407. (*Chairman.*) The Cantonment Magistrates are distinct?—Yes.

4408. (*Mr. Buchanan.*) You have kept them separate?—Yes.

4409. And all the criminal work of the criminal courts is done by civil servants who do both judicial and executive work, or practically all?—All the magisterial work is done by them. The work of the Sessions Courts is done by officers who are charged under "Civil and Sessions Courts" and they are purely judicial officers as a rule.

4410. They are the people we had just before?—Yes, under the former head. It is only the magistrates and the executive officers that are combined as a rule throughout India.

(*Chairman.*) But still it applies to the whole of these magistrates and collectors and deputy-collectors.

4411. (*Mr. Buchanan.*) They do the bulk of the work of the criminal courts?—Yes.

4412. (*Sir Ralph Knox.*) I should like to ask one question, are these officers migratory in the performance of their functions; do they have to move about or are they stationary?—The district magistrate moves about a great deal and the sub-divisional officers, especially in Bombay, I think. Sir James Peile will correct me if I am wrong there.

4413. That is for the proper discharge of both their magisterial and their revenue duties?—Yes; that is chiefly for their revenue duties, I should think.

4414. (*Sir James Peile.*) You are aware, I suppose, that the District Magistrate does not as a rule try cases?—Yes, I know that it is only exceptionally that he exercises his jurisdiction as a magistrate.

4415. He is a general supervisor and director; he does not often actually try cases himself?—Very rarely.

4416. (*Sir Ralph Knox.*) What does that supervision, so far as concerns the judicial part of his duties, consist of?—He distributes the work among the courts, either by general orders or by referring particular cases to particular courts, and he is also the appellate court as regards magistrates of the second and third class, *i.e.*, the lower grade magistrates.

4417. He would have little or no revenue work to do?—He would have a great deal of revenue work to do.

4418–9. But would the District Magistrate and Collector move about much in the discharge of his duties?—Oh, yes, in most provinces he is moving about constantly in the cold weather, and part of the hot weather.

4420. (*Mr. Mowbray.*) Do I understand that he would have judicial work connected with the revenue?—Yes, he tries a certain number of revenue suits in some parts of India. The practice as to that differs in different parts of India. In some parts the revenue suits are tried in the civil courts.

4421. (*Sir James Peile.*) The police are under his orders?—Yes.

4422. The superintendents of police are under his orders?—Yes.

4423. (*Mr. Mowbray.*) Then in some cases he has civil judicial power as well as criminal judicial power?—Not in civil suits.

4424. Only in revenue suits?—In some cases he has in revenue suits.

4425. It that the exception rather than the rule?—I think the practice varies very much in different provinces.

4426. But, except for that, his judicial powers, such as they are, are criminal only?—Yes, almost entirely. It will be understood that I am speaking of the Regulation Provinces.

4427. (*Sir Ralph Knox.*) Is a very large amount of time consumed in the moving about of these officers?—In the actual moving?

4428. Yes?—No; they generally take short marches from camp to camp. Very often they remain three or four days in the same place or even longer than that in some parts of India.

4429. But, supposing their duties were divided, could they extend their divided functions over a larger

area with convenience?—I should doubt that being possible.

4430. (*Sir William Wedderburn.*) I think, Mr. Jacob, you said that when that separation was made of judicial and executive functions in the Punjab and other provinces, it mainly, or in great part, was on account of the officers being overworked?—Yes.

4431. And that rather was the occasion taken for the separation?—Yes.

4432. But the increase arose more from the fact of the officers being overworked, of there being insufficient officers, than from the separation of the two classes of work?—I suppose that that is the course that occurs in every case; when first we annex a province, the judicial work is considerably less than it afterwards becomes; one set of officers can do both the revenue and the judicial work in a young province, where the people are more unsophisticated, and where a more paternal system of administration can be followed. As time goes on, more elaborate methods are introduced, and the system of administration becomes more complicated, and the people possibly become more litigious, so that in various ways the work gradually increases; and then the process is that when the work has increased sufficiently to necessitate an increase of the staff, the opportunity is taken of making the increase in such a manner as to provide for the separation, as far as possible of the judicial and executive functions.

4433. My point was rather this: if there had been a sufficiency of officers the mere redistribution of duties would not have led to so very large an expense. It was not the redistribution; it was the insufficiency rather that led to this large expense to which you refer?—If the increase of staff had been made upon the same lines as before, the increase in the expense would not have been anything approaching to what it is now.

4434. That is to say, if additional Commissioners had been appointed?—If additional Commissioners had been appointed to dispose of the additional work.

4435. But a certain amount of the additional expense was met by a certain amount of additional improvement in the administration arising from the redistribution of work?—Yes.

4436. (*Chairman.*) Then I think, now, Mr. Jacob, we will go back to the question of how the actual increase which has occurred between 1875 and 1893, on these two heads of Magistrates and Collectors and Deputy collectors, is to be accounted for?—There has been a very large increase in the staff of Deputy collectors and there has also been an increase in their salaries. In 1884–85 it was mentioned in the financial statement that the Government of India considered it necessary to improve the pay and position of the Deputy collector class generally, and throughout India there was at that time an increase in the pay of that class.

4437. Are the Deputy collectors, as a rule, Europeans or natives?—Natives.

4438. I think in looking through the items that make up the Law and Justice budget, this is almost the first occasion on which we have come to a general increase of salaries, unless indeed you put under that term the increase to the Law Officers?—Yes; I think that the reason was this; the number of Deputy collectors in the lowest grades, had, up to that time, been increased to a very large extent. Whenever an increase was required in the district establishment it had been made in the Deputy collector class, and as a rule in the lowest class, and the consequence was that there were no reasonable prospects of promotion for the men entering the service; the lowest classes were overcrowded, and it was necessary, therefore, to improve the prospects of the service generally, and to provide for a proper graduation of the service.

4439. But that does not apply to the Magistrates and Collectors—the highest officers?—No.

4440. That charge has been stationary?—Yes, that has gone down if anything.

4441. Well then, what are the Cantonment and Railway Magistrates who have also diminished in charge?—They are chiefly the magistrates who are employed in certain large cantonments. In such places it is desirable owing to the large number of British soldiers to have European Magistrates, and generally military officers are appointed. Besides their magisterial duties they have certain duties to perform in connection with the cantonment fund, but their pay is as a rule charged entirely to this head of the budget.

4442. What do you mean by Railway Magistrates?—On one or two of the railways there is a resident Railway Magistrate who takes up principally the railway cases. He also in some cases does other work. In 1875–76 there was one Railway Magistrate. He was also the Superintendent of the Railway Police as well, but his pay was charged entirely to this head.

4443. Then we come to the officer establishment which in this case is almost stationary, or may be called stationary, Rx. 221,000 to Rx. 225,000?—Yes.

4444. One is struck by the fact of that item being stationary compared with the large increase under this head in the civil courts which you remember rose from Rx. 250,000 to Rx. 336,000; but I think you explained to us that that in the civil courts arose from increase of courts and not from increase of pay?—Yes.

4445. Then, again, therefore we may say there has been no increase of pay throughout these clerical and menial establishments?—No, there has been no general increase so far as I can judge.

4446. Allowances Rx. 36,000 to Rx. 48,000—are those travelling allowances?—Chiefly travelling allowances.

4447. Next comes a heavy increase—"Witnesses" from Rx. 9,000 to Rx. 35,000?—Yes, that is the amount that is allowed to witnesses summoned by the criminal courts.

4448–50. Then have the allowances increased?—It is not so much that the allowances have been increased as that the practice of giving the allowances has become more prevalent. In some provinces they used not to give any allowances at all; the allowances are very petty indeed.

4451. The process servers in these cases are very much fewer than they are in the civil cases?—Yes.

4452. The charges, for them, however, have also increased for the same reason as in the Civil Courts?—Yes. The processes in criminal courts are, however, largely served by the police, but in some cases a special establishment is required.

4453. Well, in "Contingencies" there is nothing to call for remark; the charge is rather down than up?—Yes; I may say, however, that though, I have endeavoured to classify these charges in 1875–76 so as to admit of a fair comparison with those of 1893–94, there may be in some cases small charges included under one head which ought really to be compared with another. I should not have expected that there would have been an actual decrease in the contingent charges.

4454. At all events the difference is so small that it hardly calls for attention?—Yes, it is very slight anyway.

4455. Now I am going to run through these heads again, to see if we can summarize the result. We come first of all to the High Court Judges, showing an increase of Rx. 47,000, which I think you explained by saying that there have been some additional judges made?—Yes.

4456. You did not attribute it to increase of salaries though it did include the allowance made in compensation for loss by exchange?—There has been a decrease in salaries, as far as any change has been made.

4457. A decrease in salaries?—Yes, the salaries of the judges of the High Court in Calcutta have been reduced from 4,166 to 3,650 rupees a month.

4458. Oh! indeed; then I do not quite follow how the Rx. 47,000 increase comes?—Rx. 24,000, out of that Rx. 47,000 is due to an increase in the number of the judges.

4459. (*Sir James Peile.*) By the establishment of a new Chief Court or High Court?—No; there have been additions to the staff of the existing High Courts in one or two cases, and an additional Judicial Commissioner has been appointed in Oude and the staff of judges in the Chief Court in the Punjab has been increased.

4460. (*Mr. Mowbray.*) In which year was the pay of the High Court Judges in Calcutta reduced?—I have got a note that it was by an Order dated 25th January 1883.

4461. (*Chairman.*) That leaves us Rx. 23,000 in the High Court to be explained?—Rx. 3,000 of that is in the charge for the superior ministerial officers, such as registrars and those who receive higher salaries; Rx. 8,000 in the establishment and about Rx. 12,000 in other charges, contingent charges chiefly.

Mr. S. Jacob, C.S.I.

5 March 1896.

Law and Justice.

4462. Then coming on to the Civil and Sessions Courts we first of all get the superior judges with an increase of Rx. 64,000, which I think you attributed to the extent of Rx. 58,000, to the separation of functions?—Yes.

4463. And you attributed to the same reason in a very large part the increase of Rx. 103,000 on the inferior judges, did you not?—Yes, very much.

4464. Is that the case in all the Provinces?—In Bengal it is not due to that; it is due to an increase in the number of courts in Bengal.

4465. But in the other cases it is due to the separation?—In the Punjab, Oude, and the Central Provinces it is due to that chiefly.

4466. Rx. 43,000 out of Rx. 103,000 is due to increase of courts?—Yes.

4467. Then I think you say there has been an increase of Rx. 86,000 on the establishments?—Yes.

4468. Which you have put down entirely to an increase of courts?—That is the main cause.

4469. On process service there is an increase of Rx. 75,000, which you showed us, arose from the fact that the payment of a number of the process servers had not entered into the accounts really?—Yes; the administration of the service has also been improved.

4470. But, if the accounts had been kept exactly in the same way throughout the difference would have been very much smaller?—Yes, very much smaller.

4471. And after that we come to office charges which show a very large increase from Rx. 44,000 to Rx. 103,000. You gave us an explanation of that?—A considerable portion of that is due to copying charges.

4472. The financial effect remaining very much the same as before?—Yes.

4473. So far, with the exception of the Law Officers, we have got hardly any increase to speak of, which we can put down to increase of pay?—No.

4474. The judges of the courts and their officers do not seem to have received increases of pay. In several cases there are increases from new courts being established, and from the separation of judicial and executive functions, but, apart from the Law Officers, whose position you distinctly described as improved, the increases of pay have been insignificant?—Yes; the remuneration of the lower classes of Law Officers has been raised generally.

4475. Then we come to the criminal courts and there we find for the first time an increase of pay to Deputy collectors?—Yes.

4476. And after that I think the allowance was extended to fresh classes of witnesses, which was not a very great matter?—No, that was not my meaning; I think that in some provinces where allowances were formerly not given, they are given now.

4477. And therefore we find that of the whole amount of this increase by far the larger part is due to the separation of judicial and executive functions, in certain provinces, in the civil courts, to the opening up of new courts and, in about two instances, namely, that of the lower classes of law officers and the inferior criminal courts, to an increase of pay?—Yes.

4748. Could you give us a sketch of the manner in which justice is administered in India beginning, we will say with the magistrate on the criminal side, and the lowest civil courts on the civil side?—The magisterial work is done by the District Magistrate who is assisted by Assistant collectors and magistrates and Deputy collectors and magistrates and sub-divisional officers.

4479. To what extent are those Europeans or natives?—The assistant collectors are chiefly Europeans, members of the Indian Civil Service, the rest are natives.

4480. That is to say, the District Magistrates and the assistants are chiefly Europeans?—Yes.

4481. And these officers between them discharge judicial functions of a criminal character?—Yes.

4482. All the ordinary offences of the country, such as in the main are adjudicated by our benches of magistrates, are adjudicated upon by them?—Yes, and they also make the preliminary inquiry into all sessions cases.

4483–4. That is to say, they decide whether a case ought to go to a Sessions court or be dismissed?—Yes.

4485. To what extent have they power of punishing without appeal?—The magistrates are divided into three classes. Magistrates of the third class have power to sentence to one month's imprisonment and 50 rupees fine; those of the second class to six months' imprisonment and 200 rupees fine and to whipping, if specially empowered. All their sentences are appealable.

4486. All of them?—Yes, to the District Magistrate.

4487. The District Magistrate is of the first class?—He is of the first class, yes. Magistrates of the first class can sentence to two years' imprisonment, 1,000 rupees fine, and to whipping. The District Magistrate, I think I ought to say, exercises only the powers of a first class magistrate, so far as the trying of cases in the first instance is concerned; but he exercises appellate jurisdiction in respect of the magistrates of the second and third class.

4488. Then do I understand that all the sentences of the second class magistrates are appealable to the District Magistrate?—Yes, all sentences of second and third class magistrates are appealable.

4489. But are the sentences of second and third class magistrates exercising their summary jurisdiction appealable?—Yes, all sentences of second and third class magistrates are appealable.

4490. Did I understand you to mention a class below the third class magistrates, who have power of dealing summarily with cases?—No.

4491. Nobody else except those three classes of magistrates have power of dealing summarily with cases?—No, those are the only three classes of magistrates. The sentences of the magistrates of the first class are not appealable unless they exceed one month's imprisonment or 50 rupees fine, or, in certain cases which they are empowered to try summarily, three months' imprisonment and 200 rupees fine.

4492. And if they exceed those then there is an appeal?—There is an appeal then to the Sessions Judge.

4493. The Sessions Judge comes under the division of the High Court, does he not?—No, under Civil and Sessions Courts.

4494. In the Civil Sessions Courts judges sit who have a criminal power?—The Sessions Court is a criminal court.

4495–6. Therefore, when you speak of the Civil and Criminal courts, the division between the two is not complete; the Sessions Court includes a certain amount of criminal jurisdiction?—As a rule the Sessions Judge is also a Civil Judge.

4497. Where does the Sessions Judge sit?—There is a Sessions Judge in each district. Sometimes there is only one for two districts. He sits for sessions at the head-quarters of the district, and if he is in charge of two districts he goes to the second district and conducts the sessions there.

4498. Is not the District Magistrate at the head-quarters of the district?—Yes.

4499. How many districts are there in any one of the Provinces?—In Bengal there are 50.

4500. And therefore there are 50 sessional judges?—No; in Bengal there are in several cases two districts to one judge.

4501. Then what power has the Session Judge?—The Sessions Judge can try all cases.

4502. Can he try capital cases?—Yes; but sentence of death by a Sessions Court is subject to confirmation by the High Court.

4503. At Calcutta?—At Calcutta, Bombay, or wherever the High Court of the province is.

4504. And to what extent has he independent power of punishment without appeal?—Only the same power as a magistrate as far as appeal is concerned.

4505. All cases above a month's imprisonment?—His sentences of above a month's imprisonment are appealable.

4506. They may go to the High Court?—Yes, if they are sentences by a Sessions Court. As a rule, of course the Sessions Court does not sentence to small punishments. Such cases would be disposed of by the magistrates as a rule.

4507. But still where they come before the Sessions Court they are appealable?—Yes.

4508. But does not that mean that the High Court gets an immensity of business thrown upon it by the number of appeals?—There are a good many. I think I could give you the number; no, I find the Statistical Abstract does not give the number of appeals to the High Court separately, but the total number of appeals in criminal cases in India in 1893 was 155,000.

4509. From the three courts?—Of all appeals.

4510–1. From all magistrates, I mean?—Yes, appeals of all kinds. The High Court, of course, is the chief criminal court.

4512. Is there any appeal from Bombay to Madras, or from Madras to Calcutta?—No.

4513–4. They are quite independent?—They are quite independent, and even in the case of Judicial Commissioners there is no appeal from them to a High Court.

4515. Well, now would you give us the civil side?—The High Court also has certain powers of revision, and it may revise the order of any subordinate court.

4516. Has Madras High Court this power?—Yes, the High Court of Madras has the power of revision.

4517. And the High Court of Calcutta?—Any High Court may revise without appeal.

4518. Of its own initiative?—Of its own motion. And the District Magistrate and the Sessions Judge may call for records and examine them and may submit them to the High Court for revision, if they think necessary, but they cannot revise themselves.

4519. Would you now tell us about the civil courts, what the process there is?—There, the practice varies very much in the different Provinces, but, speaking generally, the lowest grade of Court in the Regulation Provinces is that of the Munsif.

4520. He is a native judge?—He is a Native Judge on a pay generally of from 200 to 400 rupees a month, and he tries suits in some Provinces up to 5,000 rupees in value. Then subordinate judges can try all original suits of any value whatever, and they can be invested with appellate powers in certain cases. In some cases they have appellate powers without special investiture, but they exercise them only on a reference from the district judge. The district judges also have jurisdiction in all original cases (though generally they try very few original suits) and they exercise appellate jurisdiction from Munsifs and subordinate judges, except as regards cases in which the value exceeds 5,000, when the appeal lies to the High Court.

4521. Then above the Munsifs are the Subordinate Judges and the Superior Judges in the civil courts. What is the distinction between those two? I have got down here that the Subordinate Judges in 1893–94 cost Rx. 332.000 and the Superior Judges Rx. 326,000?—Yes; the district judges control the administration of civil justice. They distribute the suits between the various courts where they have no local jurisdiction The subordinate judge is a kind of assistant of the district judge, but he exercises original jurisdiction up to any value.

4522. And then over these comes the High Court again?—Yes, all appeals above 5,000 as a rule go to the High Court; and all special appeals, that is, appeals from appellate decrees on matters of law, goto the High Court.

4523. Therefore there is room for a very great amount of business going to the High Court?—The business going to the High Court is considerable.

4524. There is some distinction, is there not, with regard to the supreme judicial authority in the different provinces? There is a High Court in Calcutta, a High Court in Madras, and a High Court in Bombay, is there not?—And a High Court in Allahabad in the North West Provinces.

4525. Then in the other provinces?—In the Punjab there is a Chief Court.

4526. Presided over by a Commissioner?—No, it is presided over by Judges. They are called Judges of the Chief Court.

4527. What is the difference between the Chief Court and the High Court?—The difference is that the High High Court is established by Royal Warrant and the Chief Court is not.

4528. By the Act of the Government of India?—Yes.

4529. Is the pay different?—It is slightly less. The pay of the High Court judges is generally Rx. 3,750, and that of the Chief Court judges is Rx. 3,500.

4530. Then in some provinces there are only Commissioners?—There are only Judicial Commissioners.

4531. Where is that?—In Oude, Central Provinces, and Burmah; I think that is all.

4532. But I thought you said that they had a high court at Allahabad?—Yes, at Allahabad they have, but that exercises jurisdiction over the North West Provinces only, and not over Oude.

4533. But you said just now, if I understood you, that there was a Judicial Commissioner in the North West Provinces?—No in the Central Provinces.

4534. Then did you say Burmah?—Yes, Burmah.

4435. And that really comprises all the judicial officers?—Yes. Their pay varies from Rx. 3,000 to Rx. 3,500.

4536. (*Sir James Peile.*) In Assam, I think there is one too, is there not?—No; there is no judicial commissioner in Assam.

4537. (*Chairman.*) Is there any probability of an increase, so far as you have been able to ascertain in either the numbers or the constitution of the High Courts?—There is constantly a tendency to increase. In Madras they have had to create a new court in order to relieve the High Court of the lower valued suits that used to come before it; it is called the City Court.

4538. Is there any feeling in India that the system of appeal is carried too far in allowing so many small suits, if the suitors choose, to come forward to the High Court?—Yes, objections are raised to that, but it is just as strongly argued, I think, that a number of appeals should be allowed.

4539. (*Mr. Buchanan.*) Is there not a demand in Burmah, that there should be a Chief Court there?—Yes, there has been a demand for a Chief Court there.

4540. That would mean an increase of expenditure, I suppose: a Chief Court is dearer than a Judicial Commissioner?—Not very much. In Burmah there is a Judicial Commissioner for Lower Burmah, and a Judicial Commissioner for Upper Burmah and a Recorder in Rangoon, and the proposals chiefly tend to bring these three judges together and constitute them a single court.

4541. It would not necessarily mean much extra expense?—A very slight increase of expenditure, I think.

4542. (*Chairman.*) You have described to us the different orders of magistrates and judges who administer justice; would you tell us, are they all paid judges or are there any unpaid judges in India?—There are some honorary magistrates who perform magisterial duties without receiving any pay.

4543. Who are they?—They are chiefly well-to-do people, landowners and merchants.

4544. I do not suppose there is any large number of unpaid people?—No, not a very large number.

4545. Can you tell us shortly what the scales of salaries of judicial officers are?—Munsifs get from Rs. 200 to Rs. 400, in a few cases their pay is as low as Rs. 150.

4546. Are those the new lowest class that you spoke of in Bengal?—No, that class was on Rs. 200. Subordinate judges get from 500 to 800 or in a few cases 1,000 rupees a month.

4547. Are they natives or Europeans?—Natives. The Civil and Sessions judges get from Rs. 1,800 to Rs. 2,500, and in one or two cases Rs. 3,000; and the high court judges get Rs. 3,750, the chief court, Rs. 3,500, and judicial commissioners from Rs. 3,000 to Rs. 3,500.

4548. Then, on the other side, the magistrates who administer criminal justice?—The Tahsildar and Mamlatdar get from Rs. 150 to Rs. 250 a month.

4549. And those are the officers who administer petty justice, I suppose?—Not always; some of them have first class magisterial powers.

4550. Those are chiefly natives, I suppose?—Entirely natives. The Deputy collectors get Rs. 250 to Rs. 800. Then the assistant collectors and magistrates get from Rs. 400 to Rs. 1,000, or in some provinces only Rs. 900. The District Officers get from Rs. 1,500 to Rs. 2,333⅓ rupees a month.

Mr. S. Jacob, C.S.I.

5 March 1896.

Law and Justice.

4551. That makes the whole of the judges on the criminal side?—Yes. The Session Judges have already been mentioned on the civil side.

4552. Are you able to give us the numbers of the different classes? For instance, are you able to tell us what number of Munsifs there are?—I could make out a statement, I think, showing them; I have them for each province separately.

4553. Perhaps you will put in the number of the different classes of judges that you have menioned?—Yes, I will endeavour to do so.*

4554. And perhaps you would also state to what extent they are Europeans?—Yes.

4555. Or the classes rather that are usually European?—I could state that.

4556. Of course, we know that there are native judges up to the highest classes?—Yes, there are natives in the highest class.

4557. As far as you are aware, is the Government generally satisfied with the scale of salaries paid to judicial officers, or has it within your knowledge been discussed whether these salaries are sufficient? of course I am asking the question with a view to the probability of there being a demand for increased expenditure?—In some cases I know that there have been proposals made to raise the salaries, which have been either entirely refused or been very much cut down.

4558. But is there any general feeling, as far as you know, amongst those persons who are responsible for the consideration of such questions that salaries of any class of judges ought to be raised?—I think that in the smaller provinces there is such a feeling; the pay of the lowest grades of civil judges in those provinces is much lower than in the Regulation Provinces, the scale for which I have given above, and I think the tendency is to gradually raise the lowest rates of salary.

4559. I asked you a question with regard to the allowance made as compensation for loss by exchange: what year was that first introduced into the Budget?—It was paid first in 1893–94; it was not provided for in the Budget of that year, but it was actually paid in that year.

4560. Is a separate provision made for it in each division of the Budget?—Yes, it is provided for under each head of the Budget.

4561. As a separate allowance?—The total under each major head is not shown in the Budget; it is provided for under each sub-head.

4562. Would the sub-head show how much is provided for judicial officers?—I have a statement showing the total in 1893–94 for courts of law; the total was Rx. 69,397.

4563. And that would include the whole of the courts of law, would it?—Yes, as far as they are charged to Law and Justice; it includes the whole of the amount charged under Law and Justice.

4564. But who would there be outside Law and Justice?—Well, I said that in the non-Regulation Provinces the Commissioners exercised certain criminal jurisdiction in addition to their administrative functions, and they are charged wholly to general administration.

4565. They are not separated and charged to Law and Justice?—No.

4566. Is any provision made with regard to that allowance that it should cease or diminish, if exchange rises to a certain figure?—The conditions, under which it is granted, would make it cease entirely if the rupee reached 1*s.* 6*d.*, and it diminishes as the rupee approaches 1*s.* 6*d.*

4567. You have given us the total expenditure for the years 1875–76, and 1893–94 of the Law and Justice Budget, it being Rx. 2,275,000 in the first year, and as near as possible Rx. 3,000,000 in the second; but I think it does not entirely cover the whole cost of justice; it does not cover the non-effective cost?—No, it does not include the non-effective cost, and, as I said just now, there are some officers who exercise judicial functions whose pay is not charged to Law and Justice, though generally the pay of officers who exercise judicial functions is so charged.

4568. Take that latter case first; is that an item of any significance?—The pay of Commissioners is from 2,500 to 3,000 rupees a month.

4569. And how many of them would there be?—There must be about 50 of them in the whole of India; but in the non-Regulation Provinces the number is smaller, though all Commissioners, I believe, exercise some control over the administration of criminal justice.

4570. It would make a considerable sum?—Yes. Of course, only a proportion would be chargeable to the Law and Justice Budget in any case.

4571. Fifty of them at 2,500 rupees a month, that might be 150,000 rupees a year?—Yes, the whole cost of Commissioner's pay would be from 100,000 to 150,000 Rx., I should think.

4572. But you say that would not all be charged to Law and Justice?—Oh, no; quite a small proportion, would in any case, be chargeable to Law and Justice.

4573. It is not a very important matter then?—No.

4574. It might be Rx. 20,000 or 30,000 a year more?—Then the pay of Deputy collectors in the North-West Provinces has also not been divided, as it is in all other provinces, between Law and Justice and Land Revenue; it has been charged wholly to Land Revenue, but from 1895–96 it is being divided in the same way as it is in other provinces.

4575. Then in the sum of the Rx. 3,125,000, in that year the separation is made, is it?—Yes, and that accounts for part of the increase in 1895–96.

4576. Going back again to the question of pensions; have you any idea what the amount of pensions of judicial officers is?—No, I could not give the amount; the charge for pensions in the Judicial Department paid in India was estimated in 1894–95 at Rx. 101,292. But the pensions in the Land Revenue Department were also estimated at Rx. 199,274 and probably from one-third to one-half of these should be taken against Law and Justice.

4577. On the ground that you have just stated as to the Commissioners?—No, on the ground that their pay is actually divided between Law and Justice and Land Revenue. They are always considered as belonging to the Land Revenue Department, but their pay is distributed between the two, and their pensions would be distributed in the same proportion, I presume.

4578. And that, you say, would be about one-third?—From one-third to one-half of Rx. 200,000.

4579. That would be Rx. 70,000 to Rx. 100,000; would it not?—Yes. These, however, are chiefly the pensions of the Native Officers. The pensions in England payable to Judicial Officers are not shown separately in the Home Accounts. The pensions paid to judges of the High Courts in 1893–94 amounted to 31,431*l.* Judicial pensions would also be included in the 115,336*l.* paid to the "Uncovenanted Service of India," and in the amounts shown as paid out of the Civil Service Annuity Fund, namely—

	1893–94.	1894–95.
	£	£
Bengal - - -	304,233	308,636
Madras - - -	101,377	100,024
Bombay - - -	77,313	78,477
Total - -	482,923	487,137

4580. But there is no analysis of those charges made?—No.

4581–2. Do you know at all what the ratio is that pensions for non-effective service are supposed to bear to effective services in India?—It is roughly about 20 per cent.

4583. Twenty per cent. of the cost of salaries, not of the total estimate?—No; but an average of 20 per cent. would roughly cover not only pensions but also leave allowances.

4584. As much as that?—Yes, as a general average; the actual rate, of course, differs for the various Government services.

4585. Would you be disposed to say that, supposing the salaries in 1893–94 were, say, Rx. 2,700,000, or Rx. 2,800,000, probably 20 per cent. of that would represent the non-effective?—Yes, I should think that that would be about the percentage to take.

* *See* Appendix 16.

4586. That would be something a little over 500,000*l.*?—I do not know what the cost of salaries is.

4587. It is not taken out here, but I think some of your papers show it. I suppose, for instance, you would not include in the basis of that calculation process servers' charges, would you?—Yes, there would be some pensionable service under that.

4588. Nothing like the whole Rx. 2,800,000?—Not the whole of it. The total in 1893–94 of salaries and establishment charges was about Rx. 2,266,000.

4589–90. That would make the non-effective charge between Rx. 400,000 and Rx. 500,000?—Yes, the latter figure would more than cover it, I should think.

4591. The pensions in India of Europeans follow one scale, do they not? Whether the officer is judicial or whether he is executive, he works up to a thousand a year, does he not, in the Civil Service?—In the Indian Civil Service, yes.

4592. And what is the scale of pension allowed to natives?—They are allowed a maximum pension of half-pay up to an absolute limit of 5,000 rupees.

4593. They have a maximum?—Yes.

4594. And cannot rise above half?—No.

4595. Then that would mean rather a low average of pension, because that is considerably less than the scale in the Home Civil Service. We can rise up to two-thirds?—Yes, it practically means about half-pay for low-paid officers, because the pension money limit does not apply to them.

4596. (*Sir James Peile.*) The service contribute to that 1,000*l.* for the Indian Civil Service, do they not?—They contribute a portion of that.

4597. 4 per cent.?—4 per cent. of their pay all through their service.

4598. (*Chairman.*) An officer may retire on 1,000*l.* a year after 20 years' service?—After 25 years' service.

4599. (*Mr. Caine.*) What proportion of that does an officer pay himself? what does the 4 per cent. work out at?—On an average it works out to about 400*l.*, I think.

4600. (*Chairman.*) Therefore you have got to put against the pension of 1,000*l.* a year, that the man has contributed, what would produce 400*l.* of that 1,000*l.*?—Certainly 400*l.*; many men have of course paid much more.

4601. (*Sir William Wedderburn.*) And there are the lapses of those who die?—Yes.

4602. (*Chairman.*) At all events, in all probability, the net charge on the taxpayer of judicial pensions after allowances are made would be nearer Rx. 400,000 than Rx. 500,000?—Yes I think so.

4603. Then, besides this non-effective charge, you have other charges, have you not, such as works and buildings?—Yes.

4604. Can you tell us what, in an ordinary year, that charge would come to?—The amount shown as spent in 1893–94, is Rx. 115,769; that is both on original works and on repairs. The Government of India made a very elaborate inquiry a few years ago as to the net cost of the administration of civil justice, and they published the result of it in the *Gazette of India*, and for the year which they took—it was the year 1885—they worked out, after allowing for all charges, to a net receipt of Rs. 1,251,000 = 125,000 Rx.

4605–7. As what?—As the net receipt after allowing all charges for civil justice.

4608. Would you read us the item, and show how that is made up?—Yes. The court fee stamps in that year were Rx. 1,974,500; cash receipts, Rx. 43,100; that is the total receipts, Rx. 2,017,600. Then they took the charges; salaries of judicial officers employed exclusively in the administration of civil justice, Rx. 625,500.

4609. Civil justice?—Yes; this is a rather different distribution from that in the accounts. The proportionate share of the salaries of judicial officers engaged partly in the administration of civil justice is given at Rx. 1,094,000: a share of the cost of the stamp establishment, Rx. 22,700; a share of the discount on sale of court fee stamps, Rx. 20,300; refunds of court fee stamps, Rx. 23,200; pension and leave allowances, Rx. 252,800.

4610. Would those include the High Court salaries?—Yes.

4611. But I thought you said the return was for civil justice; they do not include criminal judges, I suppose, in it?—Yes, this is civil justice; they took into account only so much of the court fees as was attributable to the Civil Courts.

4612. Is that the total?—No. Rent for buildings used by civil courts, Rx. 84,600; and stationery and printing, Rx. 19,600. That works up to a total of Rx. 2,142,700.

4613. They do not allow anything there for buildings, they only put rent?—Yes, they charge only for the rent, but that is only another way of charging for the buildings. It works out to a net charge, I see—I said it was a net receipt—of Rx. 125,000. That is for civil justice only.

4614. Are there any receipts in criminal justice?—A small proportion of the court fee revenue would be creditable to criminal justice. Some applications to criminal courts have to be made on an 8-anna stamp.

4615. (*Sir William Wedderburn.*) The fines, I suppose?—Yes, the fines would come in.

4616. (*Chairman.*) Well now, take the charge in 1893–94. We get Rx. 2,996,000 as the audited charge in the accounts of 1893–94 of the active cost of the courts. If you were to put on something like Rx. 600,000 for buildings and pensions, I take it you would be estimating liberally, would you not?—Yes, for pensions and buildings, and leave allowances.

4617. I am taking as a rough calculation for pension, 20 per cent. of the amount that you have stated?—Yes, that includes leave allowance.

4618. Leave allowances?—Yes.

4619. That would give you what you may call 3,600,000?—Yes.

4620. This sum is exclusive of charges for stamps. Against this charge must be set the receipts of Courts of Justice from fees, fines, and other sources. Can you state the amount of such receipts properly belonging to Courts of Justice for 1893–94?—Only for 1893–94 or for 1875–76 also?

4621. I should like to have it for both years?—In 1875–76 the receipts under Law and Justice were Rx. 295,669, and the court fees were Rx. 1,975,465.

4622. Therefore the cash receipts were——?—Rx. 295,699.

4623. And the stamps?—Rx. 1,975,465.

4624. Making?—Rx. 2,271,164.

4625. Now 1893–94?—Cash receipts, Rx. 372,405; court fees, Rx. 3,063,463; total Rx. 3,435,868.

4626. And those receipts are fairly and properly applicable to courts of Justice and Law?—Yes, I should say so.

4627. Therefore in 1875–76 the receipts of Courts of Justice did not cover the effective charges of the courts?—No.

4628. There was a deficit upon them?—Yes.

4629. In 1893–94, although there had been a considerable increase of charge in the interval, the receipts had increased in a greater degree, with the result that the receipts covered the whole effective charge of the courts, leaving a surplus of Rx. 430,000?—The net charge would be about Rx. 170,000 according to the figures adopted above.

4630–3. No; look at the accounts for 1893–94, Rx. 2,996,090. That is the active cost?—Yes.

4634. The receipts you have just given me—Rx. 3,435,000, leaving a surplus of Rx. 439,000?—Yes.

4635. In 1893–94, although there had been a considerable increase in the interval, the receipts had increased in a greater degree, with the result that these receipts cover the whole extra charge of the court, leaving a surplus of Rx. 439,000, which may be set against non-effective and building charges?—Yes.

4636. Therefore it may be said that the administration of justice in India, apart from police and prison charges, is very nearly self-supporting after charging against that department the whole of the non-effective cost, and also Rx. 100,000 to Rx. 110,000 for buildings; that would only leave a slight deficit of some Rx. 100,000 to be provided by the general taxpayer?—About Rx. 200,000 I suppose it would be; there are certain other charges that would have to be added, and the method of calculation is somewhat rough.

4636A. Further the increase of receipts, which have been added since 1875–76, has more than covered the

Mr. S. Jacob, C.S.I.

5 March 1896.

Law and Justice.

increase of expenditure incurred during that time?—Yes, much more.

4637. Do you happen to know whether the receipts continue to increase, and whether the estimate of them for 1895–96 covers or more than covers the expected increase of expenditure?—The estimate of revenue for 1895–96 is, Law and Justice, Rx. 371,200; Court fees, Rx. 3,152,850, total, 3,524,050.

4638. You may say practically that it more than covers that increase?—Yes.

4639. Can you tell us whether in the interval between 1875–76 and the present time there has been an increase or reduction in the scale of fees?—There has been practically no change in the fees to my knowledge.

4640. Do you happen to know whether the scale of fees in courts of justice is held to be high, and whether it is a source of revenue which requires re-consideration when the state of finances permits?—I think arguments in this sense have been put forward, but I know of no intention on the part of the Government of India to reconsider the fees with a view to a revision.

4641. (*Sir William Wedderburn.*) Was there not a Court Fee Act passed in 1878 or so?—No, it was in 1870.

4642. Was there not one about 1878?—No.

4643. For an increase?—No. The general Stamp Act was passed in 1879, but not the Court Fees. Act I. of 1879 is the General Stamp Act, and Act VII. of 1870 the Court Fees Act.

4644. (*Chairman.*) The increase in the charge for judicial establishments since 1875–76 is considerable. Do you know whether it has fairly corresponded to the increasing demands of the public, or is it pleaded that the demands have not been fully met, that increases in the Courts which good government requires, have been set aside or postponed because the finances of the country did not permit of a large appropriation to meet them?—There have been many applications for increases of the judicial establishments, which have been refused. The High Court of Bengal, I know, thought at one time that the establishment of munsifs and subordinate judges ought to have been increased to a greater extent than was sanctioned by the Government.

4645. Then you would anticipate as a general result that on various heads Government must look for increased expenditure? We have mentioned the separation of judicial and executive functions as a case the principle of which has been acknowledged; and then, again, I gather from you that the present scale of salaries in many respects has been thought to require revision, if finance permitted it. Therefore, to a certain extent we must look for an increase of expenditure as more likely to happen than a decrease?—Yes. I think certainly there will be an increase, but I do not suppose there will be any necessity for a greater increase than will be covered by the provincial share of the court fee revenue.

4646. Quite so. And further than that we are met by the rather surprising fact that the courts of justice in India are practically self-supporting—that they involve an insignificant charge on the general taxpayer?—Yes, subject to what I said as to certain of the charges not being taken against Law and Justice—certain of the charges for judicial officers.

4647. For which?—The Commissioners.

4648. Those whom we left outside?—Yes.

4649. But at all events, even when we transfer them to the account of the courts of justice, the deficit remains a very small one?—It would not be large.

4650. And, as far as we can judge from recent years, the tendency of the receipts is to increase in a quicker ratio than the expenditure?—Yes, I should certainly say that that was the case.

4651. (*Sir William Wedderburn.*) As regards the general question of the increase of expenditure in this department, in the higher grades the principal increase is from compensation for exchange, I understand?—There is a considerable increase for that.

4652. Do you know what it is as regards superior grades?—The total under Law and Justice in 1893–94 was Rx. 69,107.

4653. So that if natives of India had been employed instead of Europeans that would have been a saving to that extent, or so far as they had been employed?—So far as they had been employed, yes.

4654. As regards the increase in the lower grades, I think that that is all distinctly in the direction of good administration, getting a more trustworthy class of officer?—Yes, I think so.

4655. I should think that, especially in the process serving department, that additional pay is an extremely valuable improvement?—Yes, I think so.

4656. (*Mr. Naoroji.*) I was only going to put the same question, that the more the native service increased, the greater would be the saving both in the original salary as well as in any such incidental charge for additional compensation for exchange, and so on?—Exchange compensation is not given to natives.

4657. No, and that would be a saving, as well as in their original salary also; there would be a saving the larger the number of natives employed?—Yes, as far as it is possible to substitute natives for Europeans.

4658. And then, as two Secretaries of State have thought it desirable that the separation of magisterial and executive functions should be effected notwithstanding any additional expenditure that might be incurred, it would be very important for the efficiency of justice that it should be done?—I am not prepared to give any opinion upon that point.

4659. The increase in the judicial revenue or Law and Justice revenue has been going on increasingly every year, so that the excess or the extra charge that would be necessary before making the separation may be very well met to a good extent, so far as the surplus of justice revenue is increasing?—The revenue is certainly increasing steadily.

4660. And, therefore, that would enable the separation of the judicial and executive functions to be carried out without much difficulty?—The court fee revenue is increasing, but it is not assigned necessarily to Law and Justice charges.

4661. Then this inefficiency is necessitated by want of funds or want of the elasticity of Indian revenue?—I do not know that the separation of the magisterial and executive functions would be carried out but for the want of funds. I am not prepared to say that.

4662. As I understood all along, it was on account of the extra charge that it would entail, that the difficulty chiefly rests, though two Secretaries of State had considered it desirable?—All I am prepared to say is that the separation would involve some addition to the expenditure, but I am not prepared to say that that is the only reason why it is not carried out.

4663. (*Mr. Caine.*) Have you at all tried to arrive at the cost that would be involved in the carrying out of the separation of the two functions?—No, I have not made any estimate of it.

4664. (*Sir Andrew Scoble.*) I do not know whether you have given any information on the subject, Mr. Jacob, but I should like to ask you if you can tell me what proportion of natives to Europeans is employed in this judicial branch of the service in India that you have been speaking about?—The subordinate judges and munsifs are entirely natives.

4665. All the ministerial establishments of the courts are entirely native?—Yes, entirely, I think.

4666. And Europeans are only employed in the higher, and I may say, supervising, capacities?—Yes, that is the case except the assistant magistrates who are in training for the higher appointments and are employed as magistrates.

4667. And their pay is only in this calculation charged partly to the Law and Justice account?—Yes.

4668. Can you say at all in regard to this expenditure which you have given us, what proportion of it is spent upon native employés as compared with the proportion which is spent upon British officers?—I could not give you the proportion out of the higher officers that are natives.

4669. What can you give me?—The subordinate judges, the munsifs, the deputy collectors, in fact, the natives who are judges or magistrates cost 611,000 Rx., establishments cost 642,000 Rx., and for the higher officers, some of whom are natives, the charge to Judicial is 1,013,000 Rx.

4670. I believe I am right in suggesting that in all the higher appointments from the High Court downwards, natives are employed?—They are employed in all the grades, and they will be still more employed in the future under the arrangements which have been

made for the assignment of certain appointments to what is sometimes called the Provincial service.

4671. In fact, the policy of recent years has been to employ natives, qualified natives, in these higher employments more constantly than was formerly the case?—Yes, certainly.

4672. (*Sir James Peile.*) Is it not the fact that the original civil jurisdiction in India is exercised wholly by native judges?—Practically that is the case.

4673. (*Chairman.*) I think, Mr. Jacob, that completes what I have to ask you with regard to Law and Justice proper; but with regard to a question which I put to you at the beginning of the examination, as to whether you could form any idea of years previous to 1875, would you look at the Statistical Abstract beginning 1867; there is a heading of Law and Justice, the figures of which, I think, are in excess considerably of those which you mentioned in 1875–76, are they not?—Yes, they are; that is owing to the reason I gave, namely, that they included police charges as well.

4674. But when we come to later years in the Statistical Abstract, could you not get the same basis of calculation? Would not the comparison be fair if you added the police charges to the Courts of Justice?—I cannot say that you would be comparing like with like. The proportion of salaries charged to Law and Justice was not the same, I think, in the earlier years as now.

4675. You see in the next one they are separated?—Yes; but that separation begins from 1876.

4676. Supposing you were to put the two together they come to over Rx. 5,000,000, do they not?—From 1876 they do.

4677. And before that they came to about Rx. 3,000,000?—Yes; considerably under Rx. 3,000,000.

4678. Therefore on both charges before 1875–76, there must have been a very considerable increase, or does that increase come from more careful combination of the charges that make up Law and Justice and Police?—I think it is partly due to a transfer of charges from other heads.

4679. You think it is?—I think so.

4680. At all events you would recommend us not to rely upon a comparison of those figures?—No; I do not think that you could compare the two.

4681. Then how much of the Rx. 69,000 allowance for loss on exchange and remittances do you think would be attributable to the High Courts? If you put together the salaries of the High Court Judges, the Law Officers, and other judicial functionaries, the total in 1893–94 is over 1,000,000 Rx., showing an increase only of Rx. 85,000?—Yes.

4682. And, I presume, that the greater number of those are European officers, are they not?—Yes.

4683. And then you say that out of this Rx. 85,000, Rx. 50,000 is due to the increased cost in the Punjaub and Oude, and the Central Provinces, where some steps have been taken in the direction of separating these functions, from those of the revenue officers. That would only leave 34,000 to be accounted for, and yet, I suppose, the greater part of that 69,000, which is paid as an allowance for loss on exchange, would really be attributable to that heading, would it not?—Yes, there would have been a decrease of expenditure but for the grant of the compensation.

4684. Quite so; and therefore we may take it that, after allowing for the increase of charge in the Punjab, the remaining increase is accounted for, and more than accounted for, by the compensation for loss on exchange?—Yes, it is.

4685. I do not think it will be necessary to keep you a very long time over the other charges which come within this heading. Police and Jails are considered to be a branch of the Law and Justice charge?—Jails are considered to be a branch of the Law and Justice charge.

4686. In the statement showing the moral and material progress and condition of India they are classed together?—Yes; "Jails" is a branch of Law and Justice in the accounts, but Police is a separate head of the accounts.

4687. I think there would be certain convenience if we were to run through those heads. Would it be in your power to compare the expenditure in 1875–76 with that of 1893–94, first of all on Prisons and then on Police?—I have taken them out for jails; I could give you the figures for jails at once.

4688. If you please?—The total expenditure on jails in 1875–76 was 826,304 Rx., in 1893–94, 924,097 Rx.; that is an increase of 97,793 Rx.

4689. Jails, of course, include prisons and all prison work?—Yes; and it includes also charges for the administration of Port Blair and the Andamans.

4690. What we may call transportation?—Yes.

4691. Can you give us in the same way the figures for the police?—I have not taken them out, but I can give you them from the Accounts. The charge for police in 1875–76 was 2,473,340 Rx., and in 1893–94, 3,919,785 Rx.

4692. Increase?—1,446,000 Rx. about.

4693. Are there any receipts to be set against those two heads?—Yes; the jail receipts in 1875–76 were 270,805 Rx., and in 1893–94, 306,191 Rx.

4694. Police?—Police receipts in 1875–6 were Rx. 234,736, and in 1893–4 Rx. 417,531.

4695. Taking the prisons, I observe in the "Report "on the moral and material progress of India" that the number of persons on an average in jail over a series of years is given, and that it is rather less than it was some years ago. I do not know why the expense of prisons has risen. Are you aware of any reason for the increased charge?—I think the increased charge is largely in the cost of rations and provisions.

4696. The table I have before me ranges over the period from 1881 to 1891, and, therefore, it is rather different from those years that you have chosen; but in 1881 the average daily number of prisoners of all classes was 92,000—I am giving round figures—and in 1891 93,000; but the average cost per head was Rs. 52, or nearer Rs. 53, in 1881, and nearly Rs. 59 in 1891. It is a considerable increase, and I do not see here any reasons given for it?—The increase has occurred in the cost of central jails chiefly. The central jails cost in 1875–76, Rx. 149,000, and in 1893–94 Rx. 222,000, showing an increase of Rx. 73,000.

4697. Then what it comes to is, that central prisons are more expensively organised than they were?—Yes, but the number of central jails has been increased also.

4698. You have got no increase in the number of prisoners in detention?—No.

4699. And yet you have got a considerable increase in the cost?—Yes, but some of the increase, of course, goes against the receipts.
